It had taken some time to change my thought from the old theological concept of God to the Christian Science idea. The thought of God as Love, as Life, as Mind, had not been difficult to comprehend, but I had not been able to understand what my Christian Science friends meant when they spoke of God as Principle. The term seemed to be a very sacred one to them,—I often heard them say, "Principle guides;" or, "I am trying to live my life according to Principle,"—but to me the term seemed cold, hard, inflexible, wholly contrary to my previous thought of God. To my visit to the sawmill I owe the first illumination which came to me in regard to this term. When I first entered the mill, it seemed to me a place of utter confusion,—the roar of the machinery, the buzz of the saws, the hurrying workmen, all produced the effect of a chaotic hubbub; but as we went from place to place and watched the process of transforming the rough logs to the smooth, white boards, it became evident that what seemed like confusion was one perfect plan, well thought out and executed, and that every part was in perfect cooperation with every other part; that each piece of machinery, although it seemed separate from every other, was controlled by the same invisible power which started the mighty engines. The smallest or the most unimportant piece of machinery was guided by the same compelling force that controlled the great gang-saws. As I watched the perfect control and harmony of it all, I began dimly to understand what was meant by a perfect governing Principle. To my consciousness began to come the realization of what a Christian Scientist means by the term Principle as applied to Deity; that in spite of the seeming chaos of false living, there is a "divine Principle, Love, underlying, overlying, and encompassing all true being" (Science and Health, p. 496). I began to see that if I would turn from the false, and realize man's right to the true, my life would be controlled by this perfect Principle, and that it was my privilege to know that all the events of my life, from the smallest and most insignificant to those which seemed of the greatest importance, were guided and controlled by divine Principle, that is never hard and inflexible, but is always perfect Love.

Another question which had troubled me was to understand God's part and man's part in a case of healing. That the healing came from God I did not question for a moment, yet I could not help noticing that the results were not the same with all Christian Scientists. Why this difference, if God did the healing? While visiting the sawmill I found an illustration which cleared up this difficulty for me. In one part of the mill was a long, straight saw, which constantly moved up and down with great rapidity. In front of this saw was a flat car, which moved back and forth close to the saw. When the great logs were brought in from the river they were placed on the edge of this car, and as the car passed down in front of the saw, a board was cut off. A man on the car shifted the log to a nearer position, and the car again passed in front of the saw and another board was cut off, and the process was repeated until the log was reduced to boards. No one for a moment would have thought that the man cut the log. The saw did it; there was no question about that. Yet, if the man had not been faithful to his work, and had not shifted the log to exactly the right position on the edge of the car, and had not held it firmly in place, no board would have been cut, or, at best, it would have been a very imperfect one.

Digitized by Google

As I watched the man at his work, his alertness and the skill with which he manipulated his machinery and held the log steadily in its place, a passage from Science and Health (p. 261) came to me, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts." My question was answered. God, divine Principle, does the healing and the work of regeneration. Man's part is to "hold thought steadfastly" to divine Principle, and the results are in proportion to the earnestness and faithfulness with which this is done. Divine Principle, the healing, transforming power, is ever the same, unchanged throughout all the changing mortal years, and it is our privilege to realize constantly and steadfastly, that just as the smallest bit of machinery is an essential part of the great mechanism at the sawmill, and is guided by its controlling power, so man, in God's image, is one with the universe, and governed by the divine Principle of all being.

A HEALING FAITH.

ROSE H. FLEISHER.

THIS question, why I, a Jewess, became a Christian Scientist, presented itself to me lately while reading in the *Sentinel* (Vol. X., p. 470) an article copied from the *American Hebrew*. The writer says that those Jews who become Christian Scientists cannot have had a religious home or religious anchorage. Now I must confess that both of these blessings have been mine. A dear good mother brought me up, and we have always been members of the Jewish church. I shall ever love my people—but I can no longer worship in the way they do. Christian Science has taught me a higher, also a more practical way.

Christian Science came to the world because it was needed by one and all, by the individual and by the church. I can remember that I became dissatisfied when quite a girl. To trust blindly without understanding God, seemed stupid and dull, and I began to doubt whether there was a God. I meant to do right, for I had high ideals, but alas! I found often that, like the apostle of old, the good I would, I did not; but the evil I would not, that I did. There was no guide, no positive way by which to work out the problem of life. Isaiah says, "An highway shall be there, and a way, and it shall be called The way of holiness." Christian Science has not given us a new way, the way has ever been established, but it has cleared away the debris which has clogged the way, and it shows us that if we are born of the Spirit we must also walk in the Spirit—the way of God.

I have not given up Judaism, I have only a higher sense of God, who is not the God of the Jew only, but the God of all who love the truth. All that I have given up is the form; the real truth, "The Lord our God is one Lord," is more mine to-day than it ever was. No one ever persuaded me into taking a single step in Christian Science, but these steps were taken from the free volition of my heart, after years of study and practical application of the truth, with healing "signs following." There came a longing to join those who at this period dared to think for themselves and to follow the truth which they could reason out and understand.

To the question often propounded to me, How can a Jewess become a Christian Scientist? I had to say, Because Christian Science is the truth; because it fulfils the Scriptures,—the words of our own prophets show us that the New Testament is the natural fruit of the Old,—and because I found that physical science is speculative, material, and unsatisfying. Christian Science is the reasonable way to all true worship of God. Jesus said long ago, to the woman of Samaria, "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth,"—not in this form or that place, but in the innermost soul; and the psalmist prayed, "That thy way may be known upon earth, thy saving health among all nations." The teaching of Christian Science has healed us, a family of five, of all manner of disease.

I love and admire Mrs. Eddy, who is the prophet of this age, and as surely sent by God as were the prophets of old. Science and Health, and also her other writings, are an ever-increasing inspiration to me. Words are inadequate to express my gratitude for the uplifting I have received, and may God speed the time when "they shall all know me [God], from the least of them to the greatest."

UNAPPROPRIATED GOODNESS.

REV. HENRY M. PERKINS.

THROUGH ignorance of the ever-accessible supply, a sense of need is sometimes prolonged. Such was once the experience of a few sailors, who in reply to their signal of distress were told they were in the mouth of the broadest river in the world, and that they needed only to dip up the fresh water and quench their thirst. The treasures of God's Word, as unfolded through Christian Science, are a constant and unfailing inspiration, and point to the divine source of supply, within easy reach of all mankind, while only a small proportion of them are availing themselves of the benefits. The spiritual needs of humanity have been ever the same. Centuries ago Isaiah said, "Ho, every one that thirsteth, come ye to the waters, and he that hath no money; come ye, buy, and eat; yea, come, buy wine and milk without money and without price. Wherefore do ye spend money for that which is not bread? and your labor for that which satisfieth not? hearken diligently unto me, and eat ye that which is good, and let your soul delight itself in fatness."

Many are now inquiring as to the nature of true goodness, for there are many and varying opinions as to the truth, but only the truth itself is real and permanent. God is the supreme good, and our Leader's favorite text, "Thou shalt have no other gods before me," points us to this truth. The importance of knowing man's close relationship to God is shown by these words in Science and Health (p. 275), "To grasp the reality and order of being in its Science, you must begin by reckoning God as the divine Principle of all that really is." With strong realization the psalmist affirms, "God is the strength of my heart, and my portion forever." In having the greater good, we surely have the lesser. In laying hold of the Christ life and teaching, we enter upon a glorious inheritance. In viewing man's rich possessions, Paul asks, "He that spared not his own Son, but delivered him up for us all, how shall he not with him also freely give us all things?" To those who are seeking for harmony with God, the divine Principle of being, the same writer says, "All things are yours."

Since God knows not evil, most surely He does not dispense evil. On the other hand, He is ever dispensing good. Divine help for all human need is ever available, and may be individually appropriated. Otherwise what can be the import and value of all the invitations and promises of the Bible? As we thus take into our thought such affirmations, let us heed the inspired writer who has said, "Cast not away therefore your confidence, which hath great recompense of reward." This realization of the truth is powerful to uproot evil and sinful habits, to remove physical pain, to allay fear, and in that very way to affect favorably all outward temporal conditions.

As in the material world new and valuable discoveries are being made, even from things once regarded as waste, so though spiritual blessings may be unrecognized, none

Digitized by Google

are designed to be lost or misused, but rather to be received and understood and thus transformed into the fruitage of useful and happy lives. This understanding of superabundant good meets the craving of human lives, and while promoting humility tends also to counteract the feeling of unworthiness, and to advance one's acquaintance with God, the divine Love that is ever seeking after us with infinite patience and compassion.

In appropriating God's goodness to ourselves, we become in turn the dispensers of good to our fellow-men. Very instructive are the words of promise given to Abraham: "I will bless thee, . . . and thou shalt be a blessing." Our lives may also be made fruitful of light and help to others, if we will only receive God's spiritual gifts which are freely offered to us.

PATIENCE.

GRETTA POTTER BEARCE.

THERE is a strong belief of impatience with which beginners in Christian Science have to contend. The young Scientist should beware lest, after reaching a height of exalted spiritual insight, he be dropped down suddenly, through this false belief, into a feeling of intense distaste for the humdrum monotony of his daily duties. He feels, perhaps, that they are trivial or sordid in comparison with the glorious work of his Father,—the desire to give all his time to compliance with the twofold command of Jesus to "preach the gospel to every creature," and to "heal the sick,"—which has become possible to him through the teaching of Mrs. Eddy. He is tempted to turn away from all earthly tasks; to leave distasteful environments behind him, regardless of possible discordant consequences. Grasping only the thought that God is his sole reliance and strength, he fails to consider whether he is taking the right steps to make manifest this truth. This is the point where he should question whether it is not his own self-will which clamors for instant recognition and gratification; whether his attitude is that of the patient, humble waiting on God's word which is demanded of all. Mrs. Eddy says, "Emerge gently from matter into Spirit" (Science and Health, p. 485).

Christian Science is purely metaphysical, and every problem must therefore be worked out mentally by the individual, before he can hope to leave behind him his unsatisfactory material condition or environment. All those things which result in harmony, peace, and concord, are right ideas. The beginner, therefore, should not permit himself to feel distaste for any duties, no matter how insignificant, which concur in the general expression of harmony. If all necessary duties be accomplished in the right spirit, knowing the truth about the work, working out one's freedom mentally, that freedom will follow naturally and lift one to a higher plane.

[Written for the *Sentinel*.]

OH, DID THEY KNOW.

MRS. F. L. MILLER.

OH, did they know that God is All-in-all.
That love alone the measure of that allness is,
Then with what zeal they'd seek to know
The height, the depth, the length, the breadth
Of that which measures Love.

Infinite length its patience is,
Its breadth unselfed stability.
Its height is boundless gratitude,
Its depth—humility.

Thus poised in Mind stands God's own man,
The one who knows that he is God's own span.

SELECTED ARTICLES.

["Square Deal" in the *Augusta (Ga.) Chronicle*.]

After reading in a recent issue of the *Chronicle* of the attack on Christian Science by a doctor of divinity, I desire to state a few facts and ask a few questions in their defense. I am not a Christian Scientist, my membership being in the Presbyterian church, and what I know of Christian Science I have learned through hearing it talked by friends. I wish it understood that this letter is not written in a revengeful spirit, but merely to state the facts as I see them after hearing both sides of the question.

In the first place the reverend gentleman stamps the "whole system as the work of the enemy of Christ, and as Satan's preparation of the Antichrist." Now, if there is any one thing that Christian Science is not, it is Antichrist. I think, in fact I know, that Christian Scientists carry out more fully Christ's teachings than any other sect or denomination that is in existence up to the present time. In support of this I refer to Matthew, 10 : 1–42, and Luke, 9 : 1–6. In these chapters it will be found that Christ not only commanded his disciples to teach, but to heal all manner of sickness and disease, and to go forth with neither gold nor silver nor brass in their purse, neither with two coats, nor shoes, nor yet staves, for the workman is worthy of his meat. . . . Then, too, the ministers of other denominations pay no attention to Christ's explicit command to heal the sick and cast out devils. As to the charge of being Antichrist, that is too ridiculous even to consider after reading the chapters above referred to, and hearing Christian Scientists state their belief. They believe that God is all-powerful, even more powerful than the Presbyterians consider Him; and they still believe what Christ told his disciples on this earth in regard to healing, as it is through Christ that they claim to be cured. . . .

As to "the marvel that men and women of intellect and culture allow themselves to be ensnared by Christian Science," I really think the reason there are not countless thousands enrolled in their membership, is because of the lack of intellect and culture among a large majority of us. As to Mrs. Eddy's control of the Christian Science Church —what of that mountain out of a mole-hill? Do not all churches, secret orders, corporations, etc., have some one to direct the affairs of each?

As to the charge that Christian Scientists do not believe in sin or evil, the doctor grossly misrepresents them. They look upon them as very real to human sense, and as the paramount causes of all sickness and trouble to humanity, and they are therefore the two things they are most vigorously fighting. He is also reported as saying that those who left other churches to join the Christian Science Church never were Christians, and never had Christ in their hearts. I can hardly make myself believe that the doctor made any such statement, for I believe that a minister of the gospel, and a follower of the Lord Jesus Christ and his teachings, would not judge so harshly, but leave that part of it to them and their God. . . . The Scientists believe in the same God and Saviour that other denominations do: the only difference is that they try to carry out more fully Christ's commands by healing the sick, and giving Christ the credit. . . .

As to what Christian Science holds out to any one: It holds out a broader, clearer, conception of true Christianity as taught by Christ, a clearer, more distinct knowledge and understanding of Christ and his teachings, a broad-minded, charitable view of the world and the people in the world, a helping hand to sinful, suffering, weak humanity, a brotherly love for all, and enmity toward no man. I feel assured that there is not a member of their

Digitized by Google

little flock in this city who feels any way but friendly toward the doctor, even though he challenged their sincerity and their Christianity. They say for him, as Christ said of his accusers, "Father, forgive them; for they know not what they do." . . .

Finally, I believe Christian Scientists live as near Christ and his teachings as it is possible for mankind to live. You know the people found fault even with Christ, so it cannot be expected that Mrs. Eddy or members of the Christian Science Church can escape the cruel dagger of criticism, when those who wield it see but dimly and understand less.

[Editorial in the *Chicago* (Ill.) *Post.*]

Probably a great many newspaper readers—and certainly the vast majority of those who are addicted to the reading of sensational newspapers—will be surprised to learn that in their reading they have a public duty to perform. Surprising though this may be, it is true; and its truth is shown clearly and strongly by President Arthur T. Hadley of Yale, who has contributed to *The Youth's Companion* (Nov. 5) a thoughtful article on "The Public Duty of Newspaper Readers."

President Hadley sees in the reading of a daily paper more than mere amusement, more than keeping in touch with current events. He sees in it the shaping, through the newspapers and by them through the government, of the future of the nation itself. For the papers are, after all, the most direct and effective way the people have of speaking to the men in whose hands they have entrusted the government of the country. It is of vital importance, then, that the papers speak always for the right and tell things as they are. And this the papers will do, declares President Hadley, if their readers demand it of them. This is his argument:—

"If we are to have responsible newspapers the reform must begin with the readers themselves. Most of the men who edit newspapers will give the people the kind of newspapers they want. There will, of course, be exceptionally good editors who will make their papers better than their readers demand and try to educate the people up to a higher level, . . . but the average editor will work for the average reader. He cannot be any more independent of the man who buys his goods than the merchant or manufacturer can be. . . . People sometimes talk of 'yellow journalism' as if the editors of the yellow journals were solely responsible for their existence. They are responsible to some degree; but to a still larger degree the responsibility lies with the public that will buy and read their news."

This is the duty of the reading public as President Hadley sees it:—

"In the first place, we can demand that the newspapers give facts rather than sensations. This is part of our public duty. Each one of us is given a share in governing the country because it is supposed that he will take an intelligent interest in facts which affect its management. If he reads his newspaper primarily for the sake of murders and prize-fights, and only looks at the columns of public news when they are made as much like reports of murders and prize-fights as possible, he fails to do his duty as a citizen. Here is an opportunity for young men to make the standards of the next generation better than those of the last."

There is, we believe, no exaggeration in this summing up of the duty of the public. More, we believe that the present is the time to undertake this labor. More and more are the more thoughtless falling under the sway of the "yellow press;" more and more are they coming to be swayed not by reason but by passion. It is a dangerous tendency, and the public should give its support to those editors who speak for sanity and purity, who strive always to tell the truth and to publish papers worthy of being read by Americans in the best meaning of that word.

[Frederick Dixon in *The Medical Times*, London, Eng.]

As to our critic's main argument, may I explain, once more, that I have no objection whatever to his applying the word miracle to cases of Christian Science healing, if he will use it in the true sense of the Greek words, so translated, in the New Testament, or even in the sense in which the Latin word was used by the pagan philosophers. What I do object to is his using it, in an arbitrary doctrinal sense, to imply something supernatural, a sense only adopted at a period subsequent to the composition of the Vulgate. If he will do this, he will find that the miracle will become a synonym for the demonstration of the theology of Jesus, who used it not as a claim on his own part to divinity, but as the test of the Christianity of those who professed to have accepted his teaching. Consequently, James taught that faith without works, profession without demonstration, is dead.

So long as the Church worked miracles, Christendom accepted the healing of physical disease by spiritual means as a natural process. When, however, the Church proclaimed Jesus as God, and declared that the working of miracles was confined to the Godhead, the miracle which to John had been the *semeion* or proof of man's understanding of the law which clothes the grass of the field, became "a transgression of a law of nature by a particular volition of the Deity." . . .

Even in spite of this the miracle never became extinct. It might, and no doubt did, constitute a rare and remarkable phenomenon, awe-inspiring to those who had experience of it, nevertheless it continued. If, as our critic maintains, proof consists of evidence sufficient to convince the great majority, the proof of the working of miracles is irrefutable. To-day the labors of the Christian Science churches are lifting that evidence from the level of mere sporadic incidence into the realm of Science. Week after week, month after month, for many years past, in the pages of the *Christian Science Sentinel* and *Journal*, and from the Wednesday testimony meetings in the churches, there has been going out a stream of evidence, rising geometrically in an ever-increasing ratio, to which if a man wishes to stop his ears he must go and nest with the pelican in the wilderness, or like the ostrich bury his head in the sand of the desert.

[George Shaw Cook in *The Beacon*, Aurora, Ill.]

Our critic's argument that drugs are created by God for man's benefit, seems to be rather faulty in view of the fact that, according to the Gospel record, Christ Jesus, who came to do the will of God, did not use drugs in healing the sick, and did not recommend them to his disciples and followers. The use of drugs may temporarily alleviate pain, and remove disease for the time being, but permanent and thorough cures can only be brought about by the exercise of spiritual power and law, which emanate from that Mind "which was also in Christ Jesus."

Deep in the wood where the goldenrod glows,
Tangled 'mid branches of sweetest wild rose,
There is a temple of worship, to me
Greater than castle of builded tree.

For only the purest in heart can find
Beauties of God in a vine entwined,
Only the meekest in thought can see
God's man, made perfect as bud on tree.

THE LECTURES.

CONCORD, N. H.

The beautiful edifice of First Church of Christ, Scientist, the gift to Concord Scientists of the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, was crowded Thursday night [Oct. 15] on the occasion of the lecture by Judge Septimus J. Hanna upon "Christian Science, the Religion of the Bible," many being present from Manchester and other places. Prof. Hermann S. Hering, First Reader of the church, in opening the service, said in part,—

We are very highly honored by the presence of one of Concord's foremost and most respected citizens, who will introduce the lecturer of the evening. I have the pleasure of presenting the Hon. James O. Lyford of Concord.

In introducing Judge Hanna, Mr. Lyford spoke in part as follows:—

I sometimes think that the attitude of the people of Concord is like that of the Scotch minister who lived in one of those hamlets on the rocky coast of Scotland where the people get part of their living from the wrecks that are cast up on the shore, and so during a storm they kept watch on the coast to see if any vessel was drifting in. One stormy Sunday they were gathered in their temporal worship, listening to their minister, when a boy shouted in the roadway, "Ship ashore! Ship ashore!" Immediately everybody got up and started for the door. The minister looked on in amazement; then he pounded on his desk and commanded everybody to be seated. Such was their respect for him that every one took his seat; then slowly descending the pulpit stairs, the minister deliberately walked down the center aisle until he got to the door, when he turned around and said, "Now come on; let's start fair," and I think that represents the feeling of the people of Concord in dealing with their coreligionists.

Concord was for many years the home of the Founder of your faith, Mary Baker Eddy. She took a deep interest in all that pertained to the growth and betterment of this city. We have many evidences of her generosity and her public spirit, and I think I express the universal feeling of regret that she is no longer numbered as a citizen among us. On her account, if on no other, we can extend a cordial greeting to our guest to-night. It gives me great pleasure to introduce to you Judge Septimus J. Hanna of Colorado.

As a preface to his lecture, Judge Hanna said in part,—

Here in this church edifice, and here in the city which was her home for so many years and near which she was born, I esteem it an especial privilege and pleasure to say a few words with reference to the Founder of this religious movement,—Mrs. Eddy, whose personal acquaintance it has been my pleasure to have enjoyed for nearly twenty years. Speaking from this opportunity of knowing, I can testify to the fact that intellectually she is one of the most alert, one of the most remarkable women of all whom it has ever been my privilege to know. She has consecrated herself to the great work of aiding and uplifting humanity, of bringing into this struggling world of ours better, more harmonious, more happy, more holy conditions.

One of the remarkable things in connection with the remarkable life of this remarkable woman, is the fact that she began her work by teaching her students how to heal the sick, how to destroy and overcome sin. She began her great work in this way, and she has carried it out on this basis ever since, and through her labors thousands have been taught how to heal sickness and how to overcome sin.—*The Patriot.*

MARYVILLE, MO.

The Christian Science lecture at the Empire Theater Sunday afternoon [Oct. 11] was attended by a good-sized audience, who heard a most interesting lecture by Frank H. Leonard of Brooklyn, N. Y. The lecturer was introduced by President H. M. Cook of the Normal School as follows:—

He who reads his history accepts the fact that the minds and lives of men have, through the ages, been molded and shaped by certain great religious movements. He who reads his Bible must accept the fact that the great God who works all things together for good has kept His hand on the affairs of men, and allows these religious movements to arrive at that time when each may best mold and impress mankind. Each movement fulfils its mission; each movement leaves its impress on humanity's heart and life.

In the memory of some of us a religious movement began to be. It was first looked upon by the orthodox as a fad, then as a fancy. That man who is big enough to think, regardless of what may be the limitations of his creed, must recognize in Christian Science one of the world's great religious movements. The history of the movement has not yet been written. Its Founder, Mrs. Eddy, being alive, her history has not yet been written, but when time shall have digested facts, this woman, who has by her own simple teaching builded for herself the largest personal following that the world has ever known in the given time, will be recognized as one of the world's great religious teachers.

This people—living and teaching the gospel that suffereth long and is kind; that envieth not, that vaunteth not itself, and is not puffed up; that thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth; that beareth all things, believeth all things, hopeth all things,—this people has sought to impress on the mind and life of the world the neglected doctrine of absolute self-mastery and the old Eden-given lesson of the mastery of the forces and conditions about us.—*The Maryville Republican.*

EDINBURGH, SCOTLAND.

Under the auspices of First Church of Christ, Scientist, Edinburgh, a lecture on Christian Science was delivered by Clarence C. Eaton, in the Queen's Hall, Queen Street, on Saturday afternoon, Oct. 17. The hall was crowded in every part, and the lecture was listened to with the closest attention. The lecturer was introduced by Ben. Haworth-Booth, who said in part,—

At the present time there appears to be, among all the various denominations of Christians, an uplifted thought, a state of hopeful expectation that we are about to know more about God, and about the Christ, and about the universe and man, than we have ever known before. And now Christian Science appears upon the scene, and as one of old cried in the wilderness of Judæa, saying, "The kingdom of heaven is at hand," so Christian Science reminds us that the God of the Bible is omnipotent, omnipresent Love, ever ready to save and to bless, and the only healer of all mankind; it reminds us that the Christianity taught by the Christ and his immediate followers, up to the third century, was a full, perfect, and sufficient religion for all the needs of man; not only did it offer salvation to the soul hereafter, but healing and health to the body here and now. Christian Science points out that whatever was scientifically possible in those days must be scientifically possible now. This is a scientific era, and if the Christianity of to-day is to take its proper place in the hearts and in the councils of men, it must be shown to be scientific, it must be able to prove itself. The healing of the body in original Christianity was but an outward

Digitized by Google

and visible sign of the inward and spiritual grace, and whatever was true of Christianity in those days must be true for all time.

In the days of the Messiah the momentous question was asked, "What is truth?" This question is answered in Christian Science by demonstration,—by healing the sick and reforming the sinning. Eleven years ago my wife was wonderfully healed by Christian Science, after fifteen years of sickness and suffering, and after trying in vain all the usual course of prescribed treatments. I will but briefly say that during the past eleven years we have been grateful students of Christian Science. We have on all occasions seen it weighed in the balance, and we have not found it wanting.—*Correspondence.*

LOS ANGELES, CAL.

Rev. Arthur R. Vosburgh lectured for First Church of Christ, Scientist, of this city, Sunday, Oct. 18. On Sunday afternoon three thousand people crowded Temple Auditorium twenty minutes before the time for the lecture, and so many were turned away that the lecture was repeated at Simpson Auditorium on Monday evening. The introductory remarks of Judge John D. Works were in part as follows:—

For now almost half a century Mrs. Eddy, the Founder and Leader of Christian Science, has been endeavoring, "with malice toward none, with charity for all," to bring mankind to a right understanding and appreciation of her religion. It is not a new religion. It is founded on the Ten Commandments, the Lord's Prayer, and the Sermon on the Mount. It is the religion of Jesus of Nazareth. Its teachings are his teachings; and its practice is now, as it was in his time, exemplified and demonstrated by preaching the gospel he preached and healing sickness and disease as he healed them. Mrs. Eddy has been persecuted, reviled, and ridiculed for her religion. So it has been with every great religious reformer in the history of the world. Jesus was persecuted, maltreated, and finally crucified for the religion he preached and practised. Calvin and Luther and Wesley and Roger Williams, and many other religious reformers, were denounced as heretics and dissenters and thousands of their followers put to death for their religion. In turn, the followers of the present day of these great men who stood conscientiously and courageously for their convictions, have been the persecutors of Mrs. Eddy, forgetting the history of their own leaders, as well as their own Christian charity.

But that day has passed. Now only the bigoted and ignorant few are found indulging in unkind criticism of Mrs. Eddy or her religion. The great and beneficent work done by Christian Science has silenced the tongue of slander and vituperation and brought only words of commendation and friendly greeting from all broad-minded Christian people who have taken the pains to investigate its teaching and its works. This vast audience gives evidence of the great interest taken in Christian Science, and the eagerness with which all classes of people are seeking a more rational, practical Christian religion, which brings the message of hope and faith in the teachings and promises of the Master.—*Correspondence.*

EL RENO, OKLA.

Francis J. Fluno, M.D., lectured here on Christian Science Oct. 19. He was introduced by Major E. J. Simpson, who said in part,—

Christian Science appeals to me as something tangible, something good and strengthening. Under the influence of its teachings I have seen depraved appetites destroyed, homes made happier, the weak, physically and morally, grow stronger and better. I have gained holier thoughts than ever before of God and of His beloved Son. I know what it is to realize that God is Love. This one thought will some day harmonize every antagonism. As I look over this audience to-night I know and realize that creed and dogma are represented in their different forms, that many of those present entertain theories along religious lines which perhaps differ with those entertained by Christian Scientists; but no matter how great seem these variances regarding non-essentials, we may all meet, as we do meet, in perfect harmony in the recognition of God as omnipotent.—*Correspondence.*

ROCHDALE, ENGLAND.

Last night [Oct. 20], in the Rochdale Town Hall, a lecture on Christian Science was given by Clarence C. Eaton. The chair was occupied by R. A. Leach, Clerk to the Rochdale Board of Guardians. There was a crowded attendance, every seat in the large hall being occupied. People were present from all over the country, including London, Bristol, Bradford, Leeds, Liverpool, Bolton, Blackpool, Sheffield, etc. Among those present were the following Christian Scientists, stationed at Manchester: Lady Victoria Murray (daughter of the late Earl of Dunmore), Miss Coutts-Fowlie, and Maurice Saunderson (nephew of the late Colonel Saunderson). The chairman, on rising, said,—

Not being a Christian Scientist, the request made to me to preside at this meeting came with a great surprise. However, that request having been made under those circumstances, I was impressed with the fact that the Christian Scientists must be a very large-minded people, otherwise they would not have asked a person who is not a Christian Scientist to preside at this lecture. And as I like large-mindedness—unfortunately we have not sufficient of it in the world—I consented. You are not concerned to know, to ascertain, how much or how little I know of Christian Science. My Christian Science friends will say I know little or nothing, or I should be a member of their persuasion. I hope I am right in my impression, however, that Christian Science stands for an exposition or a revelation of the gospel of Jesus Christ, which, if accepted, will reduce to the irreducible minimum, if not annihilate, the miseries and the sorrows of humanity. Well, living my official life, as I do daily, constantly within the sight and within the touch of miseries and sorrows, I hope I am so much of a Christian as to welcome any exposition of the gospel of Jesus Christ which, if accepted, will cause the removal of these miseries.—*Rochdale Times.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"TO BLESS ALL MANKIND."

THAT the world is becoming more and more willing to admit the magnitude and importance of Mrs. Eddy's work for humanity, and to applaud it, is shown by the following extracts from an editorial in the *Denver Republican* of Nov. 27:—

Two days ago in Boston, the "hub of the universe" now as in the days of the ethereal Emerson, appeared the first issue of a daily newspaper accredited to the Christian Science Cause. As a foreword Mrs. Eddy wrote, "The object of *The Christian Science Monitor* is to injure no man, but to bless all mankind." To this we would say, Amen! . . .

It is not for us to enter into the metaphysics of Christian Science, its outer manifestations are of sufficient interest. We would place the Founder of the religion on a high plane, one of the potent factors in modern thought. If imitation be the sincerest of flattery, then Mrs. Eddy has been flattered in her lifetime as no religious teacher has been flattered and imitated in modern times. . . . Even the medical profession, which had nothing but scorn for the doctrine that "tubercles, inflammation, . . . are waking dream-shadows," has been prevailed on to change base and admit that mind is a factor often equal to if not greater than *materia medica*. Mrs. Eddy blazed the way. She broke down many prejudices. She was the pioneer in a world of materialism. . . .

The woman from the western world has her churches, free from debt, all of them, it is said; her weekly and monthly publications, and now her daily newspaper, which is to usher in, if it lives, the "federation of the world." A woman has done this, as the woman in the Orient who passed to her account the other day ruled a great empire, through the force of intellect. Genius waits not for woman's suffrage.

That the course which popular opinion would take in regard to Christian Science was clearly foreseen by Mrs. Eddy a great many years ago, is shown by her apt recognition of the truth contained in the statement of Professor Agassiz which she quotes on page 104 of Science and Health: "Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it."

That Mrs. Eddy's work is being imitated is in no wise evidence that those who are doing the imitating have reached what Professor Agassiz designates as the third stage. It simply proves that while the average mortal wants to be healed of his diseases, he is not yet ready to face fairly the necessity for surrendering his belief of life and intelligence in matter. When mankind have reached the point where they are ready to surrender this belief, Mrs. Eddy will have no imitators in the sense in which this word is now used, but the number of her followers will have been largely increased.

The *Republican's* tribute to Mrs. Eddy, and its recognition of the great work she has done and is doing for her fellows, will be appreciated by all Christian Scientists.

ARCHIBALD MCLELLAN.

"THE WAY OF HOLINESS."

THE 35th chapter of Isaiah is of peculiar interest to Christian Scientists, because it outlines so beautifully the results which must of necessity follow when divine Truth is clearly revealed and understood. Here, as in St. John's apocalyptic vision, divine realities are presented to human thought by means of symbols which may be readily understood. Mrs. Eddy says (Science and Health, p. 575) "spiritual teaching must always be by symbols;" so the prophet tells us that with the coming of Truth "the desert shall rejoice, and blossom as the rose." He also tells how the deserts of human hope begin to blossom at the breath of Spirit, when the word is spoken: "Be strong, fear not: behold, your God will come . . . he will come and save you." Then we have the fruition in the healing of disease,—the eyes of the blind are opened, the deaf hear, the lame "leap as an hart," and sorrow and sighing flee away.

No one who studies the signs of the times can fail to see that this glorious prophecy is being fulfilled in the present-day ministry of Truth, Christian Science. To reach the heights of Truth humanity must know the Christ-way and walk in it, and Isaiah calls this way "the way of holiness." What he says about it is not only highly interesting but intensely helpful to the one who is timid in undertaking the journey from sense to Soul. These are his words: "The unclean shall not pass over it; but it shall be for those: the wayfaring men, though fools, shall not err therein. No lion shall be there, nor any ravenous beast shall go up thereon, it shall not be found there; but the redeemed shall walk there."

In all Christian experience it has been customary to dwell much upon the perils of the way which leads to life. The Master did not, however, emphasize these perils, although he did say that the way is strait and narrow, and he also said, "Few there be that find it." When his students went out on their healing mission, the Master taught them how to overcome the threatened dangers which beset their path, and he said, "I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you." It is therefore evident that at no stage of our mental journey from belief in error to the understanding of Truth, from a sense of imperfection to the realization of man's perfection as the likeness of God, is there any cause for fear. Even before we have fully risen above the plane of material sense, the promise to those who follow Christ is this, "Nothing shall by any means hurt you."

When greater progress has been realized, when the "way of holiness" has been entered upon, the inspired Word says, "No lion shall be there, nor any ravenous beast shall go up thereon." Is not this a sufficient reason for pressing forward in the "new and living way," that we may speedily reach the plane where no "ravenous" or devouring thought can be found? The Master never hesitated to bid every one who came seeking help to follow him into "the way of holiness,"—to live the life of Spirit; and our revered Leader, in her many writings, has made it very clear how we can do this. Her article, "The Way" (Miscellaneous Writings, p. 355), cannot be studied too often. In it she says, "We must walk in the way which Jesus marked out, if we would reach the heaven-crowned summit of Christian Science."

ANNIE M. KNOTT.

"WHICH ART IN HEAVEN."

LIFE brings many experiences that beget distrust and discouragement, and the peace and happiness of the average individual depend largely upon how well he has learned, in his thinking, to bring every event into right relations with some abiding fundamental of revealed truth, some aspect of the infinite good which is clearly defined and immovable in the embrace of his faith and understanding.

Little children make their mistakes, and so do we. They are troubled over the transient and the trivial, and so are we. In all their experiences, whether of gladness or of

Digitized by Google

grief, they flee to the parental love for safety, communion, or comfort. Here unhappily the parallelism ends with, *not so do we*. The average man, though Christian, has not acquired the habit of instinctive reversion to his heavenly Father, in the hour of trial; he has not yet learned in a practical, problem-solving way that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

One can readily divine the seriousness of the hazard, the inevitable ill to the child, if he did not associate all his experiences with the brooding love that so instantly and so gladly answers to his call. Were he not thus love-enthralled, it would be simply impossible for him to escape the dangers, seen and unseen, which crowd the pathway of youth; and the lesson for us is plain. If we have not yet learned in every event and circumstance of life to turn to the Father "in heaven," with the realization that His eternal harmony and peace is reflected in all His creation, we cannot possibly know the comfort and safety which motherhood means for the little ones. Christian Science brings a new thought of "heaven," as the all-inclusive harmony of the kingdom of Truth, and a new sense of the exclusion of the disharmonies of human history from divine consciousness, and hence from real being. It thus awakens that realization of the undisturbed continuity of the manifestations of Truth and Love, which becomes a haven of refuge in every storm and stress of experience. Knowing with Browning that

God's in His heaven:

the Christian Scientist improves upon the poet's phrase in declaring that

All's right with [His] world;

and he is thus able rightly to relate in thought the world of material sense to the immutable facts of being by knowing the unreality of all its vaunted prerogatives and power. He is able to bring human events into logical relation with the fundamentals of spiritual thought, and his further ability to demonstrate health and peace in so doing gives him that sense of superiority to mortal experience which ever marks the Christlike man.

He who would overcome the world must learn to live in the larger event. Counseled by the sage, he will "hitch his wagon to a star." Counseled by Christ Jesus, he will know God as the Father "in heaven." Forgetfulness of the undisturbed and all-inclusive reality of being brings discouragement and doubt, heaviness of heart and weakness of will; but to have even a meager realization of the embrace and continuity of the "heaven" of divine consciousness is to have power over the surging sea of human sense. It is to acquire that command over the whilom annoyances, disappointments, and temptations of life which enables one to rejoice evermore; it is to possess and radiate that "peace of God" which is the seal of our commission "to bind up the broken-hearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound;" it is to bring to the sad and suffering the revelation of our Father which is "in heaven."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

New York, N. Y., Nov. 17, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—I have been most favorably convinced of your great wisdom in authorizing *The Christian Science Monitor* for the dissemination of important truthful daily news, the universal need for which is clear to me in conclusions drawn from my experiences regarding the ordinary newspaper. Since coming into Christian Science, about eleven years ago, my business has taken me into nearly every country of the globe, often, at first, into places where Christian Science had not been heard of; but what a wonderful yet divinely natural growth has been accomplished, covering to-day practically the whole of the civilized world. And yet Christian Science has made only a beginning, measured by what it will mean to all mankind in the near future.

During some of these long trips I have been deprived of the customary newspaper for many months at a time, until by habit I had become quite contented with very meager cable bulletins of home news items. I was, however, often greatly disturbed and mortified to find that usually at every American consulate could be seen only copies of two of the most notorious of the "yellow journals." My embarrassment will be appreciated when it is known how the people of our good United States of America are actually judged and measured up by the flaming head-lines and record of practically only the horrible, criminal, and degenerate happenings and conditions printed by the ordinary newspaper. Many times I have been asked by foreigners, in their country, Why do not the better class and law-abiding people of the United States rise up and take control of things, so that it will be possible for a person to walk on Broadway or to cross the continent by train without being "held up," sandbagged, or murdered? Their belief that these conditions generally prevail, to the exclusion of personal safety, comes from the newspapers which are sent regularly to these countries. Such an immense amount of good could be accomplished in this direction by the *Monitor*, that if it is practicable to send copies regularly (say weekly) to every consulate throughout the world, I should be pleased to contribute to a fund to cover such expense.

I know that the *Monitor* will be greatly appreciated by a large body of good people who are not yet interested in Christian Science, and its seed will bring an hundredfold increase of the understanding of Truth and Love to mankind.

Gratefully and sincerely,

CHARLES GRIFFITH YOUNG.

Washington, D. C., Oct. 19, 1908.

Dear Mrs. Eddy:—The united Christian Scientists here at the national capital have just recorded an evidence of progress in making the final payment on the debt assumed in the purchase of the church property. In meeting this obligation we have not failed to remember the oneness of the Cause and the ever-widening grooves of its operation. We have therefore shared in the privilege of contributing to the building funds of The Mother Church and of the publishing house at the same time that we met our own building fund obligations. The constantly increasing interest in Washington in Christian Science necessitates immediate steps being taken for the selection of a site and the erection of a larger building. For the unity and spiritual growth to which these steps bear evidence we are sincerely grateful to you, as the Discoverer of the Science that is divine, and as the Leader who has made plain to us the rule of harmony by which we have the assurance that we are working with God.

By order of the Board of Trustees. First Church of Christ, Scientist, Washington, D. C.,

WM. S. CAMPBELL, *Acting Clerk*.

New York, N. Y., Oct. 27, 1908.

Dear Mrs. Eddy:—An unusual incident occurred the other day, illustrating the progress of your discovery. On entering my waiting-room, four people were found—one an osteopath, one a druggist (formerly attached to the private dispensary of the Czar of Russia), and two

Digitized by Google

doctors of the old schools. All were there for treatment except the osteopath, who had brought his friend the druggist. The change made some time since in Science and Health (p. 424, l. 22) has appealed to me more strongly than any other, except perhaps that which I might style its correlative, page 211, l. 23. Any one who has attained even as much (or as little) understanding of Truth as have I, can see how unutterably silly it would be to think any other than yourself—your real self—could be the author of Science and Health, for the hand of God can be traced on every page and in every clearer interpretation of Truth.

Yours faithfully,

WENTWORTH B. WINSLOW.

Binghamton, N. Y., Nov. 11, 1908.

Beloved Leader:—May I express my gratitude to you, the one whom God ordained to give the blessed message of Truth to a sin-sick world. I think I am beginning to realize from an earnest perusal of your works, including the daily study of Science and Health, the magnitude of your life-work, and as you have said, "obedience is the test of love," I am earnestly striving to be obedient to the demands of Christian Science, which means to leave all for Christ, Truth, and to love one's neighbor as one's self. The divine Principle, Love, which enabled you to endure the world's frowns and to bless all in times of great persecution, is still sustaining and comforting all those who are loyal and true. With deepest love,

Your student's student,

MRS. LOUISE C. BENEDICT.

Spokane, Wash., Nov. 18, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Beloved Leader:—Last Sunday the children of our Sunday School voted to send a contribution of fifty dollars to the Publishing House Building Fund. I should like you to know that this offering was an expression of love and unity, and that the children manifested a keen interest in the announcement of the publication of *The Christian Science Monitor*. The older members of the Sunday School are showing their gratitude to you and their love for the teachings of Christian Science by becoming earnest students of the Lesson-Sermons.

Lovingly yours, in behalf of the Sunday School,

IDA L. BAKER, *Supt.*

Worcester, Mass., November, 1908.

Dearly Beloved Leader:—It is more than twelve years since I was restored to health, after an eminent physician had pronounced my trouble quick consumption and limited my life to three months. As I found myself growing weaker day by day, apparently in fulfilment of his predictions, I began to be conscious of God's presence, love, and power, as never before. He became a reality to me, fear vanished, and my cry went forth continually for Truth. It is clear to me now that my thought was merely receptive to the glorious, life-giving truth which even then was being revealed to the world through you. A few weeks later, when my hopes were high, though still unable to leave my bed, Science and Health was placed in my hands, and I drank it in eagerly, never doubting its truth nor questioning those things which I could not then understand. I knew the hand was clean that had penned such thoughts, that the channel through which they had come was true and good. My recovery, through the aid of God alone, was rapid, and I came into possession of such health and strength as I had hardly deemed possible.

Many times I have written you some feeble expression of my deep gratitude and love, only to destroy the letter lest I intrude upon your crowded time. A short time ago, however, it occurred to me, after reading in our little church the splendid Lesson, "God the Preserver of Man," that in common gratitude I ought to try to express something of my joy in His wonderful preserving power, of which we should still have remained ignorant but for your faithful and devoted effort to find the healing Christ, Truth. Since my healing my most earnest desire has been to bring others to a saving knowledge of God, and for the past eight years I have been able to do this with an encouraging degree of success.

With the earnest love of my husband and myself,

Faithfully yours,

EVELYN SYLVESTER KNOWLES.

San Francisco, Cal., Nov. 17, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—A little band of twenty-four have withdrawn from membership in First Church of Christ, Scientist, in San Francisco, and have organized under the recent By-law as Second Church of Christ, Scientist. The crowded condition of the former church, also the urgent need for the establishment of a Christian Science church in what is called "the mission district," were the reasons for the move. The first service was held on Sunday morning, Nov. 15, and was largely attended. We rejoice in this advance step in our city, and as members of Second Church we hope to follow faithfully the path you have set before us. In the *Journal* of June, 1904, are these words of yours: "The Church is the mouthpiece of Christian Science,—its law and gospel are according to Christ Jesus; its rules are health, holiness, and immortality, —equal rights and privileges, equality of the sexes, rotation in office."

May we "watch and pray" that our light be not hidden "by bringing forth the fruits of Love,—casting out error and healing the sick" (Science and Health, p. 35). We are indeed grateful that this is made possible to-day through the understanding revealed to us in "Science and Health with Key to the Scriptures."

Your loving followers,

Second Church of Christ, Scientist,

ANNIE M. CHILDS, *Clerk.*

Cambridge, Mass., Nov. 26, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—Allow me to congratulate you, along with your able editorial staff, on the successful issue of *The Christian Science Monitor*. There are few who can appreciate the magnitude of this grand project. I do not profess to have an adequate concept of it myself, but I know something of what it meant to my father to start one of the first penny newspapers in Scotland. It is only when I realize that the purpose of this grand movement lies hidden in the heart of infinite Love, that I can view the whole scheme with some degree of complacent assurance. What is this purpose? Is it not an unselfed love, that would devise means and methods by which to reach a helping hand to humanity, seeking to make their burdens lighter, their hopes brighter, and their thoughts purer? Dear Leader, I cannot express what I feel about this, but I pray that more of the love you have lived may permeate our hearts and lives.

With grateful affection I remain,

Most sincerely yours,

JAMES J. ROME.

AMONG THE CHURCHES.

MINNEAPOLIS, MINN.

Second, Fifth, and Sixth Christian Science churches held a union service Thanksgiving morning at Second Church, Eleventh Street and Second Avenue, S. The occasion was indeed inspiring, and must have attracted the attention not only of those who are not Scientists, but even of the Scientists themselves. The spirit manifested was one of great joy and thanksgiving, and was exemplified in a spontaneous outburst of testimonies, which were sixty in number and all of them expressed love and gratitude to God and to our Leader for manifold blessings received. We had a very large number of people, completely filling the church, and it seemed as though the very atmosphere was permeated with joy and gratitude for Christian Science and for the privilege of uniting in the Thanksgiving service.

Correspondence.

YONKERS, N. Y.

First Church of Christ, Scientist, of Yonkers, N. Y., held their opening service in the newly-acquired church edifice on Greenvale Avenue, Thanksgiving morning, Nov. 26, 1908. The steps leading up to this demonstration of the fulness of supply for all human needs, are interesting to us and may be helpful to others.

In June, 1903, Christian Science services were begun in a parlor at Hastings-on-Hudson, N. Y., and had continued there for a short time when it became evident that this was not the best place, Hastings being but a small town on the outskirts of Yonkers, a city of seventy-five thousand inhabitants, in which no Christian Science services were held. It was therefore decided to transfer our labors to the larger city, which was done in December, 1903, a small studio being offered as a place of meeting. Here we organized as a society, soon outgrew the room, and engaged a store in the same street. We then began Wednesday evening meetings, and the growth was so steady that within the year we were again obliged to enlarge our borders. This time a room in an office building, centrally located, was secured, and as it was large and bright, it seemed to offer us a home for some time to come; but after incorporating as First Church of Christ, Scientist, in March, 1906, the necessity of securing a permanent place of worship forced itself upon us.

We had been devoting our basket collections on the first Sunday of each month to The Mother Church Building Fund, and when the church was completed, we continued these collections for our own building fund. A committee was appointed to find lots suitable for our purpose, and this resulted in the purchase, in September, 1907, of five desirable lots in the old residence portion of Yonkers, which lots we held until it became very evident that Love was urging us to move outward, upward, and onward. No hall or room suitable for our needs seemed obtainable, and the problem began to take on the semblance of a difficulty; but we knew that divine Love was leading, and would supply our need, and from quite an unexpected channel a lovely little chapel, with grounds and furnishings, and which had a seating capacity of about two hundred and fifty, was offered us. This chapel had been occupied by an Episcopal congregation, now dispersed, and was comparatively new.

At a most harmonious meeting of the church, held Sept. 21, 1908, it was unanimously voted to sell our lots and purchase the chapel. Notwithstanding the pessimistic prognostications of real estate men, to the effect that we should "find it hard during the present drop in real estate and finances to dispose of the lots," an offer was made and accepted by us whereby we were enabled to pay cash for the chapel and settle for our new lots, with the exception of a small mortgage, which through the kindness of the friend from whom we had purchased the lots was transferred to the new property. The deeds were signed and delivered on Thanksgiving eve, and our first service there, as stated above, was held on Thanksgiving day. A day of thanksgiving it indeed was to us. Our hearts overflowed with gratitude to God, and to our beloved Leader, whose greatest work for mankind has been to teach them the utter nothingness of limitation, and the limitless possibilities of man when consciously reflecting the one infinite intelligence, God.

Both the Thanksgiving service and that of the following Sunday were largely attended, and the happy indication is another near step in expansion. Our church as a loyal branch strives individually and collectively to second and carry out the grand purpose of its parent Vine, The Mother Church, by holding "thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 251), so that these may be brought not only into our own lives but into the lives of other wayfarers, who in their turn will arise with us, and call God's faithful messenger to this age, our revered Leader, "blessed."—*Correspondence.*

VAN WERT, O.

The Christian Science Society held its first regular service in the home of Mr. and Mrs. Watts on West First Street, March 16, with less than ten members. On June 14 they held their first public service in Zimmerman's Concert Hall, which had a seating capacity of forty, but it has since been necessary to add a dozen more chairs. Beginning with Dec. 1 they will have a free Reading Room open to the public. They will also have a Sunday School. The members are rejoiced over a rapid progress and are beginning to think of the next step, which will be the building of a church.—*The Daily Times.*

EXCELSIOR, MINN.

The Christian Scientists of Excelsior have purchased the Brutton residence at the corner of First and Center Streets. They plan to remodel and repair the dwelling to meet the needs of the constantly growing congregation, and for the present will have a very desirable church home. The location is most satisfactory, as it is easy of access from all parts of Excelsior, the trolley line, and the lake. When the congregation outgrows this remodeled dwelling, these corner lots will make a beautiful site for a church edifice.

Minnetonka Record.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local newsdealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

TESTIMONIES OF HEALING.

All my life I had been a sufferer. Sudden and serious breakdowns had cut short every strenuous effort to accomplish anything. For two or more years prior to 1898 I had "suffered many things of many physicians." More than once my life had been despaired of, but I would rally only to meet continued suffering, until my joy, my hope, and my home were gone, and I lay at death's door under an acute attack of rheumatic trouble. A dear old-time friend had been sent for, to see me before I should pass on. She came as she had done many times before,—to render relief from the sense of suffering; this time, however, she brought the message that was to free me from suffering sense, for she had just entered upon the narrow way of Christian Science.

Her former loving services had given her a right to the initiative, and I shall never forget the sweet humility that characterized her request to be allowed to give me a treatment. Viewing it now, in the light of what she had to give, I wonder that I could have granted it reluctantly; but my blind faith in Christianity had been destroyed in the light of better reasoning, and I could conceive of no alliance between religion and Science. She, however, wrestled silently in that prayer which brings down healing from the source of all good,—that prayer which is desire, born of divine Love. I rallied at once, in response to its call to life and action; and for a few days I read continually that inspiring book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

At first I could see but little in it, but as I advanced it dawned upon me that this religion was a complete reversal of all material statements; that to know God aright we must turn from all material testimony, and reach out after the testimony of Spirit, God, unadulterated by human concepts, unmixed with mortal confusions. The command, "Choose you this day whom ye will serve," was for me. I obediently arose from my bed, though with great trepidation and pain, and cast all my medicine out through the open window, declaring that henceforth God should be my only physician.

Immediately following this experience, and without having time to recuperate, I was put to a crucial test. My dear and only sister, who had so tenderly cared for me, fell to my hands to nurse, under medical treatment, with no hope of her recovery. I had also the entire care of the household. This labor of love lasted, with intermittent help, for four months; and my sister was, at last, committed to the grave. Because of all these trials and temptations a sure breakdown was predicted for me, but it did not come. I have since then been able to overcome many predictions of breakdowns, both for myself and others, through the blessed light of the Holy Scriptures, unlocked and illuminated by the never-failing Key, Science and Health. True to my choice, God has been my only physician since that time, ten years ago, and I have seen many manifestations of His power. I am doing all the time what my hands find to do, with rejoicing, and am waking more and more to the sweet demands of Truth, which is of itself the greatest reason for rejoicing.

This may be thought a tardy testimony, but in lifting the bushel my candle is found still burning, and I pray God that it may guide some lone wayfarer to the threshold of man's true inheritance. I still believe that all humanity desires to be kind, and that if the world could perceive even a fractional part of the injustice it has heaped upon the true benefactor and Christlike woman, Mrs. Eddy, it would accept her teachings in humility and contrition. I cannot fittingly express my gratitude in words, but hope to do so in a life consecrated to good works.

MRS. MARTHA C. SPRAGUE, Chicago, Ill.

It is with a deep sense of gratitude to God, and with the greatest appreciation of our beloved Leader, that I acknowledge what Christian Science has done for me. When about twelve years of age I was suddenly attacked with asthmatic trouble, and the doctor was called. He said the disease would not prove fatal, but that I could never be cured. This was a discouraging outlook, and during the years that followed, as youth passed and manhood came, the doctor's words seemed to have come true. During these many years I had a hope, however slight, that I might get well by some material means, and consequently I tried almost everything that so-called science had to offer, including drugs, electricity, dieting, physical culture, etc., but all to no avail. As a change of climate has always been recommended for this ailment, I came to Colorado after trying different parts of California, yet again I had to face disappointment, as the change did not benefit me.

But man's extremity is God's opportunity; Christian Science was being much discussed, and my curiosity was somewhat aroused. I secured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy from the public library, and that was the turning-point of my life. I read the book, but understood little; yet somehow I realized that the truth was there. I finally went to a practitioner, who treated me eleven weeks, and, thanks to God, I was brought into a realization of the truth that destroys all error or disease, until now my trouble has been overcome. I am most truly thankful that the truth has again been found, and that Christian Science enables all who will strive for an understanding to realize the meaning of the words, "Thy kingdom is come; Thou art ever-present" (Science and Health, p. 16).

CHARLES H. MERK, Denver, Col.

[Translated from the German.]

I desire to relate my experience in Christian Science. For five years I had lung trouble; with constant fever and headache. Different physicians pronounced me incurable, and I tried all possible material means, but found no help. I then heard of Christian Science and took treatment. After the first treatment I was much relieved, and could perform my household duties the following day, to the great surprise of my husband. I was perfectly healed in six weeks. For this revelation of divine Love my heart is overflowing with gratitude, and I am striving daily to draw nearer to God, divine Mind, that I may lay aside all the old errors which hinder us. I thank God for showing us, through our beloved Leader, Mrs. Eddy, the way to find health and peace.

CHRISTIANE BERTSCH, Stuttgart, Germany.

I am glad to acknowledge the great benefits I have received from Christian Science and trust I may express, in a measure at least, its great healing and saving power. I have received a great deal of help in the healing of minor physical ailments, but that which seems even greater to me is my business success. I had been a teacher in the public schools, but desired to change my vocation for a business life. I took a course in shorthand during a summer vacation, devoting an almost equal amount of time to the study of Christian Science and also giving it the preference. I worked with the hope that a position would be offered me as soon as I was ready for it.

As I was among strangers, and had no one to look to for influence in aiding me to secure a position, I felt that I was wholly dependent upon divine Mind; and when, before the expiration of three months,—even before I had completed my course,—I had the offer of a position, which I accepted, I felt that Mind had supplied it and that Mind would sustain me and enable me to do the work properly. This was work for six weeks only, while the regular

Digitized by Google

stenographer was away on a vacation. I completed the work, and there was an interval of only two days before I was again offered a position, which proved permanent and where the true test came, as I went on trial. A Christian Science practitioner aided me greatly to understand that by reliance upon divine intelligence I would be fitted to hold this apparently difficult position. I feel that this is purely a demonstration of the blessings in store for all those who look to divine Truth for their supply.

The thing I prize most highly is the fact that I am daily enabled to rise in thought, and behold if but faintly that "now are we the sons of God;" that we are privileged to work out our own salvation and out of all mortality. I wish to express my gratitude to Mrs. Eddy for helping humanity to perceive this beautiful truth which is the "bread of life."—ORA M. SMITH, Lake Charles, La.

I am thankful for this opportunity to express in part what Christian Science as taught by our dear Leader, Mrs. Eddy, has done for me. For nearly three years I suffered with a disease of the knee-joints, although using all kinds of home remedies and trying different medicines. The joints were becoming worse all the time, however, and for months I could not walk at all. I had different doctors and different treatment; sometimes I was hopeful and again in despair. Two of our best doctors said there was really no hope for me—that I was too old, being fifty-five years of age at that time.

This was a very sad and discouraging state of affairs, as I am compelled to support myself, but at this time I learned of a friend who had been healed through Christian Science, and I was soon ready to take up this great and blessed truth. Oh, if I could only tell all that it has been to me, but words fail me! After a very few treatments I was able to walk as well as ever before, and I have also ridden a bicycle the past two summers. My work calls for much walking, which I have been able to do winter and summer, for nearly three years since my healing through Christian Science.

But this bodily healing which I have received is not to be compared with the spiritual healing,—the peace, the joy, the love, and the harmony that is to be found in this blessed truth! It is indeed the peace which passes mortal man's understanding. My longing desire is to be more worthy to bear the name of Christian Scientist.

MRS. MARY J. POWELL, Bay City, Mich.

It is now more than four years since I first knew of Christian Science. I was in a pitiable condition, suffering from bowel trouble in a very serious form. The remedies used daily caused intense suffering. I had undergone one operation without any relief, when a dear friend asked me to go with her to a Christian Science practitioner. I did so, and the third day I had entire relief, after having been in a partially paralyzed condition for five years. I continued with this treatment one month, and then discontinued it; then I began to grow worse than ever. I was told by four of the best physicians that if I did not consent to a second operation of a much more serious nature than the first, I could not live longer than three or four weeks. I felt that I would rather die than again undergo that ordeal, and utterly discouraged and in intense mental suffering I sought another Christian Science practitioner. I shall never forget how tenderly she talked to me, and how the light broke into my prison cell when she told me that God did not afflict me, showing me that God's creation is perfect. Health and peace came very quickly, and to-day I am a well woman. I had tried every known medicine for that kind of trouble, bearing witness to the truth of Jeremiah's statement, "In vain shalt thou use many medicines: for thou shalt not be cured." Besides being healed in Christian Science of this distressing bowel trouble, I took off glasses, which I had worn fourteen years. I use them now only to read with, but I know I shall not use them always even for that, as the eye is constantly growing stronger.

To say that I am grateful to God, who is all-power, for these blessings but feebly expresses my thought, as I owe all I am and have to God, and to our dear Leader, who has made the truth known to us.

MRS. KATIE KING, Indianapolis, Ind.

In November, 1907, I had two badly injured wrists healed by one treatment from a Christian Science practitioner. For this and other blessings I am humbly thankful to God and to the Discoverer of Christian Science.

L. A. RUSSELL, Alliance, Neb.

After being treated by several of the different schools of medicine, and getting no relief, I turned to Christian Science, and in one week's treatment from a practitioner I was healed of a complication of diseases, the worst being stomach trouble. I am deeply thankful for this healing and for the spiritual uplifting which I have received through reading Science and Health. It has been truly wonderful. For all of these blessings I am indeed very grateful.—MRS. L. A. RUSSELL, Alliance, Neb.

I feel that I should no longer put off acknowledging, at least in a measure, what Christian Science has been to me and to my entire family. A little more than four years ago it was recommended to us by one who knew of the shadow of gloom which was hovering over us, and in his desire to stand for the truth which he had tried and proved, he told us of it. At that time we were searching everywhere for the freedom of our loved one, who seemingly was doomed in his innocent childhood (according to medical opinion) to a helpless and suffering existence. The doctors even went so far as to say just how many years he could live. This verdict caused great mental depression and consequent physical breakdown in my already delicate constitution, and thus in our extremity we gladly turned to that which held out the last hope.

Had I the space herein to relate it, I could hardly express all that Christian Science has been to me, but I will gladly tell at least a part. From being a delicate and almost useless wife and mother, I am to-day, through Christian Science, a well woman, and more of a helpmeet than a care. My family is also free from the medical law that declared us a sickly household. Our physician used to say laughingly that his horse stopped at our door without being reined in. This physician had not seen me for over two years until the day my baby was born, two years ago, when he remarked to my husband that he could not realize I was the same woman. I wish to add that this baby was born under Christian Science treatment and has always manifested health and joyousness and has never had any material remedies. Any little physical disorders which appeared were soon dispelled by the law of Truth, which always makes free when applied in sincerity. Our son, now twelve years of age, has steadily and surely outgrown the abnormal condition of his earlier years, and manifests the harmony of God's law. From being an irritable, nervous, and almost unmanageable child, he has grown to be gentle, quiet, and lovable, and is coming by degrees into the realization of law and order.

Our mother passed her eighty-first birthday last July. Having been reared under much theological thought, and surrounded by ministers and elders, her antipathy to what she conceived of as Christian Science was most pronounced; but ere long prejudice was replaced by interest, and about

Digitized by Google

three years ago the light of Truth shone into her receptive consciousness, and daily since she has followed as best she could its teaching. With every test of its sweet and sure power, she loves it more and more, and daily she studies the Lesson-Sermon, does her mental work, then enjoys the perusal of all our good literature. Our joys and blessings through Christian Science have been and continue to be many, not the least of which is the liberty and light by which we are able to help our fellow-men. In our former belief this help was not so general, nor was our religion then uppermost in our thought,—the best loved theme with us; but we now find that there is nothing half so important as our religion, for it is our very life, and it is from God, who alone is Life. I know not how to express half the love, gratitude, and reverence which I feel for our Leader, but I do know that I sincerely desire to follow more and more closely and humbly her teaching. Physical freedom all naturally desire, and to each of us it means much, yet Christian Science gives us something more than that, something beyond it, wherein by degrees we learn how to gain and retain this longed-for physical freedom, by separating in our consciousness the wheat from the tares, and in proportion to the thoroughness with which we clear the weeds out of our mental gardens, so will be our spiritual harvest.

While expressing somewhat my gratitude for what Christian Science is to us all, I must not fail to mention how very helpful are our wisely compiled Lesson-Sermons, which are daily studied in our home; also the great benefit derived from the *Sentinel*, *Journal*, and our dear Leader's many writings. These books and periodicals have supplanted for us the novel, and they leave but little desire or time for other reading. I would here express my sincere appreciation of those good workers who are so faithfully and judiciously furthering this great Cause in writing for our publications, whereby many are fed in the lonely wilderness,—those who are not so fortunate in respect to churches, meetings, etc., as are we. It seems to me most appropriate that we have increased facilities for those at headquarters who are engaged in so important a work, and gladly should each of us give for this object.

MRS. ELIZABETH R. STABLER, Baltimore, Md.

After a severe attack of illness in 1889, while attending boarding-school, an organic throat disease with which I had always been troubled, seemed aggravated, and became so serious that my mother was sent for. The attending physicians decided, as throat specialists had said before, that an operation was necessary. I was told that I could never use my voice to sing again. My mother was becoming interested in Christian Science (she had been healed of chronic ailments through reading Science and Health), and advised my having Christian Science treatment, which I decided to do, though I had no idea it would heal me. I visited a practitioner three times a week for about three weeks, and was perfectly healed. My vocal studies were resumed, and I continued to sing and teach for many years, never missing an engagement. Deeply impressed by this healing of my throat, as well as of other ailments as they came up, all being promptly overcome when I sought the help of a Scientist, in a few years a great longing to know more of this healing Principle, how to help myself, was rewarded by the privilege of class instruction.

Words can never express what the understanding of Christian Science has brought into my life, in so far as I have apprehended and put into practice these glorious truths of right thinking and living. There is an abiding consciousness of quietness, peace, and an assurance of God's care that enables us to meet each experience as it comes, whether it be small or great. Science and Health has indeed been the "Key to the Scriptures," unfolding the spiritual truths in the dear old Bible stories and making them clear and practical realities for daily demonstration in this century. Our children were born under Christian Science treatment, and in each case the birth was natural, with very little discomfort, and I was about the house in a few days and out to church in a week. I have always found Truth the quickest and best remedy for all ills. Coughs, colds, and accidents have been overcome with Truth alone, and quickly as a rule. When our little babe passed away suddenly, this promise in the 23d Psalm was proved true: "Yea, though I walk through the valley of the shadow of death, I will fear no evil; for thou art with me; thy rod and thy staff they comfort me." We have learned that "God is our refuge and strength, a very present help in trouble;" that death has lost its sting, and there is no victory in the grave.

We are grateful to God, and to our brave and fearless Leader, Mrs. Eddy, who can be moved neither by persecution nor praise, and who asks us to follow her "only so far as she follows Christ" (1902 Message to The Mother Church, p. 7).—HARRIET I. ENGLAND, Chicago, Ill.

I wish to express my gratitude for what Christian Science has done for me. For nearly a year I was constantly under the care of a physician, without being benefited, my doctor telling me I could not be well without an operation. It was then that I turned to Christian Science and was healed. One of my many ailments was a severe cough, which troubled me night and day. I was entirely healed in two treatments, last winter being the first in eight years that I have not had that dreadful trouble. My little girl was also healed in three treatments of a severe cold.

I am indeed grateful for these, and many other demonstrations of the power of Truth, also for the spiritual awakening which Christian Science has brought. I am thankful to our dear Leader, who has given us the truth.

MRS. FRANK DILGERT, Atchison, Kan.

I have always, since childhood, thought it the duty of every one to help their fellow-beings when they were in need, and I think that by giving my testimony of healing through Christian Science others may be helped in the same way; I therefore gladly give it. About seven years ago, after having suffered for three years from stomach and bowel trouble, with their train of ills, I turned to Christian Science. I had been taking medicine six times daily for these ailments, and besides these I had an internal growth, which the doctors told me could not be cured except by the use of the knife. As I felt the result of an operation to be very doubtful, I was in despair, and I came to Christian Science, thinking that it would do me no harm if it did me no good, once more proving that "man's extremity is God's opportunity." I sought a practitioner, threw away all material remedies, and was healed of the stomach and bowel trouble in one present treatment. Since my healing I have eaten anything I wish, without restriction as to quality or quantity, and with no ill results.

Under continued treatment for the abnormal growth, that also disappeared. At the end of two months I was a well woman, and have since remained so without the use of any material means. I have also learned how to help myself and others. Best of all is the mental and spiritual uplift gained by studying the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It is indeed a "Key to the Scriptures." Before studying it, I read the Bible from a material standpoint; now I study it with spiritual understanding.

I am thankful for all of the Christian Science literature, for the *Sentinel* and *Journal*, and the lectures are very help-

Digitized by Google

ful. I can express only in works my gratitude for this healing truth, which teaches us our relation to God as His children, and which gives us dominion over all things, as promised in the Bible.

MRS. ALICE WOODWARD, Placerville, Cal.

When I sought Christian Science it was not to gain spiritual understanding of God and man, but wholly for the physical help which I had heard one could derive through its teachings. The physical benefits to me and mine have been many, but they are small indeed compared to the spiritual awakening I have received while earnestly reaching out for the physical. In the fall of 1905 I was strenuously seeking light in Christian Science. I was not willing to wait, but was ever busy with the deeper questions, and trying to solve all in a day. Returning home one day from a neighboring city, one of our Leader's students was on the train, and I asked him how he could say or explain (as I was sure he would) that there was no reality in the awful pain which I knew I then had. Instantly he expressed an emphatic denial of the evil that was causing my suffering. I was startled, but was quite positive that I at that very moment was suffering severely. Then the Scientist lovingly turned my gaze "from the false evidence of the senses to the harmonious facts of Soul" (Science and Health, p. 420), and the spiritual sense of Life, God, was explained to me. The truth was so simply elucidated that I saw the fallacy of my human contention, and the healing was instantaneous. In now over three years there has been no return of that old physical enemy.

At that time I was physically and mentally on the verge of collapse. I dared not go out without protecting (?) myself with a so-called cure, and as in the case of Job, "the thing which I greatly feared" came upon me. I have received many physical benefits through the understanding of Christian Science. I have laid aside glasses, after having worn them for years. Meanwhile I have found that willingness to learn and to serve blesses and enriches. Not only can I now see without glasses, but the spiritual healing is enabling me to do the disagreeable things, sometimes necessary, without complaining. The past year I had the great privilege of receiving class instruction from one of our Leader's students, and since then the spiritual unfolding of the Bible and of Science and Health has been a revelation to me. The Bible had long been put aside, but now it is in daily use, as is our text-book; and I pray to see Truth so clearly as to reflect the Christ-spirit, and through living and healing to prove myself to be a Christian Scientist. I hope also to prove by good works my gratitude to God, and to our beloved Leader.

MRS. ANGES VINTON KNIGHT, Plainville, Conn.

I became interested in Christian Science a little over two years ago through the healing of my daughter. Through the understanding of this truth I have had a good many demonstrations, of one of which I should like to tell. For several years I had not been able to pick a certain flower without my hands becoming seemingly poisoned; in fact, I always wore gloves when picking them. After coming into Christian Science I went out one day to gather some, and as I stood looking at them the thought came to me, How can a beautiful flower like this have poison in it? Then I realized that it had not, for God never made poison. This time I experienced only a slight feeling of irritation, and after that I was entirely free from this trouble. I am very grateful for Christian Science, because of what it has done and is doing for me, and my sincere desire is to help others.

MRS. EMMA SKINNER, Toledo, O.

It is only just that I openly acknowledge some of the blessings received since coming into Christian Science. When it came to me I was in great need physically, but in much greater need spiritually, though I did not realize it at the time. A few weeks ago while sewing I injured a finger severely. I immediately began to declare the truth, and in less than an hour this finger had no more sensation of soreness than any of the others. On another occasion this experience of almost instantaneous healing occurred. My nephew came home from his work with a high fever and other alarming symptoms. He asked me to treat him, but he seemed so ill that I felt it the part of wisdom to telephone a practitioner. The healing began at once, and by the time he went to bed he seemed to be almost well. He got up very early the next morning, and went a distance of seventeen miles to his work, and that was the last we heard of the trouble. For all these blessings I am more than grateful to our dear Leader, Mrs. Eddy, who has taught us how to understand the Word which is the light of the world.

ETTA SCOTT BEATIE, Millbrae, Cal.

For fifteen years I was unable to have any dental work done, not being able to hold my mouth open long enough, owing to extreme nervousness. Every attempt met with failure, and my teeth were in a dreadful condition. Finally a front tooth was broken off, and I wrote a Christian Science practitioner, telling her of my distress. She wrote me to come to New Orleans, and that she would go with me to a dentist. I did not explain to her that I could not hold my mouth open longer than a second or two, so the first visit was a failure, but the practitioner told him that we would come again the next day. She went with me to a hotel, and gave me treatment, and the next day we went back to the dentist. Not only was I able to have the trouble with the front tooth remedied, but I also had two more teeth fixed the same way, besides having one crowned, and bridge work on upper and lower jaw teeth.

That I was able to have all of this work done after fifteen years of invalidism was an astonishment to my husband and relatives, for faithful efforts had been made before, one physician going with me to the dentist and beside giving me tonics, had tried to infuse me with courage through his will-power, but it all resulted in failure. There are some who think that this work was accomplished through will-power, but I know that it was none other than the power of God which sustained me. I had tried will-power sufficiently to know that in my own strength I could do nothing. I am very grateful for this demonstration, but more so for the change that has taken place in my disposition. Whereas before I was selfish and exacting, requiring my husband and others to do so much for me,—almost to think for me,—now I am quite independent of others, knowing that God is the source of my strength. I am deeply grateful to Mrs. Eddy for Science and Health.

MRS. W. P. HAYNES, Lumberton, Miss.

[Written for the *Sentinel*.]

WHEN IT IS DARK.

AMY RUTH WENZEL.

As one who rises while as yet 'tis night,
And at his window waits to see
The first faint rays of dawning light,
So wait I, healing Word, for Thee.

I cannot bring the light, but this I know,
That night has never place in Thee;
And, trustful, watch until the glow
Of Thine own day dawns new on me.

FROM OUR EXCHANGES.

[Rev. Charles Cuthbert Hall as quoted in *The Outlook*.]

"As we begin to realize how complacently and confidently we have assumed that the world can only be Christianized by adopting our theologies and our sectarian forms, solemn questions suggest themselves: Who ever gave credentials of universality to Western clerical orders, or to Western ecclesiastical institutions, or to Western denominational confessions? Has God ever pledged Himself to complete the Christianizing of the world through these means? Has God ever limited Himself to the Anglo-Saxon interpretations of the Christian faith, and set aside as unusable those extraordinary gifts of religious discernment that are peculiar to the temperament of the East? Has God ever disowned those mighty religious aspirations that fill the old ethnic faiths, surviving in pathetic vestiges of their former majesty amidst the modern degenerations of those faiths? Is He not, by the might of His spirit, able to subdue and purge and transform and recreate those gifts and those aspirations, dedicating them to the knowledge and worship of the Son of God? St. Paul, amidst the decay of Israel, could cry, 'Hath God cast away his people? God forbid. . . . God hath not cast away his people which he foreknew.'"

[*The Examiner*.]

Every ideal which we communicate to another enriches us. Our holding of it is a little more secured by the fact that we have given it to a neighbor. We have also attached him a little more firmly and largely to us, and so have enriched our inheritance in him. We have also enriched the atmosphere in which our own life is to be continued and ripened. . . . The cream and richness of life is to be found not in things but in spiritual matters, such as ideas, dispositions, affections, friendships, and helpful service. . . . The largest and enlarging fellowships and friendships among peoples and nations are in the ideals which they cherish,—the wealth of ideals we are glad to have our neighbors make themselves at home with, and help themselves bountifully to.

[Rev. John Haynes Holmes in *The Arena*.]

If it is not the business of the Church to concern itself with the ills from which modern society is suffering, then it has no business to transact; if it is not the duty of the Church to fight the good fight for mercy, justice, and truth in the every-day world of every-day affairs, then it has no duty to discharge; if it is not the mission of the Church to plunge right down into the muck and mire of the world and make it clean, then it has no mission whatsoever to fulfil.

[*The Christian Register*.]

Religion is becoming a more cheerful affair than it was. The government of the Almighty is less feared and more loved now than it was in the days of the Pilgrim Fathers. Out-of-door life, fresh air, and sunshine are driving away some of the gloomy thoughts and forebodings of good men and women, and bringing back in some measure the mood of rejoicing which expressed itself in so many ancient psalms and hymns of praise.

[*The Christian Life*.]

There can be no real disharmony or contradiction between scientific truths and religious truths, though there may be seeming antagonism if men of science or men of religion mistake theories or gratuitous assumptions for verities. Truth is, and always must be, a unity, even as is the God of truth.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture By Rev. ARTHUR R. VOSBURGH. 28 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. A Lecture delivered in London. By EDWARD A. KIMBALL. 46 pages.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. A Lecture delivered at Harvard University. By EDWARD A. KIMBALL. 28 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full Morocco. Per copy, prepaid, $3.00; Twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:

"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A; for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy; $7.00 per dozen.

COMMUNION HYMN—"SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy; $5.00 per dozen.

"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Rev. Mary Baker G. Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. 20 Pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Massachusetts commission on fisheries and game has announced the purchase of six hundred acres of land on Martha's Vineyard, which it is proposed to devote to the propagation of the pinnated grouse, or heath hen. This bird, once so common from Cape Ann to Virginia that the articles of apprentices often specified that they should not be compelled to eat the meat of the grouse oftener than twice weekly, had, a few years ago, become practically extinct. It apparently made its last stand on the island of Martha's Vineyard, and in the winter of 1906-7 only seventy-seven individual birds could be accounted for. At present there are one hundred and fifty birds on the island.

There have been in session during the last fortnight at Washington the Southern Commercial Congress, the National Conservation Commission, and the National Rivers and Harbors Congress. Before the second of these bodies it was shown that in the year 1906 the railroads carried two hundred and seventeen billions ton-miles of freight at an average cost of seventy-seven cents. If one-fifth of the freight which is shipped each year were to be transported by water it would result in a saving to the producer and shipper of about $250,000,000.

The cost to the Government during the fiscal year ended June 30, 1908, by reason of the transmission free through the mails of departmental penalty and Congressional franked matter, was $42,544,047. This figure includes the matter carried by the Post Office Department for itself and the postal service. Added to this is $57,000,000 for uncompensated service in the handling and transportation of the second-class matter of publishers of newspapers and periodicals.

It is asserted that within sixty days Congress will take steps to establish a bureau of mines in the Department of the Interior; that a plan will be advanced to protect the public from mining frauds; that renewed efforts will be made to prevent the great sacrifice of human life in our coal mines, and that necessary Federal and State legislation will be recommended, with a request that the Nation and State cooperate for the betterment of the mining industry.

Exclusive of registered matter, the Railway Mail Service during the last fiscal year handled 21,650,840,745 pieces of mail matter. Because of practically illegible addresses 35,505,301 pieces required special attention, with the result that 18,088,626 were returned to senders or corrected and forwarded. For the transportation of all classes of mail matter the department during the year expended $81,157,720.

The new "special delivery stamp" measures about one inch square and is of dark green. Running diagonally across its face is an olive branch, the leaves of which entwine a Mercury hat, symbolic of peace and haste. In the upper left-hand corner is the inscription "10 c.," while in the lower right-hand corner in bold letters are the words "U. S. postage special delivery."

The jury in the United States District Court at Salt Lake City, before which the Union Pacific Railroad, the Union Pacific Coal Company, the Oregon Short Line Railway and several officials have been on trial for alleged conspiracy in restraint of interstate commerce, returned a verdict of guilty.

The United States Government has begun suit against the governor and eight other prominent Oklahomans, charging the use of "dummies" in securing lots valued at $1,500,000 at the opening of Muskogee. The suits are brought by Creek Tribal Attorney Mott. The beneficiaries are the Creek Indians.

A complete reorganization of the Post Office Department, creating a new officer to be known as director of posts, through whom continuity of policy may be assured from administration to administration, will be proposed in a bill to be presented in the House of Representatives.

Trade of the United States with its noncontiguous territories will approximate $170,000,000 in the year which ends this month.

International.

The select committee of the English House of Lords appointed in June to suggest a plan for the reform of the upper house, in its report finds it undesirable that the possession of a peerage should of itself give the right to sit and vote in the House of Lords, and it recommends that qualifications should be the main test for admission. It then sets forth that all hereditary peers should be formed into an electoral body for the purpose of electing two hundred of their number to sit and vote as the "Lords of Parliament," not for life, but for a single Parliament; that the spiritual Lords of Parliament be reduced to ten, to be elected by the bishops; two archbishops sitting during the tenure of their Sees, and the other eight for the duration of each Parliament; that Canada, Australia, New Zealand, and South Africa have official representatives in the House of Lords; that a number of hereditary peers, estimated at one hundred and thirty, possessing certain qualifications, should sit without the necessity of election; these to include men who have held the post of cabinet minister, viceroy, governor general of Canada, and governor of the larger colonies, and naval and military officers of high rank, and that twenty years' service in the House of Commons shall entitle one to a seat among the peers. This plan will give the reformed House of Lords about three hundred and fifty members.

The Russian Douma has appropriated the sum of $2,000,000 for the construction and maintenance of elementary schools under the control of the church. After passing this measure it discussed a bill, the passage of which is assured, providing for an appropriation of $3,000,000 to build and maintain secular primary schools. These appropriations are supplementary to the estimates for elementary education in the regular budget.

Judge Willfley of the United States Court at Shanghai has resigned his post. His occupation of the position has been marked by drastic interpretation of the law and effective purification of proceedings before the court. This aroused much opposition and he had to come to Washington to answer charges. He was exonerated.

The British and Continental lighthouse boards, as well as the British, German, French, Russian, and Italian navies, have adopted the device of the Submarine Signal Company of America for the transmission of sound under water.

The British commission which is delimiting the Anglo-German Nigerian boundary has completed the survey of the boundary of Northern Nigeria. The country ahead is mountainous and trackless.

Official ceremonies in connection with the beginning of the trans-Pyrenean tunnel between Spain and France took place last week at Canfranc, Spain.

The Senate of Brazil has authorized President Penna to grant the Federal guarantee for the Salo Paulo coffee loan of $75,000,000.

The budget committee of the Russian Douma has adopted the bill authorizing an external loan of $225,000,000.

The national, state, and municipal debts of Germany aggregate $6,250,000,000.

Industrial and Commercial.

The average annual production of pig iron in the Ural and Siberia, from 1902 to 1906, inclusive, was 657,440 tons. The Siberian output of coal, chiefly from the province of Akmolinsk, rose from 660,770 tons in 1902 to 1,325,400 tons in 1905. Copper is mined in small quantities. More and more foreign capital is becoming interested in the mineral wealth of Siberia, and American miners are prospecting in those parts of the Primorskaya opposite and near Alaska.

The world's peppermint is grown on peppermint farms in the neighborhood of Kalamazoo, Mich. Over three hundred thousand pounds of peppermint oil, worth five dollars a pound, is produced annually from the moist and ink-black soil of southwestern Michigan. An acre yields about twenty-five pounds of oil. The cost of this production is about $15.

The United States is becoming the shoemaker to the world. In 1878 the number of pairs of boots and shoes exported from the United States was but 351,000; in 1908, 6,552,000. The value of the exportations in 1878 was $468,000; in 1908, $11,470,000.

The patents on the American process of producing aluminum run out in February, and it is expected that there will be a considerable decrease in the price. Aluminum is a good substitute for copper and may cause the price of that metal to drop.

It is understood that the three large packing firms of Armour, Swift, and Morris are again considering steps for effecting a combination.

Korea's rice crop this year is estimated at 1,360,000 tons.

General.

Professor Percival Lowell makes the interesting and important statement that water vapor is present in the atmosphere of Mars, its presence being revealed by spectrum analysis. This fact supports the theory of those who believe that there is life on that planet.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

TAKING SIDES.

PROF. JOEL RUFUS MOSLEY.

CHRIST, Truth, is forever being manifested to destroy the works and to rescue the captives of the evil one. Indeed, the right and only satisfactory punishment of evil is its destruction and the liberation of its unfortunate victims. Love for the captive, love for the sinned against, and love for society as a whole, require this negation of sin and this liberation from evil. The only attitude which we can legitimately develop against an "enemy" is the desire to see and help him become what he was meant to be and is capable of becoming. All the "punishment" which the bad man needs is the discipline which helps him to become good. In like manner, the "punishment" that the selfish need is to become unselfish; the unjust, just; the false, true; the hating, loving, and the fearing, fearless. The meeting of all evil with good and all good with good, all injustice with justice and all justice with justice, all falsehood with truth and all truth with truth, and all hate with love and all love with love, is the best and only way to make it easier for all to become better.

To take the side of the better as against the worse in each party to any misunderstanding or controversy, tends to bless all. To take the side of one individual as against another makes it more difficult for both to do right and tends to make the one who does it a party to the controversy instead of a peacemaker. The one who does this assumes the position of a judge, when his highest privilege and duty is to be a peacemaker; a friend to all and a helper to all. We can be friends of all and helpers of all before we know enough to enable us to locate all the good and uncover all the wrong involved in any controversy; and until we can do this, it is best for us to do that which we can do best, and to leave to God that which He and He only can do.

Moreover, in every difference among individuals, the one who is highest is always readiest to go higher. In so far as he has thought, said, and done things that should not have been thought, said, or done, and left unsaid and undone things that should have been said and done, he can always be counted upon as the soonest to see his errors of omission as well as commission, and to take the steps which will be best for others as well as best for himself. As this is done, it is much easier for those who are lower to go higher. It is glorious to see how quickly the comparatively guilty repent and confess, and strive to correct their misdeeds, when they see those who are comparatively innocent confessing and correcting their mistakes and showing forgiveness and love toward these, the guiltier. Every time we see the comparatively good making it easier for the comparatively bad to be better, we see something of the eternal wonder and glory of the atonement idea.

Still another reason why we should always take the side of the best in each as against the worst in each, instead of taking the side of one individual as against another, is that the tendency of the unredeemed human mind and attitude is to take sides with those who are present, and to join in criticizing and condemning those who are absent; and whenever we do this, we fall below the precedents of ordinary legal procedure, where the accused is always allowed to be present and to hear and answer every charge made against him. Until our righteousness and justice surpass rather than fall short of the righteousness and justice of the laws of human society, how can we expect to enter into and abide in the kingdom of heaven, where perfect justice and love are expressed by all, as well as manifested to all?

While these statements will be recognized as the mere commonplaces of the Christianity of Christ Jesus and his immediate followers, they receive new emphasis in the light of the teaching of Christian Science as to the allness of Mind; the unreality of evil and its impersonal and temporal character; and universal and perfect salvation. If all is Mind and mental, as Mrs. Eddy teaches; and if the only real Mind is God, is good and not evil; and if all seeming evil is false belief, and not a person or a real entity, then all evil can be destroyed by the right mental state, the reflection of the activity of divine Mind. Universal and perfect salvation is seen to be not only possible but necessary and inevitable. The good reflected by every one is all that is permanent, all that is satisfying, all that is real.

Our whole duty and privilege in dealing with every one is to help bring the good and the true to light, and to discourage the expression of, and actually overcome, the bad, the false, and the imperfect. We aid in the destruction of evil, not by seeing and dealing with it as a person, but by actually exposing its unreal claims to personality. The false claims and appearances of evil are destroyed on the very basis of the allness of God and the perfection of His whole creation, as well as upon the ethical corollary of this truth, namely,—that our ideal and effort must be to do all the good we can, to everybody we can, in every way we can, and to think, say, and do no evil either to seeming enemies or to unquestioned friends.

CHILDHOOD AND CHRISTMAS.

HELEN L. YOUNG.

THE Master said that except we become as little children, we cannot "enter into the kingdom of heaven." The coming of the Christmas-tide, that one anticipated glorious day of childhood, should emphasize this fact,—that unless we become as little children we cannot enter the kingdom of heaven or narmony.

An incident which occurred during my first year in Christian Science has comforted me many times when

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

passing through troubled waters, and it may help some other struggling Christian to cast off the burden he seems to be carrying, by having a childlike faith in the protection of divine Love. I had been studying Christian Science but a few months when Thanksgiving day came, and as it had been decided that we should eat our Thanksgiving dinner at a new mine which we were developing, I drove as far as a carriage could go, which brought me to a trail that went straight up the mountain. No one was there to meet me, and as I had been over the trail once before, I decided to go on alone. A heavy fog enveloped the whole mountain—so heavy that I could hardly see my hand before me. The trail was well beaten by the pack-horses that carried the supplies over it, and I started up the literally straight and narrow way, climbing up and up, for it is one of the high peaks of the Rocky mountains. As I put out my hands to feel for the bushes that I could not see because of the fog, I found that they were huckleberry bushes, and knowing these berries to be the favorite food of bears, I began to be afraid. There I was alone on a strange mountain trail, closed in by fog, and for a few minutes haunted by a fear of bears. Then my knowledge of right thinking as taught in Christian Science brought Truth to my rescue. I began to pray aloud with the fervor of a child. I knew that faith as a grain of mustard-seed could not only dissipate that fog, but could even remove the whole mountain.

I had plodded on for about a mile, when the mist began to break, and in a few minutes I stood in the dazzling sunshine which is so radiant on high peaks. I fairly shouted out the words of the prophet of old, "Unto you that fear my name shall the Sun of righteousness arise with healing in his wings"! As I looked around I saw the camp, nestling in the warm sunshine; below me were the tumultuous clouds and surging fog, while above and beyond me towered the forest-clad mountains. As I stood there, breathing in the pure, invigorating mountain air, I thought, How symbolic of my mental journey! For years I had plodded and groped through the enveloping mists of mortal mind, and over the stony path of doubt, but this year I stood in simple faith with the Christ-child, basking in the spiritual atmosphere of Truth and Love. Moreover, the sense of fear was all gone, the bears of mortal mind's projection had all disappeared, and I was reminded that, according to Holy Writ, the bears of the future will not be led about with iron collars and steel chains, but with "cords of love;" and "a little child shall lead them."

Words are too meager to voice the tide of love that is surging toward our dear Leader, Mrs. Eddy, the one wise woman who, like the three wisemen of old, could see the guiding star of Bethlehem, and was led to where the Christ-child lay. To-day she is still pointing out the road that Jesus Christ our Wayshower trod; making it clear to us, who call ourselves followers of the Christ, that it is our duty not only to preach the Christ-gospel but to do the Christ-healing. The leaves of our Christmas tree are for the healing of the nations, and our Christmas, or feast of the Christ, is every day in the year.

HELP IN A TRYING HOUR.

ALEXANDER ALDERSON.

THIS brief sketch of a very trying personal experience has been written with the hope that it may prove to be of interest and perhaps helpful to some of the readers of the *Christian Science Sentinel*. On Saturday afternoon, Oct. 3, I, with my wife, her sister, and my baby aged three years, left Liverpool, England, in the S. S. City of Dundee, bound for Egypt. All went well until early next morning, when a thick fog set in. About seven o'clock our steamer was run into by the S. S. Matina, and so badly wrecked that it sank in fourteen minutes. There was no rush or confusion on board, but we all hurried on deck, and our baby, rolled in a blanket, was the first passenger to be saved, being thrown by our captain to the sailors on the other ship and caught by the chief steward. Afterward the ladies were passed from one ship to the other.

It was at this moment that I was so tremendously helped by the slight knowledge I have of Christian Science, although we had of course all been declaring the truth of being from the first, my wife, my sister, and myself being Scientists. I was still with the sailors on our steamer, and the part of the deck where we were was just being covered by water. I remember feeling so fatigued by my previous exertions that it seemed as if I could do no more, and I had sat down on a skylight when suddenly the thought came to me that all this experience pertained only to mortal mind, and had no place in the divine order or consciousness; hence that there was no danger, and that I should be saved; though, curiously enough, I felt it was absurd to expect it. Just then I saw a sailor making for the stern, which I perceived was rising and would soon be the highest point of the steamer, and that from this point I would be able to get on the deck of the Matina. I followed the sailor and was saved, the ship going down within two minutes.

This experience has enabled us all to realize more and more the truths which Mrs. Eddy has given us in Science and Health, and I would like to express our great gratitude to her for all she has done for us. The question of supply has been wonderfully met. Not only have we never been caused any inconvenience by the total loss of our private effects, but the insurance company has paid my claim in full, so that I am none the worse financially for the experience. Two days after we landed I heard that the lord mayor of Liverpool was getting up a subscription for Captain Belton's widow, as he had been lost with the ship. I decided at once that I would give fifty pounds, though I did not know where it was coming from and told my agent so. In the mean time he had handed me my letters, and on opening them I found one was from some friends, who had enclosed one hundred pounds, thinking this gift would probably be useful under the circumstances.

The question then was to get back to Egypt as soon as possible, as I had a lot of work awaiting me and naturally was exceeding my leave. I was told by several people who were trying to secure passage to Egypt, that I could not possibly get there for a month or six weeks, but I succeeded in getting excellent accommodations for myself and family within ten days, and in three weeks from our return to Liverpool I arrived here safely, after a most comfortable trip.

[The experience related by Mr. Alderson shows what a strength comes in time of need to those who know the power of Truth, and the accompanying letter, from Frederick Dixon, Christian Science Publication Committee for London, England, gives further details of this marvelous instance of God's protecting power.—EDITOR.]

I first saw the account of this wreck in the various London papers, and a day or two after I met Mr. Alderson at the station in Liverpool, and traveled down to London with him. Neither he nor any of those with him showed the slightest effects of what was quite a long-drawn-out adventure, for the ship that took them off had its own bows torn away and a hole knocked in its stern. The full force of the pumps was required to keep the water out of the bows, and the leak in the stern had to be kept clear by constantly rolling the ship so as to get rid of the water like ballast. They were at sea in this sinking condition for, I think, three days and two nights, and Mr.

Digitized by Google

Alderson told me that they alone of all the passengers did not require brandy to keep them going.

As a matter of fact the rescue was a very wonderful one, for by every known law the steamer which ran them down should have at once pulled off and left them to sink. Its captain risked his own ship and his future career to do a quite unusual thing, that is, to range alongside, in a half-sinking condition, and take off the passengers and crew. The women and children were saved by swinging the boats of the steamer which ran them down on to the deck of the sinking ship, without loosing them from the davits, and then hoisting them up. By that time the ship was half down, its bows were submerged, its decks burst open, its stern and propeller up in the air. The crew and the men passengers had to get on board a ship constantly swinging away from them, as best they could, yet the only lives lost were those of one sailor, who made a rush to get over the bulwarks before the women and children and fell between the ships and was drowned, and the captain, who, being the last man to leave, was too late and was sucked down by the sinking ship. The first officer, in endeavoring to save the women and children, was twice pitched overboard, but was saved each time. Mr. Alderson himself clambered up to the top of the stern, which was then above the deck of the other ship; the men on board this ship told him to roll down the side and that they would catch him as he fell. He did so and was saved. Of course if the ships had rolled a yard farther apart, or the sailors had missed him, he would have been drowned.

It is rather quaint that I should try to give a much fuller account of the shipwreck than has Mr. Alderson himself, for he could easily have told it with more detail; but the whole thing was to me a marvelous instance of the preserving power of divine Love.

TESTIMONIES.

ALICE W. FULLER.

On one occasion, after returning from a Wednesday evening meeting, there came to me, as never before, a realization of the necessity of obedience to the Golden Rule—to do unto others as I would have them do unto me. In a retrospective way, thought went back over the years to my beginning in Christian Science, and I remembered how eagerly I looked forward to our weekly testimonial meetings, how I counted the days for their coming, and listened almost breathlessly to the reading of the Lesson, then to the testimonies, which corroborated with their healing messages the teachings of the Bible and of Science and Health.

The Master bade the disciples whom John had sent to him: "Go and shew John again those things which ye do hear and see;" and our testimonial meetings have been established for that very purpose,—to tell to those who are waiting for the "good news" that the sick are healed, that the blind receive their sight, that the lame walk, and that the sorrowing are comforted. When these testimonies are given with earnestness, when the facts are told without detail, they carry with them such conviction that every earnest heart overflows with loving gratitude to the Giver of all good. Again, these Scriptural words, "God is no respecter of persons," stand out so clearly; we realize that what He gives to one He gives to all. Thus do we see the great wisdom our dear Leader has shown in establishing these testimonial meetings. She tells us in Science and Health (p. 372) that "a just acknowledgment of Truth and of what it has done for us is an effectual help." Do we wish this help? If so, we shall always be ready with an acknowledgment of the blessings and benefits received through Christian Science, remembering that "it is more blessed to give than to receive," be the giving great or small; and that whatever we do, all should be done to the glory of God.

Would there be any waiting between the testimonies, any long silence, if gratitude were uppermost in thought and the desire was ever to glorify God? Nay, the fear of criticism would be relegated to its native nothingness and self-consciousness doomed to oblivion, and there would be only the consciousness of loving obedience to our dear Leader, who knows that throngs of weary ones come to these meetings for crumbs of comfort, and does not wish them to go away heart hungry and thirsty when there are so many who can tell again the story of their healing and of the peace they have found in Christian Science. She counsels (Science and Health, p. 570), "Give them a cup of cold water in Christ's name, and never fear the consequences;" and in the Psalms we read this promise, "I am the Lord thy God, which brought thee out of the land of Egypt: open thy mouth wide, and I will fill it."

THE BATTLE OF THE AGES.

PHILIP O. PEIRCE.

Years ago, in the American church in Constantinople, that grand hymn, "Onward, Christian soldiers, marching as to war," was sung by the congregation with such a true spirit that it rang out through the streets of Constantinople, and the Mohammedans gathered in knots and listened. The Sultan heard of it and took means to suppress the singing. He could stop the sound of the voices ringing out to the public, but he could not kill the spirit of love in their hearts.

That hymn speaks for the Christian Science spirit. We carry the same banner that Paul carried when he walked up the Appian Way to Rome, the banner of Love, and no power on earth can stop the advance of our Cause, for it brings to human hearts a sense of the almighty love of God. We as Christian Scientists have enlisted to do our utmost to relieve the world of sin and fear, disease and sorrow, to wipe the dust and tears from the eyes of our brothers, and to make the world brighter and better. It is our duty to be courteous to all our fellow-creatures, be they what they may. Pride of place, self-satisfaction, false superiority, spring from narrow minds and selfish hearts alone; they are never born of Love. We cannot twist the letter of Christian Science to fit mortal selfishness, but must blend ourselves into the oneness of divine Love, get in tune with our Maker, that we may do His work.

If any one thinks he can take up Christian Science for a fad, he will be sadly disappointed. If any one thinks he can take it up as a money-making business, he stands in the shoes of Ananias and his end is bound to be pitiful. We cannot deceive ourselves if we reason justly, and we cannot deceive God for He is the only and infinite intelligence; all else is misunderstanding and ignorance, but man is at-one with Him in truth. Let us search ourselves, and see if we can stand the test whether we are genuine or false,—if we are working to glorify ourselves or for the glory of God. Christian Science is not a personal affair, it is the battle of the ages, and if we are true soldiers in this great Cause of Christ, we do not mind the wounds—they are lost in the rapture of the fight, the fight for all that is good, the battle of Almighty Love against the seeming darkness of this world.

A SIMPLE LESSON.

ADELA S. HAWLEY.

I had gathered a bunch of lovely fresh roses to replace those which had been cut two or three days before. Upon entering the room I looked at the roses in the vases, and

Digitized by Google

the thought came, If I had known these were still so beautiful I should not have gathered fresh ones. As I took up the vase, however, the petals of many which were most beautiful in appearance fell to the floor. As a few had stood the handling, I thought to leave them and put the fresh ones in among them; but when I did so the brightness and perfection of the freshly gathered roses made the others look faded and sorry. I found that in order to express harmony in the arrangement of my flowers, they must all be of like purity and freshness, so I took out all of the old ones and left the perfect blossoms clustered together, expressing unmarred fragrance and beauty.

As I did so, I thought, What a lesson! How like each individual's experience in coming into Christian Science. We are apt to consider the blossoms of belief quite satisfying and really beautiful, until we have gathered and enjoyed a few of the real blossoms of the truth. When, with these first perfect blossoms of thought, we go to our mental vase (human consciousness), thinking to empty it of the old and fill it with the perfect ideas of Truth, we may be tempted to think, Why, these beliefs are very beautiful; I scarcely need empty them out. But if we are in earnest, and have realized for a moment the beauty and purity of Truth's ideas, we will bravely face the situation and examine our thoughts more closely, to see if they can stand the test, and lo! as the petals of the roses fell to the floor, so these old beliefs will many of them fall to the ground at the first touch of Science.

If, as in the case of the roses, we find that some of the old beliefs seem to stand the first touch of Truth and remain for a brief space, as we gain a clearer view and a larger desire to express harmony—more love for the perfect models of Truth—we shall soon see that the old beliefs of the flesh are made to look sorry indeed when we attempt to place them beside the pure concepts of Science. At first we feel a pang at casting away the old, for it sometimes means to "set aside even the most cherished beliefs and practices" (Science and Health, p. 141); but erelong this thought is changed, and we feel a sense of joy as we see them disappear one by one, and their place taken by the creations of good, which unfold with each day into new beauty and which grow more lovely the longer we look upon them.

[Written for the *Sentinel*.]

A CHRISTIAN'S GREETING.

ELLA CLEMENT DAVIES.

Just to greet you
In the dear old words the angels sing;
Just to meet you
Where the shepherds found their baby King.

Just to ponder
What the bells are ringing, near and far,
As we wander,
Ever guided by the eastern star.

Just to tarry
Till we catch the sunlight on his face;
Just to carry
In our smile for others all our grace.

Just to lighten
Through this sweet reflection thoughts of strife;
Just to brighten
Aching eyes with gladder songs of Life.

Just to spell you
Love, and light, and joy,—one little word:
Just to tell you
How you'll find it written,—Christ, the Lord!

SELECTED ARTICLES.

[*Haverhill Evening Gazette.*]

"Our Debt to Christian Science" was the somewhat startling title of the sermon recently at Union Church. It was the fifth discourse in the series on "The Ministry of Healing," which has aroused considerable interest during the past few weeks. Taking his text from Romans, 1 : 14, "I am debtor both to the Greeks, and to the Barbarians; both to the wise, and to the foolish," Rev. George H. Hubbard, the pastor, said,—

A splendid utterance this, and as bold as splendid. It well expresses the broad-minded, generous, frank, and fearless nature of St. Paul's religion. Few, probably, of his fellow-apostles would have recognized any indebtedness on their part to those outside their circle; but true Christianity is always receptive, universally receptive. It seeks the good everywhere, and when it has found truth it does not hide it in unmanly fear or prejudice, but frankly avows, "I am debtor." To-day we find some very earnest disciples so narrow-minded that they will not receive spiritual help from any outside their own little sect, or, receiving, will not acknowledge their debt. This ought not to be. Whoever would be perfect must receive good from whatsoever source it may come, and must not forget to acknowledge the debt.

Personally I am not a believer in the doctrines of Christian Science, nor am I even leaning that way. Yet I perceive that the system embodies certain vital truths, and that it has a mission of God that shall bless all who will receive it. For what Christian Science has already done, for what it is doing, and for what it may yet do, we are debtors. But general statements of debt carry little weight. It is the itemized account that stands in court and compels payment. Let us therefore itemize our bill of indebtedness to Christian Science.

First of all we are debtors to Christian Science for what her teachers have done to reestablish the reign of faith. This is done not by teaching alone, but by example also. The evidence of things not seen and the substance of things hoped for are daily possessions of the Christian Scientist. For many Christians faith has become a mere cant phrase. We have cast away its original meaning and have applied the word to a system of doctrine. Men who are loud in their protestations of faith in God for the salvation of their souls, display an utter want of faith in His power to keep their bodies. Furthermore, Christians have not only lacked faith in God, but what is equally harmful, they have been lacking in faith in their fellow-men.

Mutual distrusts and doubtings have sapped the life and crippled the power of the church throughout the ages. Because Christian Science has done much to reestablish the reign of faith, because her disciples have set before the Christian world the continual example of men who live quiet and fearless lives in the belief that God cares for them at all times, better still, because they make their faith in God real by manifesting like faith in their fellow-men, living in mutual harmony and love and trust, we are their debtors.

In the second place, we are debtors to Christian Science for what her teachers have done to expose the folly of discussing disease and symptoms of disease. If the system accomplished no more than to make an end of the habit of talking about pains and ailments, if symptoms and sickness became tabooed subjects in polite society, that were sufficient to merit our everlasting gratitude. If through the influence of her teachings it shall become a criminal offense to advertise patent medicines with details of pain and weakness, more than half the ills from which we suffer will be cured at a stroke. I venture the assertion that

Digitized by Google

there is no germ, bacillus, or microbe known to the fraternity that is so insidious in its attack or so destructive to public health as is the patent medicine advertisement left at our doors. Whoever shall suppress these will be a public benefactor. Because Christian Science has set the tide in this direction, because she has made the first determined stand against this criminal folly, we are her debtors.

Again, we are debtors to Christian Science for what she has done in restoring the healing function to the church at large. True, this is not the first system that has emphasized the perpetuity of the healing ministry, but for some reason a new impetus and importance has been given to the doctrine, so that it has taken a stronger hold on the popular mind. As a result, there have been thousands of cures by Christian Science practitioners, cures of the most remarkable and unquestionable kind. More than this, others have been inspired to take up the work of healing from different points of view. Doubtless we should have had no Emmanuel movement but for Christian Science. Best of all, the church as a whole is being awakened to her duty and privilege in this matter, and before many years the healing Christ will be welcomed back to every part of his church from which he has been so long banished. For this, too, we are debtors to Christian Science.

Once more we are debtors to Christian Science, for the emphasis which her teachers have placed upon the supreme reality of the spiritual. Whatever we may think of the Christian Science doctrine of the unreality of the material, if she shall at length succeed in convincing the world, or even the church, that spiritual things are the greater realities, she will confer a priceless boon upon the race and will bring mankind forever into her debt. This is the crowning gift, the item that outweighs all others. By comparison with this the gift of bodily healing is a mere trifle.

One thing remains to be said. If I have spoken the truth, then as reasonable beings, as men and women who are seeking the best and truest in life, we are bound not merely to acknowledge our debt frankly and fearlessly, but to accept with gladness and gratitude the gifts which Christian Science offers to us. Does that mean that we should all become Christian Scientists? No. But it does mean that we should cease our prejudice. It means that instead of assuming an attitude of hostility and criticism, instead of perpetually seeking to discover the false amid things true, and to hold that up to ridicule and scorn, we should seek eagerly and trustfully for truth in things false, we should emphasize the true and the good, letting all else drop out of sight. In this our friends of the Science faith follow the Master; for they dwell insistently upon the good and the true and the beautiful in all things. For this let us be grateful. In this let us emulate their example, and so pay somewhat of our debt by passing on to others the good we have received.

[Frederick Dixon in the *Hampstead* (Eng.) *Advertiser*.]

Our critic says that to quote the conclusion of an argument, and that without even showing it is the conclusion of an argument, is legitimate. It is so legitimate that it can be used to imply the exact opposite of what a writer means. And the sentence quoted by him is an almost perfect example of this. The statement that Mrs. Eddy says "there is no sin" could convey, to a person unacquainted with her teaching, no other impression than that there is no relative sense of sin in the human consciousness, whereas it of course means nothing whatever of the sort. It means that, speaking in the absolute, sin is an unreality. Allow me to make this clear. Supposing the writer of a text-book on light were to conclude an argument intended to show that light was positive, and that darkness was a mere sense of the absence of light, with the words "hence there is no darkness," the critic would consider it legitimate to omit the "hence," quote the words "there is no darkness," and say this man affirms there is no night.

It is of course extremely difficult to find in materialism a satisfactory medium for the expression of spiritual truth. The Jews used the history of the Old Testament in this way, and there grew up a class of critics who, as I have explained, treated the Bible as this critic would treat Science and Health.

Finally, in twenty-five lines of your paper, including references, the gentleman states and explains the teaching of Christian Science on the subject of God, Christ, the Holy Ghost, and sin. Imagine the effect of attempting to explain in a like space the Trinity, the Logos, the incarnation, and consubstantiation, and you may begin to understand why his last state is worse than his first.

Our critic says, "What we want to know is how to treat 'the actual man.'" Which means that he has read Science and Health four times without discovering that the actual man is the image and likeness of God, and therefore spiritual. I have no difficulty in believing that if he has "the toothache it will not help him much to be told that 'the ideal man is incapable of toothache,'" for I have been trying to show him that his entire pamphlet manifests a profound misunderstanding of the elements of Christian Science teaching. But hundreds and thousands of men and women have been cured of toothache, not by tearing sentences of Science and Health in mockery from the text, but by the humble and sincere effort to understand the deep spiritual truths underlying them.

There is one last suggestion I should like to make to our critic before I part with him, and it is this, that he should read Science and Health for the fifth time. That he should read it with open mind; not with scorn and criticism, but with a humble desire to grasp this great truth, the understanding of which has already carried the Christ-healing of sorrow, and sickness, and sin around the world.

[A New York correspondent in the *Columbus* (O.) *Citizen*.]

Back to the world of light and life and work, back from the dusk of creeping blindness which for a year and a half had shadowed his life and the lives of his wife and child, Howard Chandler Christy, famous artist, has resumed the work which made him famous. When he had to quit it, because of his failing sight, he was a stranger to Christian Science; to-day he studies its teachings and seeks to become a member of the church founded by Mrs. Eddy.

Christy tells in simple language the story of his healing. "Last March," he says, "I was almost blind. For a year and a half my sight had been failing, and I had done no work. I groped along the walls when I went about the house; I could not read the head-lines in a newspaper. My wife, a Christian Scientist, suggested to me, as she had many times before, that I take Christian Science treatment. I had always laughed at Christian Science, but my plight was now become so serious that I grasped at any straw, and I consented. Twenty minutes after my first treatment I realized that I could see better, and my nerves were entirely calmed—the fear of blindness had left me. Three weeks later I took my last treatment. I was cured."

With Christy's healing, a great load is lifted from the heart of a beautiful and a brave woman—the "Christy girl." Her husband's future, her husband's work, her husband's ambitions were her life. The year and a half of his threatened blindness were dark days for her, too. But she, confident in her religion, believed firmly that some day he would be saved through the faith that kept her strong of heart, and so it proved. The time of the Christys is divided between their New York house and a

Digitized by Google

quiet farm in Muskingum county, Ohio, the birthplace of the artist. It is the very farm on which he was raised, and he bought it after sixteen years away from the old home, with the fruit of the work of those sixteen years. There, among the gently-rolling hills, on the banks of the slow-flowing Muskingum river, Christy plans to paint many pictures, now that sight is again his in all its blessedness. There little Natalie will romp and play and peep over papa's shoulder at the work on the easel. There the "Christy girl" will pose again and again.

[Willard S. Mattox in the *Mt. Vernon* (N. Y.) *Argus*.]

Is it to be supposed that Christian Science parents love their children less than do other parents, or that they would carelessly or wantonly subject them to a treatment which they did not believe could produce results? It is a legal axiom which is well understood, and universally acknowledged, that the parent is the natural guardian of his child. If then the parent selects *materia medica* as a remedy for disease, and his child dies, has the State any moral or legal right to arrest the father on a charge of neglect and manslaughter? Evidently the State does not conceive that it has such a right, because there has never been such a prosecution. If now the parent selects Christian Science, and the child dies, what has happened to give the State a right to charge the parent with the crime of manslaughter?

Has anything happened to the parent's inherent, natural, and constitutional right to govern his child? Can it be seriously argued that the neighbors know better than does the parent what ought to be done for the sick child, and that, consequently, their opinion or judgment should be consulted? Can it be seriously argued that the commonwealth or its legal representatives are better fitted than are the parents to select the form of treatment which shall be administered to a child? If the parent is not to be permitted to select the treatment for his child, who shall make the selection and where do the authority and the responsibility lie? The American form of government has, from the foundation of its Constitution, carefully eschewed anything that would seem to suggest paternalism. There has been a careful segregation of Church and State, and as the State has no theology, so it cannot possibly have a favorite school of medicine, and the right of the Christian Science parent to select for his child whatever treatment he is convinced is the best, remains unquestioned and inviolate.

[Written for the *Sentinel*.]

WHEN WAS CHRIST BORN?

GERTRUDE RING HOMANS.

When was Christ born?
That moment when Truth's grand omnipotence
Dawned upon consciousness, rebuking sense,
Healing and blessing as sure evidence:
Then was Christ born.

Where was Christ born?
In that same place wherever we began
To see, instead of sinning, suffering man,
A perfect being, fashioned from God's plan:
There was Christ born.

How was Christ born?
The understanding of Mind's power was brought
To earth through quickening of an inspired thought,
That all might know the Principle who sought:
Thus was Christ born.

THE LECTURES.

OKLAHOMA CITY, OKLA.

Francis J. Fluno, M.D., of Oakland, Cal., spoke on Christian Science to an audience of about one thousand people at Overholser Opera House, Oct. 18. He was introduced by Henry G. Snyder, dean of the Law School of Epworth University, who said in part,—

If one not connected with its organization may be permitted to speak of it, I should say that Christian Science purports to have discovered, in a literal reading of the Bible story of creation and of the life-doctrines of Jesus, an expression of that philosophy which affirms the reality of the eternal and the relativeness or unreality of the merely transitory. It thus presents a paradox in that it is both an exact orthodoxy and at the same time a medium for the expression of one of the newest and most unique of religious thoughts. It proceeds upon the theory that those things, and those alone, are real and vital which in the eons of eternity will continue a constantly developing existence; an inevitable corollary of which is a negation of the reality, in the sense of permanency, of those incidental influences which qualify a physical existence. It does not necessarily ignore, but emphasizes the merely relative character of temporalities.

Christian Science thus focuses the attention and thought upon what all Christians recognize as eternal, viz., the things of Spirit. It looks to the well-spring whence flows a pure crystal stream of life, unpolluted by materialism and lust. Its object is to keep the stream unpolluted—clean and healthy, mentally, morally, physically. It seeks the pure gold, and extracts it from the lode, with a single eye for the unalloyed. Should alloy creep in, its doctrine is a fining-pot which purges the pure gold and throws off the alloy. Inevitably this dwelling of the thought upon cleanliness and godliness must be followed by pure living. Thus its object is to harmonize the daily thought and deed with the essence of these eternal virtues. In other words, it is not a religion or science of deferred hopes and ideals, but one which literally interprets Christ's injunction, "Be ye therefore perfect, even as your Father which is in heaven is perfect," and offers to all sorts and conditions of men—the lame, the halt, the blind, the oppressed and downtrodden, those who are footsore and weary and sad—surcease from their affliction and an entrance into a larger and fuller life of happy, healthful reality.

These are the claims made for it. If it were a science for the relief of physical pain alone, in view of its reputed cures it would be well worth considering. But since this is only a collateral consequence of its teachings, and its avowed chief accomplishment is the development on earth of a life and spirit like unto that of Jesus, and the inducement of a pure, clean, and healthy state of mind and spirit, its demand for careful consideration may not be ignored or disregarded.—*The Oklahoma City Times*.

ALMA, MICH.

In response to invitations issued by the members of the Alma church, a representative audience gathered at the Opera House Tuesday evening [Oct. 20] and listened to an address by Judge Septimus J. Hanna of Colorado Springs. The speaker was introduced by Hon. W. A. Bahlke of this city, who in his introductory remarks said in part,—

I regard Christian Science as presenting an agency for good which deserves the encouragement of all good citizens. No one can study the faith and confidence of those embracing the teachings of this church without, in my judgment, becoming impressed with the sincerity of its

Digitized by Google

followers and the possibilities for human betterment embraced within its tenets. It seems to me that the fundamentals of this church are well founded in the Scriptures, and the application of them to human conduct is productive of spiritual, moral, and physical growth and development. I am perhaps unwilling to admit all that its adherents profess for it; but this is not a sufficient ground for disbelief or adverse criticism; rather for thoughtful study and investigation.—*The Alma Record.*

OMAHA, NEB.

Attorney C. E. Herring, who introduced Rev. William P. McKenzie at a lecture on Christian Science given Nov. 12, said in part,—

Founded within our own generation upon the love of God and with the light of His goodness, Christian Science has patiently but persistently commanded the attention of the world. With no weapon save that of its own truth, it has met bigotry, persecution, and ridicule, and they have become self-destroyed. With its churches numbered by hundreds and filled with devoted adherents drawn from the solid reflecting body of the peoples all over the globe, why should we hesitate to investigate and know the light which has illuminated the pathway of so many earnest men and women over all our broad land.—*Correspondence.*

TOPEKA, KAN.

At the Grand Opera House yesterday afternoon [Nov. 15] Miss Mary Brookins of Minneapolis delivered a lecture on Christian Science. She was introduced by F. D. Luther, who said in part,—

From out the shadows of the past and across the gloom of the years there come to us of these times certain important and vital questions for solution and answer. Old questions all of them, and yet they are as important to us as ever they were to any age that has thought and toiled and prayed over them through the weary years.

What is man? Is he master of himself? Is he the helpless victim of circumstance and environment, tossed here and there by seeming forces beyond his control? Is there no way for him to free himself from the burden of woe, from the torturing poverty and the cruel want, from the years of hopeless and helpless sickness, from the heart-breaking sorrows of loss, from the nightmare of insanity, from the awful fear of death and the beyond, the great cloud that blackens the whole fair landscape of life? Is there an adequate Saviour?

Christian Science, the religion of Jesus, gives to us a means of solving life's seeming puzzle, and, in the light of understanding so gained, shows us man's birthright and inheritance, declares positively and affirmatively that there is an adequate Saviour; that the awful brood of evils can be driven out, and that man can stand forth whole—healed, fearless, free to enjoy that liberty which is his of right. And unnumbered people bear witness to the truth of this declaration.—*The Topeka Capital.*

BRIGHTON, ENGLAND.

Last evening [Oct. 23] Clarence C. Eaton delivered a highly interesting lecture in the Dome on the subject of Christian Science. Major E. E. Carter, C.M.G., M.V.O., occupied the chair, and said that it was through the hospitality of First Church of Christ, Scientist, Brighton, that they were assembled together. He could not be insensible to the honor which had been accorded him in being asked to take the chair, and in their name he offered every one a very hearty welcome. It was unnecessary for him to explain the reason for this annual gathering, but he wished to allude to one point. They were not designed to proselytize the public; such was not their purpose; for Christian Science attributed its phenomenal growth to causes quite apart from that—to the practice of its teachings. In these days they found that mere talk and platitudes never satisfied anybody, so that humanity demanded the crystallization of words in deeds. This was the standpoint which the Christian Scientist took in this present age, and it was to tell them about some of the countless facts of Christian Science that Mr. Eaton, who was a lineal descendant of Francis Eaton who sailed in the Mayflower, had come amongst them to-night. In Christian Science the way had been found by which through faith and spiritual knowledge humanity could be freed from the bondage of sickness and sin, and therefore he had great pleasure in introducing the lecturer to them.—*Brighton Gazette.*

CAMDEN, N. J.

The Camden Theater was crowded yesterday afternoon [Oct. 25], every seat being occupied as well as all available standing space, when Bliss Knapp of Boston delivered a lecture on Christian Science. In introducing the speaker, William Schellinger of Collingswood said in part,—

I believe the time has come when no one who desires to be well informed can afford to be ignorant concerning Christian Science—what it teaches and what it practises. Christian Science brings to you nothing that you have not always possessed—it takes from you nothing that you really have. It is the gospel of restoration—it restores to you health, harmony, success, peace, and restores you to right relations with God, divine Principle. Christ Jesus challenged the religious thought of his age with the daring assertion that he knew—that is, understood—God; "Ye have not known him; but I know him," and the proof he offered of this knowledge was his demonstration of unity with God's will in healing the sick and sinful, and he defined immortality as nothing else than this right knowledge. "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

I think we can safely say, then, that the mission of Christianity is to know God as Jesus knew Him; and if Christian Science offers a key to this understanding, it is certainly worthy of our investigation. If the message brought to you to-day inspires you with the hope that there is a remedy for the discords of earth,—if you are encouraged by the sweet promise and desire to pursue your investigations farther, the opportunity is afforded you. There is no mystery in Christian Science save the mystery which enshrouds everything that is not understood. Christian Science can be understood, and when it is, it brings healing to the sick, comfort to the sorrowful, strength and courage in the hour of trial and temptation.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A DEMAND FOR CLEAN LITERATURE.

IN the *Sentinel* of Oct. 17 *The Christian Science Monitor* was announced in part as follows:—

The tide is "at the turn:" the current of human thought is setting in the direction of that which alone is real—the good that men do, and not the evil. All over the land there has been and is a call from the fathers and mothers who feel their responsibility in this direction, who are asking for a paper that will supply vital current news, the things we want to know and ought to know about our fellow-men, but which are submerged in the daily tidal wave of crime and disaster which the ordinary newspaper would have us believe sweeps over the world. There is a field, and a wide one, for a clean newspaper, and it is this field which the *Monitor* is entering.

It will be the mission of the *Monitor* to publish the real news of the world in a clean, wholesome manner, devoid of the sensational methods employed by so many newspapers. There will be no exploitation or illustration of vice and crime, but the aim of the editors will be to issue a paper which will be welcomed in every home where purity and refinement are cherished ideals.

The first issue of the new paper was on Nov. 25. It received the cordial approval of the reading public, and also of many editors throughout the country, who in commenting on the newcomer in the field of journalism admitted in effect that no class of people are more out of sympathy with sensational journalism than are the practical newspaper men now engaged in reporting and exploiting the so-called "seamy side of life."

On Dec. 13 a letter was addressed to the editors of the daily papers of New York city from which we quote as follows:—

The aim of securing newspapers for our homes which shall at all times be free from lewd or suggestive articles detrimental to morals, offensive to decency, and damaging to self-respect, is one which all admit to be desirable. Some might perhaps say that it is possible to enjoy it at all times by simply buying only good newspapers. But, unfortunately, there come periods when overweening public interest and unworthy public curiosity provoke the editors of even some of the best of our journals to overstep the mark and to lay before us and the modest home circle, including the tender children of the schools, libidinous details of criminality which are revolting even to men charged with the punishment of those who prey upon society. We attempt to escape it and close our door to it for a short period, only to find that to keep in touch with our usual social or business needs we must continue our patronage of a journal which we are ashamed to bring home. Then our school children or others must have the objectionable articles and detestable head-lines thrust upon their sight in the public conveyances or other places. Each editor escapes censure by claiming that all his brother editors will surely present the same matter and he cannot be exceptional.

The community—all communities—were shocked by the long-continued revelations of the Thaw case, set forth in bold type. We are now promised another of similar character by reason of the approach of certain sensational murder trials, during the course of which, as we have been credibly informed, material more interesting to the prurient mind, and consequently more dangerous to the home and more disgusting to the self-respecting man, is about to be presented in court.

It is believed by good authorities that a respectful protest presented early enough to the press by men of serious character, representing heavy responsibilities in the care of their own children or children confided to them by the duties of their positions in life, will meet with an immediate and sympathetic response, resulting in such careful editing of this and similar news matter that no harm shall be done to the reading community by indecently offensive suggestion.

It is felt that with such views, support will be obtained throughout the whole country. Several editors have already expressed their intention of observing even greater care than in the past over news matter of this kind in their columns. You are therefore asked to give this movement your editorial support.

The letter above quoted was signed by men of standing in the community, and the views expressed by them were endorsed by other prominent citizens, whose names were also used in connection with the letter. All of this goes to show that the demand for clean literature is on the increase, and that the *Monitor* in setting a high standard for its own readers has not only made the way easier for other newspapers to come into line, but the public is no longer afraid to ask openly for what it wants to see in the daily press.

If "clean journalism" has accomplished even this much in a few short weeks, is it not something well worth while?

ARCHIBALD MCLELLAN.

"THE SPIRIT OF TRUTH."

TOWARD the close of Jesus' personal ministry he told his students that they need have no regrets because of his departure from their plane of experience, because the Father would send to them "another Comforter," who was to abide with them forever. Never had sick and sorrowing humanity known such comfort as the Master had brought to those who groped in the darkness of material belief, seeking vainly, as it seemed, for the much-needed light. What experiences were those of the three years' ministry, when the joy of healing was brought to the lame, the halt, and the blind, when even the dark shadow of death was dispelled in proof that man has eternal life! Was it strange the disciples shrank from parting with the one who could work these wonders and who was teaching them how they were to do the same, and even "greater works."

Had Jesus' departure meant that the healing work and the knowledge it required were to be lost to humanity, his followers might well have been sorrowful, but the Master said they had no cause for sorrow, that "the Spirit of truth" would not only be their Comforter, but, said Jesus, "he shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you." What tremendous possibilities lie in that "whatsoever I have said"! Nothing of all the Master's wonderful teaching to be lost, but all it contained and all it implied to be revealed by the Spirit of truth. What more could humanity ask?

That this promise of the Master was ripe for fulfilment we learn from the book of Acts, in which we are told of the continuance for many years of the glorious ministry inaugurated by him; but, sad to tell, the time came when personal opinions were sought rather than the guidance of the Spirit of truth, until at length the "signs" which Jesus said should "follow them that believe" were replaced by creed and dogma that offered no proof of divine origin. But the need for the healing truth did not lessen with the coming centuries, and again it was met when Mrs. Eddy discovered the divine Principle of Christ Jesus' work and declared to the world that the Spirit of truth would lead us into all truth and enable us to repeat the demonstrations of that earlier day. Her statements have been supported by the healing of unnumbered thousands of otherwise hopeless sufferers in over forty years' experience, upon which God has set His seal in uplifted and purified lives and in the fact that the Holy Scriptures are again opened up and the hungry find therein the bread which giveth life unto the world.

Wisely has our revered Leader provided that all who desire the truth shall find it in the Bible and Science and Health, "uncontaminated and unfettered by human hypotheses" (Explanatory Note in *Christian Science Quarterly*). It is therefore the purpose that each Christian Scientist should seek primal truth for himself in this way, and any discussion of the Lesson-Sermons by little groups of enquirers or members, where some one is apt to assume the role of interpreter, is contrary to the purpose of the

Digitized by Google

Lessons, and is apt to darken rather than enlighten those who in seeking personal guidance are in so far ignoring the fact that divine Mind is revealed as the guide to the true understanding,—that which is known by its fruits. While it is true that we need the letter, we have this clearly set forth in the Lesson-Sermons, and the spirit which "giveth life" comes through individual communion with God and demonstration of the truth. The daily overcoming of sin and sickness for ourselves and others will reveal to us in each Lesson "hid treasures" from the infinite source of all good, and the Master's promise is, "Ask, and ye shall receive, that your joy may be full."

ANNIE M. KNOTT.

CHRISTMAS.

FOR unfailing interest there is naught that can eclipse the beginnings of life. How delightedly one always sees again the sweet unopened bud that hints of flower and fruitage, the wee wax-cradled bee that dreams its way toward summer sweets, the silk-wound chrysalis that shapes itself for gay and brilliant flight, the callow nestling that nervously awaits its feathered freedom, and, chief of all, the little babe whose wondering eyes globe all mysteries, and in whose tender helplessness so many hopes are centered, so many cycles start anew, so many great careers are launched, so many vast events take their rise. Here at the threshold of mortal existence spring up evermore the world's deepest questionings, and here, as one stands before the opening doors of that temple within whose courts all created things are fashioned, and looks upon the unfolding miracle of life, he uncovers his head in a hush of reverent awe.

Upon the most interesting, most significant of all life-beginnings, Christmas-time is focusing the world's thought to-day. The coming of the little stranger who nestled in Mary's bosom awoke a cheerier song than earth had ever heard before, and this because he was to be the sweetest babe, the dearest boy, the noblest son and brother, and the most splendid and heroic man that the world has ever known. More than this, he was to make all things new, present a higher ideal and beget a truer sense of love and faith and duty, of fellowship and freedom and purity, of man's true nature and privilege and power. He was to be the world's Wayshower and Exemplar, humanity's true helper; and because he thus fulfilled every hope and met every need, said the right word and did the right thing for all men and for all time, his natal song has become a perennial pean, his birthplace a sacred spot to all the nations.

And yet in all our commemorative Christmas joys we need to understand and to remember that the birth of Jesus, the Christ-child, takes its greatness from a yet greater event, namely, the appearing of the Christ, the revelation of the divine idea in human consciousness. The theme of the angels' song to which the shepherds listened with uplifted faces, embraced infinitely more than the storied incident of the Judean village. It was the coming of the saving Christ, for the healing of all sicknesses, the righting of all wrongs, the wiping away of all tears. As understood in Christian Science the nativity of the Bethlehem babe symbolizes and expresses that universal fact, the dawning of divine truth upon human thought, which is the basis of all redemptive philosophy, faith, and experience. Like all other universal truths, it belongs to every individual, and it must be apprehended and experienced by each, made one's very own, ere he can grasp its true meaning, utilize its saving power, and drink its cup of joy.

The historic incident of the coming of the Christ-child in the long-ago may be believed in and joyously choraled by the many, but it can be understood and truly celebrated by him alone whose heart has become a Bethlehem. This understanding of the larger, deeper, and more immediate significance of the Christmas-tide may be said to distinguish the teaching of Christian Science. It is, as our Leader says, "the forever coming of Christ, the advanced appearing of Truth," which "will bring us into health, holiness, and immortality" (Science and Health, p. 230); and the poet was trying to voice an imperfect realization of this great transforming thought when he wrote,—

> O humble son of Mary, once again
> Make thou a manger in our hearts, and when
> Proud names have gleamed and gone, speak thou! Amen.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Dover, N. H., Nov. 11, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dearest Friend:—In the *Christian Science Sentinel* of Oct. 31, under the heading "Editorial," appears an article entitled "Interesting Narrative." It gives honor to whom honor is due, and with a heart overflowing with gratitude and love to God, our Father, the writer tells you of the glorious love-light and spiritual understanding that has come to him, wherein the "old man with his deeds" has been put off, and the "new man," created in God's own image, has been revealed and put on.

I have written you before of the wondrous light that came to me instantaneously, while waiting to take my seat at a gambling-table, through reading an article in your book, "Miscellaneous Writings," entitled, "An Allegory." The condition of mind I was in can never be known by any one. For thirty years I had used tobacco, both in smoking and chewing, had drank, gambled, and followed the path of vice and sin to its utmost, drinking of every false pleasure that this so-called world had to offer. The tramp whose story was published was not so deep in sin as myself, for I passed as a fairly good man and had access to the best there was. I knew not God, nor had I any desire to know Him. In this condition I came to the words: "Wilt thou climb the mountain, and take nothing of thine own with thee?" The question was asked of a penitent one who was seeking help of the "Stranger." The answer was, "I will." At once the words left my lips, "And so will I." Oh, if only the sin-tossed could know what then came to me! The world seemed changed from darkness unto light. I saw, as did the tramp, the husks on which I had fed. I saw my Father near at hand; even His kingdom within, and my true self as His child, pure and perfect. I saw His Christ, no longer a stranger. It seemed as if I had been taken into a strange but lovely city, where all was peace, love, and harmony. I arose, went to the room where I was about to sit and rob my fellow-man, took my coat from the wall and left the place. From that hour, ten years ago, I have not touched "the unclean thing," have never entered a gambling-place of any description, while the sense of desire for the old fell off without a struggle. I bought all I could of your writings and began the study of the Principle that makes men free. I went to work in a shoe shop, and while there I took instruction of one of your loyal students. The third day after I arrived home there came a cry for help, and after waiting to be led, I went to the rescue. The next day another came. Laying down my tools, I said, "If God has work for me to do, I will not come here again." That was seven years ago, and I have never returned for the tools.

God has blessed my work, and the Bible and Science and Health have been my guide and strength. How can I express my gratitude for the light that has shone into my darkened consciousness, that has made my life happy and enabled me to "depart from evil, and do good"? I feel

Digitized by Google

that only by living the truth and showing to the world that a man can be regenerated by holy living and ceaseless loving of our fellow-men, that by healing the sick and sin-racked, can this be done. Just now these words of Jesus come to me: "If a man love me, he will keep my words; and my Father will love him, and we will come unto him, and make our abode with him." Like the tramp I say, "Grace be unto you, and peace from God our Father, and from the Lord Jesus Christ."

With most tender love, and with gratitude untold,

Your student's student,

WILLIAM CHANNING HENDERSON.

Kansas City, Mo., Nov. 28, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—I wish to express my joy and gratitude for the latest addition to your already long list of benefits bestowed on mankind,—*The Christian Science Monitor.* Judging from the first copy, which was received this morning, I know it will be a welcome visitor to any one's home. It has long been my desire to see a daily newspaper free from such items as tend to be dangerous to its readers, and the *Monitor* fills this long-felt want. It will become a wonderful power for the education of the masses and make journalism a sacred institution.

Very sincerely,

ALBERT JACOBSON.

Santa Barbara, Cal., Nov. 27, 1908.

Mrs. Mary Baker G. Eddy.

Dear Leader:—I have wished many times during the past three years to write and thank you for the great happiness and benefit I have received through your teachings, not only for the physical freedom, but for the added joy and intelligence that I constantly receive through your interpretation of the Bible. I had studied eagerly and faithfully Christ's teachings for some years previous to beginning the study of your books, and I am lovingly and heartily grateful to you for your help in making my life richer in the knowledge of God and of His perfect law. Faithfully and obediently yours,

CARRIE L. BLISS.

Minneapolis, Minn., Nov. 27, 1908.

Beloved Leader:—The first issue of *The Christian Science Monitor* has just reached us, and we hasten to send a word of loving gratitude to you for supplying still another great need of the age—the need for a higher and truer journalism. Not long ago the key-note of this reform was sounded by one of our local editors, who commented critically upon the sensational head-lines of the modern newspaper, and closed by asking the question, "What would the practical business man of to-day think if, as he stepped from his office door, he should hear the newsboys shouting down the street, 'Evening paper! All about the glory of God'"? May we not say that the mission of the *Monitor* is to give to the world such an ideal? It will stand for the things that are true and right and proclaim "the glory of God."

Perhaps it would interest you to know that our Thanksgiving day this year was celebrated by a joint service of Second, Fifth, and Sixth churches of Christ, Scientist, of this city. It was indeed an inspiration and joy for these three churches to meet again for one day under the same roof, and in sixty testimonies voice the deepest gratitude and praise to God for Christian Science and its inspired Leader. To-day, as an overflow to this glorious thanksgiving, comes the *Monitor* to cheer us on our way through the coming year, and may our lives express to you in some measure the reverence and gratitude we feel for your priceless gifts to humanity.

Lovingly yours,

EMMA A. THOMPSON,
ABIGAIL D. THOMPSON.

Baltimore, Md., Nov. 30, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—*The Christian Science Monitor* is coming daily into my home. Hitherto I have dreaded to have my children learn to read so much of the so-called "news" of the day. I am accordingly thankful to our Publishing Society, and also have added cause for gratitude to you both for our Publishing Society and your permission for them to publish a daily paper.

Most sincerely,

CHARLES G. BALDWIN.

Boston, Mass., Nov. 30, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Beloved Leader:—The ushers of your church, The First Church of Christ, Scientist, Boston, representing as we do many branches of mercantile and professional life, wish to express to you our sincere appreciation for the new daily newspaper, *The Christian Science Monitor.* The establishment of this paper marks an important epoch in the world's history, and its daily perusal will be of inestimable benefit to us in our efforts to become better business men and more loyal supporters of God's Cause along the lines taught by you in your wonderful book, "Science and Health with Key to the Scriptures."

With renewed assurances of love and gratitude for all that you have given us, and for the opportunity of serving you in our individual and collective capacity, we are

Faithfully yours,

THE USHERS.

Kansas City, Mo., Dec. 1, 1908.

Mrs. M. B. G. Eddy.

Beloved Teacher and Leader:—I wish I could command words to express my gratitude for the *Monitor,* for a paper that only blesses mankind. The world is sadly in need of such a paper, and we have another proof that "divine Love always has met and always will meet every human need." Your grateful student,

SALLIE N. CHANDLER.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local news-dealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

AMONG THE CHURCHES.

SAN DIEGO, CAL.

Final negotiations for the purchase of three lots on the southwest corner of Second and Laurel Streets, which are to be used as a site for a handsome new church edifice to be erected by First Church of Christ, Scientist, have been completed. The property was purchased by John S. Hawley, a member of the church congregation, who paid eight thousand dollars cash for the three lots and donated them free of all incumbrance to the church. This liberal donation places the church in a position where it can go ahead with the erection of the new edifice as soon as the church officials so desire. The property has a frontage of one hundred feet on Laurel and one hundred and fifty feet on Second.—*San Diego Union.*

ALDERSHOT, ENGLAND.

On Wednesday [Oct. 28] Aldershot Christian Scientists assembled in their own Freehold Hall for the first time. The tiny one-room gathering of three years ago has grown to the big meeting of Wednesday, a meeting which marked impressively the growth of the creed in this district.

Prior to the month of November, 1905, little was known in Aldershot of the creed, based upon scientific Bible teaching, as expounded by Mrs. Eddy in America. But during the month mentioned the first Christian Science service was held in an upper room at 11 High Street, then known as the School of Music. Only a few weeks after this first gathering it became necessary to hire the music room on the ground floor, and later on the Sunday services were held in the public room of the Cecil Restaurant. The local Christian Science membership was now assuming proportions warranting its formal organization as a society, this being effected under the title of Aldershot Christian Science Society. Less than four months later the society overflowed to the Masonic Hall, in Station Road, and a Reading Room was opened to the public on Feb. 27, 1907. The idea of testimony meetings did not mature until April, 1906, when the first was held one Wednesday at the Cecil Restaurant, but since then testimony meetings have been held periodically. The strength of the organization became very apparent when on April 15, 1907, Bicknell Young, C.S.B., lectured in the Theater Royal to an audience well over a thousand strong; and again on April 24 of this year, when Edward A. Kimball, C.S.D., spoke to a similar gathering. Nothing has seemed to stay the vigorous growth of this new-world cult, and in August, 1908, the members of the society met on their own premises, having in April purchased the property in Grosvenor Road. Workmen were set on to demolish the studio in the rear of the building in July, and the structure of the new hall, which heard a song of praise for the first time on Wednesday, was then started upon. The edifice is of brick, and quite unpretentious on the outside, but the inside, though plain, is very tasteful.

At three o'clock on Wednesday the hall was filled for the thanksgiving service. Even the gallery overflowed; extra chairs were requisitioned, but still several eager Christian Scientists had to stand at the back. After a hymn from the Christian Science Hymnal, "O'er waiting harpstrings of the mind," written by Mrs. Eddy, and readings from both the Old and New Testaments, with correlative passages from Science and Health, the beautiful solo from Mendelssohn's "St. Paul," "So they, being filled with the Holy Ghost," was rendered. The usual form of Thanksgiving services was then conducted, concluding with the hymn, "A glorious day is dawning."

Sheldrake's Aldershot Military Gazette.

TESTIMONIES OF HEALING.

In attempting to write my testimony I realize how inadequate are words to express the gratitude I feel for Christian Science, which came to me as an angel of light, at the time of my greatest need. For many months I had been an invalid, with little hope of ever being well again, from the effects of a fall. My life was one of constant suffering, indeed I shudder now when I think of the days and nights I passed through. Nothing that was done for me, and no tender care, could give me one day's relief, and I longed to die.

With joy I listened to what Christian Science could do, and from the first I gave up my medicine (fifteen doses a day) and turned from sense to Soul. In three weeks' time I was up and about the house, and oh, so happy. My complete recovery was slow, however, owing to opposition and the tenacity of mortal belief. I decided to give up all else except my daily duties, that I might have time to read and study. I realized each day that the way would be opened, and that I would surely see it. The way has been opened; and in our home, where once with my six children we were always having a doctor, now we are free from this kind of bondage, such ailments as come up being quickly met by the power of Truth. The children have lost much of their former fear, and are daily understanding more and more how to help themselves, not only for health, but for character, knowing that the overcoming of hate and unkindness is very necessary to health and happiness, which are parts of God's kingdom on earth.

My heart also goes out in very tender affection to Mrs. Eddy, our Leader, who, holding this truth for a waiting world, has illumined to this age the way up to God which Christ marked out for mankind. I am sure every Christian Scientist feels like repeating with his whole soul the glad refrain sung by the angels above the hillside of Judea: "Glory to God in the highest, and on earth peace, good will toward men."

FANNIE BAKER STOCKTON, Jacksonville, Fla.

Mrs. Eddy tells us in "Unity of Good" (p. 72): "Sorrow is the harbinger of joy. Mortal throes of anguish forward the birth of immortal being; but divine Science wipes away all tears." About three years ago, when I could see little more than sorrow and anguish, I was led into an atmosphere of Christian Science. After several months' treatment, I became interested in the study of that Science which "wipes away all tears." Though slow in grasping this truth, with "signs following," I rejoice in the fact of a mental horizon cleared; that fear has been supplanted by hope, darkness by sunshine, and life is a joy instead of an unsolvable problem. I am deeply grateful for a return to health, and for the glimpses of light which I gather along the pathway marked by Christian Science.

FLORENCE G. MAULSBY, Baltimore, Md.

[Translated from the German.]

There was a time when life and health seemed inexpressibly beautiful, but for me they appeared to be unattainable. For four years and a half I was very ill, until the glorious tidings of Christian Science changed my sad existence to a bright and pleasant one. Toward the end of September, in 1905, I heard of Christian Science for the first time, and I at once sought a practitioner. I never can forget that day. My main trouble was an enlargement of the stomach, and the only hope which my physician saw for me was in an operation. He proposed the removal of the enlarged part, but I was too weak for that; besides, I was suffering from nervous weakness, heart

Digitized by Google

trouble, etc. My healing through the truth was very slow, almost imperceptible, but sure. At first I worried because I did not improve more rapidly, but later on I recognized joyfully the blessing which this slow healing was to me, in view of my spiritual growth. Sleeplessness and heart trouble vanished first, and now my stomach is performing its duties in a normal way. The importance of this statement can only be appreciated by those who knew how ill I was. Sometimes I can hardly realize it myself.

I have been made physically well through Christian Science, but the spiritual blessing which I have received I realize more fully as time goes on. I am always glad when I hear of the healing of a poor sufferer who has found this way to health and peace, because I can see more and more that I could never have been made well, either physically or mentally, without Christian Science. I say with David: "Bless the Lord, O my soul, and forget not all his benefits." I am also deeply grateful to our beloved Leader, Mrs. Eddy.

FRIDA HORN, Creisau, Silesia, Germany.

Trusting that others may gain renewed courage from hearing of my experience in Christian Science, I gladly write it. For many years, at intervals, I suffered with an eruption of the skin, which stubbornly refused to yield to any treatment. I tried various remedies and had a number of physicians, but nothing seemed to do any good. After much persuasion I was induced to try Christian Science; I felt that at least it could do me no harm. I took treatment about two months, and after five or six months my skin became perfectly clear and has remained so ever since. This was a year and a half ago, and now I know what physical comfort means. Yet the physical healing was not all. Christian Science teaches the cheerful way to live from day to day, and life to me has now a broader significance than ever before.

GRACE HENDRICKS, San Francisco, Cal.

I found Science and Health in my father's library in April, 1905, and have studied it ever since. I was then suffering severely from stomach and bowel trouble, etc., and had not been well for over seventeen years. I was constantly in the hands of the doctor, and had tried most known "cures." I was always tired and suffered from bad headaches. I took medicine continually, and one particular remedy I had taken daily for over two years, having been told by a leading physician it was impossible for me to do without it. Within six weeks of my beginning to read Science and Health, however, I gave up taking this medicine, and have never used it or any other material remedy since. To-day I am well and a marvel to all my friends, who looked upon me as a chronic invalid.

I am deeply grateful to Mrs. Eddy for writing Science and Health, as to me it has not only been a guide to health, but a "Key to the Scriptures" also; for whereas before I had it I never read the Bible or believed that any good could come from it if I did, I now study it daily and get great help and comfort from it.

S. ALEX. ALDERSON, Alexandria, Egypt.

It is with the deepest gratitude that I record my healing in Christian Science. For ten years previously I had suffered from Graves' disease, with its attendant complications of heart trouble, dropsical swellings, etc., and great general weakness. Though I was not invalided the whole of the ten years, I was very seldom well for a week at a time. The complaint was never absent from the system, and the attacks were frequent and severe. In the year previous to my healing I spent eight months in bed, and during the greater part of that time was so dangerously ill it seemed very unlikely that I should ever recover. The great kindness and attention of my doctors is one of the pleasant memories of that sad time, and I am grateful for all their efforts in my behalf. My convalescence at this time was very slow, and I had not regained my usual degree of health, poor as that was, when another attack set in. I was then utterly hopeless, as I felt I had no courage to go through all the suffering again, and had no hope of living more than a few months. I decided therefore that I would not try to go through the struggle again, but would die as quickly as I could, that the loving relatives who nursed me so tenderly should not be more worn out than was unavoidable. I could hardly bear the thought of leaving my husband and little daughter, and the others whom I so dearly loved, but since I believed I had to die, the sooner death came the better.

It was at this point that Christian Science came to heal and to save. I was instantaneously cured. At the first visit from the practitioner I was healed. That is more than a year ago, and ever since I have had strength sufficient for my daily need. My eyesight was restored so that I was able to discard glasses, the heart trouble vanished, and within a few weeks the goiter had disappeared. To say that I am grateful is little; my whole outlook upon life is different. It is not only my health that is restored, but my eyes have been opened to the truth, and of all my thankfulness my deepest joy is this, that the blessing I have received is free to all. There is no one in this world so sick or so sad but that Christian Science can heal him and make him to rejoice, and there is no wish in my heart that can compare with the desire that my life may prove how deep is my gratitude to God for my healing, and to Mrs. Eddy, who has been the means through which this great truth has been given to the world.

MRS. AMY BROOKSHAW, Manchester, England.

I have come to the conclusion that the time is ripe for me to express my thanks for what Christian Science has done for me. Eight years ago I was attracted by the material brilliancy of the theatrical profession, and took it up as a means of livelihood. The gaiety and frivolity soon led my ignorant mortal mind to channels of dissipation and idolatry. I drank and smoked, and thought myself a good fellow. For seven years I had been suffering from an acute disease which doctors told me could not be cured entirely. Feeling somewhat discouraged, I gave up using the medicine and let fate take its course. On May 5, 1907, I attended First Church of Christ, Scientist, in San Jose, Cal., and enjoyed the service very much. I did not understand the Lesson-Sermon, but the silent prayer impressed me greatly. I felt so rested, so peaceful, that I forgot all earthly things. After service I remarked to a friend who had accompanied me that I did not know how or what it was, but I felt grand! Later I met several Christian Scientists, and was so attracted by their kindness that when I was in Peoria, Ill., in November of the same year, I visited the Reading Room and had a long heart-to-heart talk with the lady who was in charge. She kindly loaned me her own copy of Science and Health to read while on the road. At the same time I decided to try a new prescription, as the disease was still giving me trouble, and as I began to read I also began to use my new medicine. On several occasions, however, I forgot to take it, and finally I decided to leave it behind, as I was resolved to try Christian Science treatment; for having received some light, I wanted it to be brighter. To use Mrs. Eddy's words, "I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226). Through the conscientious study of "Science and Health with Key to the Scriptures" I have overcome all fear of the illness from which I suffered.

Digitized by Google

The physical relief derived from this wonderful study is but a mere detail, a step to the glorious spiritual uplifting from all immorality and evil. I now know and realize that the beauties of life are only found in spiritual thoughts, not in material things. I have grown both physically and mentally since I came into Science, and the Bible and Science and Health, together with the *Quarterly*, are my only teachers, during my tours. I have thanked the Scientist personally for her loyalty to the By-law that members "shall strive to promote the welfare of all mankind by demonstrating the rules of divine Love" (Manual, p. 61); and I now take this opportunity of expressing my heartiest thanks to Mrs. Eddy for showing us the way to this glorious truth. God bless her.

LUDWIG F. P. BAECHLE, JR., Brooklyn, N. Y.

About two years ago I had severe attacks of earache, which increased in violence and frequency to such an extent that I had to call a physician, but he could not relieve me in the least and advised me to consult a specialist; which I did. The specialist told me that the right ear was badly diseased, and that the only resource would be an operation, to which, however, I would not consent. I then consulted three other doctors, who told me the same thing, one physician saying he was afraid I had waited too long. I had been sick for a month, and my mental condition was somewhat disturbed, so that I was in great fear of losing my reason. During my great affliction a lady who had been healed in Christian Science called on me and asked me if I would try the treatment. The next day I went to see a practitioner, and made arrangements for one week's treatment. I felt better when I left her; with the third treatment the pain disappeared, and at the end of the week I was made whole through the truth.

When I first came into Christian Science I had a fear of lung trouble and a cough, but the cough soon disappeared and since then I have had many beautiful demonstrations, for which I am very thankful; also for the light and help I have received. I am thankful to God, and also to Mrs. Eddy, our Leader.

MRS. M. E. M. FOWLES, Bay City, Mich.

I became interested in Christian Science nearly two years ago, through the healing of my youngest child, a boy five and a half years old. All his life he had been afflicted with a weakness of the bladder, and at times it was very trying both to the child and myself. We tried every remedy we heard of, but no medicine that we used seemed to do him any good, and it was in a spirit of desperation that I took him to a Christian Science practitioner. I felt that help must be found for him in some way, and the way in which the practitioner talked to the child that morning gave me a glimpse of God such as I had never had before. I had been a church-member since I was a young girl, but I had never known God as ever-present Love, as I found Him that morning through Christian Science. The disease was entirely healed in the one treatment and the child has never had the slightest return of it.

I am truly thankful for the physical healing, but mere words cannot express my gratitude for the spiritual uplifting I received through my child's healing. I know that Christian Science is the truth, for each day we prove it by some demonstration over error. I am so thankful that this understanding of God as divine Love has come to me while my children are still young, so that they may always know God as Love.—MRS. EMMA BEARD, Chicago, Ill.

I have received so much benefit from Christian Science that I wish to express my gratitude to God, and also to dear Mrs. Eddy for showing us the way. Not long ago my little boy came home from school feeling very ill. At night he complained of a sore throat and headache, and by the next morning he had what seemed to be a well developed case of throat trouble. He appeared to be very sick, so I sent at once for a Christian Science practitioner. She gave him treatment in the morning, and at noon we sent her word that he was much better. He had only one treatment, but the next morning all symptoms had disappeared and he wanted to go to school, though I kept him home two days longer. The first day he went back they were examining the children's throats, but they found nothing wrong with him. This healing is only one of the many blessings we have received through the study of our priceless text-book, Science and Health.—MRS. M. DEHAVEN, Haywards, Cal.

I feel that I can no longer be silent, but must tell others who are seeking for help what Christian Science has done for me. It has been as a great light dispelling the darkness of mortal fear and sorrow. The fear of lung trouble had been over me all my life, and the disease seemingly developed four years ago. The best of medical skill and change of climate gave little benefit, and two years ago, in my discouragement, I turned to Christian Science. I well remember the words which the dear practitioner quoted to me when first I talked with her, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." I had been a professing Christian since childhood, but with ill health and mental troubles I had not found abiding peace. Now I know that it was because my mind was not "stayed" on God. With the Bible and Science and Health as daily companions, and occasionally a few days' help from the practitioner, I have been able to work continuously, and through circumstances under which I should have succumbed in the old thought. I feel today that I am well. Physical and mental troubles have disappeared before the truth which Jesus said should make us free. Seemingly great trials have come to me, but I am proving day by day "the supremacy and reality of good, the nothingness and unreality of evil" (Science and Health, p. 205).

For many years my son, a lad of thirteen, had been confined to the house for weeks at a time during the winter with glandular trouble. The past year we have been living many miles from any Christian Science influence, and when a few months ago the familiar symptoms appeared, fear seemed to hold us in the old bondage, but after a few hours' quiet realization of the ever-presence of divine Love, the fever left him, and by the next morning he was free from all symptoms of the trouble. Is it strange that we who have been lifted out of bondage love dear Mrs. Eddy, and honor her brave, unselfish life? I cannot in words express my gratitude for Christian Science. Best of all is the spiritual help it has given,—the better understanding of the Bible,—the proof that its precious promises are really meant to be realized to-day. I pray to be obedient to Truth, for I know that, as Paul says, "if these things be in us, and abound, they make us that we shall neither be barren nor unfruitful in the knowledge of our Lord Jesus Christ," I can best show my gratitude for this truth by helping some one burdened as I was, and this is what I am striving to do.—MARY K. FOSTER, Chase, Col.

Christian Science has done so much for me that I wish to express my gratitude to dear Mrs. Eddy for this wonderful understanding of Truth. For seventeen years I was afflicted with stomach trouble. Many kind doctors did everything in their power for me, and everything that *materia medica* could suggest was tried. The first Wednesday evening meeting which I attended I heard several testi-

Digitized by Google

monies of the cure of stomach trouble, and I felt that if Christian Science had helped others, it would me. That night I slept better, and never used the water-bottle which I had used every night for many years. Kind friends loaned me the book "Science and Health with Key to the Scriptures" by Mrs. Eddy, and while studying it I was healed. My joy and happiness at the relief from pain cannot be expressed, and I thank God every day for this divine Science.

MRS. HATTIE SCHLESINGER, San Francisco, Cal.

As I hear and read of the many wonderful healings that come from the study of Science and Health, my heart goes out in gratitude for this blessed truth that makes us free from sin, sickness, and death, and I feel it a great privilege to send my testimony to the Field. The first time I entered a Christian Science church, led there by a loving friend who was a Scientist, I was deeply impressed by the Sunday morning service and the many happy looking people present. I then studied this healing truth as it is taught in Science and Health, and at the third Wednesday evening meeting which I attended, I took off my glasses, which I had worn nine years for supposedly organic trouble and in that time had twice nearly lost my sight. For this healing, and for the many other blessings which I have received since coming into Science, I am deeply grateful to God, to Christ Jesus the Wayshower, and to our beloved Leader, Mrs. Eddy.—MRS. R. M. HOLDER, Cleveland, O.

Six years ago, when my little girl was a baby, she was sick for a long time. At last the doctor said he had done all he could for her, but that she was sure to die. I then heard of Christian Science, and called a practitioner to treat her. In a week's time my baby was well. About a month later we moved to the country, where there were no Christian Scientists, and I did not hear of the Science again until a year ago, when we moved back to town. I had stomach trouble for months, so that I could not eat anything. The doctors came to see me for a long time, and did all they could, but they said I would never be any better. I became so weak that I could not walk about the house. I was then treated by a Christian Scientist, and in two weeks I was able to help about the work. I have been entirely healed, and I am very thankful to God for Christian Science and for all it has done for me and my family.—BESSIE DENTON, Paducah, Ky.

In my desire to tell how much Christian Science has done for me, I hardly know where to begin. My first experience, eight years ago, was in the healing of an internal disease. For six months, twice a week regularly, I had been going to a doctor's office for treatment; but I apparently grew worse instead of better, so the time was set by the doctor for an operation, and I was told to make all preparation for the same. I could not reconcile myself to the thought of an operation, and instead of following the doctor's instructions I went to a friend who was a Christian Scientist, with an appeal for help.

I knew nothing about Christian Science except through hearsay, but I was willing to give it a trial, and we went from my friend's home to that of a practitioner. I took one treatment, and was healed. I shall never forget my feelings as I left the building after that treatment—I was a different mentality entirely. I felt positive that I was well and sound, and was so happy that I forgot all about the abscess. I gained twenty-five pounds in three months, and have been a grateful believer in this truth ever since.

Christian Science has changed my whole life, and everything I am and have I owe to its teachings. I have learned that all we need is to have enough faith to turn and accept the help that is and always has been ready for us. I have at different times been troubled with severe headaches, and whenever I have felt one coming on I have called up the practitioner and asked for help. With but one exception, as I remember, I have been healed instantaneously, and in that one exception it was only two hours before the sense of pain left me entirely. While each time I have known that I should receive the help asked for, yet each demonstration has brought recurring wonder and joy to me. Human thought cannot grasp the infinity of divine Love.

MRS. ELLA WOODROUGH, Omaha, Neb.

A fall on an icy pavement resulted in severe injuries to my arm, but these were completely overcome under Christian Science treatment. The following year an injury to the ankle was quickly overcome. After the former experience it seemed easier to see the nothingness of this. I was living in a hotel, and walked the length of the dining-room at each meal, so that no one knew of the accident. For these and many other proofs of healing I am truly grateful; also for this practical Christianity and the new light with which I read the Scriptures.

MRS. HORTENSE B. HAMILTON, Danville, Ill.

Christian Science first came to me through my parents, who became interested in it when I was only a child. The results of their study were at once evident in improved health in the household, and the dismissal of the family physician. A few years later, when I was attacked by a dreaded fever, Christian Science was the only remedy employed. In two weeks' time I was healed and able to be outdoors. The benefits received mentally, however, have far exceeded the physical help. To have learned, even in a small degree, to think rightly, to appreciate the power of good, and to be grateful for demonstrations of the truth, is surely of lasting benefit. I have witnessed many demonstrations of the healing power of Truth, as presented in "Science and Health with Key to the Scriptures" by Mrs. Eddy, among them the laying aside of glasses, the restoration of a crushed foot, and the healing of serious illness.—FRANCIS E. CADY, Washington, D. C.

I wish to express my heartfelt gratitude to God for the great blessings I have received in Christian Science. Through reading Science and Health by Mrs. Eddy, I was inspired to read the Bible more, to believe God's promises, and apply the truth as Mrs. Eddy teaches. All my life I had been a great sufferer from what a physician pronounced incurable stomach trouble. I was unable to work; in fact I was too miserable to walk very much. At length a lady advised me to see a Christian Science practitioner and ask for help, and as soon as I could feel sufficient strength I hobbled to her house one morning and asked if she would heal me. I tried to tell her all my troubles, and she assured me that God is good and that He loved me. She begged me to return good for evil in my discordant home, and to try to see error as impersonal. She told me to watch my thoughts, to keep them in clean and healthy channels, and said that the body would respond in proportion to the purity of my thoughts. Thank God, I was healed perfectly and permanently in that one treatment. Nearly a year has passed since my healing and I have not had a return of an ache or pain. I am working steadily, washing, ironing, and cooking, walking miles each week.

I cannot explain my spiritual advance. I feel nearer to God, and know that Love is always with me. I have had some very good demonstrations for myself. While washing, one day, a pin went deep into my hand. I pulled

Digitized by Google

it out and declared the truth,—that God is the only power, —and did not have any trouble with my hand. My home is growing more and more harmonious, and I feel that I am doing a good work among my race, which needs the truth so much. I am thankful to begin to know that God is All, and that all is good. God bless our kind and good Leader.—EVANGELINE YOUNG, Jacksonville, Fla.

Christian Science has done so much for me that I wish to add my testimony, as it may be helpful to some one under similar circumstances. About three years ago I was suddenly stricken with an acute form of throat and lung trouble, and after several weeks' treatment by a physician it seemed to me that death was staring me in the face. I was filled with fear, and words cannot describe my condition. I then turned to Christian Science, and was healed in a few days. A few weeks later I had Christian Science treatment for weak eyes, and was completely healed in three treatments, so that I have had no use for my glasses from that time to this. Christian Science has brought me up out of the miry clay of materiality, and set my feet upon the rock, Christ, Truth.

J. C. GIBSON, Atchison, Kan.

One morning I awoke with a fear of impending headache, and although I worked mentally while doing my housework, I did not get rid of my fear. Finally I thought I must rest and let God do the work. I had opened my mental doors and felt that I could not help receiving the truth. In a short time the fear and unpleasant feeling left me, and I unconsciously said to myself, "I am healed." Several people have remarked how much better I look since I have been reading the Lesson-Sermon all through each day. These are some of the minor blessings derived from Christian Science,—the overcoming of pride and worry, and I am learning to depend upon God more and more as the source of all supply. We have sometimes seemed stinted, as to the supply for our needs, but when we know the truth there is an abundance.

Through the understanding of a dear practitioner, our little son was completely healed of a dreaded spinal disease, which is usually fatal under medical treatment. The doctor who diagnosed the case, when our boy seemed about to pass on, has since pronounced him perfectly cured. The *Sentinel*, with its testimonies, has helped us so many times that we are sending this statement, in the hope that it may encourage others. I want to add that the increased harmony and peace that has come to our home within the last four years is the greatest blessing of all.

LINDA G. BAKER, Scarsdale, N. Y

I wish to express my thankfulness for what Christian Science has done for my twelve-year-old daughter. In September of last year she was taken with a bowel trouble, which in two weeks developed into a dreaded fever. For a few months previous to this I had been studying Christian Science, so at first I tried to treat her myself, but it finally seemed advisable to call on a practitioner for help. As we were away from home at the time, the practitioner thought it better to take my daughter to her own house, which was done on a Tuesday morning. The child was unable to eat, and when not in a stupor was delirious most of the time until Saturday morning; but about noon of that day she called for the Christian Science Hymnal, and sang a few hymns. By Sunday night the fever had entirely left her; Monday she was dressed, and Wednesday we went home. We had been at home only a week when she seemed as strong as ever, although the practitioner had treated her but fourteen days in all.

Christian Science has brought us help and comfort, and has taught us that God is able to heal us at any and all times if we but trust Him fully and freely; and that He is no respecter of persons.

MRS. FANNIE OLIVE DEINTZ, Waterbury, Conn.

I feel it my duty to tell of the many blessings that have come to me through Christian Science. At the birth of my little daughter last summer, the midwife said that the child could not be born without the aid of instruments, as did also the nurse. A Christian Science practitioner was then called, and the delivery was safely made. In three days I was up and about my household duties, none the worse for the experience and without even a sense of weakness. I have also been healed through Christian Science of severe throat trouble and several other physical ills. Words cannot express my gratitude to God for what Christian Science has done for me. My thanks are also due to Mrs. Eddy, who has shown us the way and taught us how to know more of God's loving and watchful care over us.—MRS. MAE KITCHEN, Lake Charles, La.

So much joy and harmony have come to me through the promised comforter, Christian Science, that I am glad to give a testimony of my healing, with the hope that some one who is in need of encouragement will be led to seek the healing and sustaining power of divine Love as revealed to the world in Mrs. Eddy's teaching. For several years I was subject to painful attacks, and when nothing else seemed to bring me relief, I was given an opiate by my physician. As time passed, whenever there was suffering this opiate seemed to be the remedy for me to use, until at last I found myself in bondage to a constant demand for it. Then followed nearly five years of habitual use of the drug. Sometimes the quantity taken was so large that the effect, physically and mentally, alarmed my family and friends.

About a year ago they decided to place my case in the care of a Christian Science practitioner. I began to take treatment, and soon the desire for the drug was destroyed. In a few weeks my physical condition had become normal. I cannot find words to express my gratitude for the comfort and peace that have come into my life through this great healing truth.

MRS. EDNA B. MERRICK, Concord, N. H.

I am seventy-six years old, and one year ago I took treatment in Christian Science and was healed of bowel trouble of twenty years' standing, also of rheumatic trouble, and have been earning my own living ever since. I have read Science and Health through once, and I love the truth which I have learned from the book.

MRS. REBECCA JANE TIPTON, Knightstown, Ind.

Two sorrie thynges there be—
Ay, three—
A neste from which the fledglings have been taken,
A lambe forsaken,
A redde leaf from the wilde rose rudely shaken.

Of gladde thynges there be more—
Ay, four—
A larke above the olde neste blythelv singing,
A wilde rose clinging
In safety to a rock, a shepherde bringing
A lambe, found, in his armes, and Chrystemasse bells
a-ringing.

WILLIS BOYD ALLEN.

FROM OUR EXCHANGES.

[Rev. John Haynes Holmes in *The Arena.*]

Throughout all Christian history, correct belief has been the test of discipleship, acceptance of authorized dogma the supreme virtue, rejection of this dogma the unpardonable sin. And this, in the face of the express teaching of Jesus, as contained in the famous judgment scene of St. Matthew, wherein the Master accepts as his disciples not those who have "believed on him," but those who have given food to the hungry, drink to the thirsty, clothing to the naked, etc., and rejects not those who are guilty of "infidelity," but those only who have neglected the hungry, the thirsty, and the naked! What a travesty of religion, indeed—this emphasis upon sound theology! And yet it is just this interpretation which has for ages paralyzed the church as an agent of social redemption, which has made it possible for the most hideous social ills to continue for centuries uncondemned and undestroyed, and postponed the coming of the kingdom of God upon earth to a future as indefinite as eternity. Concerned only with the problem of right thinking, the church has utterly neglected the problem of right living, and thus has left the world to welter in its sin.

[*The Christian Commonwealth.*]

The religious spirit has an existence independent of all forms and institutions, and cannot be quenched either, on the one hand, by the churches, with their tenacious clinging to tradition and convention, their apparent inability to distinguish between the husk and the kernel of the faith, the eternal verities and their changing mode of expression, or, on the other, by attacks on religious belief—attacks which often are themselves inspired by an unconscious devotion to the spirit of true religion, and do but help her to shed off artificial and mischievous accretions and reveal the truth and beauty that when seen are irresistible. What is regrettable is that so many leaders of the church utterly fail rightly to diagnose the disease with which she is afflicted, and consequently to prescribe the true remedy.

[*The Universalist Leader.*]

Men are often thrown into skepticism because preachers merely toy with the fringes of life, or impose needless burdens, or demand an abject surrender of common sense. The prolific seed of unbelief is unreason in the champion of an irrational belief. All men are ready to believe in the Bible; it is the narrow dogmatism of its friends that often drives intelligent people away from it. Even the Golden Rule may be presented in such an unlovely manner that it seems repellent. When Christianity is displayed as a mass of ritualistic fashions and dogmatic assertions it is no wonder that the modern mind rebels. But no sensible man will persist in a skeptical attitude toward Christianity when the appeal to experience in its behalf respects his freedom.

[*The Examiner.*]

Those who deny that the Bible is a revelation from God, forget that all the real knowledge we have of divine things is derived from it. The gropings of philosophers and the grotesque ideas of ethnic religions represent the innate longings of the human spirit after God; but they also show how impossible it is for the unaided mind, even though it feel after Him with profoundest desire, to find Him. The heathen are still groping.

[Sir Oliver Lodge in *The Hibbert Journal.*]

Every man, woman, or child who has the power of elevating the thought of another human being, every one who is chosen to act as a channel of the divine Spirit, is for the time a priest.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel.*

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 40 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture By Rev. ARTHUR R. VOSBURGH. 28 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. A Lecture delivered in London. By EDWARD A. KIMBALL. 46 pages.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. A Lecture delivered at Harvard University. By EDWARD A. KIMBALL. 28 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

REPRINTS FROM THE JOURNAL AND SENTINEL

SERVICE AND STIPEND.
THE LESSON SERMONS.
A PROTECTING RELIGION.

Price: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full Morocco. Per copy, prepaid, $3.00; Twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:

"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A; for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy; $7.00 per dozen.

COMMUNION HYMN — "SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy; $5.00 per dozen.

"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY
FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Rev. Mary Baker G. Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. 20 Pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The decree of the Circuit Court in the Government's suit against the American Tobacco Company and others declares the tobacco trust a monopoly engaged in an illegal combination, and restrains these holding companies from engaging in foreign and interstate commerce until competition between them is restored. An appeal has been taken to the Supreme Court.

The Standard Oil Company's defense in the Government suit seeking to dissolve the $100,000,000 holding concern, is practically all in. On Jan. 5 the Government will begin the rebuttal testimony, which will take about ten days. In March the argument in the suit will take place before the three judges of the Eighth United States Circuit Court in St. Louis.

By a decision of the Circuit Court the Board of Valuation and Assessment of Kentucky is directed to assemble and assess the Southern Pacific Railroad according to law. The suit, however, was to force an assessment on a valuation of $250,000,000 and will mean about $6,000,000 for the State if the Court of Appeals upholds the judgment.

The importance of the subject of accidents to workmen is apparent when it is considered that between thirty and thirty-five thousand workmen lose their lives in accidents in the course of their employment in this country during a year. Government Bulletin No. 78 of the Bureau of Labor deals with the matter.

An injunction has been issued which restrains the Indian Territory Illuminating Oil Company from piping oil and gas out of the State of Oklahoma and from constructing its pipe lines along the highways of the State. The injunction follows a suit to oust the company from the State for alleged violation of the statutes and constitution.

Defects in methods of bank examination and the inability of the comptroller of the currency to deal with infractions of the banking laws without resorting to such harsh measures as the closing of the offending national banks, have been pointed out to the National Monetary Commission by high officials of the Treasury Department.

There are 1,826 national banks, with capital of $25,000 each; 2,116 with capital of over $25,000 to $50,000 inclusive; 1,623 with capital of over $50,000 to $100,000 inclusive; 757 over $100,000 to $250,000; 476 over $250,000 to $1,000,000; 69 over $1,000,000 to $5,000,000, and six with capital of over $5,000,000.

The withdrawal of United States troops from Cuba, instead of terminating according to the original plan on Jan. 28, the date of the inauguration of the new president, will not be completed until April. This leaves troops available during the transition period.

More than four hundred delegates, representing thirty religious denominations and eighteen million communicants, gathered in Philadelphia at the recent Federal Council of the Churches of Christ in America. Their watchword was "Church unity."

Shipping disasters on the coast of Maine, New Hampshire, and Massachusetts the past year numbered 282; vessels totally lost 11, persons involved 1,456, persons lost 5, value involved of ship and cargo $1,708,815, value of property lost $425,260.

The output of the shipbuilding plants of the United States for the fiscal year ending June 30 last, was 1,457 vessels of 614,216 gross tons, the greatest in the history of the business. The yards on the Great Lakes were the chief contributors.

Two more convictions for conspiracy to defraud the United States of land in Oregon and Washington have been secured, one carrying a penalty of a $10,000 fine and two years in the penitentiary, the other $1,000 and fourteen months.

In anticipation of the need in the near future of enacting legislation for the government of the Canal Zone, the House Committee on Interstate and Foreign Commerce will soon make a trip there in a Government transport.

The internal revenue receipts for the fiscal year ended June 30 show a decrease below those of the previous year of $17,098,072. The receipts for the current calendar year are estimated at over two hundred and fifty million dollars.

It has been brought out in the trial of the Dupont powder trust that a ten-year agreement among practically all powder manufacturers at home and abroad was entered into in 1897, and dealt with the question of regulating competition.

Two professors, commissioned by the Carnegie Institute to undertake a magnetic survey across Africa from Cape Town to Cairo, have begun their labors. Twelve months will be required to complete the work.

Another effort will be made in this session of Congress to enact a bill appropriating $1,000,000 annually for the purchase or erection of embassies and legation and consular buildings abroad.

Governor Hughes of New York has appointed a commission to investigate stock and commodity speculation in Wall Street. His course is generally commended.

The effort to secure a revision of the House Rules during this session of Congress has failed thus far

The difference between the price paid by the Government for the metal and the coinage value of nickels and one-cent pieces for the fiscal year was $10,541,371.

The cost of building the Panama Canal with locks may ultimately reach or exceed the estimated cost of a sea-level canal, which was estimated at $247,000,000.

Post Office experts report that "it is not feasible and desirable at the present time for the Government to purchase, to install, or to operate pneumatic tubes."

The Boston printing plant, though now on a business and paying basis, has in the past caused the city a loss of over one million dollars.

International.

The Austrian government intends to electrify its mountain railways, and has been studying the question of hydro-electric plants in Scandinavia. According to a report recently made to the government, Norway has a total water-power of 28,000,000 horse-power, Sweden 10,000,000 horse-power, and Finland of 4,000,000 horse-power. The plants of these countries now in operation or under construction have a total capacity of 500,000 horse-power.

The Minister of the Treasury, Italy, in making his financial statement to the deputies, announced that the close of the year 1907 8 found the treasury with a surplus of $7,500,000 after all liabilities had been settled and $21,500,000 had been expended toward the reduction of the country's debt and $2,000,000 for railroad construction.

Upwards of four hundred American sportsmen contributed $33,000 to the provincial exchequer of New Brunswick, in license fees during the deer-hunting season.

The army budgets for Prussia, Saxony, and Wurtemberg estimate the expenditures for 1909 at a total of about $180,500,000, or $6,500,000 less than in 1908.

An enthusiastic meeting was held in London last week at which the question of state-owned cables and lowered rates was heartily endorsed.

The Russian Douma has authorized the external loan of $225,000,000 which was sanctioned Dec. 6 by its budget committee.

The quantity of gold exported from New Zealand during the last eight months was 337,319 ounces, of the value of £1,334,232.

Japan, by agreements with the other interested Powers, will conform to the regulations already applying to pelagic sealing.

Legislation to prevent the exportation of meat from Denmark is about to be enacted.

Industrial and Commercial.

The Standard Oil Company is aggressively preparing to enter the Mexican oil field. Its activity is due, it is said, to a hint which has been given by the Mexican government that a high duty is soon to be placed upon imported crude and refined oils.

A total of $120,000 has been disbursed to farmers in northern Wisconsin and upper Michigan by the Menominee River Sugar Company in payment of beets grown under contract with the big industrial concern during the past season.

In the annual report of the National Ginners' Association, just issued, the total number of bales of cotton ginned to Dec 1 is placed at 11,064,000, and the total crop for the season is estimated at nearly two million more.

Government laboratory tests seem to warrant the conclusion that print paper can be manufactured from corn-stalks in competition with wood pulp.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE COURAGE TO SAY, NO.

SAMUEL GREENWOOD.

To resist evil—to say, No, to wrong suggestions—is generally considered the right thing to do; but until Mrs. Eddy in Science and Health diagnosed disease as a "temptation," capable of being resisted as successfully and in the same manner as the temptation to sin, no one thought of taking that attitude toward sickness. (See Science and Health, pp. 218, 381, 450.) It is safe to say, however, that if this view were more universally adopted, and men realized that they have the same power from God to resist sickness and suffering that they have to resist moral evils, there would be less work for the doctors and a decided increase in Christianity. Jesus treated disease as the work of the devil, or Satan, and we have his authority for doing likewise. He healed sickness and sin with the same word; and on the basis that errors which are subject to correction by the same rule are of the same lineage, we may properly conclude that sin and disease have a common source, and that the truth is the antidote for both.

Christian Scientists are often condemned for denying the sense of sickness, as it is assumed that in so doing they are denying facts, and are therefore telling untruths; but these same critics deny the power of evil whenever they resist the temptation to be other than upright and honorable, and if it is right to deny one it is right to deny every phase which evil assumes. Christians are enjoined to war against the flesh as well as the devil, which surely means that they are to resist the thraldom of pain as well as of pleasure in the senses. The temptation to sin is recognized as wholly a mental suggestion, while sickness is regarded as purely a physical disorder, yet both are trespassers on the individual right of self-government, and both should be resisted for the same reason. It is evident that nothing can enter consciousness except through one's thoughts, since there can be no consciousness at all apart from mind; therefore bodily conditions should not be considered less amenable to thought than are moral conditions, especially when it is admitted that the entire universe is governed by divine Mind alone.

On page 420 of Science and Health Mrs. Eddy states that disease can be resisted and warded off as positively as can the temptation to sin; and again she says, on page 391, "When the body is supposed to say, 'I am sick,' never plead guilty." In other words, say, No!—and why should we not? Why plead guilty and be condemned without defense, especially when the cause of health is right and the other wrong? We say, No, to worry, covetousness, revenge, etc., when they tempt us, if we are wise, and why not to aches and pains when they also would tempt us? Must we believe that the latter have power over us despite our protest, while we know that the former have not? If, through the belief that man can be sinful, one is prompted to lie or to steal, and he says mentally, "No, I will not," and continues to say it so long as the suggestion continues, every one believes this to be the right course and that it prevails. But if, through the belief that man can be sick, one is tempted to think that he is weak or nervous, and so forth, he is apt to say, "Yes, I am," and continue admitting it while the suggestion lasts. How much better it would be for him to say, as in the former case, "No, I am not," and to hold to that position because it is right. The truth that God is infinite good, the divine Principle of being, and that He inflicts no suffering upon man, surely confers upon mortals the right to resist to its overcoming the imposition of any evil upon them, whether it be physical or moral. We have no more right to be sick than we have to be sinful, and if we were as unwilling to sin as we are to suffer for sin, we would more quickly recognize our power to resist both of these conditions. God's law compels no one to accept the dictates of a false, evil sense, no matter what may be the arguments used for their support.

The courage to endure the ills of the flesh may not be the least saintlike characteristic of the Christian, if his faith in God has been exerted to its utmost to overcome them; but what we need more is the courage to resist, the courage to reject instead of submit to the suggestions of disease and sin, as being alike contrary to the will of God. Evil has no right to exist under any circumstances: it is in its very nature a contradiction of the being of God, to be treated as all lies should be, by denial. The belief that another law than the law of God governs man is an evil temptation, no matter what name may be given to it nor how long it has been accepted and sanctioned by mankind. On the other hand, the teaching that God's law is supreme, producing good only, is Scriptural and scientific, and is the basis on which disease as well as sin is treated in Christian Science,—that is, that only good is reality and power. It may require courage to take this stand in the face of one's educated prejudices to the contrary, but humanity's freedom demands that it shall some time be done. When one's physical sense and a doctor's diagnosis combine in declaring that one is sick, when his family and friends confirm it, when all one's previous training and belief favor that conclusion, it calls for some little courage to rise in protest, to declare the sickness unreal and stick to the declaration. The conviction of the absolute allness of God does, however, bestow this courage to give the lie to evil, even in the forms of sickness and pain, and the resulting good will be according to one's confidence and understanding. God's Word asserts and maintains man's freedom from evil, as being made in the divine likeness, and we must also assert and abide by it in the face of opposition, knowing that it is error and not truth which opposes this endeavor.

The writer took up the investigation of Christian Science because of a trouble that, on account of intense pain, had for many years prevented the normal use of his eyes. After a long course of treatment from Christian Science practitioners, but with little apparent benefit so far as this

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

particular trouble was concerned, he was advised to begin systematic reading in spite of the pain, and to increase the amount each day. A somewhat similar course had been suggested earlier in his treatment, but the courage to accept it seemed lacking. This time, however, the advice was put into practice, with the result that within two or three weeks the trouble had entirely disappeared. That was twelve years ago, and it has remained a memorable object-lesson of the right to contradict the claims of disease, not only in thought and word but in deed as well. In this case the suffering and inability were shown to be a temptation to believe what was afterwards proved to be untrue. The foregoing is not given as a rule to be followed invariably, as there may be cases where it does not seem possible, but the fact remains that to oppose actively and persistently the sense of disease is as important a factor in its cure as is a similar course in the treatment of moral disorder, provided this resistance is based upon an intelligent apprehension of the truth that, because disease has no origin in God, it has no right to be.

It is largely the fault of our education that we do not say, No, to pain and discord in the same positive way that we do to sin, because we have been taught that sickness, being physical, is beyond our control, unless we can overcome it through the action of so-called physical law,—which, by the way, is supposed to produce it. But is that teaching true? Does God's law compel us to be sick? Is it right to teach submission to aught but the law of infinite Life, Truth, and Love, "the triune Principle" (Science and Health, p. 469)? If it is correct to conclude that disaster and suffering are the outcome of the law of the infinite, then God is at war with Himself and universal discord must encompass being. But since this is not correct, since God does not find evil necessary to the welfare of the universe, why not resist it with all the force of our conviction, as we would the imposition of any unjust sentence? Inasmuch as disease is not of God, it must be wrong to believe in it at all, hence it comes to us in reality as a temptation, despite our educated opinions to the contrary.

Isaiah speaks prophetically of a city whose inhabitants shall not say, "I am sick." The present understanding of Christian Science may not be equal to the overcoming and prevention of all sense of physical discord, but the health of thousands has been restored and many ills avoided as the result of practising its teachings. These emphatic signs indicate the time when Isaiah's prophecy will be literally fulfilled, when this Science will be so understood and demonstrated, and man's rightful dominion as a child of God will be so clearly recognized, that a Christian will be as confident that he cannot be sick as that he cannot commit a crime. It is our privilege at this time to acknowledge the infinite perfection of being, to declare in our hearts that in God is the health as well as the holiness of man, and to hold to that position against all temptation to the contrary.

AN ADDED RESPONSIBILITY.

HELEN ANDREWS NIXON.

IT is very clear that each blessing brings added responsibility, and not a release from work. To undertake new tasks joyfully as enlarged opportunities, is to make steady gain. Our Leader's request that "every Christian Scientist . . . subscribe for and read our daily newspaper" (*Sentinel*, Nov. 21) is a call to a higher privilege, and the significance of this request is gradually assuming more and more definite proportions to my mind. The first conspicuous effect of this wonderful gift to ourselves and to the world has been to lift one's eyes to an horizon far beyond one's own door-step. The call to help in the world's thinking is no longer something that can pass unheeded, it is an imperative duty. Things we did not like to look at nor think of, problems we did not feel able to cope with, must now be faced manfully, and correct thinking concerning the world's doings cultivated and maintained.

We shall read in one of two ways: either in a desultory manner, falling into acquiescence with the material sense testimony, forgetting that "God is on the field, when He is most invisible;" or we shall open our daily paper with a sincere prayer that by our perusal of it we may lessen the seeming power of evil and strengthen our own confidence, and the confidence of the world, in the actuality of the ever-operative law of God, good. In the work of reading rightly the newspaper each Christian Scientist will have at least one who comes daily for treatment. Look at the task set before us: systematically and intelligently to "aid in the ejection of error" (Science and Health, p. 97). Prognostications of all kinds, whether war or weather forecasts, based on calculations and experiences wherein divine Principle has not been recognized, we must weigh scientifically. Thereby many "signs" shall "fail." Great is the opportunity, and may we solemnly and joyfully awake to it!

READINESS TO SERVE.

VIOLET KER SEYMER.

THE divine standard of activity is so high that only perpetual obedience can enable one to advance toward it. In "Miscellaneous Writings" (p. 116), Mrs. Eddy says, "Never absent from your post, never off guard, never ill-humored, never unready to work for God,—is obedience." To reflect good in the midst of seeming evil is really to work for God. Is divine Mind inactive? Would not everything be at a standstill if the creator were unmindful of His creation, and disinclined to sustain and support it? Love and Life are never unready to give forth what man needs, and so the true reflection or likeness of this Mind must know no fear nor sloth, and must be equally ready to serve the needy. When courageous and consecrated witnesses to the work already "finished" in Mind are found, the kingdom of heaven will be established on earth, and healing will become as spontaneous and as certain as the unfolding of a flower in the sunshine. Further, when the nature of pure happiness is discerned, mortals will cease to seek its counterfeit in evil. In proportion as we discern and do God's will, it will bring heaven to us. Obedience and discernment go hand in hand, and neither can advance very far without the other.

Some may say in all good faith, "But I never get a chance to do any Christian Science work, though I am quite ready to do it." Willingness to take patients, but a secret hope that the occasion to do so may not arise, indicates a degree of unreadiness to work for God, and the would-be practitioner must beware of deciding as to the class or the quantity of work he desires to undertake. Such an attitude would preclude the full guidance which comes as the reward of full trust. When we look to Mind to map out our day, there will never be too much nor too little to do. Comparisons between workers, their methods and what they accomplish, are often misleading and discouraging. As each one seeks to be led, his best work constantly grows better. Jesus said, "My Father worketh hitherto, and I work."

Opportunities come to that one whose compassion is stirred into action by his faith in Truth's redeeming power, when we "abide in such a spiritual attitude as will draw men unto us" (Retrospection and Introspection, p. 121). This should be our constant aim. Christ Jesus is the example for all time. He did not spare himself, but quickly detected any temptation to shirk, as when he prayed, "Not

Digitized by Google

my will, but thine, be done," recognizing that the divine power would carry him through trial to victory. This spiritual readiness to help must be reflected by God's likeness, and when a legitimate call comes, every suggestion of incompetence, every symptom of unreadiness, every attempt to procrastinate, should be met with the thought expressed by Jesus when he was but twelve years old: "Wist ye not that I must be about my Father's business?" The "business" of Mind is to act promptly. "*Semper paratus* is Truth's motto" (Science and Health, p. 458), and Christian Scientists are responsible for showing the world how good God's will is by doing it, and thereby give glimpses of heaven to such as seem to be in hell.

Mind's demands do not lessen, but increase through consecration to them; and with the increased demands come increasing dominion and power from on high, from Spirit. Eagerness to serve, rather than reluctant or timid obedience, is the quality through which the divine Mind can best work. There is the rather grudging spirit which would doubtless be ashamed to refuse work if it actually came, but which nevertheless prefers respite, if only for the purpose of additional study; but that degree of unreadiness, if undetected, is apt to lead to less and less work, to fewer and slighter cases, and the would-be laborer in the vineyard presently is found saying, "No work comes to me." And why? Because as a man "thinketh in his heart, so is he." Jesus proved the power of Truth by means of the work he did for the multitude. His followers cannot afford to be spiritual misers, for giving is the divine way of gaining.

"AND THE RAIN DESCENDED."

CASSIUS M. LOOMIS.

To the careful, scientific observer there is an intensely practical side to Christian Science. Even though it is sometimes hard to amplify metaphysical truths by the use of ordinary English, yet do not business men and women find ways to apply the gospel of Truth to current affairs, even amid the noise and turmoil of commercialism?

In the great cities of our land where the adherents of Christian Science are many, there is a current saying that you may know a Christian Scientist the moment you set eyes on him, be he stranger or friend; that his air of confidence, cheery looks, and settled convictions give to his every movement the flavor of accomplishment and fixedness. This may be a little overdrawn, but it is nominally true to him or her who keeps an eye open to the study of humankind. A Christian Scientist who truly lives the life his text-book teaches, needs no other capital. As he builds, his house endureth, for the superstructure thereof is not to be shaken. "And the rain descended, and the floods came, and the winds blew, . . . and it fell not: for it was founded upon a rock."

Because of his happy faculty of adaptation, the man of business finds prosperity a logical sequence, as incidental to human affairs as is the rain to the nourishment of the rose. "Whoever would demonstrate the healing of Christian Science must abide strictly by its rules, . . . There is nothing difficult nor toilsome in this task, when the way is pointed out" (Science and Health, p. 462). Oh, that the vital meaning of this quotation might be so absorbed as to become a revelation to all mankind! Would not prosperity, linked with neighborly love, prove its legitimacy? Would not the rules of fair dealing, just recompense, and a living profit yield their fruits daily, hourly? The Christian Scientist with settled convictions works right-handed. Worry is conquered by a mind so filled with something better that when the day's work is begun sufficient capital has been generated over night to win the day's victories without the chafing sense of doubt or distrust. Such an one attends church as if impelled by a cherished desire rather than duty. I have observed that business men and women, more than any other class, look eagerly forward to the Wednesday evening service, for the reason that here one's neighbors relate their experiences in language so simple that conviction among their hearers is frequently only a matter of a few weeks or days.

A person trained to business analysis wants the truth at first hand; he has no time for generalizations, rumors, or guesswork. Thus Christian Science becomes to him so real and convincing that, with his trained faculty of grasping the right issue at the right time, he is ready at any moment to tell you that he is a Christian Scientist, *per se*, one who can walk with Christ over stony paths or beds of roses, and still be a man among men. Once he may have been a church-goer on Sundays—a follower of a religion too sacred to be mentioned on week-days. Now he grasps your hand and sends a tide of warm brotherly love over you—tells you openly that he is a Christian Scientist from the very love of it. Thus it is that you may know a Christian Scientist on sight—he is different, without being fanatical, presumptuous, or intrusive. It would take columns to enumerate the change that business life would undergo were every student of commerce to become a follower of Christ. The Golden Rule would not then be a mere abstract tenet of right living, but would be just what the Master felt it to be when he gave it to his disciples. Business transactions would be so modulated in their scope that panics would be unknown, labor troubles would cease, nations would be brothers, and the consequent health and happiness arising from the improved state of things would be incalculable.

Has not our beloved Leader shown us that legitimate business acumen and spiritual attainment are in no wise strangers? That, properly blended in love and good works, they meet every need of daily life, even to the defeat of triflers who follow not the paths of Christians? Founded upon the rock, Christ Jesus, the house of commercialism can and will stand so long as values need to be measured, for material issues are being rapidly changed for the better. The present conditions of the world of business make the realm of trade and barter a necessity. "Suffer it to be so now," said the Master; and further one saith not, for the inevitable progress of mankind is bound to reveal to us, in its own good time, what is destined to take their place. Brotherly love is indeed a mighty power back of all human activities.

THE REWARD OF FAITH.

JOHN K. ALLEN.

In my garden the annual miracle had begun. The slender red spire of the tulip, the rounded yellow spatula of the narcissus, and the green fascis of the hyacinth had gently yet persistently forced their passage through the clodded earth, and were being changed into the lovelier shades of leafage by the wonderful chemistry of sunshine. When, months before, the bulbs were planted in what our Leader so graphically terms their "cloistered cells," and left to the seemingly inhospitable care of a bed soon to be frozen and snow-covered, it required an act of faith; and this faith was "the substance of things hoped for." Our hope was for a springtime gladdened by beautiful flowers, and the essential thing to be done in order that our hope should be realized was an act of faith, an assent to what we have learned regarding the ordinary growth of tulips and narcissi. We knew that, according to this material order, bulbs must be placed under certain conditions in order to eventuate into flowers, and we seemingly condemned them to death and the grave in order that they might later provide us with a higher type of beauty. In observing this order of human belief, we may find many hints of a higher law, the law of Life.

Digitized by Google

Speaking accurately, gardeners do not term the autumn and winter a period of rest in the vegetable kingdom. Even a superficial examination of root and bud will disclose the fact that both autumn and winter are periods of growth and preparation. If we were yet more accurate, we would not say that the tulip which had just disclosed its presence above the ground was now any more of a manifestation of life than it was when lying in the ship's hold, the previous summer, on its journey from Holland. Surely life as God's idea is as complete and perfect in the bulb as it will be later in the flower. To our limited and fettered human understanding, the life of the bulb cannot be seen; it must needs be manifested in a different form to be apprehended by our mortal sense; but life—full, complete, and perfect—is the true law of being, to which the seemingly inert bulb gives suggestive assurance. Do we do wrong, then, to project faith, which we usually term a quality of understanding, into the vegetable kingdom, and say that the bulbs teach us a lesson in its application? Is it not true that they do give an illustration of what our perfect and unresisting assent to the truth of life as an idea of God would effect?

Does not the bulb present us a reasonably perfect illustration of the operation of faith under circumstances in which we mortals so frequently fail? The bulb gives assent, yields itself entirely to the law of life, and through all its phases of existence it moves on quietly, peacefully, and as a matter of course to its perfect demonstration. It is as truly living when first placed in the earth as it is later when in brilliant bloom. Thus the bulb points to the orderly, continuous, equable manifestation of God's idea of life: it suggests what may be achieved through perfect, peaceful faith. This we are slowly learning in Christian Science. The Christ-idea is being more and more comprehended. Jesus the Wayshower is being more clearly revealed to us. Through our understanding of God as Life, Truth, and Love, although as yet it is very imperfect and inadequate, a greater faith is being established, accompanied by an increasing peace. This condition of mind, when perfected, must be that last bequest of Jesus to his disciples, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid."

This divine possession, which Christ Jesus committed to his disciples in his farewell address, came to him through his perfect understanding of the allness of God, and it is a gift not only to the immediate personal followers of Jesus, but to all who reflect enough of God's nature to be able to receive it. It is the same quality of understanding which is bestowed upon us in Paul's familiar benediction, "The peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus."

[Written for the *Sentinel*.]

JOY.

ADA J. MILLER.

A FULL, clear note with the 'cello's depth and power
Sounds in the word that means to mortals more
Than fullest thought can tell in verse or song.
Joy is not born of earth—has no earth-hue.
Its color-tones are heaven's own rainbow tints,
And still the one white light of purity.
Joy comes when error's clouds are met with Love;
Comes when, unselfed, we seek another's gain;
Comes when the heart is one with God. And then
The day is radiant; in all the air is song,
And heavenly harmony attunes our thought
To Love's low voice. Then only can we hear
The softly whispered words—Well done!

SELECTED ARTICLES.

[William E. Brown in the *Los Angeles* (Cal.) *Examiner*.]

The phenomenal growth of Christian Science is due to the fact that it gives earth's weary, discouraged, and hopeless ones what they have been seeking—strength, courage, and hope. In addition to bringing them health and harmony, it brings them a satisfying understanding of God and His laws, and the ability to overcome in themselves and others all that is unlike the Mind of Christ. While Christian Science is efficacious in healing all manner of disease, its real mission is the healing of sin,—the cause of all ills,—sin in this connection embracing all ignorance and disobedience of God's laws, whether wilful or unintentional. In fact, it would be impossible to heal one physically in Christian Science without improving him spiritually and morally, and this emphasizes the fact that Christian Science is of divine origin. Christian Science is strictly in accord with the teachings of Jesus and is daily and hourly proving that it has correctly interpreted his teachings by fulfilling, in a large measure, the works he said should follow "them that believe."

It is preeminently Christian in its nature and accomplishments, and has nothing in common with hypnotism, mesmerism, mental science, or faith-cure. Mrs. Eddy has contended for the past forty years that the church should heal the sick as well as the sinning, and that the command of the Master to heal the sick is just as imperative as the command to preach the gospel. Said Jesus, "He that believeth on me, the works that I do shall he do also." While it is gratifying to note that Christian Science has succeeded in awakening the church to its remissness in healing the sick, it is to be regretted that any church should make an effort to do this by methods other than those taught and practised by Jesus and his disciples. The Emmanuel church movement frankly admits that it employs suggestion,—one of the most harmful of the carnal mind qualities,—and this practice is instantly seen to be at variance with the teaching of Jesus, who relied wholly upon the divine Mind in healing the sick. Again, this movement attempts to cure only functional diseases, and gives organic diseases to the physicians for healing. There is no warrant in the teachings of Jesus for such segregation. On the contrary, the disciples were given power to heal "all manner of sickness and all manner of disease."

The ability to do the works that Jesus did is limited only by lack of spiritual understanding. It will be recalled that when the disciples brought the lunatic boy to Jesus, in reply to their inquiry, "Why could not we cast him out?" Jesus said, "This kind goeth not out but by prayer and fasting," clearly indicating that the case in question required a greater degree of spirituality to banish it. It will indeed be a glorious day when the church takes up the healing work commanded by Jesus, relying wholly upon God, "who forgiveth all thine iniquities; who healeth all thy diseases."

[E. J. Simpson in the *Enid* (Okla.) *Eagle*.]

In your report of his service the evangelist is credited as making some remarks with regard to Christian Science that have not the kindly ring of brotherly love which the brother, as a preacher of the gospel of love, must necessarily entertain if he would nicely harmonize preaching and practice. That portion of the report to which I have reference reads as follows: "He referred to Christian Scientists, and told how one had swallowed arsenic to prove that it was poison only because it was believed to be so, and had died immediately." It is very probable that the evangelist did not make this statement in the identical

Digitized by Google

words as reported, for even ministers are not immune from being misquoted at times; but if he has been correctly quoted, then certainly a brief reply will not be amiss. Those engaged in the laudable work of correcting errors of others in the name of the Master should be only too willing to have their own mistakes pointed out, that they may be corrected, and Christ's work done in love.

The evangelist failed to state the name of the arsenic victim, the date of his folly, or location of his home, so I must conclude that the incident was merely used to "point a moral, or adorn a tale." Even had the illustration any real basis, it would not justify uncharitable reflections on Christian Science; because Christian Science does not countenance nor lead to an act so foolish, nor to any so fanatical as the one mentioned. To follow the teachings and example of Jesus the Christ, is what Christian Scientists are striving to do, and the temptations set before the Saviour in the wilderness, and their rejection, are precious lessons to Christian Scientists, and protect them in doing sane things and in rejecting tempting suggestions of evil. When tempted by the devil to throw himself down from the pinnacle of the temple, Matthew tells us that "Jesus said unto him, It is written again, Thou shalt not tempt the Lord thy God." No believer in the Christ-power doubts for a moment that the Master could have thrown himself from the pinnacle without hurt or harm, but to have temporized with temptation in any form would have been to concede power to evil. Christ's teachings attribute all power to God. Christian Science does the same.

Referring again to the arsenic incident, and repudiating it as one of the resultant effects of Christian Science teachings, I ask in all seriousness why in case of accident or misadventure it should be thought a thing incredible that the Christ-truth is potent enough to destroy even the effects of arsenic, or poison of any kind. The Master after his resurrection, when thought was perfectly spiritualized, told his disciples this, in no uncertain words, "They shall take up serpents; and if they drink any deadly thing, it shall not hurt them." Who doubts that Jesus meant exactly what he said? No Christian should. Christian Scientists certainly do not. We all believe that in time of need God is an ever-present help, and that the Christ-word is true.

Our brother may not view things as Christian Scientists view them, but some time we shall all see alike, and in the meanwhile we shall have to struggle along, environed with differing theories and dogmas and with many varying church creeds, removing beams from our own eyes, and obeying the Master's injunction: "Judge not, that ye be not judged." Christian Scientists try to obey this command. If they do not, they are wanderers from the truth; but the straying away does not make the truth any less, nor is the truth weakened if others wander from it.

[Frederick Dixon in the *Loughborough* (Eng.) *Monitor*.]

The question naturally arises, Was the healing power of Jesus inherent solely in his own spirituality—was it bestowed by him on his immediate followers—or did he claim it as the right of every one, in all the ages, who was prepared to follow him? If we accept the Bible, there can be but one answer. He made the power to heal the test of his own claim to be recognized as the Christ, and of the claim of all men and women, in every age and country, to be regarded as his followers. "Go your way," he said, when the Baptist sent to demand if he were the Christ, "and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached;" while it is not merely that in the first Gospel the command to heal is made a universal one to his followers, but in the second and fourth it is made the actual test of their faith—"And these signs shall follow them that believe;" and again, "He that believeth on me, the works that I do shall he do also." It is surely sufficiently plain that Jesus did not confine Christian healing to "semimoral and seminervous diseases," and that he not only, as no Christian Scientist has ever disputed, claimed that this "power was in the hands of the Christian church," but made it the test of Christianity.

It only remains to notice the last and most remarkable of our critic's statements, that the power used successfully by Christian Science, and which is "in the hands of the Christian church," is "suggestion." To be quite frank, in order to practise what is termed healing by suggestion, it is not necessary to be a Christian at all. It is just as possible for it to be practised, for what it is worth, by "all infidels and heretics." It is not Christian, because it professes to effect healing by the very power which it claims produces sickness. In a word, it is a "house divided against a house," and, as Jesus said, cannot stand for that very reason. Finally it is not power, because it is not of God. It was to this belief in the power to destroy disease through the cause creating disease that the Jews referred when they said, "This fellow doth not cast out devils, but by Beelzebub." Jesus' answer was final: "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." The kingdom of God, and with it the peace of God, never came to any man through mental suggestion; but it does come to all who realize, in the words of Mrs. Eddy, on page 496 of Science and Health, "that it is the spiritual idea, the Holy Ghost and Christ, which enables you to demonstrate, with scientific certainty, the rule of healing, based upon its divine Principle, Love, underlying, overlying, and encompassing all true being."

[R. Stanhope Easterday in *The Dispatch*, Kokomo, Ind.]

There is every reason to believe that divine power healed organic as well as functional disease in Jesus' time, and the "great Physician" declared, "He that believeth on me, the works that I do shall he do also." Christian Scientists are but attempting, and with a gratifying degree of success, as is undeniably attested on every hand, to heal the sick as Jesus healed them, and for the same purpose and by the same means. The Scriptures declare, "He sent his word and healed them;" "Ye shall know the truth, and the truth shall make you free." There is nothing of the "occult" about Truth, or Truth's operation, either now or in the past.

[Written for the *Sentinel*.]

THE NEW YEAR—A FRIEND.

JOY E. R. ZINT.

A FRIEND has depths of character,
Fragrant and rare as Alpine flowers;
Then make a friend of each new year,
And search for treasure in its hours.—

For happiness in others' good,
For justice, honesty, and worth,
For generous thought, untouched by greed,
For Truth, that gave the new year birth.

And as its hours and days increase,
'Twill peace unfold for those who pray,
And work, and watch, through its swift flight,
And struggle toward the light alway.

'Twill also bring thee joy to know,
If thou hast filled with love this year,
It bears upon its time-spread wings
Another friend, to hold as dear.

THE LECTURES.

ROXBURY, MASS.

A large and representative audience assembled at Fauntleroy Hall, Roxbury, Thursday evening [Oct. 29], to listen to the semiannual lecture on Christian Science. Frank H. Leonard of Brooklyn, N. Y., who delivered the lecture, was introduced by the First Reader of the church, George S. Haddock, who said in part,—

The question is sometimes asked, Why do Christian Scientists express so much gratitude to Mrs. Eddy? Let us imagine one lost in a dense wood, so thick and overhung that the sunlight scarcely enters, while everywhere the underbrush opposes a tangled barrier to progress. Weary with fruitless tramping, uncertain, discouraged, about to give up in despair, he discerns with joy a path blazed through the forest, marked out by a traveler who, having been over the ground, had found the way to freedom, and with loving forethought, marvelous patience, and untiring effort had made the way plain for him to follow. Would there not come a deep sense of gratitude, as with renewed strength and joyous steps he moved quickly to light and liberty? Would it be thought out of keeping if at the first opportunity he gave audible expression to this feeling of gratitude? Or let us suppose one lost on the mountain, in a blinding storm, night fast closing in, the path beset by many pitfalls—trembling, fearful, bewildered, he knows not where to go. If suddenly a light should shine in the gloom, and a cheery voice should say, "This is the way! Have no fear!" would not the heart overflow with gratitude to the one who, breasting the storm with thought only for others, leads the way to warmth and safety and peace?

These illustrations but feebly intimate the feeling in the heart of the thousands who have been lost in the forest of false teaching and old superstition, or were astray on the mountain of sin and disease, and who have found harmony and health and rest through the message Mrs. Eddy has given to the world. Their sincere and heartfelt expression of gratitude is no less legitimate than spontaneous. They are deeply grateful to her for expressing so much of good, for living so close to God, for overcoming so much of self and the world as to be chosen to guide them out of the maze of ignorance and false beliefs. Christian Scientists know, for it is the teaching of Christian Science, that all is of God, and that to Him and through Him are all things. This, however, does not prevent them from expressing gratitude to those who most clearly reflect His light. The greater the radiance, the more of gratitude.

The Dorchester Beacon.

MANCHESTER, ENGLAND.

A large audience assembled last night [Nov. 3] in the Free-trade Hall, Manchester, to hear a lecture on Christian Science by Clarence C. Eaton. The meeting was arranged by First Church of Christ, Scientist, built in Victoria Park. It was presided over by Sir Wilfred Lawson, who said he had for many years taken a keen interest in the subject of Christian Science. He had proved for himself, and had seen proved in the case of others, the power of the thought which it inculcated to guide, bless, calm, succor, and heal in various ways and under varying conditions. He was glad and thankful to add his testimony to the efficacy he had found in it. There was a saying of a famous man that "what the world wants is sympathy." No doubt it wanted sympathy, but what it seemed to want even more amidst "the dust of systems and of creeds" was harmony and unity. Without this the best of human sympathy was very little better than "sounding brass or a tinkling cymbal." The sympathy of Christ was practical living, truth demonstrated, because it was based on the scientific understanding that he had of his union with God. Through Christian Science he [the speaker] had realized more of that true unity than he had ever before thought possible. He asked the audience in approaching this subject to act in the spirit of the Biblical injunction, "Prove all things; hold fast that which is good."—*Manchester Guardian.*

GIRARD, KAN.

The lecture given by Bicknell Young of Chicago, at the Court House last Friday evening [Nov. 13], on the subject of Christian Science, was greeted by a full house of representative people of Girard. The lecturer was introduced by E. N. Richardson, president of the Commercial Club, who said in part,—

All of you who read and think must admit that Christian Science is a growing movement. On every hand you see this new system displacing the old. In every part of the world it is growing rapidly. Go to any of the large cities and attend the churches there, and in almost every instance you will find the largest congregations in the Christian Science churches. There must be something back of the movement that grows as we all know Christian Science is growing. As intelligent men and women we should know something about it—we should try to grasp the spirit of it. If it is truth,—and there are many of us here who think that it is,—we want to know it and to make it our own; if it is false, we want to know that also. We cannot intelligently be for it or against it without studying it.

The Girard Press.

SAN JOSE, CAL.

The Victory Theater, with its spacious seating capacity, was crowded from footlights to the rear row of the gallery and scores were turned away last evening [Nov. 10]. A representative audience had gathered to listen to a lecture on the subject of Christian Science by Bliss Knapp of Boston. The speaker was introduced by one of San Jose's most prominent business men, Judson L. Stull, who said in part,—

The presence of this large audience to-night is an evidence of the great interest now being taken in the subject of Christian Science, and expresses the demand of these times for a sane, practical, and healing religion; shows the need for a full salvation; for salvation from sickness and sorrow, as well as from sin. Humanity has a right to expect this, and may reasonably reject any system of alleged truth which does not fulfil these conditions. David, the sweet singer of Israel, says in the 103rd Psalm, "Bless the Lord, O my soul: and forget not all his benefits; who forgiveth all thine iniquities; who healeth all thy diseases." Mark the language, "all thy diseases," not merely a part of them, but all of them; and the Bible is full of accounts of healing by spiritual means alone. Jesus came preaching the gospel, and "healing all manner of sickness and all manner of disease among the people," and he left the promise, "He that believeth on me, the works that I do shall he do also."

The command to heal the sick is no less imperative than the command to preach the gospel, and it is just as important to relieve the suffering as to reform the sinner. The early Christians healed the sick, and even raised the dead, for more than two hundred years after the time of Christ. The historian Gibbon recorded in his "Decline and Fall of the Roman Empire" that "the miraculous cure of diseases of the most inveterate or even preternatural kind, can no longer occasion any surprise, when we recollect that in the days of Irenæus, about the end of the second

Digitized by Google

century, the resurrection of the dead was very far from being esteemed an uncommon event; that the miracle was frequently performed on necessary occasions, and that the persons thus restored had lived afterward among them for many years."

Christian Science comes again to-day, preaching the gospel of the kingdom and "healing all manner of sickness and all manner of disease among the people," as thousands upon thousands of reliable witnesses will testify, many of them turning to Christian Science after every other means had failed and only as a last resort.

San Jose Mercury.

CHATTANOOGA, TENN.

Yesterday afternoon [Nov. 15] at the Bijou Theater Rev. Arthur R. Vosburgh of Rochester, N. Y., delivered a lecture on the "Idealism of Jesus" for the local Christian Science church. He was introduced by Samuel Bosworth Smith, of the local bar, who said in part,—

Since the early dawn of history there has been a turning and a yearning in the human heart for God. There has been a crying aloud for heaven. Whether it has been in the drawing-room or in the execution of our daily duties, whether it has been in those who do not believe as you do and do not agree with your ideas of God or salvation, there has been this yearning ever since man has been man, so far as we can look back through the ages. This belief that there is something better than what we have, this belief of all men of all ages and all races, that there is a God and that there a heaven, has been said by many to be a proof that there is a God and a heaven.

My attention was called not long since to a couple of little verses that appealed to me, and have brought to my mind an idea original to me. It is this, that the yearning for God in the human soul means more than simply a proof that there is a God and that there is a heaven. The verses to which I refer were written by a local poetess, Emma Bell Miles of Walden's Ridge. With the thought of the lines it came to me that possibly the crying and yearning for God and heaven was not only a proof of God and heaven, but was a memory, a crying for home, and that it was the real soul-home of the Spirit that we remember while in this physical, material home, and that we did have a home in the real mountains. And it came to me that the homesickness, the yearning and longing of the poetess to get back to the realities, to get back to what was hers, illustrates the yearning of the spirit for its real home. And in thinking of this it came to me that possibly this is the call that Christian Science makes to you, that Spirit is Truth; that the mountain from which you have lost yourself is reality; that the materiality of the city, the materiality of the world, the materiality of your life is unreal; that it is the truth for which we are crying.

The News.

NEW BRITAIN, CONN.

A scholarly and lucid lecture on the subject of Christian Science was delivered yesterday afternoon [Nov. 15] in the Russwin Lyceum before an audience that filled the auditorium. The speaker was Francis J. Fluno, M.D., of Oakland, Cal. He was introduced by Rev. Dr. O. S. Davis, pastor of the South Congregational church, who paid a tribute to the speaker's unquestioned sincerity, and said in part,—

I accepted with appreciation and sincere heartiness the invitation of First Church of Christ, Scientist, to present to this audience the lecturer of the afternoon, in the profound conviction that there is standing-ground on the great platform of truth for all men who seek it sincerely and accept it devoutly as a revelation from God. There are a few people in the world—whether they are fortunate or not, I will not say—who believe not only that truth is perfectly expressed in person or book or formula but also believe that they themselves clearly apprehend that perfect expression. But for the most of us life is a passionate and ceaseless quest for the truth, which we appreciate with ever-increasing clearness and certitude; but it is the task of life to realize eternity in its complete apprehension.

A German philosopher once said that were he given the choice to know all truth at once, or ever to seek and find truth, he would choose the latter; and so we not only choose but we ourselves must seek if we may find it, and he who thus apprehends the task of life finds two things clear: First, his own confidence in the truth that he apprehends; and second and last, a generous and loving appreciation of the truth which another man apprehends but does not state as he states it. I have found that the men who are most truly tolerant are the men who themselves are most profoundly convinced; or that, on the other hand, he never has become the disciple of truth who has not learned that his brother may see it from a different angle and define it in different terms, and yet be equally the child of God in that which he seeks and seems.

It is on this platform that we stand together, and it is in this conviction that I have answered with gratitude and appreciation the request of the church, knowing well that they no less thought me identically with them than I thought them identically with me, but that together we lift our hands in prayer and thanks, and the beacon-light so far as it may shine illuminates us in our quest to apprehend the truth, to live it and to serve it well; and eternity, which is but our little conception of time rounded out to the full, shall bring us at last where we know and understand.

New Britain Herald.

CEDAR RAPIDS, IA.

To a large audience at Greene's Opera House last night [Nov. 10] the Rev. William P. McKenzie of Cambridge, Mass., lectured on Christian Science. The lecturer was introduced by Supt. J. J. McConnell of the public schools, who said:—

This situation suggests several significant facts: The first is the fact of a freedom of belief. If we read history aright, it has been a long and a hard struggle from the tyranny which for a long time laid a proscriptive hand upon the human soul, to this era of liberty of thinking, and we rejoice that we live in a time which is characterized by this freedom of thought. Another significant fact is the fact of freedom of speech. Not only may a man think for himself but every man may give free expression to his thought, and this is a situation which makes progress. It is only as thought and speech are free, it is only as men meet their fellow-men honestly and fearlessly in the interchange of thought and opinion, that we get that resultant in human conduct which promotes the highest good of society, that we develop institutions which conserve and foster the best there is in life.

We rejoice that these things are true. We rejoice that it is possible for large numbers of people to come together to hear the discussion of any subject. It cannot be otherwise than that many shades of religious belief are represented in this audience; but we are here with open minds to hear the presentation of a single phase of religious thought, and I need not to assure the speaker of the evening that all come in a spirit of candor to hear what he may have to say to us.—*Cedar Rapids Republican.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A RECENT DECISION.

A FEW years ago the state of Missouri, upon the solicitation of a committee of medical doctors, enacted a law which was popularly supposed to be aimed at the practice of Christian Science. This view would seem to be justified, judging from the action of the state board of health, which recently instituted the prosecution of two Christian Scientists under the terms of this law, alleging that in practising Christian Science they were practising medicine. The outcome of this prosecution is shown in the following news item, which we clip from *The Christian Science Monitor* of Dec. 21:—

Warrensburg, Mo.—Judge Berry Thurmond, in case of State vs. Lena D. Jaccard and Theresa M. Haywood, Christian Science practitioners, charged with practising medicine without license, Saturday held that the Missouri state medical statutes do not apply to this class of healers, and that there is no law in this state either prohibiting or regulating their practice.

The case was argued by T. A. Witten of Kansas City, Fred W. Lehman and Judge Franklin Ferriss of St. Louis, and O. L. Houts of Warrensburg for the defense, and Ewing Cockrell, J. W. Suddath, and J. A. Kemper, all of Warrensburg, for the State.

Does it not seem as if the Missouri state board of health might be in better business than the persecution of two women who are engaged in healing the sick, and who are not lawbreakers, technically or otherwise? The members of this board surely cannot be ignorant of the fact that thousands of persons have been healed of the most serious diseases through the practice of Christian Science, and it would appear to any impartial observer to be more in line with their office if they were engaged in promoting every means by which the sick can be healed, rather than by interfering with the practice of an admittedly successful system.

ARCHIBALD MCLELLAN.

HOSPITALITY.

IN the epistle to the Hebrews the writer says, "Be not forgetful to entertain strangers," and he adds, "Remember them that are in bonds, as bound with them; and them which suffer adversity, as being yourselves also in the body." Even among barbarous nations hospitality took high rank as a virtue, and it is possible that it lost much of its value when it came to be a mere exchange of courtesies. Nowhere do we find a more beautiful picture of genuine hospitality than in Victor Hugo's "Les Miserables," where the good bishop welcomes to his home an ex-galley slave and sets before him at their simple meal the best that the house can supply. This he did with the thought that the home and all it contained belonged to God, and that he must not withhold from any needy child of earth the shelter which that home had to offer, since the infinite Father bestows the blessings of His rain and sunshine upon the just and the unjust alike.

In Christian Science we learn to value all the virtues not less but more as we come to understand their spiritual source and meaning, and we should never forget the Master's admonition, "Unto whomsoever much is given, of him shall be much required." Under present conditions it may not be either possible or necessary to invite to our table all those to whom it were good to show hospitality, but we can certainly "entertain" every needy one who comes within the radius of our thought, remembering, as did Jacob, that wherever we are, that place should be to us "none other but the house of God." We can give to every one of our best,—setting before them the bread of life and the wine of inspiration, so that they may go on their way refreshed and rejoicing.

It should never be said of any Christian Scientist that he (or she) ever attempts to "entertain" a stranger by serving up the current verbiage of the weather or the fashions when the visitor may be hungering and thirsting for spiritual meat and drink. Under a gay exterior may be a heavy heart, waiting for us to lift its burden. Our revered Leader reminds us that there are not only many, but "millions" of "weary wanderers, athirst in the desert," and she bids us give them not merely a jest or a smile, but "a cup of cold water in Christ's name, and never fear the consequences" (Science and Health, p. 570).

The text quoted from Hebrews counsels us to remember in our hospitality the special need of the one we would "entertain." This may remind us of the angel that came to Elijah, when he had lain down utterly exhausted, after fleeing from the wrath of Jezebel, and who tenderly said to him, "Arise and eat; because the journey is too great for thee." We read that the prophet did as he was bidden, and then he "went in the strength of that meat forty days and forty nights unto Horeb the mount of God." May we not all minister to human need as did that angel, offering the living bread and water from the great storehouse of Truth, so that those who partake shall go on and on until, like Elijah, they reach the mount of God, the heavenly height where man's immortality is fully realized, and they hunger no more.

While we are encouraged to entertain "strangers," this may mean our nearest and dearest, since we are all pilgrims and strangers on earth; therefore let us give of our best,—as Paul says, "Distributing to the necessity of saints; given to hospitality."

ANNIE M. KNOTT.

THE NEW YEAR AND THE NEW LIFE.

THE traditional time for turning over a new leaf has come again, and they are few, surely, who do not think it entirely in keeping for them to make the turn. While it is encouragingly true that perhaps the great majority honestly desire to do and to be better, it is also true that the efforts to put this good purpose into execution have been attended for the most part by very discouraging results; and for this reason among others, that the undertaking has been thought of as a tussle with veritable evils, a resistance of asserted forces which have been consciously or unconsciously accredited as real.

It is well, therefore, for us to remind ourselves again that all reforms, whether they be trifling or tremendous, are essentially mental, and that they are to be effected by knowing Truth rather than by fighting error. In the light of this vital teaching of Christian Science we shall find a new meaning in the declaration of Him "that sat upon the throne," as John tells us, and said, "Behold, I make all things new." If the new and nobler life we covet is indeed from and of God, we do well to give up the idea at once and for all that spiritual progress is under bonds to human sense. The old Chronicler spoke discerningly when he said,

Ye garnements of rihtwisnes are weven of ye Lord,

and we cannot hope to demonstrate the true life so long

Digitized by Google

as we consent that evil has any hold upon man. Our command of the spiritual, to-day, is measured by our escape from the material of yesterday. Aspiration finds its fruition in the consciousness that God is our immediate source, that the true selfhood is an unsullied stream flowing forth from the fountain of eternal Life. "Behold, I make all things new." To-day, forever! In the embrace of this thought we no longer acknowledge our subjection, or pay tribute, to those asserted influences and laws which have linked us to the weakness and waywardness of our past. We no longer yield our thought to the dictum of heredity and habit, predisposition and acquired impulse, but rise anew and forevermore in the realization of the freedom of the sons of God. The Scripture teaching, as interpreted by Mrs. Eddy, that all substance, power, and law belong to divine Mind, supplies a philosophical and sufficient ground for knowing not only that all real things are new, but that they are good, and it is this knowing which breaks the hold of habit by begetting that sense of separateness and sufficiency in Christ which gives entry to the new, longed-for life.

So long as the turning over of a new leaf is associated with the thought of bracing up against disabilities which we regard as no less actual than numerous, so long does it count for little; but when we think of it as an escape from false beliefs,—that age and weakness, decrepitude and defeat no more pertain to man than they pertain to the multiplication table,—then we begin to see that there is no lawfulness and no reality in the asserted holdback of mortal sense. We have grasped an idea that has a wonderfully buoyant lift, and we begin to go ahead.

As materially understood, the doctrine of evolution has handicapped human aspiration by supplying multiplied reasons why we should not get out of patience with our baser selves. Its tacit acceptance of evil as "good in the making," its recognition of every experience as having place in an all-comprehensive and adequate order, makes for contentment with the unideal, and in contrast therewith Christian Science has come to free us from every thought of our true selfhood's affiliation with or subjection to an unworthy past, and to awaken that consciousness which daringly yet humbly exclaims, Mine is the ever-new way of God, mine the forever-new things of Life and Truth and Love! This is the inspiration of Christian Science teaching, and this explains, in part, its helpfulness to men.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., Dec. 19, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—I feel that I must write you what I know you long ago foresaw. There has been no tide to turn in the affairs of the *Monitor*, for since starting on its great mission it has gone steadily onward in the estimation of its readers, and words of commendation are received on every hand.

That this building should have been completed, presses installed, and a business and editorial force gathered in these few months—that a newspaper comprising four editions each day should gain world-wide recognition from the public press in less than three weeks from the date of its first issue, gives us joy; but greater still is our happiness at being identified with some active proposition in Christian Science. And the *Monitor* is, for almost every day word is received of some one becoming interested in this great movement for the betterment of mankind through something read in its columns.

From my first introduction to this great project I have endeavored to keep constantly in mind that success can be gained only by "those leaning on the sustaining infinite" (Science and Health, Pref., p. vii.), and each succeeding day makes me more grateful that I am, even in this small way, identified with the *Monitor* and its mission.

Most sincerely yours,

ALEXANDER DODDS.

Boston, Mass., Dec. 18, 1908.

Beloved Leader:—May I write just a few lines, in token of my gratitude to you for having called me to Boston to work on the *Monitor*. You taught me long ago that the only way in which we can thank you for the understanding of Truth you have given to us, is by devoting our lives with greater consecration to our work. I am going to try to do this.

Yours lovingly,

FREDERICK DIXON.

Omaha, Neb., Dec. 8, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Leader:—The advent of *The Christian Science Monitor* is one more cause for my rejoicing that I have found a practical religion, with the development of its applicability to present-day needs in hands so competent from all points of view. Even the seemingly excusable sting of "a woman's religion" meets its rebuke in the thought of every just observer, and raises woman one more step toward her rightful place, even in human affairs. The policy of the *Monitor*, so evident even between the lines, bids fair to realize a hope for a fairness toward all humanity, unmixed with a calculation of the purely commercial self-interest.

I continue to hold yourself and the Cause of Christian Science in growing and purifying affection.

Yours in sincerity,

JOHN FORBES.

Northampton, Mass., Dec. 7, 1908.

Beloved Leader and Teacher:—We are near to you or distant from you according to the state of consciousness in which we are living. My heart cries out in a renewed effort to see with the single eye, to do better work for our Cause, to manifest "diligence, promptness, and perseverance" (Science and Health, p. 514). God has been good to me, tender of me, patient with me, purifying me in some degree. I am thankful to God that through Christian Science I can see and experience something of the falsity and unreality of the allurements in the senses that beset young womanhood.

The daughter of a woman who looked to me for help in Christian Science asked her mother if she were not entrusting herself to the care of one too young. So I explained the situation by reading the definition of "Children" in Science and Health, p. 583: "Counterfeits of creation, whose better originals are God's thoughts, not in embryo, but in maturity." She saw that help did not come through youth or age, but through the "better originals," "in maturity," and the healing has been accomplished. According to years Jesus was a young man, but he so lived in his spiritual selfhood that we think of him as in maturity and not as a youth.

The *Monitor* meets a great need with me.

Gratefully your student,

MIRIAM B. CLARK.

Digitized by Google

Findlay, O., Dec. 3, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—The Christian Scientists of Findlay, O., assembled in a business meeting to adopt by-laws and complete organization as a society, unanimously voted to send a message of gratitude to you. May we always be found "with one accord in one place," and learn obedience to God from your example and your words: "Never absent from your post, never off guard, never ill-humored, never unready to work for God" (Miscellaneous Writings, p. 116).

With deep gratitude for all the blessings which have come to us from your consecrated life.

Loyally yours,

MRS. LOUISE M. TEWKSBURY, KARL R. RUMMELL,
CHARLES BEILSTEIN, *Committee.*

Bridgeport, Conn., Dec. 6, 1908.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Bridgeport, Conn., wish to assure you of our deep love and unswerving loyalty, and to express to you especially, at this time, our appreciation of the latest proof that every need of humanity is met through the Love and wisdom that you have made manifest. Though we felt, in a degree, the importance of *The Christian Science Monitor,* when it was promised to us, it was not until it was issued that we began to realize its power for good. The character of its articles and editorials is such that its news seems ever fresh, thus meeting the objection that as a daily paper it could not supply the demand of the country at large. Its optimistic tone, and the clearness and fearlessness of its presentation of the truth, cannot fail to insure for the paper the accomplishment of its mission. Like the fabled goddess of wisdom, it has apparently sprung into the world full armed and ready for action.

At the time of the building of The Mother Church, in Boston, you impressed upon your students the thought that "no doubt must intervene between the promise and event" (Miscellaneous Writings, p. 320), and it is an inspiration to persistent effort on our part to remember that you were willing to wait a quarter of a century for the fulfilment of your desire to send out a Christian Science daily paper. Very lovingly,

LOUISE B. WARNER, FREDERIC C. HOTCHKISS,
MARTHA BURR BANKS, GEORGE E. BETTS,
Committee.

Amboy, Ill., Dec. 7, 1908.

Mrs. Mary B. G. Eddy.

Dearest Leader:—Words fail me when I try to tell you of the help I have received from the study of your books. During the year 1900 I was healed of misery and suffering, and made happy, hopeful, and cheerful. I have since continued in better health than I ever expected to have, and I am daily praising God for Christian Science. Everlasting life and peace be yours.

Faithfully yours,

MRS. OLGA HELDMAN.

H. M. S. Defence, Home Fleet.

Dear Mrs. Eddy:—I wish to express my love and gratitude for this glorious Science which has been revealed through you, and for which you have so patiently labored and endured. It is now my privilege also to labor and endure, humbly following you as you follow Christ. My prayer is to demonstrate the truth in my life and deeds by the renewal of my mind.

Lovingly yours,

F. W. HANAN, *Lieutenant, Royal Navy.*

Skaneateles, N. Y., Dec. 8, 1908

Dearly Beloved Leader:—How beautifully and naturally the blessed truth as revealed to us through God's Word comes to true seekers! My heart goes out in deepest gratitude to you who have done so much for me and mine, —gratitude for physical and moral healing, for the spiritual awakening, and the many blessings that have come to us through the perusal of your books and the many helpful articles in our *Sentinel, Journal,* and *Monitor.* All the gold in the universe could not buy what I have found through your self-sacrifice in bringing to a needy world this healing truth, and I thank God for so wise a Leader, with God-given instruction to lead us ever onward, heavenward. God is indeed for us the God of prosperity, purity, peace, and success.

Lovingly,

MRS. JULIA C. FRENEART.

Carey, O., Dec. 7, 1908.

Dear Mrs. Eddy:—I want to thank you for Christian Science. Three years ago I was healed of a dreaded disease of the kidneys and bladder, through Christian Science. It is so good to be well! I am very happy. I can now "run, and not be weary; . . . walk, and not faint." I am fifteen years of age, and am studying Christian Science, going to school every day, and taking music lessons. We have a little band of Christian Scientists here, and we are learning more of the truth every day.

With love,

KATHERINE HICKLE.

Fayetteville, N. C., Nov. 30, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Beloved Leader:—Humbly let me thank you for *The Christian Science Monitor.* Surely as we are ready for the blessings they unfold to us. It is wonderful to see how divinely you are being led, and how steadily and on what an ascending scale God is teaching you "wondrous things" out of His law to reveal to all mankind. Your quickened understanding, your obedience and devotion to God and Christ is inspiring, and is daily turning thousands "to righteousness," and through your works you are bringing to pass the saying that is written, "Then will I turn to the people a pure language, that they may all call upon the name of the Lord, to serve him with one consent." "The Lord recompense thy work, and a full reward be given thee of the Lord God of Israel, under whose wings thou art come to trust." Peace, peace be unto thee, and blessings forever from the Lord.

Dear Leader, will you accept my unspeakable gratitude and love. JANIE MCK. MYROVER.

THE CHRISTIAN SCIENCE MONITOR

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local newsdealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE MANUAL.

The 76th edition of The Mother Church Manual, containing all of the recent changes, has been issued and is now on sale.

Subsequent editions of the Manual will be issued when new By-laws are made or when important changes are made in By-laws already in effect; and due notice of each new edition will appear in the *Sentinel*.

Address all orders to Allison V. Stewart, Publisher, Falmouth and St. Paul Streets, Boston.

TESTIMONIES OF HEALING.

In 1889 I was told that Christian Science was able to heal me, and though the words sounded trifling to me then, now it is all very different. I had been attended by a great many doctors, but received no lasting benefit. When I entered a class in Christian Science I realized that I was healed, and it was the first time that I had been free from pain in twenty-nine years. This relief came in three days' time, but it took several weeks for all the symptoms to disappear entirely, and leave me free mentally and physically. One of my worst troubles was a serious form of heart disease, and many times I lay helpless for hours, not even able to speak. Another ailment was lung trouble, in what the doctor called its last stage, besides other diseases too numerous to mention.

When Christian Science came to me I saw that it was none other than the Christ-healing, and from that time to this I have never doubted the truth of Mrs. Eddy's teaching in "Science and Health with Key to the Scriptures." In the last nineteen years I have seen many persons healed of disease, which proves all I have said in its favor. Christian Science is a mighty power for good, as it is lived and loved.—EDWARD M. FELKEY, Armstrong, Ia.

In the spring of 1889 I was suffering from a disease pronounced lung trouble. There were weeks that I coughed continually, and I was unable to turn myself in bed. I had become very much wasted, and almost wished for death, if that would deliver me from my misery. My friends all told me that something must be done or I would not last long, but what that "something" was I did not know. I was at the time under the care of a prominent physician, but was receiving no benefit whatever. Finally man's extremity proved to be God's opportunity. Word was sent me by a friend that a lady was coming to our town who healed without medicine, and that she was going to hold a class and teach Christian Science healing. I grasped at the thought of healing as a drowning man would grasp at a straw, and when the lady came, which was on a Thursday, I sought her that I might be healed. The following Sunday I seemed to be in very bad condition. I went to bed early in the afternoon, and lay there, suffering extremely, until about eight in the evening, when suddenly, like a ray of light bursting through a cloudy sky, the healing came instantaneously. I shall never forget my sense of freedom at that time. I rose, dressed myself, went down-stairs, and asked for some supper, which greatly surprised my friends. From that time until now the disease has never returned.

I would also like to tell of the healing of our little boy, our only child at that time. He was suffering from a dreaded disease; and the verdict given by the physician was that he had never known of but one case of this disease where the child lived to be ten years old. My son is now twenty-one and is a picture of health. This healing was simply the result of our understanding of Truth. Our daughter at the age of eight was healed of a serious illness in three days' treatment. I could write very much more of ills that have been met and overcome through Christian Science.

My husband and I feel that we owe endless gratitude and love for the faithfulness and patience shown to us. Every day I thank God for our beloved Leader, Mrs. Eddy, who so wisely is leading us to Christ; and I know that I can best show my love and gratitude to her through obedience to what she teaches, every step of the way. I have gone through deep waters since coming into Christian Science, but never once have I let go of the light that has been

Digitized by Google

revealed to me, and my one desire has always been that I may live so close to the Principle revealed in Science and Health, not in the letter only, but in the spirit, that I may prove a worthy example to others.

MRS. F. N. FELKEY, Armstrong, Ia.

I am a man fifty-seven years old. In 1907 I was under medical treatment all winter, but did not get much help. My wife had been interested in Christian Science for a number of years, and I decided I would throw all my medicine away and turn to it for help. A Christian Science practitioner treated me absently for a week, and I was healed.

One morning in June, 1907, I went out on the mountain for a load of wood. I met another wagon and turned out to let it pass. It was loaded with ties, which struck my horses; they shied and went down a bank about three hundred feet. I fell first on the horses, then was caught under the wagon, the seat striking me in the back. I was rolled over for about forty feet, and all I could think of was, "God help me!" The man who was with me said he did not expect to find me alive, but he called to me, "Are you hurt?" I said, "I will soon be all right." I then repeated the Lord's Prayer, sat up, and felt better, although I had seemingly received some terrible injuries. I was taken home, and all our friends said we must get a doctor, but I did not want one. About nine o'clock the conditions became so alarming that my wife felt she needed help, and telephoned to a Christian Science practitioner in Denver. This lady treated me, and the hemorrhage ceased. The practitioner came to see me once, and treated me one week absently. The discoloration and swelling of my right leg was about all gone in one week, and through all this experience I suffered very little. In six weeks I was hauling tourists around again, and feeling fine.

I am very thankful to Mrs. Eddy, who has taught us to understand God, and I feel that I shall always trust Him in every way.—G. W. FLESHER, Pine, Col.

[Translated from the German.]

I give this testimony with sincere gratitude for all that Christian Science has done for my family and myself. My husband had been afflicted with asthmatic and bronchial trouble for over twenty years. I myself was suffering from abdominal troubles and a weak stomach, and was allowed to eat only a few things. When the physicians did not know what else to prescribe for us, they advised us to travel either to Germany or the South. For this reason we went to Europe twice, and lately went almost every winter to southern California. While coming back the last time, which was a little over two years ago, we met on the train some travelers who were on their way to Boston to attend the dedication of The Mother Church. They were very nice people, and we became acquainted with some of them. One lady asked me why we went to California every winter, and I told her that the physician had advised it for our health. She then told me there was a Christian Science church in Chicago, one block from where we lived, and that if I should go there and ask for the address of a practitioner, that I would nevermore need to take any journeys for my health. After we arrived home I did go to that church, and found a practitioner, who gave me Christian Science treatment. In three weeks I was healed of all my ailments, and I have been well ever since.

When I came to America I was over fourteen years of age, and did not go to school here, therefore I did not learn to read English, but by the advice of my practitioner I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other Christian Science literature. I began to read and study these books, and to-day I can read English quite well. It is now two years since we heard the first lecture on Christian Science in our church. I invited my husband to go with me; he did so, and became convinced of the truth of Christian Science. Since that evening we attend the Sunday services and Wednesday meetings. My husband went to the same practitioner, and was healed of all his ailments. We threw away all material remedies, and since last January we are members of Second Church of Christ, Scientist, in Chicago.

Words are inadequate to express my gratitude to God, and I wish to thank our dear Leader, Mrs. Eddy, for her inspiring books, which have given us a spiritual understanding of the Scriptures. I am indeed grateful for Christian Science.—MARIE MATTERN, Chicago, Ill.

In December, 1906, I had a severe attack of illness and sent for a Christian Science practitioner, but it was not until the afternoon of the next day that I realized much change. At this time I was able to lie down, having remained most of the previous thirty-six hours in a sitting posture, and unable to move without great suffering. The following day I was up and about the house, and on Sunday attended the services at the church. Appendicitis had been healed in Christian Science. Truth had gained another victory. The gratitude I feel to God, and to Mrs. Eddy, the Discoverer and Founder of Christian Science, can only be expressed by what I am able to do for others. It is nearly eleven years since I first became interested in Christian Science, and in that time it has been my sole reliance for myself and children. We have never used medicine or any material remedy in that time. For all these benefits I am most grateful.—VIRGINIA ALLPHIN, Denver, Col.

Some four years ago I was afflicted with a nervous trouble. After trying several physicians, of different schools, I turned to Christian Science. Although my healing came slowly, I can truthfully say that I was benefited, both mentally and spiritually. I am not an active worker in Christian Science, still I enjoy studying the Lesson-Sermons and find in them great good.

M. L. WRIGHT, Luverne, Minn.

From early childhood the statement, "She is a nervous child," greeted my ears, and the law that "like begets like" was fully verified as I grew into womanhood. After my marriage chronic invalidism and medicine were my inseparable companions. At the end of ten years medicine had been exhausted, and I found myself wasted to a skeleton, with just strength enough to try a sanitarium for rest, diet, and outdoor life. There, for two years, everything that human love, care, and money could bestow was given to me, and at the end of that time, as I had gained sufficiently to walk about, my husband brought me home, with a nurse to care for me. The fear of food was so great that my diet was limited to a very few things. At the end of fourteen months I yielded to the advice of friends and sent for a Christian Science practitioner, though particular care was taken to tell him that I had no faith in Christian Science. Notwithstanding this, and the fact that my prejudice against the Bible was so great I at first refused to study it in connection with the Lesson-Sermons, I gradually gained strength enough to do my own housework. After five months' treatment, class instruction was taken, and at the end of three years chronic bowel trouble, sleeplessness, female disorders, and fear of food had disappeared.

Now, after seven years' daily study of the Lesson-Sermons and practice of their teaching, I have learned to

Digitized by Google

love the truth found in the Bible and in "Science and Health with Key to the Scriptures" by Mrs. Eddy. Sickness has been replaced by health, despair by hope, melancholy by joy, and hatred is yielding to love. I feel I can best express my gratitude by so living the truth that others may desire to find the kingdom of heaven, which is at hand for all who seek it.—BELLE CADY PLUMMER, Stockton, Cal.

I am very glad to be able to pay a heartfelt and grateful tribute to Christian Science and to its Leader. The testimonies which I am constantly hearing at the Wednesday evening meetings and reading in the Christian Science publications, prompt me to give my own. My first experience in the wonderful efficacy of Christian Science was on what was thought to be my death-bed. I had been under the care of two of the best physicians in this city for seven months, and received some benefit, so that I went to work, for one week, but was soon confined to my bed again, in a worse condition than before.

It was then that my mother pleaded with me to try Christian Science, which had been recommended to her by a friend, and after a few days I gave my consent. A practitioner was called, and arrived promptly. As soon as the practitioner came I experienced great relief. I was given treatment by the practitioner, which helped me very much, and this was continued for three days. On the third day I ate a hearty dinner, and at three o'clock that afternoon I got up, dressed myself, and went outdoors. After this I received absent treatment for a short time, and soon was perfectly well in every way. I then sent for a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the *Christian Science Quarterly*. I find great joy in the study of the text-book and our other Christian Science literature. This truth is indeed, in the words of the psalmist, "a lamp unto my feet, and a light unto my path." It has given me the understanding that God is my Life, the source of my health and my strength.

J. B. ANDERSON, Fremont, Neb.

On the 28th day of February, 1907, I came here from my home in the South. I brought with me a sick body, having quite recently been in a hospital for an abdominal operation, and previously for an eruptive affection of the lower extremities, on which occasion my limbs were packed in ice for seventeen days, with the result that they were left in a dreadful condition, and one knee-joint was displaced. After coming here I took up the study of Christian Science, and found it a beautiful religion and a demonstrable truth, both physically and spiritually. In a few months I was perfectly healed of all the conditions I have mentioned, as well as others. One day in the month of March I felt very ill with what seemed to be a serious throat trouble. I realized the truth as best I could, but said nothing to any one and kept about my duties. The next morning I felt unable to rise from my bed. The lady of the house then came to my room, and at once began to treat me. The high fever was overcome within an hour and the other conditions were met in a few days.

I was also healed of a very severe attack of cold during a testimonial meeting in the winter. I can say with the psalmist, "The lines are fallen unto me in pleasant places." I am deeply grateful to God, and to Mrs. Eddy for this healing truth.—LIZZIE WARD, Brooklyn, N. Y.

Since coming into Christian Science I have surely found that "God is our refuge and strength, a very present help in trouble." I have been interested for quite a number of years and know that the truth is applicable to each moment's work, but there are times when we seem to need a little help from others. I would like to write of a severe ailment that was quickly healed. The suffering became intense, and if we had been in the thought of *materia medica* the aid of a surgeon would have been required, but a Christian Science practitioner was called and in a short time harmony was manifested.

We are thankful to God for revealing to us this wonderful truth through her whom He has chosen to lead the world again to the fount of health and happiness.

MRS. ELVIE H. PIPER, Concord, N. H.

We as Christian Scientists have received many great blessings in this truth—and have never told the half. I wish to tell of a demonstration which was made in Science when we first went to Los Angeles. On entering the schools, one of the rules demanded that all children should be vaccinated. We complied with the rules, and our two girls were vaccinated. They seemed at first to get along nicely, but after awhile blood-poisoning set in. To the senses it seemed very alarming, but it was met perfectly with Science treatment; and I am very thankful for the healing. I was also healed, by reading Science and Health, of a painful stomach trouble, and of a female disease that the physicians said would compel me to have an operation performed in order to get relief. Instead of going to a hospital, I began to investigate Christian Science. In Mrs. Eddy's book I found the truth I so much needed; and it was so good to read it. While the physical healing was grand, the spiritual uplifting and the teaching that showed me how to live a better life, led my thought heavenward. I thank God for all these blessings. Now it is a pleasure to read the Bible. Our dear Leader, Mrs. Eddy, who is such a noble guide to follow, is ever keeping the high goal before her.—MRS. LILLEY B. YOCKEY, Chanute, Kan.

How thankful we should be that through the understanding of Christian Science we have "an anchor of the soul, both sure and steadfast," when the clouds of material sense gather round our path, shutting out the light of God's presence for a time. It is then that we should rejoice, for we know that when the clouds have rolled away the light will again shine out, its splendor undimmed by this seeming obscurity. Seven years ago Christian Science came to me, as "one born out of due time," and since then my progress though slow has been continuous. I have been healed of many physical ills, but the greatest blessing, to my sense, and for which I would give God thanks, has been the overcoming of discontent, restlessness, an envious and jealous disposition,—all of which are being eliminated from my consciousness.

I send this testimony with the hope that it may cheer and encourage some fellow-traveler, and to express my gratitude to Mrs. Eddy for showing us the way.

MRS. MARTHA MUNSELL, Winchester, Conn.

For some time it has been my desire to tell of the many ailments of which I have been healed through Christian Science, the first being a very bad case of kidney trouble. Our family physician, one of the best in Cincinnati, came to see me three times every week for six years, but without any good results. He then tried electricity, but still I got no relief and was about to give up in despair. One day, when I was suffering intense pain, my daughter went to see a Christian Science practitioner and had absent treatment given me. I was healed at once, and have not had any attacks of the pain since that time. I was given up to die by the same physician, in an attack of acute lung

Digitized by Google

trouble. He said I could not possibly live through the night. My husband was then asked if he would send for a Christian Science practitioner, and he said to send for any one who could save my life. A practitioner was called, and the next morning I was well, able to be down-stairs, and that day I helped to prepare dinner for my family. I have also been healed of chronic bowel trouble and headaches by reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures."

I wish this meager acknowledgment of some of the benefits I have received through Christian Science might reach all those to whom I voiced my opinion of it in former days,—an opinion which only expressed my utter ignorance of the subject. Yet I know God does not despise me, for I have had many blessings since that time and am having more peace and contentment of mind than I have had for many years. I give thanks for all this to God, and to our noble Leader for showing me the way.

MRS. JENNIE LONG, Hartwell, O.

After having been invited a few times, I finally attended a Christian Science service, and at once bought a copy of the Christian Science text-book, which I began to read in conjunction with the Bible. At that time my left arm had been helpless for about a year, my wife and children being obliged to help me dress, as I was unable to do anything with this arm; but before I had finished reading "Science and Health with Key to the Scriptures" my arm was healed. I was also healed of some other ailments, such as bowel trouble, etc. About nine months after that time, on Thanksgiving evening, I read in *The Christian Science Journal* of a man who had laid away his glasses. It was then I realized that what God had done for one He could do for another, and that I, too, could read without glasses; consequently I went to work as best I could, and before I retired that night the "still small voice" assured me that I would obtain complete healing. On Sunday morning at five o'clock I arose, opened Science and Health at page 578, and there found the 23rd Psalm. I realized that God, divine Love, had fulfilled His promise. If it had been in the daytime I should have shouted aloud with joy. I laid away my glasses and have never used them since.

Praise be to God at all times, for His goodness stands forever, and thanks to Mrs. Eddy for her tireless work for suffering humanity.—S. BIEDERMAN, Evansville, Ind.

With the hope of leading some one to investigate Christian Science I will tell a few of the many blessings that have come to me through its study. About three years ago my mother came to visit me, and while at our home she was attacked with a rheumatic trouble which was quite severe. She was entirely healed through the help of a Christian Science practitioner, and was also relieved of chronic liver complaint and bowel trouble. At this time my husband was in such poor health that we despaired almost of his life; but he was healed through Christian Science of stomach trouble and a disease of the kidneys. I was healed at this time of severe backache, mental depression, and general ill health. Our children have been helped through all the ills that are supposed to attack children, not succumbing when exposed to two dreaded diseases. One child was born under Christian Science treatment. The birth was attended with very little pain, no medicine was used, and no physician was called.

While we are very thankful for the physical help, we prize the spiritual uplifting far more. We were members of orthodox churches, my husband belonging to one and I to another, but as these churches never seemed to meet our needs, we soon withdrew and are now members of The Mother Church and of our local society. We feel that we owe a great deal of love and gratitude to the dear good woman who has taught us the way to the Christ-healing.

MRS. M. VIRGINIA PRATER, Lake Charles, La.

Having suffered for five years with a very bad stomach trouble, which was growing worse, I turned to Christian Science for help in September, 1907. I had been treated by the best local doctors and by a specialist in Boston; but had received only temporary relief. I then thought it was time to try something different, if I wanted to live, and I thank God I did; for I found what I should have had all the time, and what I find by the study of Science and Health is given us by divine authority, that is, health and happiness. I am trying to live a life that will be a living testimony to Christian Science.

O. B. INGALLS, Pejepscot Mills, Me.

For many years I have hesitated to send in my testimony, feeling that as I did not seek Christian Science for physical healing, and had no unusual experience to relate along that line, it would not prove of much interest in comparison with others so much more impressive; but I now realize that the smallest mite is acceptable unto God, and that we cannot hope or expect to receive blessings unless we give something in return. I want to add my grateful acknowledgment of the benefits of Christian Science to those thousands of others, who through the pages of the *Sentinel* and *Journal* bring hope to many weary hearts,—to those who are hungering and thirsting after righteousness and peace and waiting to be filled.

For about nine years I have looked to no other source than Christian Science for relief from physical ills, and it has never failed. Chronic stomach trouble, and severe headaches, etc., disappeared gradually as I studied the Bible and Science and Health, and I can now discern to some extent the meaning of Isaiah's words concerning a state of existence in which "the inhabitant shall not say, I am sick: the people that dwell therein shall be forgiven their iniquity;" for when disease is blotted out from the human mind it will not be manifested on the body, even as there would be no sin committed were it not first conceived in the human mind. Christian Scientists also know that the physical healing is of small importance compared with the spiritual regeneration or baptism,—that putting off of "the old man" of which the material manifestation is but the natural result.

I wish to say that in a time of sorrow and loss Christian Science brought me such comfort as I never dreamed would be possible, and I am grateful for this above all else. Even the slight understanding of God which I had gained, of Life as All-in-all,—filling all space and leaving no room for its opposite called death,—so uplifted me above the thought of death as to enable me to see that the real man is God's image and likeness, and cannot die any more than God, who is eternal Life, can die. Although the sense of separation from our loved ones is a trial, the bitterness of which disappears only as we gain a higher understanding of the truth of being, the "sting of death" is taken away by the teachings of Christian Science and we know that the grave has not won a victory. We then learn to profit by these trials, and they become stepping-stones to a higher condition of thought, turning us away from matter to Spirit, where all real being is. It is only thus that we can realize with Paul, that "all things work together for good to them that love God."

The door to man's immortality has been opened to this age and all future ages by the truth taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and there is no longer any necessity

Digitized by Google

to stand on the outside, forsaken and forlorn, amid the storm and stress of sin, disease, and death,—discords which God never made. I know that I can only prove my right to be called a Christian Scientist by my love to God and also for our Leader, and my loyalty to Truth by striving to live up to the teachings of Christian Science.

MRS. LURLINE H. SWAIN, Kansas City, Mo.

It is about five years since I first sought and received help from Christian Science. At that time I was in bondage to many physical diseases. Although a young woman, I could not do an ordinary day's work without suffering from fatigue. I spent all my vacations, which amounted to over three months every year, in resting. I was hampered and limited at every turn by the belief in so-called physical laws, which said, "Thou shalt not." The first year in which I knew something about the teachings of Christian Science, I felt a sense of freedom I had never known before. For the first time in several years I enjoyed going out evenings, and felt no ill effects from it afterward. I also found out that I could work hard all day and not be tired at night. A burden of care had been rolled away. My sister, who saw a great improvement in my disposition as well as in my health, began with me to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. The clear teachings about God in the chapter on "Prayer," first convinced us that our understanding of God as infinite Love had been indeed limited; that a belief in material law, so called, and in material causation, had practically ruled out of the universe the God of whom Jesus spoke when he said, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

About a year after I began the study of the Christian Science text-book, I awoke one morning to the realization that I was free from a chronic disease that had caused me much annoyance for many years, and that I had been free for several weeks. All the evidences of the disease had passed entirely away, and I could not remember when they had disappeared. Since then I have seen many diseases destroyed by the word of Truth, as revealed in the Scriptures and in our text-book. Headache, catarrhal colds, chronic sore throat, etc., selfishness, jealousy, and malice, I have seen healed through Christian Science. Jesus said, "Ye shall know the truth, and the truth shall make you free." Christian Science has brought to a weary world the fulfilment of this promise. It has shown mankind that this truth is of God, Spirit, and that mankind have been held in bondage to sickness and sin by human beliefs, by material thinking, not by the law of God. It has pointed the way to spiritual thinking, and has thereby struck at the foundation of sin, disease, and death.

I am grateful to our dear Leader, who has shown me how to live by teaching me that Life is God, Spirit. This debt of gratitude can never be fully acknowledged in words. It can be met only as I come to know God better and to serve Him more faithfully.—MARY THORN, Elgin, Ill.

In "Science and Health with Key to the Scriptures" (p. 385) we read, "Whatever it is your duty to do, you can do without harm to yourself." I would like to tell of one of many demonstrations of the truth of this statement. In March, 1904, I was suffering from a serious attack of illness, and although I had worked faithfully in Christian Science, knowing surely that God is All, and that Truth would heal me, I did not seem to be getting any better. One evening at ten o'clock a messenger came with a request that I should go at once to a studio building near by, where some one was in urgent need of Christian Science help. It was a cold, stormy evening, and the first thought which came was, "I cannot go. I have more need to stay at home and help myself;" however, I am thankful to say that this selfish suggestion was immediately overcome.

It was a case of accident, and the conditions were such that I had to remain all night, alone with the patient, and as I have already stated, it was a bitterly cold night in March. There was not a particle of heat in the building after midnight, and as I had left my warm room rather hurriedly, and had only a short distance to walk, I was not very warmly dressed. I have never before, nor since, experienced such discomfort, such cold, as I did that night; but there was work to do, and it had to be done quickly. It was a night to be remembered forever, with deepest humility and everlasting gratitude to God for Christian Science—the half can never be told. I went home about seven o'clock in the morning, and after breakfast I sat down to study more of this glorious truth which had done such wonderful works, and then I remembered the condition I was in when I left the house the night before. All the trouble had gone, every symptom of it had disappeared, I was perfectly well! On Wednesday evening, Feb. 19, 1908, the young woman to whose assistance I was called that evening in March, 1904, stood up in Second Church here and told of what Christian Science had done for her that night; and as she stated, there was not a mark or scar left on her body as a result of the accident.

My gratitude to God, and to Mrs. Eddy who has taught us how to know God, can only be "expressed in daily watchfulness and in striving to assimilate more of the divine character" (Science and Health, p. 4).

ELIZABETH FERGUSSON, Chicago, Ill.

I was drawn into Christian Science through divine Love, without any thought of my infirmities, which were many. I was lame from severe injuries to my leg ten years before, and when I was freed from using crutches and cane I felt happy indeed. Since then I have been looking for and receiving more light and knowledge, and I realize that I am gaining in each and hope to continue. I also want to acknowledge my gratitude for the healing of my wife in three or four days of a serious eruptive disease. There were twelve or thirteen similar cases in the neighborhood, and one of these sufferers passed away, while the rest of the cases took from six weeks to three months to recover, all of them being treated by *materia medica*. I am ready to show my gratitude for our healing whenever I can, and if any one wishes to write me on this subject I will gladly answer. Nearly every one in this vicinity is familiar with the facts as given in this testimony, as I have been a resident here for twenty-six years and was a cripple for ten years. My wife joins me in giving all praise to God and to Mrs. Eddy for this truth.

V. J. COYNE, JOSEPHINE COYNE, Breckenridge, Col.

[Written for the *Sentinel*.]

"AS A LITTLE CHILD."

KATHARINE T. PORTER.

REMEMBER childhood's ways—the pure, unsullied heart,
The ready sympathy, affection, impulse true,
Which were our own, e'er earth's cold blast had caught
Us unaware, and chilled our natures through.
The truthful joy, the gratitude must once again
With tender conscience, intuitive love combine.
Ere we dare ask for more, we must in full regain
What once e'en here on earth we have possessed of Thine.

FROM OUR EXCHANGES.

[*The Christian Herald.*]

The gospel was given, not for philosophizing and theorizing, however admirable these may be in their own proper places, but to supply a rule of action applicable to all the affairs of human existence. The religion of Jesus is a practical thing, which takes hold of the daily life and comes down to the level of the general need and comprehension. Let us not forget that "the common people heard him gladly." So, our own churches to-day, to meet the modern emergency, must come down to the people. Their true mission is to save not only the individual sinner, but also to save society by improving it, by bringing its component elements into better relationship, by teaching that the doctrines of Jesus—love, justice, generosity, and human brotherhood—were not given to be preserved in books and missals or read once a week gravely in church, but to be lived in the daily life.

[Rev. John Haynes Holmes in *The Arena.*]

The church has the opportunity to destroy the ills of society, since it is the one institution in the world to-day which stands solely for the things of God; and the church has the power to destroy these ills, since it has a membership so large, a property so vast, an influence so supreme, an authority so divine, that it could as surely banish from the earth any iniquity against which it might choose to proceed as the angels of God banished from the heavenly heights the rebellious hosts of Satan. Upon the church, therefore, as upon no other organization in human society, rests the obligation of action; and so long as it remains idle and indifferent in the face of such evils as are rife to-day, so long may it be fairly held responsible for the consequences.

[Pres. Benjamin Ide Wheeler, as reported in the *Chicago Tribune.*]

The Founder of Christianity had no idea of a ritual. The rituals have been inherited from pagan religions. Christianity is not a book. All religions have more or less of a story at their base, but Christianity does not stand or fall on the accuracy of its story. There is no salvation in theology. Christianity is not an institution and should not be confused with the machinery, called church, which has carried Christianity down the ages. None of the sects is Christianity. Each sect has developed a certain phase of Christianity, and when the work of the various sects has been completed, it will be handed over to the church universal and the sects will disappear.

[*The Congregationalist and Christian World.*]

We need converted imaginations, that we may see each situation from our neighbor's point of view as well as from our own. The necessary adjustment of the threefold love of God, our neighbor, and ourself, is difficult, but it is the practice-ground for the powers of affection which God has given us and which are the assurance of our growing likeness to Himself.

[*The Universalist Leader.*]

Francis G. Peabody says that not less of religious fervor and not less of practical activity are demanded of the representatives of religion, but a new accession of intellectual power, the capacity to translate the message of the timeless into the dialect of the present age.

[Joseph H. Bradley in *The Christian Work and Evangelist.*]

We are ready for heaven in another life when we have first found heaven here, and have entered into it, and not until then.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States and Possessions, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE. THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 29 pages.

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D. 37 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. By EDWARD A. KIMBALL. A lecture delivered in London. 47 pages.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. By EDWARD A. KIMBALL. A lecture delivered at Harvard University. 28 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. This pamphlet is also printed in French. 25 pages.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. A Lecture. By FRANK H. LEONARD. 31 pages.

CHRISTIAN SCIENCE; OR, DELIVERANCE FROM EVIL. A Lecture. By REV. WILLIAM P. MCKENZIE. 29 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the JOURNAL. This pamphlet is also printed in German. 38 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By REV. ARTHUR R. VOSBURGH. 33 pages.

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. A Lecture. By MISS MARY BROOKINS. 37 pages.

PROPHECY: FULFILMENT: REVELATION. By CHARLES ADOLPHUS MURRAY, Seventh Earl of Dunmore. 42 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 81 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the JOURNAL. This pamphlet is also printed in German. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the JOURNAL. This pamphlet is also printed in German. 50 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. 38 pages.

PRICE: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

REPRINTS FROM THE JOURNAL AND SENTINEL

THE BROTHERHOOD OF MAN.
HOW SHOULD THE SICK BE HEALED?
LESSONS FROM A WORKSHOP.
THE LESSON SERMONS.
CHRISTIAN SCIENCE AND THE BUSINESS LIFE.
"THE LAST ENEMY THAT SHALL BE DESTROYED."
PATIENT CONTINUANCE IN WELL DOING.
CHURCH BUILDING IN CHRISTIAN SCIENCE.
PRACTICAL RELIGION.
THE IMPERSONAL NATURE OF EVIL.
"IF YE ABIDE IN ME."
INTERESTING NARRATIVE.
THE DIVINE IDEA AND THE HUMAN CONCEPT.
LOVE IS LIFE.

REPRINTS IN GERMAN

CONCERNING THE TEXT-BOOK.
SERVICE AND STIPEND.
THE REAL AND THE UNREAL.
THE LESSON SERMONS.
A PROTECTING RELIGION.

PRICE: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full morocco. Per copy, prepaid, $3.00; twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:

"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A; for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy; $7.00 per dozen.

COMMUNION HYMN—"SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy; $5.00 per dozen.

"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Rev. Mary Baker G. Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. 20 Pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid, to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The estimated weight of the free mail matter carried during last year is 76,355,738 pounds. This covers second-class matter, franked matter, and penalty matter. If this mail all paid postage at the regular rate, it would bring into the treasury $20,881,239. In addition to this the department carried free mail of its own which if it had been paid for would have brought in a revenue of $21,000,000. It is probable that this showing by the department may receive considerable attention by Congress before the close of the session.

The creation of a Federal expert non-partisan tariff commission, with a permanent tariff bureau working under its direction, was recommended by the National Business League of America at its late meeting in Chicago. It was declared that "sweeping changes" of tariff schedules were promotive of business uncertainty, and the commission was indorsed as a means of changing the tariff as conditions demand.

The governors and highway commissioners of the New England states have just had a conference, at which an attempt was made to secure uniformity in the rules governing the use of the highways by automobilists. One regulation proposed establishes twenty-five miles an hour as the extreme speed limit. A limit of eight miles per hour is suggested around corners and curves and at intersections of streets.

When the wireless equipment planned by the department is finished the navy will have no peer in that service and will be able to communicate quickly with any ship of the navy, no matter in what waters it may be stationed. The station on land will have a sending radius of three thousand miles, the ships will have a receiving radius of three thousand miles and a sending radius of one thousand.

The appointment of clerks and other employes needed for work on the thirteenth national census, unless pressure be brought to bear on the question by friends of civil service reform, will be congressional patronage, as in the case of previous censuses, a bill providing for non-competitive examinations having already been reported.

Fifty business and professional men of Los Angeles, Cal., have formed an organization to be known as the Business Men's Anti-Race-Track Gambling League of Southern California. The purpose of the organization is to secure "the enactment and enforcement of a law prohibiting race-track gambling in the state of California."

The Massachusetts Fish and Game League, a private corporation, is planning to lay out shortly an estate of some six thousand acres in and near Plymouth, in order to propagate and preserve such game birds as threaten to become extinct. The state has already set aside a tract in Martha's Vineyard to preserve the heath-hen.

The bill appropriating five million dollars for the purchase of forest reserves in the White Mountain region and the Southern Appalachians will be surer of passage, it is thought, by providing that the purchase be made by a board and through a continuing instead of a straight appropriation.

President-elect Taft and two or three eminent engineers will soon go to Panama. This will give the incoming President the benefit of friendly suggestions from outside, which may be of use in bettering in some details the present plans of the Panama Canal.

The national monetary commission appointed by Congress will, after the holidays, report a bill to amend the acknowledged defects of the banking laws. A report dealing fully with the money question will not be reported until the next Congress.

The Garden of the Gods, one of the seven scenic wonders of the American continent, is to become the property of Colorado Springs, by gift of the children of the late Charles E. Perkins of Boston, former president of the Burlington Road.

The intimation that the site of the Gatun dam at the Canal Zone overlies a lake has been set at rest by the statement of the commission that the dam rests upon a firm and safe foundation of impervious clay.

The New York, New Haven and Hartford Railroad Company carried 39,777 passengers for the recent Yale-Harvard game at New Haven, and earned $71,299 in revenue.

Officials of the Voters' League, Pittsburg, have secured evidence of graft which has resulted in the arrest of seven councilmen and two bankers.

The value of new buildings erected in Chelsea, Mass., since the disastrous fire last spring, as given in the official reports, is $3,030,437.

International.

Cipriano Castro is no longer president of Venezuela. He left there a few weeks ago for a trip to Europe, confident of the security of his position. He was received guardedly by France, with whom he has lately had differences, and openly by Germany. Meanwhile, when Holland, who had a sore grievance, had captured two Venezuelan warvessels, the home people became aroused, and renounced his dictatorship. Acting President Gomez is opening the way for a settlement of the various disagreements with foreign powers.

The Pan-American Scientific Congress, which is to consider American social problems, with a view to showing the advantage to all American countries of regulating in a uniform manner the operations of some of their public institutions, began its sessions Dec. 24 at the Santiago (Chile) University. There was a large number of delegates present from the United States, which created an excellent impression.

The construction of the first one hundred and fifty miles of the Rio Grande, Sierra Madre and Pacific Railroad will be started within sixty days. This extension will take the road into the heart of a vast tract of valuable timber which is owned by a syndicate of Americans. The plans already adopted call for an extension of three hundred and fifty miles ultimately.

The course adopted recently by the authorities in India, to cause the arrest, swiftly and mysteriously, of all natives suspected of revolutionary activities, is having a very good effect on the unrest of the population. Instead of being deported, the leaders taken into custody are being distributed to the various jails in India.

Wilbur Wright, the American aeroplanist, established a new world's record for heavier-than-air machines a few days ago, while trying for the Michelin cup, remaining in the air one hour, 53 minutes, and 50 seconds. The distance was officially measured as 61½ miles.

France and Spain have transmitted to the signatories of the Algeciras Conference an identical note relative to the formula for the recognition of Mulai Hafid, the present Sultan of Morocco.

It is reported that the United States has tendered her good offices to the Argentine Republic and Brazil, with a view to securing a diminution in the armaments of these two countries.

The Mexican government paid out more than $6,000,000 as subsidies for the construction of new railway mileage during the six months which ended Dec. 31.

Austria-Hungary, it is reported, is prepared to grant Turkey $20,000,000 as compensation for the annexation of Bosnia and Herzegovina.

Industrial and Commercial.

Satisfied after a thorough study of conditions that American labor is far superior to that of the Japanese, operators of the Burlington (N. J.) Silk Mill confirm reports that the concern will close several large mills in Japan and move its entire plant to that city.

The vast coniferous forest zone of Siberia is yielding ever-increasing quantities of timber. On Jan. 1, 1906, the state forests of Russia in Asia covered 650,687,497 acres. The timber industry has scarcely begun to be developed in Siberia.

There have been transported through the St. Mary's ship canals this year 41,200,000 net tons of freight. This is a loss of forty-one per cent compared with the traffic of the preceding season.

The average citizen of the United States consumes half his own weight in sugar every year, and the sugar bill of the country aggregates a million dollars for every day of the year.

Two new steamship lines between the Pacific coast and the Hawaiian Islands are being organized. Los Angeles will be the chief port of call.

The International Smelting and Refining Company, with an authorized capital of $50,000,000, has been incorporated in New Jersey.

A total of 11,802,115 running bales of cotton were ginned from the growth of 1908 to Dec. 13.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A CHANGE OF RAIMENT.

CLARENCE W. CHADWICK.

WHEN Jacob was called to "go up to Bethel" he realized that a change of raiment was necessary both for himself and his household, and he said to all that were with him, "Put away the strange gods that are among you, and be clean, and change your garments." He knew that they must "arise" in thought if they would serve God "in sincerity and in truth." The journey to Bethel was really a mental one, whereby they were to forsake idolatry and to learn to obey one master, Spirit and not matter. They heeded the call, and the journey was safely made and an altar was erected unto God.

The mission of Christian Science among men to-day is to show them how to put away the strange gods that are in their midst. They, too, must forsake matter for Spirit, if they would journey heavenward and learn that "there is none else" beside the God who is Spirit. Many will contend, however, that they do not need Christian Science to show them the way to heaven. They may believe such to be the case, but the fact remains that Christian Science is here to fill a need, to explain the true mental journey to the kingdom of heaven on earth. Because Christian Science has been given to the world, one must admit that there was something in the human race that needed correcting, and Science tells us plainly what it is.

Humanity have been worshiping and relying upon something besides God. Spirit has not been discerned to be All-in-all, Mind has not been understood to be omnipotent; and because of this lack of understanding Christian healing has been looked upon as something fanciful and impracticable rather than practically operative and available in daily living. Had any one in the eighteenth century established the Christ-healing through actual demonstration, and explained its Science or *modus operandi* to the world, Christian Science would not have come to the world when it did. It would have been here already. Because it is here now, it is here for a purpose and that purpose is divine, not human. It is here to be spiritually understood and demonstrated, not simply believed. There is no other teaching in the world to-day that practically analyzes and explains humanity's unchristian reliance upon matter, and that shows mortals how to overcome such belief.

Before the advent of Christian Science the Christian world was attempting to understand Spirit through the medium of matter or the so-called physical senses; now it is being shown how to understand the nothingness of matter through a practical but spiritual understanding of Spirit. Because of this positive reversal of thought and activity in human affairs, the unbelieving are throwing stones at their own distorted concepts of Christian Science, declaring this reversal to be contrary to established usages. And so it is, and so it ever will be until this Science is acknowledged to be the only Science there is, because it is the Science of God, omnipotent Spirit, the All and Only. None of the so-called natural sciences scientifically explain either mind or matter, hence their failure to overcome matter's universal allies, sin, disease, and death.

Here is a most vital point, and one generally overlooked by the various leaders of so-called advanced thought, that the mythical nature of matter must be discerned before humanity can successfully cope with its so-called conditions and overcome them. The teacher who advocates the forsaking and mastering of sin must be able to explain, and to prove through healing, the unreality of matter and its assumed laws. To cut off the tops of noxious weeds, leaving the roots undisturbed to grow again, does not destroy the weeds. Christian Science lays the axe at the very roots of evil, sin, disease, and materiality, by demonstrating or proving the unreality of what the world calls matter. There is no other teaching that relies upon the supremacy and allness of Spirit by denying the validity of matter. Superficiality may sneer at the intimation of matter's nothingness, even while Christian Science is healing thousands of people of the most inveterate sins and diseases that flesh is heir to, through its understanding of the nothingness of matter, on the basis of the Scriptural statement, "I am God, and there is none else."

The physical senses alone dispute this premise of scientific reasoning and demonstration. The true Christian must choose whom he will serve,—these so-called physical senses that know nothing of the God of Spirit, or the spiritual senses that can bear witness only to spirituality, purity, goodness, reality. The student of Christian Science has already made his choice, and is daily and hourly arising in thought to cast out all belief in matter and its so-called laws, and to proclaim the ever-operative activity of infinite Mind or Spirit, beside which there is and can be no other activity, consciousness, power, or influence. Only in this way can he obey the command, "Be clean, and change your garments." If he would find the kingdom of heaven within, he must learn to forsake matter, since nothing pertaining to matter is in any way identified with spirituality. There is a practical common-sense way of doing this, and when it is done humanity will be clothed in new raiment. There is no mystery connected with the process of exchanging "filthy rags" (material thoughts) for the garments of praise and righteousness, save the mystery of an unwillingness to become as a little child and to reason metaphysically instead of physically.

An early Christian writer defines baptism as "an escape from matter." Science echoes this Christian sentiment and urges upon mankind the necessity of getting away from matter if it would be clothed in its right mind and learn the truth about God, man, and creation.

No argument of intellectual pride or worldly wisdom should tempt one to hold to matter when Christian Science makes it possible for every honest seeker to prove the operation of Spirit acting through spiritual law to destroy matter's so-called conditions. The demonstration of Christian healing has already passed its experimental stage. It is here as an available reality, and whoever stands ready

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

to forsake the belief of supposed life and intelligence in matter can prove for himself the validity of Mrs. Eddy's teachings and thereby usher in the reign of righteousness in individual consciousness. It is a work of spiritual devotion, consecration, and self-sacrifice, and these virtues are not born of matter or the so-called physical senses.

Only those who escape from materiality by seeking first to understand the supremacy and completeness of Spirit can participate in the demonstration of Christian healing as explained in Christian Science. Whoever tries to mix matter and Mind has lost sight of the Principle of Jesus' healing, and is simply revolving in a false mental orbit of his own conceiving which reaches no farther than his own sense of limitation and false concept of divine Mind. The healing power of divine Mind is constantly operative to uncover, rebuke, chasten, and destroy every erroneous material thought, and whoever would feel its beneficent influence and be enabled to rise into newness of life in Christ, Truth, must realize his own mental poverty and be willing to cleanse his material thought habitation from cellar to garret, and to leave nothing within which would defile the perfect spiritual image and likeness of Spirit.

"AS ONE WHOM HIS MOTHER COMFORTETH."

JEANIE C. E. ANDREWS.

It was a late autumn afternoon, and the warm glow of the setting sun was blending the tints of tree, and earth, and sky in a flood of golden harmony, while speaking to the awakened consciousness of the deeper harmonies of Truth and Love. One of earth's travelers was pressing wearily forward in the golden light, her thought vibrating between hope and fear. Her destination was one of the houses on a hill near by, and on reaching it she was taken to the friend she had come to seek.

"I have come," she began, "to see if you can help me. I am ill in body, but for that I care little—I am so ill in mind, for want of God." There was a moment's pause, and then she went on, "Perhaps you will not care to talk to me when I tell you I have no faith—I always loved mankind, and when as a young girl I looked around me and saw the want, and sin, and woe upon the earth, I felt that I could not bear it, and that if this were the work of God, then God was evil and I did not want Him." Her voice rose in bitter protest. "How could a good God act so?" she said. "How could any one with an atom of good evolve such cruel wrong? Am I wicked because I cannot worship such a god as that—are you too horrified to talk to me?"

"Indeed no," answered the other; "you have less to unlearn than most of us. There is no evil god to worship; God is unmixed good." "Yet all the great thinkers say otherwise," the inquirer protested. "Are you sure of that?" came the answer. "True thinking is the only thinking; making mistakes is not thinking."

"That is not the end of my trouble," the seeker answered. "For years I had no God; then one day a sister told me she was satisfied that she had found a good God. She quoted this from the Christian Science text-book: 'The Christian Science God is universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death' [Science and Health, p. 140]. She lent me this book, and also gave me a copy of another, 'Unity of Good.' I cannot tell you what these books were to me. I could not put them down. They gave me back hope, and joy, and peace, until one day they brought me face to face with the, to me, startling fact that this Christian Science God, infinite good, knows no evil. I see it is true, I cannot change it or get away from it, but where am I the better? I have changed the belief in an evil god for the belief in a God so pure, so high, so altogether good that He cannot know my pain, my sorrows, my sickness, or my sin."

"If these were a part of the divine consciousness, they would be real," was the answer. "You do not want that, do you?"

"I want Him to know," she insisted. "How can He be of any use if He does not know? If you can help me to see, do—talk to me as you would to a little child, to one who knows nothing. I am tired of intellectual wrestlings, they do not touch my need."

There was a moment's silence, as the student of Christian Science sought the help of ever-present Love for inspiration. Then across her waiting thought swept the words, "As one whom his mother comforteth, so will I comfort you." "Love is of use," she said; "Love is available now. May I try to show you this by a very simple incident? A few days ago I went to see some one whose little son was all the world to her. She took me to the room where he lay sleeping. 'I never leave him; no one else has ever done anything for him. I know all that has ever happened to him,' she said lovingly, as she leaned over the little cot and watched him. Suddenly the boy stirred, the look of peace changed to one of alarm and terror, and he cried out for help. The mother put her arms around him, folded him close with words of love and soothing tenderness; but the boy, still only half-awake, struck out against the enfolding arms, screaming the louder. Still she held him, lovingly, firmly, persistently reiterating the comforting assurance of help and love at hand, till, completely awakened, he opened his eyes. As he saw who held him, smiles gleamed through the tears, and he murmured, 'Mother! What was it, mother?' 'Nothing, darling; nothing at all—it was only a bad dream.' Trustfully he nestled up to her and said, 'It was indeed a bad dream; I did not know you, mother,—you seemed all a part of the nightmare,—and I'm sorry, for I was angry with you, too.' 'No, darling, not with me,' she answered, 'but only with the dream-mother.'

"Now, think a moment, did that mother need to know the nightmare in order to help her boy? Would the help have reached him sooner, or been given with better understanding of the need, had she shared the terror? Was it necessary that she, too, should dream in order to wake him? Ah, no! and even so in Christ does our Father-Mother God, eternal Love, hear His children when they need Him. Said Jesus, 'Your heavenly Father knoweth that ye have need of all these things.' He enfolds all in the arms of divine protection, and gives them continual assurance of His presence till they awake satisfied. 'This awakening,' our Leader tells us, 'is the forever coming of Christ, the advanced appearing of Truth, which casts out error and heals the sick' [Science and Health, p. 230]. And Jesus said, 'Ye shall know the truth, and the truth shall make you free.'"

A look of radiant joy passed over the seeker's face. "I see!" she said. "God in Christ does know all that is necessary. He knows my every need."

"Yes," replied the other, "He knows we need all good."

A silence fell upon the speaker, then the seeker raised her eyes, filled with tears of gladness, as she said, "I, too, thought I was fighting God, because I did not know Him. I was only fighting in a dream—part of *my* nightmare." She turned to go, but at the door paused. "I had forgotten," she said; "I meant to tell you of a physical trouble. I don't really mind anything now, but I want to be obedient to Truth. Ought I really to take no drug to-night—I have never been able to do without it at all."

"You will not want to take it. Listen to this," was the answer. "'Put on therefore, as the elect of God, holy and beloved, bowels of mercies, kindness, humbleness of mind, meekness, longsuffering.' You see you have taken your medicine, you have learned of the activity of mercy."

Digitized by Google

A few days later the Scientist received a letter which said that the difficulty had disappeared, and that for yet another of God's children "the Sun of righteousness" had arisen, "with healing in his wings." Her gratitude is poured out to the "Father-Mother God," the "adorable One" (Science and Health, p. 16); and as she thinks of the peace and salvation that "the healing of the seamless dress" is bringing to humanity, her heart is stirred to tender love, and to the recognition, in some small measure, of the debt she owes to that faithful watcher, that "mother in Israel" whose purity of heart enabled her to discover and demonstrate the allness of Love, the oneness of Mind, the unity of good; and who, in the perception of that oneness so lost all sense of self, of any aim or purpose but the one Christlike purpose of manifesting anew the healing, saving power of divine Love, that alone she faced the world's false sense of sin, disease, and death, and claimed for all man's sonship with God, his perfect heritage of Godlike being. To follow her "as she follows Christ" (Messages to The Mother Church, p. 78), in knowing Love, is once more to find dominion and freedom. As Matthew Arnold has said,—

> We shall not then deny a course
> To every thought the mass ignore.
> We shall not then call hardness force
> Nor lightness wisdom any more.
> Then, in th' eternal Father's smile,
> Our soothed, encouraged souls will dare
> To seem as free from pride and guile,
> As good, as generous, as they are.

BREAKING BREAD.

W. J. MARTINE.

IN the 24th chapter of Luke we read: "And it came to pass, as he sat at meat with them, he took bread, and blessed it, and brake, and gave to them. And their eyes were opened, and they knew him; and he vanished out of their sight." From a material standpoint mortals have but a faint conception of the spiritual significance of the words, "he took bread, and blessed it, and brake, and gave to them." From a human view-point it was the bread of the every-day meal, but from a spiritually scientific point of view it was the revelation of the healing truth which Jesus made clear to his students.

In many instances he brake bread and blessed it, prior to some particular revelation of the truth, as when he uncovered the Judas among them, or when he revealed himself after the crucifixion, and again when he fed the multitude. He thus prepared and made receptive the thought of those to whom he was to speak or to perform his miracles. This breaking was the awakening of the slumbering senses of his hearers. When the awakening came they understood his words and deeds, and were uplifted to higher joys of Truth and Love, which showed them the lifting up of the everlasting doors, that the "King of glory" might enter in.

Two of Jesus' students, on their way to Emmaus, with bowed heads and sorrow of heart, reasoned together of the things he had taught them, the ofttimes prophesied appearing of the holy Comforter, the Teacher of the law of salvation: but their Master's interpretation caused their hearts to burn within them, which showed their sincere desire to know God. This was "the fervent heat of Truth and Love" (Science and Health, p. 565) kindled in their consciousness, consuming the errors of sense, the accretions of materiality from contact with the world. The forsaking of old landmarks of creed and dogma for a demonstrable worship was necessary in order that they might do the works and follow in the footsteps of Christ. On the way to Emmaus Jesus expounded the Scriptures concerning himself, beginning with Moses and all the prophets, but they knew him not. When, however, he accepted their hospitality, and went to sup with them, his breaking of bread and his gift of it to the disciples opened their eyes so that they recognized him, and he then disappeared from their sight. It seemed as if the spiritual uplift was so great that their human sense could not retain it for long, and it disappeared from their comprehension. As Christ, Truth, breaks and blesses the true bread to us to-day, then do we recognize God as Truth and Love; but the Comforter may disappear to our consciousness, because we have not grown enough to retain the divine presence. To the pure in heart, however, He will return, and find lodgment, and abide as the everlasting Comforter,—"the Prince of Peace," "the bread of life;" eaten and assimilated. To partake of the "bread of life," the Word of God, we must be in a receptive frame of mind; and to assimilate it we must be willing to study the letter with sincere desire for righteousness. Through this process we become conscious of the presence and power of the one Mind. The burning of the heart is born of a sincere desire for the Mind that was in Christ Jesus. Through it is the shell of materiality consumed and spirituality takes its rightful place in the receptive heart.

Christian Science is our Comforter; breaking and blessing the "bread of our life," and giving us glorious glimpses of eternal life and harmony. We can retain this beauty and grandeur of Truth in proportion to our growth in grace, and this growth is attained only by active service, that righteous activity which is vitalizing. This ever enlarges its scope of action, and gains power and dominion over all that is unlike good. As we abandon our beliefs of life in the material bread, then is Christ, Truth, revealed to us as the eternal bread, and the glories of Spirit are revealed.

How many there are of us on the way to Emmaus, groping in the darkness of doubt and despair, looking for that which has already been done. Cleopas and his friend had been looking for the redeemer of Israel to come through Jesus, and were disappointed, sorrowful, and downcast when they heard of the crucifixion. Error led them to believe that the problem of Israel's redemption was yet unsolved; but the power of Truth was not dissipated by the persecution of Jesus.

We are taught in Christian Science that it is not necessary for us to have the human Jesus to demonstrate the power of divine Truth, which is ever-operative, ever-present, ever-omnipotent. When doubt, fear, or discord had taken possession of his students, Jesus would sup with them, and as he brake and blessed the bread, it reassured them,—recompensed them for their struggles in the dark, and recomposed them. Jesus rebuked the material sense which outwardly followed him, saying, "Ye seek me, not because ye saw the miracles, but because ye did eat of the loaves, and were filled." Patiently he expounded to them the meaning of the "true bread from heaven," and when they besought him, "Lord, evermore give us this bread," his reply, fraught with hope and promise, was: "I am the living bread which came down from heaven: If any man eat of this bread, he shall live for ever."

PRAYER UNDERSTOOD.

HILDA P. HELLGREN.

WORDS cannot express my great gratitude for the knowledge I have gained in Christian Science of how to pray aright. I had been brought up in a God-fearing and prayerful home, and believed that I prayed aright, although many of my prayers were unanswered; but when I came into Christian Science I soon began to see that I had been asking "amiss." By earnest and diligent study of our priceless text-book, "Science and Health with Key to the

Digitized by Google

Scriptures" by Mrs. Eddy, I have been able to unlock the doors of the dark dungeon of material misconceptions, and thus to enter into the bright chambers of man's divine inheritance by gaining the understanding of how to pray aright, not, as of yore, by habitually asking for this and for that. No! The Christian Science prayer involves ardent desires, great hopes, great ventures of faith, and a hungering and thirsting for good. It is a recognition of answers already given, and of undeniable victories. By it we obtain promises, solve perplexities, and win conquests.

In striving to reach the true sense of prayer we may experience depression and exaltation, struggle and resolve, but with it we have received forgiveness; for it has eradicated sin and uprooted evil habits. The Christian Science prayer brings sanctified convictions and purified affections; it marks thought indelibly with a desire for purity, goodness, and holiness, and is acceptable to our Father-Mother God. This understanding of man's divine origin, and his oneness with God, good, will mold circumstances so that, at the right time, we shall know how to pray aright. If to the wanderer the way to such molding seems long and the road steep, it is because it leads over the boulders of sense and self, and we must clear our own path through the rocks of mortal sense, ever remembering that divine Love awaits us at the summit, where we shall rest above the storms of mortal belief. The poet's words point us to this shrine:—

The silences—ah, they are life's great joys.
Far from the noise
Of traffic's tide that soundeth through the day,
I steal away,
And listen for Thy voice of inward strength,
Which comes at length—
Comes to my soul, and fills it with the charm
Of holy calm.

[Written for the *Sentinel.*]

CONSTANCY.

MARY I. MESECHRE.

OFTTIMES the daily current of my life
Doth seem so clogged with error, that I fain
Would break a clearer channel, where the strife
And fret of endless conflict, and the pain
Of beating 'gainst the rocks that long have lain
Where now my way appears, are all unknown;
Where, free from every hindrance, I might gain
In depth and breadth, till perfect I had grown.

Then I remember how our Master said:
Thy will be done, not mine; to earth I came
That I for Truth might witness with my voice.
I, being in the way, am also led;
So let me follow on with steadfast aim,
That e'en in stony ways I may rejoice.

Love hath set bounds by which my wave is stayed,
And I must do my task midst fretting stone
All patiently, nor must I be afraid
Lest I be left forever here alone;
For though my place is narrow, 'tis my own,
And I can make it beautiful with praise
Until the time when I am fitter grown
And Love shall lead me into wider ways.

So let me bear all humbly the restraint
That chafes me oft with seeming fruitlessness,
Until I clearly know Love doth not bar
Obedience, nor can impatience taint
The slightest measure of my usefulness
If I be constant where my duties are.

SELECTED ARTICLES.

[Frank Putnam in the Houston (Tex.) *Chronicle.*]

The nineteenth century in America produced two extraordinary women—world characters and time conquerors—Frances E. Willard and Mary Baker Eddy. Frances E. Willard, the apostle of temperance, stands in shining white marble among the soldiers, inventors, discoverers, and statesmen in Statuary Hall, the American Pantheon in the capitol at Washington. Strangely significant is that single female figure, with uplifted, shining brow, symbol of purity and peace, among the stalwart figures of the continent's foremost fighting men.

Not less but more significant is the position achieved, in her own lifetime, by Mary Baker Eddy, for she, the Founder of one of the world's great religions, has proven herself to be the greatest woman alive and one of the greatest that ever lived. The mother of the Christian Science Church seems certain, surviving the wrath and wrack of time as the slow centuries recede, to become one of the gigantic figures in the world's Pantheon.

The deepest cry of the human heart is uttered in the question, "If a man die, shall he live again?" Brief span of conscious life we have—and then the mystery of the darkness. What lies beyond? Beside this awful issue all others fade into utter insignificance. So it is that humanity elevates its religious leaders to a height no other mortal being can attain. . . . Armed conquerors and philosophers rise and fall and are forgotten; the sweetest songs of the most happy singers sink slowly but surely in the dust of crumbling ages; statesmen go into the dark with their works, and all that they were and all that they did is in time's night forgotten. Only the givers of immortal hope are themselves immortal. To each of these immortals some part of the vast eternal truth has been revealed, and to each something new. Humanity's life is a pilgrimage, onward and upward, out of darkness into light. If we could not believe that, if we believed man to be, like the beasts of the field, born but to die, incapable of progression, the race would die of swift despair. It is the hope divine that keeps us living, the lamp God lights in minds divinely selected and inspired that guides us onward.

In our own time a new miracle has been done—woman has taken her place among the immortal leaders and inspirers of the race's hope. That woman is she we know as Mary Baker Eddy. Judged by her work and its fruits garnered within a short half century, none can deny the authenticity of her message, nor the world-compelling quality of her genius. William Sharp, in "The Isle of Dreams," wrote not many years ago these lines pregnant with the spirit of prophecy:—

"It is commonly said that, if he would be heard, none should write in advance of his times. That I do not believe. Only, it does not matter how few listen. I believe that we are close upon a great and deep spiritual change. I believe a new redemption is even now conceived of the divine Spirit in the human heart, that is itself as a woman, broken in dreams and yet sustained in faith, patient, long-suffering, looking toward home. I believe that, though the reign of peace may be yet a long way off, it is drawing near; and that who shall save us anew shall come divinely as a woman, to save as Christ saved; but not as he did, to bring with her a sword."

So, indeed, if my long dreams upon the race's history and its destiny have not deceived me, the divinely appointed woman has come, and has begun her work,—come filled with human faults and imperfections, stricken with human weakness and human sorrow, but gifted with divine courage and divine energy to conquer self and bless humanity

Digitized by Google

with a more perfect health, a finer happiness than it has known.

Mark Twain, brilliant, sympathetic, sobered and saddened with the white weight of many years, took up this woman's life and her work to study them in the cold light of worldly reason, in the material spirit of the country and the age. In the mischances of her mortal life he found much matter for unkindly merriment, but when he stood face to face with the astounding facts of her creation he asked himself questions which he could not answer, save by admitting the utmost that her followers claim for her. In the light of her early life, her apparent lack of the conventional preparation for so great a work, he could not understand how it was possible that she could have evolved the central idea of Science and Health—that idea which he justly describes as "wholly gracious and beautiful; the power, through loving mercifulness and compassion, to heal fleshly ills and pains and griefs."

Why, he wonders, should such an idea interest Mary Baker Eddy, unless she is, as her followers believe, "patient, gentle, loving, compassionate, noble-hearted, unselfish, sinless—a profound thinker, a divine personage, an inspired messenger?" He answers his own inquiry, in the only way it can be answered, by adding: "She has delivered to them a religion which has revolutionized their lives, banished the glooms that shadowed them, and filled them and flooded them with sunshine and gladness and peace; a religion which has no hell; a religion whose heaven is not put off to another time, with a break and gulf between, but begins here and now and melts into eternity." This Mrs. Eddy has done for hundreds of thousands of human beings throughout the world, and the long roll continually increases.

Much has been written of Mary Baker Eddy—much that was unfriendly and superficial, founded upon her misfortunes, the errors she fell into during the long slow years of her ripening. Now, for the first time, as I believe, we have a sober, accurate, sympathetic, and fairly complete account of her origin, her development, and her environment from her birth forty years after the close of the American Revolution down to the present day. This addition to the literature of Christian Science is entitled "The Life of Mary Baker Eddy." It is from the pen of Sybil Wilbur of Boston, is published by the Concord Publishing Company of New York, and printed by the University Press at Cambridge. Miss Wilbur is a writer of sincerity, fine intelligence, trained in literary work by years of successful journalism on its higher levels. In this book she has established herself as the most fair, just, and competent historian of Mary Baker Eddy.

"No mystery," she says in the introduction, "to-day surrounds the life-story of Mary Baker Eddy. Her birth, her ancestry for two hundred years, her education, her social development, and her individual service to the world have been scrutinized with the strong search-lights of both love and criticism. Every event of her long career has been established by unimpeachable records and testimony. It is no longer possible to invent fiction concerning the environment in which she was born and reared or the acts which make up her life."

"I have," says Miss Wilbur, "a life-story to relate, and I plant myself unreservedly on the methods of St. Mark. St. Mark, I believe, was a scribe who related what he had been able to gather from witnesses in a direct and unvarnished way. Now I shall endeavor to do simply that. It is not for me to explain or to expound. The facts of this life shall be left to elucidate themselves when set in orderly and unembellished array before the world; the import must carry to that consciousness able to receive it. I shall concern myself only to report the truth."

In this spirit the story of an extraordinary life has been told. The result is a book that will be welcomed into the library of every Christian Scientist, and that should be owned and read by every thoughtful man or woman, because, as stated at the outset of this brief sketch, it is the story of one of the world's immortals, of a woman whose fame it may easily be believed will long outlast that of any other human being yet born upon the western continent.

[Frederick Dixon in the *Birmingham* (Eng.) *Despatch*.]

It is never possible to be perfectly sure what an individual writer means by "faith-healing;" but if, as is commonly the case, the bishop meant the prayer to God to remove something He has either directly caused or indirectly permitted, then Christian Science has no affinity with it. Christian Science is based on the fact of the allness of God; that is, of good, and the insistence that nothing really exists but God and the spiritual universe. It follows from this that sorrow and sickness and sin, in a word everything that is unlike God, are unreal, inasmuch as they are inherent in a purely relative human sense, which actually is ignorance of God. The prayer, then, which will destroy this is a realization of Jesus' words that our Father has already given us all that we require, and the corresponding effort to demonstrate this by gaining a more scientific knowledge of God, and consequently of the truth which Jesus said would make men free.

Such a knowledge is as far removed from mental suggestion as anything well could be. Mental suggestion is the claim that one human mind can control another, and as no one has ever dared to pretend that the human mind is entirely good, it is manifest that such a theory leaves one human being at the mercy of another for whatever that other may define as good or evil. Now Jesus said, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." It consequently follows that the fruit of a mind capable of thinking good and evil cannot be good. It is, in the plain words of the Jehovistic document of Genesis, the fruit of the tree of the knowledge of good and evil, the eating of which is described as producing death. It is equally manifest that healing cannot be effected through such a means. Jesus brushed the whole idea aside, from a Christian point of view, when he said, "Every kingdom divided against itself is brought to desolation," for the claim of the human mind to the power to suggest health and sickness is just such a kingdom. "But," he went on, "if I cast out devils by the Spirit of God, then the kingdom of God is come unto you." The kingdom of God, and with it the peace of God, never came to any man by mental suggestion, and it never will. It is here that the difference between Christian Science treatment and any other mental treatment becomes a great gulf fixed; and the fact emerges that instead of producing tragic effects Christian Science has healed unnumbered cases not only of functional but of organic disease, and is destroying by precisely the same means sorrow and want and despair and malice and sin, for did not Jesus declare, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk"?

Christian Science, as the world will some day come to perceive, is no less scientific than Christian in its operation. The demonstration of its teaching is based on a recognition of the fact that causation is spiritual and not material. The question consequently arises, Is there an absolute spiritual law, working out in unvarying harmony, of which the wayfaring man may avail himself? Mrs. Eddy maintains that there is, and points out that Jesus broke every physical law, and demonstrated in doing so that the law was not God's law. The truth is that he healed the sick, not by breaking God's law, but by the strictest conformity to it. What he did break was the human sense of law. So long as man believes that physical causation is governed by law

Digitized by Google

he will be subject to that law, but when he learns that there is no law but God's law he will realize why Mrs. Eddy has written, on pages 52 and 313 of Science and Health, that Jesus of Nazareth was not only "the best man," but "the most scientific man that ever trod the globe." He knew more of law than any other man, because he knew more of God, of Truth; and, knowing more of Truth than any other man, he necessarily demonstrated that knowledge more fully. These demonstrations have been called miracles because they were wonderful to those who believed that law was physical, instead of understanding that it was the working of that divine Mind "with whom is no variableness, neither shadow of turning." And because this law really is law it can be demonstrated to-day, as it was demonstrated by Jesus, whose therapeutics was moral and whose physiology was spiritual.

[George Shaw Cook in the *Evanston* (Ill.) *Press*.]

Mr. Chesterton is quoted by our critic as saying: "To tell a man that it is his own fault if he has a toothache, is to cease to be a Christian while uttering eight words." Christian Science does not teach that suffering is necessarily the fault of the sufferer, but rather that the sufferer is the victim of some erroneous mental condition which claims to have power to cause suffering. Christian Scientists do not, therefore, charge sufferers with being responsible for their own suffering, although physical suffering may sometimes be due to conscious sin. Rather do they give their attention to gently guiding the sufferer out of the mistaken belief that his suffering is natural and inevitable.

Mr. Chesterton continues: "Christian Science (so called) says that pain is not a reality." Christian Scientists recognize that pain seems perfectly real to the false sense of the sufferer, but they prove its unreality by removing or destroying it. The mere fact that Christian Science treatment has annihilated pain in thousands of instances, convinces Christian Scientists by practical experience that pain is destructible, and therefore in the true sense unreal. For this and other good reasons Christian Scientists are not prepared to agree with Mr. Chesterton that pain "is so great a reality that even the creator could feel it," nor with our critic in his assertion that, because Jesus suffered on the cross, "a certain actuality and even sanctity has clung around the pain of prosaic men."

Christian Science does not reveal a creator who could suffer pain or be sick or die. Christian Science teaches that the one and only creator is God, divine Love, eternal Life. It teaches that this God who is Life and Love made "all that was made" and pronounced it good, but did not make anything evil or that could cause evil, pain, sickness, or death. What possible comfort can the sufferer derive from believing that pain and sickness are from God, and therefore are real and indestructible because Godlike? Has such a belief been of any advantage to the countless millions who have sickened and died under the intolerable discouragement which it fosters? On the other hand, is it any comfort or advantage to the sufferers in this day and age to have learned through Christian Science that their suffering is needless, that pain and sickness are illegitimate, monstrous, abnormal, unreal, and therefore can be successfully resisted and scientifically banished? The answer comes from more than a million grateful beneficiaries of Christian Science that its teaching of man's rightful dominion over evil (including pain and sickness) has caused them untold joy and comfort and has given them a foretaste of the "new heaven and new earth" in which St. John said "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

[John L. Rendall in the *Nonpareil*, Council Bluffs, Ia.]

What Mrs. Eddy has done for humanity is to reveal and make practical teachings of truth which have always existed. Our critic must recognize the fact that concerning many scientific and demonstrably true discoveries of the present day, "the world has blundered on in darkness for thousands of years." Mrs. Eddy does not claim that Christian Science is new, but that it is the adaptation to the needs of humanity of the same healing Principle of which prophet and apostle caught glimpses and which Jesus Christ taught and practised in its completeness. Its healing ministry cannot therefore be justly likened to incantations or other occult practices, but is on the contrary the direct result of intelligent prayer and the understanding of God's laws.

In the teaching of Christian Science concerning mind and matter, in its teachings as to the reality and perpetuity of God, man, and the universe, in its presentation of the nature and character of Jesus the Christ, the Saviour of the world, it is in exact accord with Scripture, with reason and revelation, and is entirely consistent with its premise and conclusion; namely, "perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259). It might be well to call attention to the fact that as a matter of Scriptural record the religion of Jesus Christ "healed all manner of diseases among the people." We have no authority anywhere for believing that the religion of Jesus has changed. The Scripture states: "Jesus Christ the same yesterday, and to-day, and forever."

Mrs. Eddy, through her spiritual insight, her grasp upon ultimate Truth, has been able to present this same healing religion of Jesus Christ in a practical way, and humanity has eagerly availed itself of the hope of surcease from its woes which Christian Science presents.

[Frank W. Gale in *The Pacific Unitarian*.]

All Christians will concede that Christ Jesus understood and demonstrated the law of God in his mighty works among men, and he said of each disciple who believed (or understood), "The works that I do shall he do also." Jesus used no drugs, hypnotism, nor suggestion in his healing work, but relied entirely upon the truth and power of God, and those who would follow his example should do the same. He made no distinction between functional and organic diseases, but healed "every sickness and every disease among the people," and instructed his disciples to do likewise. Through Christian Science this injunction is being fulfilled, in the healing of both functional and organic diseases of every kind.

When Jesus called his disciples and sent them on their mission, "he sent them to preach the kingdom of God, and to heal the sick;" and they fulfilled their mission. This shows that the work of the Christian ministry is both teaching and healing through spiritual means, and there is no warrant in the teachings of Christ Jesus for the separation of this work,—the minister to preach only and the healing to be left to the doctor who uses material means; or the minister to treat functional diseases by suggestion and leave all other cases for the doctor. The spiritual understanding of God and His law is sufficient to solve all the problems of life and to heal every phase of disease without recourse to material methods. While Christian Scientists recognize and commend the humanitarian motives of physicians in their efforts to alleviate human suffering, they also recognize that the spiritual method taught and demonstrated by Christ Jesus is the most effectual and the one to be followed by those who understand it.

THE LECTURES.

BROMLEY, ENGLAND.

Judging by the very large attendance which almost completely filled the Drill Hall, Bromley, on Saturday evening [Oct. 24], on the occasion of a lecture on Christian Science, delivered by Clarence C. Eaton of Tacoma, Wash., the Christian Science movement continues to influence the minds of many in this neighborhood and to win a considerable number of adherents. The lecture was given under the auspices of First Church of Christ, Scientist, Bromley, and the meeting throughout was characterized by very close attention to the words of the lecturer. It was entirely free from interruption of any kind.

The chairman was Algernon Hervey Bathurst, First Reader of First Church of Christ, Scientist, London, who in his opening remarks said it was his privilege to extend to them all a cordial welcome from First Church of Christ, Scientist, Bromley. They were met there that evening to hear the truth about Christian Science, which was a subject frequently misunderstood and misinterpreted by those unacquainted with its teachings. The message of Christian Science was a message of health, harmony, peace, and joy, through the healing of physical troubles and the destruction of discord and sin, and consequently death. There were a great number of people who had heard that message, and had learned how to apply it to their own needs; and they had found that God was with them to-day as of old, and it was because of the practical proofs which they had experienced of its efficacy and power that they could say in the words of the psalmist, "Bless the Lord, O my soul; and all that is within me, bless his holy name. Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."—*Bromley and District Times.*

FARGO, N. DAK.

The Hon. Clarence A. Buskirk lectured here on Christian Science Oct. 25. He was introduced by the Hon. W. D. Sweet, who said in part,—

It seems to me that the people who are interested in Christian Science may be divided into three classes: the first includes those who, afflicted with bodily ills and physical suffering, seek its beneficent aid, and, as we are told, not in vain; another class is composed of those who find an intellectual satisfaction in a rational explanation of the theology of Christianity, and the remaining class consists of the great multitude—of whom I am one—who, though not in alignment with Christian Scientists or members of their church, are yet strangely attracted by certain striking characteristics which are always apparent in the adherents of this faith. It matters not if it is simply an inscription on the fly-leaf of one of their pamphlets, or the embellishment on the cover of a book, or the mingled beauty and grandeur of the architecture of their edifices, or whether it is in the complacency and serenity of the lives they lead, or in the regularity and methodical exactness with which they conduct their fiscal affairs,—through it all there prevails a reflection of the dominating idea of the universe, "the eternal fitness of things." How they manage to hit it so nicely, I do not know; how in their lives there is always unbroken regularity, contentment of mind, lengthening of days and bodily health, and good fellowship among themselves, an ideal relationship with all the world, I know not, unless it be that underlying their scheme of thought there is the foundation of Truth; and I believe that it is a realization of this sense of harmony that compels the respectful attention of the world.—*Correspondence.*

ST. LOUIS, MO.

Bicknell Young lectured on Christian Science at the Odeon Theater Oct. 25. About six hundred people were turned away for lack of room. The lecturer was introduced by A. P. De Camp, who said in part,—

In behalf of the six Christian Science churches in the St. Louis field I am most happy to welcome you to this lecture. These churches are First, Second, Third, and Fourth in St. Louis, First in Kirkwood, and First in East St. Louis. Fifteen years ago there were no churches of our denomination in this city. First Church was organized in 1894 with a small membership. The constant increase in its membership, with crowded congregations at the public services, has necessitated the forming of the five younger churches during the past seven years, three of them within two years. Public Reading Rooms are maintained by each of these churches, and Sunday and Wednesday meetings are held in widely separated sections of our city and in East St. Louis and Kirkwood.

It may well be asked what has caused this growth. Only one reason can be truthfully given to account for it, and that is the absolutely good one that those who seek help through Christian Science are finding it. They are finding the help which Christianity promises,—not only the spiritual enlightenment and moral regeneration which it brings to mankind, but, accompanying these, the bodily health which is an indispensable consequence of Christian knowledge and practice.—*Correspondence.*

SHARON, PA.

The Morgan Grand Opera House was well filled Friday evening [Nov. 6], when Dr. Francis J. Fluno of Oakland, Cal., lectured on the doctrines of Christian Science. The speaker was introduced by M. L. Williams, who said in part,—

We are assembled for the purpose of listening to a lecture this evening upon a subject which is not entirely new to some of us—Christian Science. A little less than four years ago, this was a subject which I could not tolerate, and the degree of my antagonism to its teachings was intense and without reason. But the time came to me (and will surely come to us all) when all earthly aid and material means failed, and I turned in my extremity to Christian Science, to God; and from that time until to-night I have had a steadfast belief in the doctrine and teachings of Christian Science. My regret is that I do not possess a better understanding of its divine Principle.

I trust that I may be pardoned for referring to the (to me) miraculous healing of my eldest daughter after the three physicians had given up all hope and told me frankly that she had but a few hours to live. The circumstances surrounding this case are familiar to many of you, and with gratitude to God I rejoice that to-night this daughter occupies a seat among you and is a living example of the demonstrable truths of the religion of Life and Love.

Notwithstanding all the vicious attacks which have been made upon it, Christian Science has gone quietly on its loving way, striving for the advancement of Christian thought and Christian living, and will still go on, and continue to be in the time to come, what it has been in the years gone by, a blessing, a solace, and a benediction.

The Sharon Herald.

God is an infinite ocean of all good without any admixture of evil; an infinite treasure-house of all riches, without any fear of poverty; an infinite source of all joy, without any apprehension of grief; an infinite cause of all good, comprising all, absolutely all good things.

FR. ANGELO.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A NEW BY-LAW.

ARTICLE XXII.

AGREEMENT REQUIRED.—SECT. 13. When the Christian Science Board of Directors call a student, in accordance with Article XXII., Sect. 11 of our Church Manual, to the home of their Leader, Mrs. Eddy, said student shall come under a signed agreement to remain with Mrs. Eddy during the time specified in the Church Manual.

"NOT IN THE EARTHQUAKE."

WITHIN the past few days the world has been shocked by the calamity which has befallen the people of southern Italy, and the hearts and purses of the civilized world have opened in generous and loving response to the needs of the survivors of this greatest tragedy of its kind in modern history. Sad to say, however, the usual jarring note has been sounded in the views expressed by those who look upon such an occurrence as "a dispensation of Providence" or a manifestation of "the wrath of God."

To believe that God was the author of a catastrophe by which thousands of persons have been killed and maimed, and other thousands rendered homeless, is to believe that He is capable of such cruelty toward His people as would shock even a Nero. As a matter of fact, we doubt if any one at this time really believes that God is the author of such misrule. The trouble is that those who talk of "a dispensation of Providence" do not follow out the logic of such a statement.

The advent of Christian Science, and its scientific, and therefore logical, analysis of the relation of God to the universe, including man, has cleared up many of the theological misconceptions which have existed in the popular mind, and no doubt this belief of a revengeful and ferocious God soon will have passed away, as have other false notions which could not stand against the logic of Jesus' teachings. In this connection, too, it is interesting to read the experience of the prophet Elijah, when he was commanded to "stand upon the mount before the Lord. And, behold, the Lord passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before the Lord; but the Lord was not in the wind: and after the wind an earthquake; but the Lord was not in the earthquake: and after the earthquake a fire; but the Lord was not in the fire."

Christian Scientists have always contributed liberally in time of need to the relief of those who have suffered by such calamities as that which has laid waste the towns and cities of southern Italy, and their Leader, Mrs. Eddy, has in this instance, as always, set them a good example.

ARCHIBALD MCLELLAN.

RESTITUTION.

IN the third chapter of Acts we find a very beautiful promise in Peter's words, "the times of restitution of all things;" a promise which is linked to a kindred idea, viz., "when the times of refreshing shall come from the presence of the Lord." These words were spoken soon after the great Teacher had gone from his earthly labors, and just after Peter and John had healed the lame man at the Beautiful gate of the temple. The Christ had appeared to humanity in the life and works of Mary's son, but divine Truth as thus presented had been "despised and rejected of men." John says, "He came unto his own, and his own received him not." The carnal mind believed that it had succeeded in quenching the light of Spirit—in crushing out the Christ and the Christ-healing, but this cure of the lame man, and Peter's bold defense of the cause of Truth, showed that Truth is deathless and that, whatever the seeming, Truth's idea is destined to appear until the last vestige of belief in evil shall have disappeared.

Not so long ago, many of us believed, when one Christmas day followed another, that Christ had been born only to die, and that in our deepest need the Christ-power was as far from us as if it had never been manifested by Jesus of Nazareth in the overcoming of all forms of sickness, sin, and sorrow. This false belief robbed us of that which should bring joy and gladness not only on Christmas day but every day of the year, and God says, "I hate robbery for burnt offering; and I will direct their work in truth." So "the times of restitution" have come as the apostle declared, and man's divine rights—health and harmony—are ours "to have and to hold" if only we are willing to avail ourselves of them.

Of late years our beloved and revered Leader has done much toward our emancipation from the tyranny of custom at the Christmas season, and thus also toward the "restitution of all things," in bringing to us a clearer and nearer sense of the ever-presence of the Christ and the ceaselessness of the angels' song of peace on earth and good will toward men. In *The Christian Science Journal* of January, 1906 (p. 646), and that of December, 1907 (p. 568), we have republished articles on the meaning of Christmas which were written by Mrs. Eddy for widely-read periodicals,—articles which give no uncertain sound as to the true significance of this occasion. In the first she says, "An eternal Christmas would make matter an alien save as phenomenon, and matter would reverentially withdraw itself before Mind." She adds, "Christmas, in Christian Science, stands for the real, the absolute and eternal,—the things of Spirit, not matter."

Unnumbered throngs are to-day entering the universal temple, whose service is "in spirit and in truth," through the Beautiful gate of the Christ-healing, by which they gain an ever-unfolding sense of Life as God. With this entrance there comes a dropping of the heavy burdens imposed by belief in an absent Saviour, and instead we find the joy of "Christ in you, the hope of glory!" What can measure our thankfulness for these "times of refreshing," and the "restitution of all things,"—yes, all things, with the healing which makes whole! Truly said the psalmist, "Thou hast led captivity captive: thou hast received gifts for men; . . . that the Lord God might dwell among them."

ANNIE M. KNOTT.

THE MEANS OF CURE.

THE hopelessness with which so many diseases are invested by *materia medica,* the irresistible appeal of the idealism of Christ Jesus, and the unnumbered and unquestionable healings witnessed to in Christian Science,—all these are to-day impelling the suffering to seek for something better than pills and potions, and in response to their half-articulate longing, human sense has hastened to proffer so many mental panaceas that a great body of well-meaning people are utterly confused. This is no less true of clergymen than of others, and it all witnesses to how far

Digitized by Google

the belief in the reality of matter and of evil has divorced Christian thought from a clear sense of the nature of Christ Jesus' healing work.

Belief in the reality of matter logically leads to the acceptance of material law as of God, and some of those who are dominated by it are trying to heal the sick not through the apprehension of spiritual truth, but through the command of those so-called psychic forces which have been so far affiliated with evil-doing as to have long since been pronounced an abomination by the moral sense of mankind. The enchantments of the Witch of Endor and the sorceries of Bar-Jesus certainly find their kin and counterparts in the mesmerism and hypnotism which have proved so serviceable to evil in our day, and it is coming to be seen by an ever-increasing number that these subtleties of mortal mentality merit classification as "enemies of all righteousness" no less than did those of former times. Nevertheless it is to these that many Christian people are honestly looking as channels for the divine manifestation in the healing of sickness and sin!

To Christian Scientists the incongruity of this fact is equaled only by its pathos, and while they respect the freedom of all men to work out their salvation according to their own sense of right, they rejoice that they have been taught to look to God alone for succor from sickness and sin. They hold unequivocally to the proposition that the law which Jesus utilized in his gracious works is divine; that it is communicable to man, and that such an apprehension of it was reached by the disciples that they were able to heal the sick as Christ Jesus healed them, *i.e.*, by using the same Principle and the same rule in its application. Accepting our Lord's unequivocal statement that his works were done by "the Father," Christian Scientists understand that it was the activity of Spirit which wrought the good, and hence that the effective force was wholly spiritual. That this force could ever lend itself to iniquity is to them simply unthinkable. It is as impossible as that light should serve darkness, and since modern mesmeric methods are notoriously subservient to the ends of the evil-minded, Christian Scientists conclude that they were not used by the great Wayshower, and could not have been commended by him. There is no escaping the conviction that an asserted force which subserves evil purposes is not spiritual, and hence not of God, though its use may be associated with ever so much wholesome, common-sense teaching. As Mrs. Eddy has written, if it seems "to alleviate or to cure disease, this appearance is deceptive, since error cannot remove the effects of error." "On the other hand, Mind-science . . . is of God and demonstrates the divine Principle, working out the purposes of good only" (Science and Health, pp. 101, 103).

It seems clear, furthermore, that the truth which Christ Jesus utilized in his healing ministry was necessarily spiritualizing and regenerative, both in its process and its effects, and these two tests establish a clear discrimination between the healing of Christ Jesus and all systems of attempted cure which depend upon human will or personal thought-domination. The maintenance of this discrimination is a distinctive feature of the teaching and practice of Christian Science.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Hartford, Conn., Dec. 13, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—For some time I have wanted to tell you what you and the truth, which you have rediscovered for all mankind, have done for me. From the time I was two years old I was under the care of doctors, both abroad and in New York city, for my eyes,—the result of an accident,—until a little over ten years ago, when I came to the point where nothing more could be done for me, according to *materia medica*. I was brought up in the strict orthodox Jewish faith, and therefore was much opposed to the name Christian,—not understanding its true meaning,—consequently my healing was slow. From the time I was led by my little boy, then eight years old, to the Reading Room, and later to Second Church of Christ, Scientist, in New York city, I have never doubted that Christian Science, which is the word of God, is for the Jew and Christian alike. I knew it would heal me, and it did! Since my healing, many of my people have investigated and accepted this blessed truth, and all have been more or less benefited by it.

Recently a great sorrow came to me, one which in the old thought would have been very hard to bear, but through the understanding of our inspired text-book, "Science and Health with Key to the Scriptures," I am learning that there is no death, and that God is man's Life always. Want and woe, sin, disease, and death have been overcome through the understanding which you, our dear Leader, have given us, and I shall daily try to show my gratitude by following in your footsteps. I should like to add that I was never able to read or write English until Science and Health came into my possession. While I am grateful beyond measure for my healing, the spiritual regeneration has been far greater.

I remain, in the bonds of love, your faithful follower.

MRS. NINA ECKSTEIN.

Poona, India, Nov. 20, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—I have long felt a desire to express my gratitude for and appreciation of Christian Science and what it has done for me. I have kept silent only because (to sense) a disease from which I was suffering was only partially healed, although I had been cured during the treatments of the cigarette habit of twenty years. This was while I was stationed in Manipur, Assam, India, and it was while there, and after the departure of the Christian Science practitioner for England, that the tests and trials crowded around me. At times it was apparently up-hill work with me, but now, thanks be to God, and with the help of our text-book, the disease has been wholly overcome. Again I would say that I am thankful for the help Christian Science has been to me, and I am ever grateful to God, and to you, dear Mrs. Eddy, for all the benefits I have received.

Yours obediently,

W. G. SMITH,

Bandmaster 114th Mahrattas.

Galesburg, Ill., Dec. 8, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Dear Mrs. Eddy:—My heart is so full of love to you that I shall be happier for having expressed it, even though you never read this letter. As we near the Christmas time I contrast my thought of a few years ago with that of the present time. The beautiful tree, with its candles and gifts, has been merged into uplifted thoughts. In its place comes the thought of love, grown from the seed of purity, planted in the soil of humility, which was once manifested as the child Jesus. The gifts are now the fruits of Spirit, the healing and the beautiful understanding of Christian Science.

With the coming of this Christmas my heart seems to beg for but one gift—a clearer understanding of man

Digitized by Google

as God's reflection, and I know I shall receive it, for you tell us in Science and Health that "the desire which goes forth hungering after righteousness is blessed of our Father, and it does not return unto us void." Just now I see more clearly than ever that each spiritual thought born into my consciousness makes Christmas, and I do not have to wait for it. With a heart full of gratitude for your tireless efforts, I am,

Humbly,
LYDIA CUMMINS.

Chillicothe, O., Dec. 17, 1908.

Mrs. Mary Baker G. Eddy,
Chestnut Hill, Brookline, Mass.

Beloved Leader:—It is with hearts overflowing with love and gratitude that we, the Christian Scientists of Chillicothe, O., send you greetings. We feel that it is always welcome news to you to hear of another Christian Science branch or society, and especially in a new locality. About three years ago, a stranger who was canvassing here met in one house a father and mother who seemed to be in great distress. When questioned, they said they had tried all manner of material remedies, but to no avail. The lady told them that they should use God's remedy. Then followed questions and answers; the seed was sown, and it fell on good ground and brought forth much fruit, the result being the organization, on Nov. 3, 1908, of the Christian Science Society of Chillicothe, O., with splendid prospects of large expansion in the near future, as the seed is being sown broadcast and many are quietly searching for the truth. We have a splendid hall, where we hold Sunday and Wednesday services, with Sunday School and Reading Rooms. It is our desire ever to follow the light which you have held before us. That God will bless you and give you strength to lead us on, is the prayer of this little band of those who have unanimously expressed a fervent desire to acknowledge the freedom that has come to them through you.

J. D. RITTER, *Clerk.*

Kansas City, Mo., Dec. 14, 1908.

Dear Leader:—With the Bible and Science and Health for our guidance, we are learning each day how to do life's work aright. The poorest worker on earth through the study of your book is being fitted for excellence in labor, and each day by honesty and faithfulness he can improve the quality of his work, his efforts growing better and better. Even while we toil in the valley we may have the vision of what real work is, and the truth comes into our life, lifting up each thought to the Life that is Spirit. So we plod along, knowing that if we fail not nor falter we are sure to enter into that rest which describes the perfect work of which Science and Health says, "God rests in action."

Lovingly yours,
SYLVIA TILTON.

Kenora, Ont., Dec. 14, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Beloved Leader:—As this was the first Thanksgiving in Christian Science to some of our dear members, they brought their offering. On learning that we do not take a collection at our Thanksgiving service, they expressed a desire to have the money used to benefit the Cause of Christian Science in some way, so we decided to forward it to the publishing house building fund as a token of the deep gratitude we feel for Christian Science literature. To you we extend our greetings and love for unfolding the wonderful truth that benefits and uplifts all mankind. Some one has said, "God has His best for those who dare to stand the test." We are grateful to you because you have had the courage to "stand the test," and may this beautiful Thanksgiving and Christmas season bring "His best" to you. We are, dear Leader,

Yours in truth,

M. BIGGS, ANNIE WILSON,
W. R. WILSON, ANNIE NEWCOMBE,
DORA I. WELCH, R. E. WILSON, *Clerk.*

Waterloo, Ia., Nov. 29, 1908.

Mrs. Mary Baker G. Eddy.

Dearly Beloved Leader:—My heart overflows with gratitude to you for the blessings that have come to me through Christian Science. The advent of the daily *Monitor* marks an epoch in the newspaper world; so all the time you are holding aloft the torchlight of Truth. It is indeed a privilege to subscribe for the *Monitor*, and I am further demonstrating the fact by sending a subscription for our public library, which is open for reading on Sunday afternoon. In this I am proving God to be my financial as well as spiritual source of supply.

Sincerely,
MRS. FLORENCE H. BARBER.

Salt Lake City, Utah, Dec. 10, 1908.

Mrs. Mary B. G. Eddy, Brookline, Mass.

Dear Leader:—I have long desired to express my gratitude to you for your loving labor in behalf of mankind. I am thankful to God, and to you His servant, for "Science and Health with Key to the Scriptures," which has been instrumental in unlocking to me the word of God to His creation. It is a lamp to light my path from sense to Soul. I am also grateful for the other Christian Science literature which has come from your pen, and I read these works with joy unspeakable, for they all tell of the great help and comfort that has come and is coming to God's children. From a student of your student,

M. K. BANNING.

Dubuque, Ia., Dec. 15, 1908.

Dear Mrs. Eddy:—Allow me to thank you for the establishment of *The Christian Science Monitor.* The world is in great need of a good daily paper, and the *Monitor* will surely meet this need. Its editorials are very helpful to me in my daily work. I am very grateful to God, and to you, for the understanding that I have gained by studying the Bible and Science and Health. It gave me what words cannot express—a better knowledge of Life. Cordially yours,

JOHN T. NEU.

Boston, Mass., Dec. 13, 1908.

Beloved Leader:—This is an expression of gratitude for *The Christian Science Monitor.* It is already clearly evidenced that this paper is to be governed by Principle, not by person nor party. I am deeply interested in watching its growth; and each day's issue bears unmistakably the hall-mark of Truth. Mrs. Jewett joins me in love and appreciation for the ever-increasing light which you are reflecting to all mankind.

Sincerely,
HENRY JEWETT.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local news-dealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

AMONG THE CHURCHES.

ALAMEDA, CAL.

First Church of Christ, Scientist, has outgrown Woodmen Hall, where it now worships, and the Adelphian Hall has been leased in order to accommodate the growing congregation. The lot opposite the new Adelphian Club, at the southwest corner of Central Avenue and Walnut Street, has been purchased by First Church of Christ, Scientist, and a handsome edifice will be erected by the church in the spring. The lot is one hundred and fifty by one hundred and forty feet, and a large structure in the mission style will be built for the future home of the followers of the church. The interior will be spacious and artistic in design and will seat over eight hundred people.

Alameda Times.

VICTORIA, AUSTRALIA.

The past year has been in many respects a most eventful one for Christian Science in Australia. For the first time Christian Science was mentioned in our state Legislature, in respect to a clause in an act which some members of the House thought might be construed to affect Christian Scientists. It was noteworthy that certain members would not agree to the wording of the clause until they were assured that it would not affect the practice of Christian Science, and in order to satisfy them that the clause was not so intended, the minister in charge of the bill altered the objectionable wording. It was also very noticeable with what authority some of the members spoke regarding the growth of the movement all over the world and its standing as a religion in America.—*Correspondence.*

SAN FRANCISCO, CAL.

In order to relieve the crowded condition which has prevailed at the services of First Church of Christ, Scientist, at Sacramento and Scott Streets, and also to provide better for the large number residing in the Mission district who are interested in Christian Science, twenty-four members of First Church, whose residence is in that district, withdrew, and at a meeting held in New Club Hall, corner of Howard and Twenty-first Streets, Monday evening, Nov. 9, 1908, Second Church of Christ, Scientist, in San Francisco, was duly organized. After by-laws had been adopted and the roll signed by the charter members, directors and Readers were elected.—*San Francisco Call.*

[Written for the *Sentinel.*]

THE BETTER PART.

H. OLIVER WISE.

How maz'd and drear, amid his sticks and stones,
His color'd pebbles and his bits of glass,
That darken if a cloud above but pass,
Gropes mortal man, that thing of flesh and bones!
These have his heart, o'er these he pores and croons
An eldritch rune that shakes the bladed grass,—
Rooted like this in earth that ever has
A charm to check all impulse it disowns.

And shall we say the brown earth gave us all?
Permits our tiny growth toward the sun,
Strong to recall us to her bosom dun
When we have rip'd her juices chemical?
Nay, nay, not so, God's children still we be,
Due unto vaster motions—free, yes, free!

Digitized by Google

TESTIMONIES OF HEALING.

If there is one who doubts that Christian Science does the works which its adherents claim for it, I would say to this one that my personal experience gives ample proof of the fact that Christian Science does heal the sick and reform the sinning. For a number of years I suffered from many of the ills to which flesh is heir, was in the hospital at different times, and felt the effects of the surgeon's knife. During a period of about seven years I believe I either took internally or had applied externally practically every remedy known in the realm of *materia medica,* but all to no avail. Then, as if to knock the last prop from under me, a prominent specialist said to me, "I am sorry to inform you, but there is no help for you, so far as the practice of medicine in this country is concerned." From that hour I spent a good deal of my time thinking about the kind of a funeral I should have and where I should be buried.

I cannot conceive of any one being more opposed to Christian Science or more prejudiced against his concept of it than I was at that time; but here let me say that no man is prejudiced against Christian Science. He is prejudiced, if at all, against his own mistaken sense of its teachings. He either knows nothing whatever about Christian Science, or his concept of it is wholly erroneous. Finally, after being thoroughly scourged through the sufferings I experienced, and seeing no other avenue of escape open to me, I put pride and prejudice aside and turned to Christian Science for help, with the result that I was completely and permanently healed, and also received a moral and spiritual uplifting which made a man of me. This truth is leading famished, fainting, prodigal humanity away from the swine and the husks of materialism, up to the presence and knowledge of the Father, where the fetters of sin and disease are broken, where fear and its many fruits are destroyed, and the seeker gains man's lawful heritage—dominion.—JAMES A. HEMINGWAY, Chicago, Ill.

It is now twenty-two years since Christian Science first came to my notice through its acceptance by three members of a brother's family. They were very enthusiastic adherents of the then new doctrine in Indianapolis, where I was at that time a resident. Through conversation with these three students, a glimmering of the Christ-healing came to me; but it did not appeal to my understanding, and I turned a deaf ear, as so many others have done before and since. My first real awakening to the power of the truth that makes men free from sin and sickness, was six years ago, when a member of my family was healed of a serious illness. Her troubles had baffled the skill of the best physicians of the country, and she had had the advantage of a long season of sanitarium treatment, all of which only palliated her distresses but did not heal them.

In the spring of 1904, when an epidemic was prevalent, I suffered from a violent attack of the malady, and was under the care of our kind family physician. He administered hypodermics to relieve me of the severe pain, and I was under his treatment for several days before I was able to go about my work. Three months later I was visited by another attack of this same disease, equally violent with that of the previous attack. On the urgent advice of my daughter, I decided to try Christian Science in this instance. I told her that this would give me a fine opportunity to test the relative merits of Christian Science treatment as compared with *materia medica.* A practitioner was called, and within less than an hour after his arrival I was completely relaxed and fell into a sweet and restful sleep. When I awoke the next morning I was as well as usual, the disease having been completely overcome, and there was no suffering from after effects, as in drug medication. In two days I was about my business as usual, and quite unconscious of having just passed through a serious illness.

This practical illustration of the effectiveness of Christian Science healing in my own experience satisfied me entirely, and from that day to this I have relied wholly upon divine Mind for help in every emergency. I am now approaching the four-score limit of age, and in no one thing more than another has "the renewing of the mind," as taught in Science and Health, been more helpful to me than in the overcoming of the belief of age and its limitations. I am able to go about my business, to make long journeys by railroad, and to be out in all kinds of weather, through the sustaining help of divine Love. I had been a church-member for many years, and tried to live a consistent Christian life, but the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, has opened to me an understanding of the Bible which I never had in the old way of thinking. I read the Bible before as a sort of perfunctory duty, but now I read it because I have a clearer understanding of the divine message and what it means to be one of God's children.

Among the physical conditions which have either been wholly healed or greatly modified, I may mention catarrhal fevers, feeble heart action, and chills caused from bladder complications. In all of these attacks of sickness I have endeavored to take God at His word as set forth in Isaiah, 41 : 10. My greatest pleasure is in the study of the Lesson-Sermon and in attending the regular services at the Christian Science church.

My heart is full of gratitude to Mrs. Eddy for having given to the world the wonderful truth as set forth in Science and Health, and to God as He has been revealed to me through this enlightened understanding of the Scriptures.—B. F. HAUGH, Anderson, Ind.

In July, 1906, my interest in Christian Science was aroused by reading a copy of the *Sentinel.* Previous to that time I had known absolutely nothing of Christian Science, but before long I concluded I had found the truth that makes us free, and it has freed me from the bondage of many material beliefs and fears. I was healed of serious eye trouble, and laid aside the glasses which I had worn for some months. For many years I had been troubled with catarrhal and throat disease, and greatly feared the changeable winter weather; but both disease and fear have been entirely overcome through the study of the Bible together with Science and Health and other Christian Science literature. I feel that my gratitude can be better expressed in deeds than in words. The teachings of the Bible, as revealed by our Leader, Mrs. Eddy, have proved a daily help to me, and her loving, unselfish example makes me desire to tread the straight and narrow path that leads to Truth.—MISS LEONA FREY, Boulder, Col.

I gladly give my testimony to all the benefits received from Christian Science. I was unable to use my right arm and had great pain day and night, and the doctors could give me no relief. A Christian Science practitioner was then recommended to me, and in the first treatment I found relief and was quickly healed, for which I am very thankful. Since that time Christian Science has been our only physician. My youngest child, ten years of age, has never tasted medicine. Before I had learned to speak or read English my progress in the understanding of Christian Science was very slow. When I began to read Sci-

Digitized by Google

ence and Health not a word could I understand, and it seemed at first impossible to make any progress, but I then heard of a Danish lady who had learned to read English by studying this wonderful book, and this gave me hope and courage to press forward. To-day I can read all the Christian Science literature, for which I am very thankful. Moreover, my mental condition had become much darkened; I had no hope, and was "without God in the world." Life seemed a burden, but again Christian Science was shown to be the true helper. Evil was seen to be powerless; instead of discord, peace and harmony were obtained. The blessings received, especially in the last year, are more than I can tell.

I am more than thankful for having been helped through many experiences, and to Mrs. Eddy for this revelation. I thank God more and more. His is the power and the glory forever.—MARIANE N. HANSEN, Chicago, Ill.

In grateful acknowledgment for the many blessings received, I desire to tell what has been done for me through Christian Science. It is hardly possible with pen to tell all that might be said regarding the help I received nearly two years ago. Through the healing of my sister, some twenty years ago, from what is claimed to be an incurable disease, we had come to know of Christian Science. We were therefore very desirous of attending the Communion service and dedication of the new edifice of The Mother Church, but from a financial point of view this seemed an impossibility. Divine Love, however, supplied the means through a relative who had watched the temple being reared from the beginning and who, although not a Scientist, was solicitous for our pleasure, and an invitation came for my sister and self to come to Boston and remain through the meetings. In the mean time a generous check came from cousins in Minneapolis to help make the necessary preparations.

The way had opened so unexpectedly that our cup of joy was filled to overflowing, and seemingly all we had to do was to make ourselves ready for the journey, but there was another demonstration to be made. Without any seeming cause, I was taken very suddenly and seriously ill. As we did not meet the attack ourselves, we asked for help from a Christian Science practitioner. The disease was very persistent, and for three weeks seemed to be master of the situation, but the Scientist who was treating me did not give up for a moment but that I would be able to make the journey to Boston. The last afternoon before we were to start I gave up all hope, for I could not even sit up. I could only voice what error was claiming, namely, that I could not go, forgetting that Truth was at the helm! In the morning I was better, and by eight o'clock I was on the way to Boston, the journey including a twelve-mile ride by carriage. The next evening we arrived in Boston, and early in the morning of the following Sunday our cousin accompanied us to the church. We were helped to gain an early entrance, when to all appearance the way was blocked with the waiting crowd for a long distance around the church. I was enabled to attend all of the day and evening services during the week, besides visiting many places of interest to Scientists.

Thanks be to God, who giveth us the victory; and to Mrs. Eddy, who has led us to know that there is but one power, one Mind, one cause, and that God is an ever-present help if we but look to Him.

MISS MARY L. HOWARD, South Dansville, N. Y.

I and my family cannot say too much for Christian Science since we have found it a help in every way and for everything. About three years ago our little girl had a serious accident while learning to ride a bicycle. In turning a corner she ran into a buggy and was thrown to the ground with a good deal of force, rendering her unconscious. She was brought home, and we sent for a Christian Science practitioner. In two hours she regained consciousness, got up, and was around from that time on. A week from then her face had all healed up, and no scar of any kind remained. So I repeat that we cannot say enough for this blessed truth that is doing so much for mankind.—MRS. E. M. BEST, Atchison, Kan.

It is with a deep sense of gratitude that I wish to give honor where it is due. My little boy seven years old suffered from a paralytic trouble which doctors pronounced incurable. I tried Christian Science, and although it took some months to complete the healing, I can now say that my child is perfectly well. Previous to this time I had seen many proofs of the truth of Science in my home in the overcoming of sickness and pain in my wife and children. To be freed from physical suffering is no little thing, but it is as nothing when compared with the spiritual understanding. I am very thankful to God, and to Mrs. Eddy for this wonderful truth.

JOHN REEZE, Evansville, Ind.

Several years ago, while hungering and thirsting for righteousness,—spiritually starving, physically sick, mentally fatigued,—weary from trying to find God, good, in matter, crying for peace when there was no peace, I was asked by a dear friend who is a Christian Scientist to try Christian Science. Recognizing that I had reached man's extremity, I gladly accepted God's opportunity, and called upon a Christian Science practitioner that very day. I shall never forget the sense of love, rest, and peace that came to me as she talked to me. Self-righteousness had been saying to me that I could hate because I thought I was hated. The practitioner quoted the last five verses of the fifth chapter of Matthew, and while I was familiar with these verses, they had been to me but mere words; I had never before realized their true meaning. The revelation of Truth was glorious! I found myself physically healed, and mentally I was given peace and rest in God, good.

But while beholding the glories of God from this mount of revelation, I found that I must go down into the valley and there begin the ascent by earnestly striving to eradicate every wrong thought about God and man. It is indeed "a warfare with the flesh" (Science and Health, p. 324), but who can express the joy as we, through honest effort, see each belief in a power apart from God vanish into its native nothingness. I am daily being fed spiritually from the feast of divine Love, prepared for us in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and from the Bible. I desire to be not only a hearer, but a doer of the truth, because I realize that it is only by knowing and doing the will of God that I can express my gratitude to God, and to our beloved Leader, who has so patiently labored to show us the way of Truth.

CORA B. HECK, Toledo, O.

I have kept silence much longer than I should have done, and have failed to tell to the world the glad news of my being lifted out of the "valley of the shadow of death" through this glorious truth which saves and heals. It is a little over four years since I was persuaded by dear friends to try Christian Science for what the medical profession had pronounced hereditary lung trouble. I was seemingly in the last stages, and for seven years had been drifting from one climate to another in search of health.

Digitized by Google

Christian Science had been recommended to me by friends in Chicago, some time previous to my acceptance of it, but like a great many of my acquaintances I was ignorant of its real teachings and supposed that those who believed in such a doctrine were fanatics.

In April, 1904, however, my roommate, though not a Christian Scientist, knowing my state, and feeling that I could not last long under existing conditions, said to me one morning, "Why not try Christian Science? You have given climate, physicians, etc., every show, and I have known of cases where it has proved beneficial." I replied that I had little or no faith in it; but like a drowning man grasping at a straw, I then decided to give it a trial. I went to a practitioner, who explained to me that Christian Science is of God, and that God is no respecter of persons; therefore it was for me. Words cannot describe the great feeling of hope which arose within me. I could hardly wait for the first treatment. I had been coughing for seven years, was afflicted with chronic bowel trouble and headaches, besides having a very bad form of stomach trouble caused from excessive use of whisky, which had been prescribed for me by different physicians. Three of my brothers and two of my sisters had passed on with lung trouble, and as I had had several alarming attacks, I was indeed a physical wreck, and expected death with every change of the weather.

Thanks be to God, after two weeks' treatment in Christian Science I began to improve, and to-day I am enjoying good health. The way has not always been smooth, I have had many seemingly difficult problems to work out, but I have never doubted that God could and would lift me out of them if only I would trust Him fully; and I have never been disappointed. In the past four years I have lost but two or three days' work on account of sickness, and this alone is wonderful, because in former years, before obtaining a knowledge of Christian Science, I scarcely ever passed through a month without losing some time on account of illness. I also had a very bad temper, and was much given to profanity, but my friends who knew me before I came into Science have since been known to remark, "I don't know what Christian Science is, but I do know that it has worked wonders for Hanson."

If I were to write many pages, I could not tell of all that Truth has done for me. Words cannot express the gratitude I owe to God, and to Mrs. Eddy, who has brought to light the glorious truth which was taught and demonstrated by Christ Jesus. My prayer is that I may be able, in some degree at least, to live a life of thankfulness, and that I may lead others to that fountain of life which floweth for all mankind.—CHARLES O. HANSON, Lincoln, Neb.

I have found that although the people who I knew had been helped and healed in Christian Science were all ready and willing to express gratitude for their healing, and some to give a testimony at the Wednesday evening meeting, there were but few who were willing to write one for the *Sentinel* or *Journal*. I wondered at this, but when I began to question myself I found that although I had enjoyed good health for eight years, through Christian Science, I had never sent a line to our periodicals to show my gratitude. All my life previous to this time, I had been miserable and sickly, suffering from a cough, headaches, fainting-spells, and many other ills, but I have been perfectly healed, so that I am now useful and happy. All these blessings have come to me through reading and applying the truth set forth in Science and Health. My husband and two daughters have also been healed of many physical ills, and what is far better, the family as a whole have been lifted up into a purer and more healthful mental atmosphere. All this, and much more, has come to us through Christian Science.

We may think that our testimonies are not needed, and allow this mistake to hinder us from performing a duty which I feel to be as essential as the daily study of the Lesson-Sermon; but if we send forth freely, and from a full heart, good will be done, even if the testimony is not used in our periodicals. This is one way to show our beloved Leader our appreciation of Christian Science. I find that a consecrated life receives each day an unfoldment which teaches us the right way.

LOTTIE J. MACGREGOR, New Haven, Conn.

It is with a sense of shame that I send in my testimony, because I have allowed so long a time to pass before giving it. Like many others, I came to Christian Science for healing, after I had tried several physicians and lost all faith in them because they did not help me. They all said I was very nervous, and I know they did all they could to help me. I then read "Science and Health with Key to the Scriptures" by Mrs. Eddy, every day, with the Bible, and I have not taken any medicine in the eight years since I began this study. My healing was slow, but I can truthfully say I am glad it was, for had it not been so, I would not have striven to understand this inspiring truth, which has set me free and changed me from a melancholy, unhappy woman into a cheerful, hopeful one.

I earnestly give thanks to God, and also to Mrs. Eddy, that I have been so wonderfully helped, both spiritually and physically.—MRS. MAMIE FOX, Winchester, Ky.

I feel it a great privilege to give my testimony to the healing power of Christian Science. Twelve years ago I was physically a wreck, but with one exception I was healed instantaneously of all my diseases, which were many. This trouble seemed to remain with me through fear, but only for a time; then it, too, went into its native nothingness. I want to tell of an experience in healing which I had a short time ago. I had been suffering for six weeks with an abdominal trouble. I could with great difficulty go up and down steps, and was very uncomfortable all the time. The ailment seemed so real to me that I could not overcome it, but God healed me through a Christian Science practitioner here, while I was telling her of this trouble. This seemed wonderful, even to me, who knew it was just as it should be, for nothing is impossible with God.

It is with great thankfulness that I record this case of healing, besides expressing my gratitude for the greater knowledge of Truth which I have been permitted to gain in Christian Science.

MRS. B. E. SHINN, Redondo Beach, Cal.

I wish to tell of the wonderful healing that has come to me through Christian Science. I was suffering from a very distressing form of abdominal trouble; had been treated for nine years by ten different doctors, and had been operated upon at four different times. At last the doctors said they had done all they could for me, except one more operation, which, however, they thought likely I would not survive. Naturally I did not wish to go through this operation, and begged my husband not to allow it. I cannot write of the tortures which I suffered, but at last I was sent to another physician in a distant town, though I was obliged to stop on the way in order to gain strength to go on. Upon my arrival I made the acquaintance of a lady who had gone there to have treatment from a Christian Science practitioner, and she asked me to go with her to the practitioner. I knew that I had received all the help I could expect from the doctors, and was only too willing to try anything which would offer relief. At the end of

Digitized by Google

one treatment in Christian Science I was very much better, and in three treatments I was completely healed and was able to leave off my supporter and truss. I went home and began doing my housework, and at times I had eight persons to cook for.

I am very grateful for the wonderful healing I have had, and wish to express my appreciation of the help given me to discern this wonderful truth, and of our faithful Leader, who still points the way for us.

ELLA LEDONIA JACKSON, Lake Charles, La.

We have had some very wonderful demonstrations made for us through the understanding of Christian Science. My mother, who is eighty years of age, has been helped, healed of many things, through this truth. Something over a year ago she was burned very severely. We, however, applied nothing material, but she received help from a loving friend and practitioner in Christian Science, and the healing seemed almost miraculous. The burn was of such a nature that I could scarcely bear to look at it, but with Christian Science treatment it was beautifully healed in a very short time.

Just following this unfortunate experience, a still greater trial seemed to overtake her. While we were moving she attempted to arrange some furniture, and a bookcase full of books fell on her, injuring her so seriously that she could not move, and in this helpless condition we found her. It was with great difficulty and much pain to her that we succeeded in removing her garments and getting her into bed. It was several days before she could move her limbs, but in about two weeks she was up and about as usual. These wonderful proofs of the power of infinite Love fill our hearts with gratitude for knowing that there is such a power in the universe to help those who are ready to accept it. Mere words cannot do justice to the demonstrations given in this testimony.

MISS GEORGIE L. CARLISLE, Butte, Mont.

I am very grateful for what Christian Science has done for me. It is more than five years since I turned to it for help, and it is indeed a pleasure to give my testimony. Up to December, 1902, I had been an invalid twelve years, under the care of a physician most of the time. I had seven physicians in all, and I had steady treatment from the last one for seven years. More than three years of that time I was at his sanitarium, and was treated for stomach, liver, and bowel trouble in their worst forms. I was on a strict diet all the time, and most of the time was allowed only liquid food. I did not taste bread, butter, sugar, or potatoes in seven years, and I was taking some kind of medicine all the time. I had all kinds of treatment and baths, but nothing seemed to help me.

Everything had been done for me that medical science could do, and when I left the sanitarium to turn to Christian Science the doctor told a friend of mine that it was only a matter of a few weeks, perhaps a month or two, till I would pass on. I then weighed ninety-five pounds, now I weigh one hundred and forty; I have not taken any kind of medicine since I began treatment in Christian Science. I can now eat anything I desire, and all I want of it, without suffering.

Is it any wonder that I am grateful to God, to our dear Leader, Mrs. Eddy, and to each and every one who has given me a cup of cold water in Christ's name!

AMELIA B. SPRINGER, Berkeley, Cal.

Over two years ago my uncle, then aged seventy-three years, was taken sick with a disease which was manifested in an eruption all over his body. His aged mother, who believed in Christian Science, as we also did, asked us to write to a practitioner in Chicago for treatment for him. Although we felt at the time that we were not doing right by the practitioner in placing such a badly neglected case in his care, we wrote, trusting in Truth to do the healing. We reported the case daily, and after a few days the eruption stopped spreading, but other symptoms appeared which caused us to think the patient was worse.

Then came a hard trial of our faith. Relatives and neighbors all pronounced the death sentence against the sufferer; but we held fast to Christian Science, and finally we were filled with joy to see him growing better. A little later, however, unfavorable symptoms appeared, which we promptly reported to the practitioner, and received a reply telling us to calm our fears and to be patient. After a reasonable time these conditions yielded to treatment, and the patient was healed. He is now a well man and two years older, being seventy-five. The recovery of my uncle had a wonderful influence on my mother, and in fact upon all of us, convincing us beyond a doubt of the power of Christian Science to heal all manner of disease.

ARNO HALL, Watervliet, Mich.

I am grateful for what Christian Science has done for me. About fifteen months ago I was ill with lung trouble, and while in that condition I became totally blind. I was treated by local physicians for about four months, and they said my case was hopeless. I then went to Detroit and consulted a specialist, who said I would never see again. I took only two weeks' treatment in Christian Science, and noticed an improvement within a week's time. Since then I have been improving slowly but surely, and can now do almost all the household work for a family of four, run the sewing machine, and thread quite a fine needle.

MRS. CARRIE EICKEMEYER, Bay City, Mich.

Several months ago I was greatly helped by Christian Science. Much of the time I was very depressed, and I was also jealous. Besides this I suffered from rheumatic trouble and lameness; but all these troubles were overcome, and now I am a different woman. I think Christian Science is grand. I study the Lessons in the *Quarterly*, and also have the *Sentinel*. I am very thankful to God, and to Mrs. Eddy for Christian Science.

MRS. THORSTEN JOHANSEN, Chandler, Minn.

In the spring of 1907 I was laid up with a severe attack of rheumatic trouble in my hands, knees, and feet. I suffered great pain day and night. Finally we called a Christian Science practitioner, and in four weeks' time I was healed and have not been troubled with the disease since. I am very thankful to God for this healing.

FRED E. JOHNKE, Denver, Col.

[Written for the *Sentinel*.]

"GREATER WORKS THAN THESE."

CASSIUS M. LOOMIS.

O BOUNTEOUS legacy! what promise this!
Could we neglect or take such word amiss?
To heal the sick, to still the angry wave,
Restore the withered hand, the sinner save—
To do as did the Master—yea, and more;
To live the life and bear the cross he bore.
Be still, my heart, that promise was to thee;
And when we know the truth that maketh free,
We too, shall say unto the seeming dead,
Arise, and find eternal life instead!

FROM OUR EXCHANGES.

[Rev. John Haynes Holmes in *The Arena.*]

The true Christianity of character and conscience and right living, of justice and truth and love, of scientists and not theologians, of good Samaritans and not Levites, of men and not priests, of doers of the word and not hearers only—this true Christianity of the Prophet of Nazareth, who came to bear witness to the truth and to give men life more abundantly, is only just now having its "rebirth," only just now, like some buried river, coming to the surface again after centuries of hidden life. Jesus did not live and die in vain; his spirit of service and of love has never perished. More bravely and more faithfully in the future than ever in the dismal past is the church destined to speak his word without fear and do his work without wearying. The kingdom, for the coming of which he prayed, and which means, as he himself was careful to declare, the doing of God's will here upon the earth, will indeed come; and the tabernacle of God, at last in very truth, as foretold in vision by the holy apostle, be here with the sons of men.

[*The Congregationalist and Christian World.*]

Christ's presence seemed always to become either an uplifting helpfulness or a sentence of judgment. When sinners drew near and learned to love and trust him, they ceased to be sinners. Zaccheus was converted in the boughs of a sycamore tree and Levi at the publican's booth. . . . To be with him was to learn the eternal difference between right and wrong in one's own life and not in a book of theories. And that light of knowledge, as we have seen, resulted either in an uplifting repentance and new purpose of right living, or in a growing hatred. No man can really live with Christ and be a neutral in that war. He ends by giving rest of heart; but he often finds it needful to begin by tearing up the roots of our blind and careless self-satisfactions. And he does this by no violence of reproach, but simply by revealing us to ourselves as we really are.

[*The Standard.*]

The man who has caught the spirit of his Lord will make his best contribution to the cause which he loves, and be content. If his work seem in vain, he knows that it is only in seeming. Somehow God makes of use to Himself, in His age-long task, the devotion of every life. We may not see its worth nor understand the part which it plays in the divine work of redemption, but we have His word that no labor in the Lord and for His sake is in vain.

[Charles P. MacGregor in *The Examiner.*]

The apostles did not create the divinity of Christ, but the truths which he revealed, and the great influence which he exerted, as well as the wonderful works which he wrought, forced them to conclude that his was no ordinary life, that it was nothing less than the manifestation of God among men.

[*The Christian Life,* London.]

True progress is something more than movement or change; it is an advance toward an ideal. The ideal for the individual has been well defined as the full development of all his powers, bodily, mental, moral, and spiritual, and the right use of all he is and all he has for the service of others.

[Rev. T. Rhondda Williams in *The Christian Commonwealth.*]

The belief that the life of the eternities will take its point of departure from the life in time makes every moral claim of one's nature a more august thing, and gives to every act of philanthropy, every demand for social justice, every spiritual exercise, a significance otherwise impossible.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel.*

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States and Possessions, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Rev. Mary Baker G. Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. 20 Pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman E. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Y. M. C. A. movement, although embarrassed by the financial stringency of the year, has added more buildings to its permanent equipment at larger cost than in any previous twelve months. Eighty-four new buildings, costing over $10,000,000, were opened and as many more are under construction or provided for, to cost $9,000,000. The membership of its 1,939 branches has increased to 446,000.

The Supreme Court of Missouri has handed down a decision ousting the Standard Oil Company of Indiana and the Republic Oil Company from the state of Missouri, forbidding them again to do business in Missouri, and dissolving the Waters-Pierce Oil Company of St. Louis unless it become an independent company. In addition each of the companies is fined $50,000. An appeal has been taken.

Announcement has been made at the White House of a proposed plan for a conference looking toward the conservation of the natural resources of North America, to be held at the White House Feb. 18 next. Letters suggesting the plan have been addressed by President Roosevelt to the governor-general and to the premier of Canada and to President Diaz of Mexico.

Secretary of the Navy Newberry has evolved a comprehensive scheme for the reorganization of the navy yards which will simplify their administration and eliminate much of the red tape of the bureau system. A uniform system of accounting in all the yards, making cost comparisons possible, may also be adopted.

Professor Hempl of Leland Stanford University, who claims to have discovered the key for deciphering Etruscan inscriptions, and who has already translated fifty out of some eight thousand, asserts that there will follow as a result considerable light on disputed points of Latin grammar, etymology, and history.

Personal property to the amount of $31,008,071, which has hitherto escaped taxation in Massachusetts, has been discovered during the year through the operation of the inheritance tax law and the new system of supervisors of assessors. This property is largely in the form of stock in business corporations.

Abraham Ruef, formerly legal adviser to ex-Mayor Schmitz of San Francisco, who is now serving a five-year term in prison, has been found guilty of bribery, on the third trial by jury, and has been sentenced to fourteen years in the penitentiary.

As counsel for the Standard Oil Company had no further testimony to present in the Government's suit in New York city to dissolve that corporation on the ground of being a combination in restraint of trade, the hearing went over until July 6 next.

The great one hundred-inch lens cast in Goblain, France, at a cost of $50,000, for the Mount Wilson (Cal.) Solar Observatory, was found to have developed a flaw after its first grinding. Immediate arrangements were made for a new casting.

President-elect Taft and a party of eminent engineers leave soon for the Canal Zone for a tour of investigation. A congressional committee has already gone there to study the needs calling for special legislation.

The total of Massachusetts' subscriptions to the Massachusetts Association for the relief of California, to be used in aiding San Francisco in her distress, following the earthquake and fire, was $923,945.54.

Massachusetts, Pennsylvania, and New Jersey will during the year join the young nation of George Junior Republics with full-fledged commonwealths of boys and girls.

President-elect Taft is said to be working out the details of a plan for the governmental regulation of corporations doing an interstate business.

The returning battle-ship fleet has already passed through the Suez Canal and is expected at Naples Jan. 17.

The trade of the United States has increased from $1,662,000,000 in 1896 to $3,315,000,000 in 1907.

A parcels post arrangement between the United States and Austria went into effect on Jan. 1.

International.

The Turkish government has engaged Sir William Willcocks to supervise the contemplated irrigation and canal works in Mesopotamia and elsewhere. For more than four years he has been making a study of the ancient irrigation works on the Tigris and the Euphrates, with a view of reconstructing them on modern scientific principles. Rough estimates place the irrigable area at nearly three million acres, the expenditure at $100,000,000, and the capital value of the land when irrigated at $300,000,000. In the days of the Assyrian and Sassanian kingdoms the delta of the Tigris and Euphrates was the granary of the world. This alluvial plain, extending four hundred miles inland from the present shores of the Persian Gulf, was celebrated for its fertility.

The Dalai Lama of Tibet has left Pekin for Lhassa, his capital, and his departure marks the beginning of the end of his wandering over northern China, which began soon after the British forces, four years ago, under Colonel Younghusband, entered the holy city. He was accompanied by a large retinue, which entailed great expense upon the various cities practically forced to act as his host. Owing to the distasteful practices of his religion, his stay in Pekin weakened his position and caused him finally to be treated as a barbarian. He returns shorn of temporal power and pledged to carry out all proposed Chinese reforms.

The Turkish governor of Mamouret al Aziz at Harpoot, Turkey, has created a committee of seventeen men to take in hand the question of education for the large interior vilayet. Two of the members of this committee and the most influential are the two senior professors in Euphrates College, the only Christian college in that part of the empire. He has also requested the senior missionary of the American Board in all Eastern Turkey to suggest lines of action he may take to promote in his jurisdiction sound education, good order, and helpful enterprises.

The bill providing for an eight-hour day in coal mines, which in process of amendment became actually a measure for a day of nine hours, has been adopted by the House of Lords. The bill, which goes into effect July 1, 1909, originally contemplated eight hours from surface to surface, but its opponents eliminated the time occupied in descending to and ascending from the workings, and calculated half an hour's time each way. The result is that eight full hours must be spent in actual labor below ground.

The Indian National Congress opened in Madras, India, on Dec. 29, with two thousand delegates in attendance. Emphatic approval of the reform plans for India advanced by Lord Morley, the Indian secretary, was expressed. This would give India something like a constitutional government instead of the unpopular autocratic régime.

The Austria-Hungarian foreign minister has made a complete statement of his attitude, declaring that under no circumstances will Austria make pecuniary compensation to Turkey on account of the annexation of Bosnia and Herzegovina. This sudden change in plans causes surprise.

According to latest reports the twenty-one universities of Germany have now an enrolment of 47,471 matriculated students, the report a twelvemonth ago being 45,136.

The Turkish Sultan has decided to build at his own expense a new Parliament house with adequate accommodations for the two branches of the Legislature.

Industrial and Commercial.

It is reported that the United States Industrial Alcohol Company, which is controlled through stock ownership by the whisky trust, has secured control of the Woods Product Company of Buffalo. The former, which has an authorized capital of $18,000,000, was incorporated in October, 1906, under the laws of West Virginia, for the purpose of manufacturing denatured alcohol under the act of Congress approved June, 1906.

In 1907 approximately 5,212 miles of new main track were laid in the United States, while a similar record of 1908 shows only 3,214 miles. The total number of miles constructed during 1908 in the South, including Missouri and Oklahoma, was 1,760. Last year there were over thirty-three hundred miles built.

The dividends paid in 1908 by the thirty-six cotton mills of Fall River, Mass., averaged 6.09 per cent on the capital invested, amounting to $1,741,135, on a total capital of $27,125,000.

An electric line from Little Rock, Ark., to Hot Springs, a distance of fifty-one miles, is to be constructed at an estimated cost of $1,500,000.

The area under cotton reported for the whole of India amounts to 17,313,000 acres.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

LINCOLN DAY LESSON-SERMON.

[During the past few years the governor of Massachusetts has annually issued a proclamation calling upon the people to assemble in their churches for the observance of Lincoln Day, and because of this The Mother Church and the branch churches in this state have each year held an appropriate service. Feb. 12, 1909, being the one hundredth anniversary of the birth of Abraham Lincoln, and arrangements having been made by the people of almost all the states to observe specially the occasion, it has seemed best to publish in advance the following Lesson-Sermon, which has been prepared for The Mother Church and may be used by such branch churches as desire to hold a special service.—EDITOR.]

Subject: FREEDOM.

Golden Text. "And the Lord said unto Joshua, This day will I begin to magnify thee in the sight of all Israel, that they may know that, as I was with Moses, so I will be with thee." Joshua, 3 : 7.

Responsive Reading:—Deuteronomy, 31 : 7, 8, 12, 13; Hebrews, 3 : 1–6.

7 And Moses called unto Joshua, and said unto him in the sight of all Israel, Be strong and of a good courage: for thou must go with this people unto the land which the Lord hath sworn unto their fathers to give them; and thou shalt cause them to inherit it.

8 And the Lord, he it is that doth go before thee; he will be with thee, he will not fail thee, neither forsake thee: fear not, neither be dismayed.

12 Gather the people together, men, and women, and children, and thy stranger that is within thy gates, that they may hear, and that they may learn, and fear the Lord your God, and observe to do all the words of this law:

13 And that their children, which have not known any thing, may hear, and learn to fear the Lord your God, as long as ye live in the land whither ye go over Jordan to possess it.

1 Wherefore, holy brethren, partakers of the heavenly calling, consider the Apostle and High Priest of our profession, Christ Jesus;

2 Who was faithful to him that appointed him, as also Moses was faithful in all his house.

3 For this man was counted worthy of more glory than Moses, inasmuch as he who hath builded the house hath more honor than the house.

4 For every house is builded by some man; but he that built all things is God.

5 And Moses verily was faithful in all his house, as a servant, for a testimony of those things which were to be spoken after;

6 But Christ as a son over his own house; whose house are we, if we hold fast the confidence and the rejoicing of the hope firm unto the end.

The following Citations comprise our Sermon.

(*b*) A few
(*c*) When the / When we
(*d*) God gives
(*e*) It should
(*f*) With one
(*g*) One infinite
(*h*) The sinless

ADMITTING GOD.

BLANCHE HERSEY HOGUE.

IT is well known to the student of Christian Science that individual thought expands to the fuller and higher meanings of the terms employed in expressing the truth, as the study of the Bible and the Christian Science text-book is earnestly pursued. Through spiritual growth, and through the investigation of the root-meanings of words, a greater mental grasp of the truth becomes a daily privilege, and the limitations which hedge the first perusal of the Christian Science text-book naturally disappear as clearer understanding displaces former view-points. In the sentence, "If God is admitted to be the only Mind and Life, there ceases to be any opportunity for sin and death" (Science and Health, p. 276), this is especially true concerning the word "admitted," and while no attempt is made to explain the text of Mrs. Eddy's writings, perhaps

Copyright, 1909, by Mary Baker G. Eddy.

Digitized by Google

an analysis of this word is permissible in order to stimulate comprehension of its full import.

The Standard Dictionary declares the word "admit" to mean, "To allow, suffer, or permit to come or go into; to have capacity for the entrance or presence of; let in." Webster defines "admission" as, "Permission to enter; the power or right of entrance, and hence, actual entrance." And as to its narrower meaning, Webster says, "To allow; as, the argument or fact is admitted."

This word admit is so frequently used to indicate nothing more than a mental concession, an "allowance" of the truth of a given point, that its accustomed association very naturally remains with the reader in his first acceptance of our Leader's statement. An intellectual perception, or a sense of logic, may compel the student to accede to the proposition that "God is the only Mind and Life," and lead him to accept the conclusion that in consequence "there ceases to be any opportunity for sin and death." His reason "allows" this basic statement to be true, and to this extent a purely intellectual concession to the allness of God may be obtained. This, however, is by no means the whole of the "admitting," for thought must become spiritualized through laying aside, somewhat, the carnal beliefs and practices of the mortal, before the way opens for God actually to "enter" human experience as "the only Mind and Life."

Abandoning the contracted use of the word, and turning to its larger sense, as "entrance," thought begins to grasp something of the broader meaning. Giving God admission to one's heart and life means vastly more than "allowing" the statement of His presence to be true. "Letting in" divine Mind, as light pours through open windows, until this Mind takes possession of individual thinking and doing, floods more widely Christian experience than does the mere intellectual acceptance of the proposition that "God is All-in-all" (Science and Health, p. 113). To perceive through reason that "God is the only Mind and Life" and to conclude by the process of logic that in consequence "there ceases to be any opportunity for sin and death," is but the first footstep in the direction of demonstration. This, if progress be desired, must be followed by such an admission of the Mind of Christ into one's daily and hourly thinking that the evil shadows of un-Christlike motive and desire can no longer lurk unforbidden in the heart. The entering Christ expels "the opportunity for sin and death" in the measure that the carnal mind, which has provided for such opportunity, yields its boast and vanishes before the flooding glory of Christ's coming. The huddling broods of evil suggestions flee before the sunrise of righteousness, and less sin, less sickness, less death beset the mortal who opens mind and heart to the incoming of this ever-brightening, ever-quickening, ever-broadening redemption. When "God is admitted," the mental household becomes the abode of divine Love, and the removal of all that would stain or dwarf or deaden the impulses of good is assured.

The student of Christian Science discerns that he may expect to be rid, ultimately, of the hard and bitter fruits of wrong thinking which are called sickness and death. His possible delay in accomplishing the elimination is very frequently occasioned by reluctance to practise the rule already given him. So simple is the law of salvation that the neophyte ofttimes overlooks it. He would go up into heaven, or beyond the sea, to fetch it, not remembering that "the word is very nigh unto thee, in thy mouth, and in thy heart, that thou mayest do it." The wonder-seeker looks for some startling sign from heaven, some new commandment, some miracle-worker outside his own experience, not yet seeing that his healing is to come quietly and all untrumpeted through the silent and unseen thought-processes in his consciousness wherein self surrenders to the government of Christ. While yet he stands calling for some prophet to rise and heal him, his Saviour comes by another way. His fellow-man cannot save him,—another's effort can only help him to set open the door of right thinking through which the Mind of Christ will "come in to him, and sup with him," and abide with him in peace.

As the individual upward-springing desire for good makes entrance for the divine presence, the remolding of ideal and motive which purifies and transforms nature, mind, and heart naturally follows, and in no other way can the outward signs of disease and pain be permanently erased. When the *modus operandi* of Christian healing is discerned, and the student becomes willing to look to the cleansing within rather than to the phenomenon without, for his deliverance, he is ready to apply the rule for salvation effectually, and constantly he employs himself in "admitting" right thinking and excluding wrong thinking. At this point he learns that the human standard for righteousness is adequate for salvation; he learns that the measure of healing received is determined by the measure of right thinking appropriated; he learns that his only guide to the heavenly places which await his ascending thought is found in the perfect pattern of spiritual manhood revealed throughout the Scriptures and elucidated flawlessly in what is called Jesus' Sermon on the Mount; he learns further that Science and Health, the text-book of the Christian Science movement, is literally a "Key," for it holds page upon page of directions for achieving the Christ-ideal; and finally he learns, beyond all question and beyond all possible doubt, that his Saviour is assuredly not "beyond the sea," but at hand.

Says Mrs. Eddy: "If mortals would keep proper ward over mortal mind, the brood of evils which infest it would be cleared out" (Science and Health, p. 234). Thus may we read upon every page of this great Christian text-book, rule upon rule for applying what the Scriptures have always held for the religionist; and who, if he honors such precepts, can fail to appreciate the twentieth-century revelator who steadfastly leads the Christian Science movement in the healing path of obedience to Christ? Who, hearing such admonition, can longer believe the saving way to be hidden and be found an unfaithful watchman at his own mental doorway? And who, heeding such instruction, can but "admit God" into his life more and more abundantly, to the increased undoing of every "opportunity for sin and death"!

INDIVIDUALITY.

MARION H. ROGERS.

SEVERAL years ago a friend made the remark that it would be very tiresome and monotonous if people were all good, all alike, as they would have to be if they believed in Christian Science. The question of individuality as revealed in our text-book, "Science and Health with Key to the Scriptures," had seemed a difficult one for me to grasp. I did not understand much that Mrs. Eddy says on individuality in her various writings, yet it was sufficient to show me the error and mesmerism, in a degree, of so-called human personality. This question would, however, often present itself, How can man express any individuality if there is only one Mind, and if man in reality possesses no other? Would not all be alike? Self-love would constantly urge its false claims of thought and action, and pride would rebel; but the time came when the truth was unfolded, when self-love, pride, and vanity were seen for what they are, and the belief in the reality of the "old man with his deeds" was "put off." I then saw and understood what I had longed to know and understand.

Mrs. Eddy says in Science and Health (p. 336): "God is individual and personal in a scientific sense, but not in

Digitized by Google

any anthropomorphic sense. Therefore man, reflecting God, cannot lose his individuality; but as material sensation, or a soul in the body, blind mortals do lose sight of spiritual individuality." Reading this in sequence with what Mrs. Eddy had written on this topic on the same page, I then saw that the only true individuality there is or can be for man is his reflection of God,—Spirit, good, the one Mind. A friend once said, relative to this subject, "It is only as we express the divine Principle of Christian Science that we manifest any real individuality. It is only as we follow Christ, divine Truth, that we are untouched by the false suggestions of evil, and learn not to be swayed by the vagaries of human thought."

To-day thousands and thousands are being abundantly blessed through the loving, unselfish, and unceasing work of our dear Leader, who has labored and patiently waited for the saving power of Christian Science to be individually and universally manifested. As the thousands who have been healed, who have had their tears wiped away, follow obediently the pathway of Christian Science made clear in our text-book, they are earnestly striving to possess that Mind "which was also in Christ Jesus," and as they do this, they manifest the freedom and individuality found in the one Mind, God, and learn that "divine Love is our hope, strength, and shield" (Miscellaneous Writings, p. 113). Christian Scientists see somewhat the self-abnegation it has taken for Mrs. Eddy to have faced and withstood the assaults of evil, that humanity may be redeemed, that we may know the peace and joy David did when he sang, "God is my strength and power: and he maketh my way perfect." Mrs. Eddy's loving example is confirmation of the saying that "one on God's side is a majority." Is there anything monotonous or tiresome in that? Is there to-day one whose individuality is so clearly defined as hers, or whose understanding of God is so great?

The greatest and most wonderful individuality ever expressed to humanity was that of Christ Jesus, and he said, "I and my Father are one;" and again, "I can of mine own self do nothing: as I hear, I judge: and my judgment is just; because I seek not mine own will, but the will of the Father which hath sent me."

WHAT IS HUMILITY?

MILTON B. MARKS.

It was no less than Christ Jesus who said, "Why callest thou me good? none is good, save one, that is, God." That humility, in the true meaning of the Scriptures, is an essential in human progress toward salvation, there can be no doubt. To gain humility in the scientific sense involves the setting aside of "even the most cherished beliefs and practices, to leave all for Christ" (Science and Health, p. 141). Nothing can be more profitable, in a spiritual sense, than to realize the vital practicality of Jesus' teaching, when he said, "Blessed are the meek: for they shall inherit the earth;" learning, in his endeavor to enter into the kingdom, how that "with men this is impossible; but with God all things are possible." The apostle James says, "Humble yourselves in the sight of the Lord, and he shall lift you up." The meekness of Jesus penetrated the veil of materiality "that is spread over all nations," so that the power made manifest was in fact none other than the "finger of God" casting out evils. What a rebuke is this thought to the suppositional opposite of Christly meekness,—humility on a material basis! The latter would humble us before the so-called powers of sin, disease, and death, or make us subservient to a false sense of good which is the antipode of Spirit, the flesh, thus delivering the mortal to his tormentor, self-righteousness. Is it not apparent, then, that the "finger of God," the power of Spirit to heal men scientifically of sin and its effects, cannot appear in any counterfeit of humility, in any hypocrisy of matter, in the belief that spiritual power is in any sense within material boundaries?

When we arrive at the unselfed love which our Leader teaches, we shall find it to be identical with the humility of Jesus,—that effacement of self and of material belief which permits the power of Spirit to be manifest over all the works of the devil,—and we shall thus be able to claim the reward given "to him that overcometh." True humility may be said to be the gateway to harmony, attained through obedience to Principle in the original purity of its revelation, and obedience involves both a meek and earnest study of how to be obedient and an extreme and detailed watchfulness against every subtle temptation to exalt self. To understand how to be obedient, how to watch, is learned from the Science of Mind, contained in the Scriptures, exemplified in the life of Christ Jesus, and interpreted for our benefit in "Science and Health with Key to the Scriptures" by Mrs. Eddy. It would be vain to claim dominion "over all the earth," if this did not first involve the dominion of divine Love over self,—exemplify the dominion of Christ and the universal manifestation of "glory to God in the highest, and on earth peace, good will toward men."

It is early seen that the higher one climbs in the straight and narrow way the more subtle are the suggestions of material sense. Evil's most plausible proposal came to Jesus after the forty days of prayer and fasting in the wilderness, when he had come nearer than ever to the perfect demonstration of the power of Spirit over matter. But Jesus rebuked the request that he command the stones to be made bread, thus stripping matter of its false claim to be substance or of contributing to the demonstration of life eternal. No one realizes as does the Christian Scientist the deceit of the material senses, how they are ever ready to clamor for the credit of Spirit's demonstrations. He that would comprehend what is meant by dominion "over all the earth" must contemplate through the lens of scientific humility the absolute dominion of Christ, Truth. Progress must reveal to each one of us that, however many degrees or beliefs of material density there may seem to be, there can be but one true understanding of divine Science, and he that has it reflects the Mind "which was also in Christ Jesus." The psalmist says of God, "His understanding is infinite."

Our Leader is the first in this age to unfold the true meaning of humility. She says, in introducing that treasure-volume, "Miscellaneous Writings" (p. 1): "Humility is the stepping-stone to a higher recognition of Deity." The proof that we possess humility is shown in our demonstration of the healing power of Truth and Love.

THE IMPORTANCE OF LETTING GO.

VELMA SWANSTON HOWARD.

There is a negative holding-on, prompted by human will and self-interest, which we are very prone to mistake for the positive grasp, born of spiritual understanding and insight. For months I had been pushing and straining in order to bring about the successful consummation of a business deal in which I was materially interested. At first I took the successful outcome for granted, then one obstacle after another loomed up; the channels through which I had expected to see a smooth and unobstructed flow of good results were closed, and all was seemingly at a standstill. Then came confusion, darkness, and chaos. I began to analyze, from a human standpoint, the whys and wherefores, becoming discouraged and resentful as I perceived that one after another of my plans had been frustrated—the labor of years apparently wasted. I could

Digitized by Google

think of nothing else than the disappointment; it dominated my waking thoughts, and even found lodgment in my sleeping dreams. In consequence, matters which at other times I should not have noticed, assumed gigantic proportions, and as a result of this self-mesmerism I was attacked with a severe bodily illness.

I want to say that during this period I had read the Lesson-Sermons regularly, and studied, as I thought; but the sense-clouds kept gathering until they enveloped me completely, for in my reading of the Bible and Science and Health there was ever an undercurrent of selfish thought, which, if not consciously directed upon my personal interests, was nevertheless there, and prevented my gaining the spiritual stimulus and help which hitherto had come from the study of these sacred books. At this stage I became alarmed at my condition, and having called a practitioner I talked with her of the things that were troubling me. "Let go this clutching and reaching out for the unreal, and get a grasp on the truth," was her practical advice. For an hour or more she worked with me, alternating the audible with the unspoken word, and when she left me I was resting quietly. After a bit, a little light filtered through my consciousness, and I began to see things in a new way. I saw that for months I had been carefully collecting, labeling, and treasuring a lot of discords. I had gone over and over my list, taking care not to lose or forget one little item. With this collection of woes I had been going to God daily and hourly. These I had taken to Him, but nothing else. As I thought of this I began to look around me, and I saw a great heap of things,—things which I had overlooked,—and these were the blessings. As I began to examine these, the "still small voice" of Truth penetrated my consciousness, "You must take these to God and thank Him for them, for they are His gifts; while the discords are of your own making."

When some first come into Christian Science they are almost overwhelmed by the ease with which they demonstrate their business and physical problems; they are then apt to become self-complacent and indolent, and delude themselves into believing that they can take the gold of the sanctuary (Divine Science) to gild the temple of Apollo (worldly ambition); but from this dangerous mesmerism we needs must be shocked by failures and defeats, that we may learn to differentiate between the real and the unreal, the true and the false. As I lay on my bed—pain-racked—I saw in my mind's eye a pair of scales descend, and again the "still small voice" whispered to me: "Place your bundle of grievances in one scale, then gather your blessings and put them into the other scale." As I did this, the little bundle of selfish interests vanished into the mist and the darkness, while at my feet lay the great heap of blessings. As I looked upon these, the sense of physical pain was gone; then I perceived that this also belonged in the bundle of illusions, and that it had disappeared with the other unrealities.

For the first time, this passage in Science and Health (p. 261) unfolded itself to me in all the richness of its spiritual meaning: "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

AND what is night?
The sun is still—
Earth, in its turning,
Turns away—that's all—
Love's always there!
Let us reflect that Love,
And we shall be
Held in Love's law eternally,
No night is here.

LAURA B. DOORLY.

SELECTED ARTICLES.

[From *The Christian Science Monitor.*]

MRS. EDDY'S CITIZENSHIP.

To the Editor of The Christian Science Monitor:—The instant contribution of five hundred dollars made by the Rev. Mary Baker Eddy to the fund for the Italian sufferers in this appalling calamity that touches the entire world, reveals anew (what is always being revealed) the good citizenship of the Founder of Christian Science.

Wherever there is human need Mrs. Eddy responds with an ideal promptness and liberality that invests her gift with double aid. Bishop Phillips Brooks used often to speak of "timeliness" as one of the great factors in aid and in any achievement. Mrs. Eddy's life is a gospel of timeliness.

All beliefs and all forms of religious faith are as one in the great essential of human brotherhood—for which no life of man or woman, in historic or contemporary time, has stood for a nobler ideal, constantly illustrated in daily life, than that of the Rev. Mary Baker Eddy.

LILIAN WHITING.

The Brunswick, Boston, Dec. 31, 1908.

[L. in the *Brooklyn Eagle.*]

The lawyer quoted in yesterday's *Eagle* says: "It is the duty of the community to prohibit the practice of medicine or healing by Christian Scientists and by all persons who are not properly qualified according to the common understanding."

Wisdom and absurdity are ingeniously entwined in this dictum. A Christian Scientist, or any other person not a regularly licensed physician, who prescribes medicine, should be put in jail. Such malpractice would be the false pretense of quackery—claiming to understand drugs without studying the science according to which they are to be administered to secure beneficial results. So, leaving out that part which is conceded by every conscientious person, the lawyer's claim may be more clearly and fairly set forth in this fashion: It is the duty of the community to prohibit healing by Christian Scientists, and by all persons who confine themselves to prayer, and are therefore not properly qualified according to the common understanding. But the first amendment of the Federal Constitution allows a man to pray. He may pray for health. And in the free exercise of the right to pray, also guaranteed by that amendment, it must be assumed that he may engage the services of another to help him—to teach him how to pray and to pray with him. "The laborer is worthy of his hire," therefore it is also just that the man who is being prayed for shall pay the man or woman who comes to him with this special knowledge in his need.

What is this common understanding, this standard, or unvarying principle, of which the critic writes? Will this common understanding come forward when a man is in an extremity and given up by the regular doctors, and tell him how much quinine and calomel he should take with his prayers? Can the critic, who is familiar with the common understanding, tell? Can the state tell? If no one can tell how much, who can tell why, at all, these or any of the fifty thousand preparatory drugs now on the market should be used? Who knows? What did men do before the principal by-products of the Standard Oil Company emerged from the tar-barrel to the drug-market? If there be those in this country who have no confidence in the tar-barrel and would walk by faith alone, without the drug-store's support, the Constitution of the United States declares they may enjoy that liberty. The rest of us, sitting in the seat of the scornful, may think they are

Digitized by Google

fools, but that makes no difference. We must be fair. We must allow them to turn heavenward, that is, within themselves, while we hasten for our pills and the pacifying plaster. And why should the community prohibit the practice of healing by prayer without drugs, as the critic declares it to be its duty "above all"? If it be folly for the sick man to turn to one who brings him hope through prayer, the practice will die out quickly; but prohibition breeds martyrs, and their blood is prolific seed.

Prayer is high aspiration—it is the longing of a loving heart, knocking that it may receive. Belief in the efficacy of prayer and of pills is in the bone and marrow of all races. But armies of devoted men and women stand ready always to undergo any privation, to fight, if necessary, for the right to pray, while only a few will fight, and then usually through an attorney, for the right to take or sell rhubarb pills, massage, or "something just as good." This being so, shall we ever learn not to trouble men who pray? Getting right down to the truth of the matter, prayer is quite as legitimate as allopathy, homeopathy, osteopathy, hydrotherapy, X-rays, Turkish baths, or hot-water bags.

And why not? Why not respect the man who, to save wife, child, or himself, deserted by every other school of healing recognized by the community or state, turns direct to God with a minister or mediator who comes to him bringing the calm, sweet faith of the fathers of the church? And if, perchance, his reward is a restoration of the loved one, who shall say it is not a divinely natural effect instead of a coincidence? Where is the wise man who can say? If he be a Christian, what can the critic say? And if the loved one has been restored, shall that man not have the right to turn again in faith, when the emergency arrives? Or are we all so very sure, as the critic is, that the "common understanding" is the source of all power and wisdom, and therefore that the state should compel us to turn to it on our death-beds?

[From the *Pacific Outlook*, Los Angeles, Cal.]

It is to be regretted that a Christian clergyman with a reputation such as that enjoyed by this critic of Christian Science should deem it necessary, in his endeavor to build up his own conception of the Scriptures, to attempt to discredit other Christian beliefs. His repeated and malicious attacks upon Christian Science, in the face of the great work this Cause is doing for the sick and suffering of the world, redeeming mankind from the bondage of sin and disease and slavery to alcohol, drugs, and tobacco, may be cited in proof of his ignorance of the subject of Christian Science and the great good which every intelligent man, whether a Christian Scientist or not, must admit it is accomplishing.

It is a source of some surprise to us that in this day of religious tolerance and enlightenment a man of this critic's supposed standing should descend to methods which have long since been discarded by intelligent and fair-minded men. The average man of intelligence will respectfully refuse to criticize adversely something with which he is unfamiliar. It would appear that in the case of this clergyman, however, it is not essential that he should understand the fundamentals of Christian Science before entering upon a bitter criticism thereof.

On the very evening on which he was most loudly denouncing Christian Science, referring to its literature as "trash" and expressing a desire for its destruction in a big public bonfire, every Christian Science meeting-place in this city and vicinity not only was filled to overflowing, but at some of these places many persons were actually turned away long before the hour for the beginning of the service. These thousands of students attend these meetings to express their thanks to God and to Christian Science for deliverance from sin and sickness in its myriad forms. Why cannot our critic see this? Why does he not carefully investigate the subject before assailing it? What is it that is turning tens of thousands of intelligent men and women every month toward Christian Science, after all other means of spiritual and physical help have failed?

[Frederick Dixon in the *African World*, London, Eng.]

When our critic talks of Christian Scientists having "the audacity" to treat cases the "symptoms of which they do not know," he is forgetting the interesting fact that there has hardly ever been a case of sickness healed in Christian Science, after the failure of the medical profession, the effect of which has not been belittled by the statement that the original diagnosis was a mistaken one. In the report of the Metropolitan Asylums Board for last year it is recorded that thirty-one hundred and eleven cases, wrongly diagnosed, were admitted to the Board's isolation hospitals, and the writer of the report goes on to remark that "it is much to be regretted that the number of cases of mistaken diagnosis is apparently on the increase."

In the light of these figures the doctor's adjectives become a little redundant, and one is tempted to consider the question why, instead of welcoming efforts for the amelioration of human suffering, some people always assume the hypothesis that everything is for the best in the best of all possible worlds. Christian Scientists are perfectly well aware that if Christian Science is to increase and spread its healing more and more throughout the world, it will have to be because its treatment is proving practically more efficacious than that of other systems, and for this reason they have no time to spend in depreciating the efforts of their neighbors. They require all they have for the consecration of themselves to the labor of the great Cause which they have enlisted to support.

[Editorial in the *New London* (Conn.) *Day*.]

The idea that Christianity is good for the body as well as the soul of man has been relegated to the background, and a great part of the church has contented itself with an expression of belief that the age of miracles had passed and explained the statements made to Christ's disciples about the ability to heal diseases as being confined to those early days, or else maintained that the spiritual healing was the most important work. Sometimes it has been hard work to reconcile the statements of the Bible with the modern contention, but it was treated as one of the mysteries of faith that could not be very definitely explained.

The rise of the Christian Science movement and the frank acceptance of the idea that the Founder of Christianity meant what he said in regard to the relief of the sick, have caused no small degree of uneasiness among those who could not quite accept the orthodox explanation of the church's attitude on the question of healing, and a good many sermons have been delivered in the attempt to prove that the movement was founded on error. In spite of all that was said, however, Christian Science attracted a great following, and there were many witnesses who attested to having regained health as a result of their faith in the teachings of Mrs. Eddy.

[Alfred Farlow in the *Boston Times*.]

"With God all things are possible," but no-things are not possible with Him. All that exists is by virtue of the divine possibility; in other words, God made all that was made, "and without him was not any thing made that was made." The Scriptures also declare: "And, behold, it was very good." That which is not good is not of God, does

Digitized by Google

not exist by reason of divine possibility, has no foundation in fact, and must, therefore, be classified as error, which Mrs. Eddy defines in Science and Health (p. 472) as "that which seemeth to be and is not." God created all things as they really are, but not as they appear to that comprehension of mortals which is not able to perceive God's creation as it really is.

The Bible truly teaches, "This same Jesus, which is taken up from you into heaven, shall so come in like manner as ye have seen him go into heaven." This text signifies that the going away of the personal Jesus ushers in the "second coming." The disciples believed the teaching, "Flesh and blood cannot enter the kingdom of God." They knew, therefore, that Jesus did not take his material body into the spiritual realm. They knew also that he did not leave it behind him to be buried. The answer to the question, What became of the material phenomenon called flesh? is that he rose through spiritual understanding into a perfectly spiritual mental condition. Jesus had gone from the perception of human eyes, and yet remained as he said, "Lo, I am with you alway, even unto the end of the world."

To understand the Master's demonstrations whereby he overcame the flesh is to understand the impersonal spiritual individuality which his fleshly appearance had typified. The same understanding which enables mortals, as eye-witnesses of the truth, to lose their belief or faith in the flesh or matter, also brings into their realization or perception the spiritual Christ. Hence the statement, "This same Jesus . . . shall so come in like manner as ye have seen him go into heaven." The text does not read, and does not mean, that the personal Jesus will come again. It does not read, and does not mean, that he will return in the same form in which he went away, but that the second coming will be after the manner of his going away. His going away was a spiritual demonstration. His return is also a spiritual demonstration.

Jesus said, "The kingdom of heaven is like unto leaven, which a woman took and hid in three measures of meal, till the whole was leavened." The kingdom of heaven, that spiritual state wherein God reigns supreme, is made possible by a full knowledge and practice of right. Each individual enters the kingdom of heaven, that is, reaches that condition wherein is perfect bliss, by understanding and practising the truth in all its fulness. The individual starts with a small understanding, and by putting that into practice begins to enter into a harmonious state. This little understanding of "leaven" increases day by day until it becomes infinite, and the individual is thereby ushered into a full and perfect heavenly state. Surely our friend will not insist that the leaven to which Jesus referred in the text was evil. Jesus said, "Beware of the leaven of the Pharisees." In this latter text the leaven evidently signified a wrong understanding, but the leaven which he likened unto the kingdom of heaven could have been nothing more nor less than that which he advocated as the means of establishing the kingdom of God.

Mrs. Eddy does not teach that the Jewish God was a God of wrath, but that the ancient Jews believed Him to be a God of wrath, a God who became angry and visited calamities upon His children in consequence. Christian Science teaches that calamities are due to a mortal lack of understanding and reliance upon the divine power; that the discords of earth are not really produced by a cause nor any sort of rule, but by misrule or want of rule. They exist because mortals lack in their recognition of God, and place their dependence upon materiality. Christian Scientists agree with our friend that when Jesus declared that the Scriptures testified of him, he was referring to the Old Testament. So there is no point of disagreement on that subject. He declares that Christian Scientists necessarily omit the self-sacrificing missionary task of saving those who are lost "because they are told and advised that the lost and sick must personally come to the Christian Scientist practitioner before the practitioner can aid the sinner." Here our friend is dealing with a technical point and evidently has misapprehended the subject. Christian Scientists are seeking to present the truth to all mankind, but they do not believe in proselyting nor intruding their ideas or offers of help upon those who do not desire them.

Mrs. Eddy teaches that a Christian Scientist practitioner generally waits until his service is solicited, and does not make a practice of treating the afflicted without their knowledge and consent except in certain cases of emergency. This does not necessarily mean that it is never proper nor right to solicit the attention of those who need help. It would not prohibit a Christian Scientist from asking another if he desired help, but it would prevent forcing an individual to take Christian Science treatment when he does not desire it. I think it can be truthfully said that no class of Christians labor more ardently than Christian Scientists to seek out and help those who are in need. At any rate, the teaching of Christian Science demands this. It is probably safe to assume that Scientists, like others, differ in their inclinations in this respect. Some are more charitable than others and have a more neighborly interest in their fellows than others.

Christian Scientists are pleased to plead guilty to the charge that they "do not recognize Satan and his host of angels as real entities." There are few people in this age who believe in the ancient devil with horns and hoofs. Jesus did not believe in such an one. He said, "He is a liar, and the father of it." "He abode not in the truth, for there is no truth in him." To say there is no truth in Satan is equivalent to saying there is no reality in him. Satan is nothing more nor less than the human, false sense "which deceiveth the whole world" and is the father of all lies. It never had any truth in it and never was in any truth. The fallen man is the individual who has a fallen or low sense of manhood and deports himself accordingly, a man who is "not himself," an individual who has an erroneous sense and is guided thereby. Redeemed men are those who are imbued with spiritual understanding, and who have so practised it as to be lifted out of the fallen sense of mankind and made awake in the likeness of God.

[Edward H. Carman in the *Augusta* (Ga.) *Chronicle*.]

The "sensational incident" at the Young Men's Christian Association service is to be deplored, and no one regrets it more than the friend whose zeal for the moment got the better of his judgment. When one's religious convictions are assailed, if those convictions are deep-rooted, it is hard not to take the attack as personal. Back of the "sensational incident" is a cause far deeper than the reverend gentleman's attack on Christian Science or our friend's interruption and defense. If he had been more Christianly scientific he would have silently prayed as did Jesus, "Father, forgive them; for they know not what they do." In this silent prayer he would have breathed a benediction that would have been a prayer for good—a blessing upon the whole situation.

Now to reply to the attack, which when summed up was about as follows: that Mrs. Eddy is not the Discoverer of Christian Science; that Christian Scientists do not believe in matter and deny the evidence that Jesus was immaculately conceived, and that he did not die nor that he was resurrected, and that Christian Scientists do not pray. It is with a sense of kindness and charity that the defenders of Christian Science reply to adverse criticisms and attacks on its Discoverer and Founder, Mrs. Eddy, and the doctrines of Christian Science. Many who now are Christian Scientists formerly condemned its teachings and

Digitized by Google

said hard things against its Discoverer, because they did not know any better—when they learned better they repented of the error and became earnest seekers for the joy and comfort which they have since found. Paul, a religious zealot before he was a Christian, went about the country armed with authority to persecute, condemn, and destroy Christians. When the truth dawned on his darkened consciousness, his physical body was so agitated that he was stricken with blindness and he had to be taken to Ananias to be treated and healed of his blindness, proving that the false material sense of sight must be instructed by spiritual sense to be healed of its falsity. All error must be seen before Truth can destroy it.

Jesus' defamers called him a glutton and a wine-bibber, —a blasphemer in league with Beelzebub, the prince of devils,—but these accusations and false opinions did not make him either the one or the other. Neither do all the misconceptions of Mrs. Eddy and her life-work, and the misunderstanding and misinterpretation of the teachings of Christian Science, make her other than a godly woman and her teachings Christian and scientific. The only possible way to understand Mrs. Eddy and her place in the history of the unfolding of the truth in human consciousness is to gain some understanding of Christian Science, and the only way to understand Christian Science is to see Mrs. Eddy in the light of one fitted to receive a revelation and then to study her writings without bias or prejudice. She does not claim to have invented Christian Science, but she does claim to have discovered it, and to have also discovered, through years of consecrated study of the Scriptures, its rules of demonstration and practical application to the daily needs of mortals, and she has to-day the joy of seeing her discovery established in the hearts and consciousness of men and women who are making this scientific Christianity practical—with "signs following." . . .

Mrs. Eddy was healed while reading the Bible, after her physician had said she had only a few hours to live and her pastor had prayed with her and bade her farewell. Unlike every other human being who has been healed by faith, she recognized that back of this healing there must be a law—a scientific law—and her own words, taken from Science and Health (p. 109), tell the story of how she worked out the great problem of Mind-healing. She says, "I searched the Scriptures and read little else; kept aloof from society, and devoted time and energies to discovering a positive rule. The search was sweet, calm, and buoyant with hope, not selfish nor depressing. I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration. The revelation of Truth in the understanding came to me gradually and apparently through divine power." . . .

Christian Science as taught by Mrs. Eddy is making aggressive warfare on every form of evil and error, either as disease or sin, and this warfare is to be carried on until all evil is made unreal, and the kingdom of heaven established on earth. The reason that "men and women of intelligence and culture" are being led into Christian Science and the "other churches" are losing their hold on them, is because Christian Science is sounding the key-note of freedom from the thraldom of ignorance, superstition, fear, worry, disease, and discord of every name and nature. God is in it, and "the Lord's hand is not shortened, that it cannot save."

[Editorial, *Western British American*, Chicago.]

In glancing over the pages of the great daily newspapers of this country—the journals of immense circulation and corresponding influence—the average right-thinking man is often moved to wish that there was less of enterprise and more of morality in the business of journalism. The astounding progress of the modern newspaper-maker has been seemingly achieved at the expense of his better nature. "All the news that's fit to print" is a common caption with the press of the United States, but the "unfit" kind continues to get the largest amount of space and the most alluring head-lines and to be couched in the most readable guise. The man who invented the foregoing phrase is dead these many years; he meant well by it and he lived up to it; but his followers everywhere, who still cling to it as an advertisement, long ago ceased to put it into practice.

Our friends the Christian Scientists are opposed by many on account of their faith and philosophy, but most people will wish them success in their latest enterprise—a daily newspaper that is to be clean as well as comprehensive. On Nov. 25 the first issue of *The Christian Science Monitor* made its appearance in Boston, Mass. It is to be a newspaper in all that the name implies; it is to cover the doings of the wide world and will leave out nothing of interest to readers who have a wholesome curiosity to know the events of the day in this and other lands. But, in presenting the current happenings, it will appeal to the ideal in human nature and not to its baseness and brutality. This is the innovation aimed at by the Christian Scientists, and it is a radical change in journalistic method that the better class of readers have often wished for.

The father of a family of imaginative boys and girls will not find it necessary to censor the *Monitor*. He will not be obliged to go over its pages with the scissors to eliminate grewsome murder mysteries and salacious divorce scandals. . . . The valuable space given over by other daily papers to twaddle and gossip will be filled, in the *Monitor's* columns, with instructive reading, such as attractive home departments, hints for the business man, and honest editorials. Its advertising matter will be on a par with its news sections in point of reliability; no price will be big enough to boost fraud or help the sales of a swindler.

The prevailing fierce competition in the newspaper field has brought the high-class publisher down to the level of his "yellow" neighbor. The former, it may be said, has relinquished his self-respect unwillingly; the people seemed to demand it, and it was his place, he thought, to give them what they wanted. He was not prepared to lose temporary profits in order to elevate the public taste, which could be taught to like the best instead of the worst. So close have the two extremes of journalism come together in recent years, that to-day it takes an expert sometimes to tell them apart.

The new venture of the Christian Scientists is welcomed with pleasure and its career will be watched with interest. Under any auspices it would be welcome, but with such fine backing as these enlightened people can give it, it is doubly so. The hope of all good citizens is that it will be the forerunner of a much-needed revolution in the newspaper world.

It is the desire for the happiness of those whom we love which gives to the emotion of love itself its principal delight, by affording to us constant means of its gratification. He who truly wishes the happiness of any one cannot be long without discovering some mode of contributing to it. Reason itself, with all its light, is not so rapid in discoveries of this sort as simple affection, which sees means of happiness, and of important happiness, where reason scarcely could think that any happiness was to be found.—THOMAS BROWN.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE MONITOR.

CHRISTIAN SCIENTISTS in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

MARY BAKER EDDY.

Chestnut Hill, Jan. 7, 1909.

HOW TO THINK RIGHTLY.

WE copy the following item from the *Evening Star* of Washington, D. C.:—

With the statement that "our thoughts are the rudder of our life," the Rev. John Reed Shannon began a series of New Year sermons to young people at the Metropolitan M. E. Church. He described thoughts as "forces more real than granite mountains. Low, groveling thoughts lay terrible assessments upon the body. Catastrophes in moral life come because evil thoughts have been cherished. The tree falls in the storm, its trunk breaks asunder and reveals the fact that decay has been going on within the tree, weakening it. Men fall because moral decay, in the form of evil thoughts, has been going on in their minds.

"High, wholesome thoughts have for the body preservative and curative energy; they are better for one's physical condition than drugs. All the water on the outside of the ship cannot sink the ship. It is water on the inside of the vessel that imperils it. So the Christian is morally safe so long as he keeps evil thoughts out of his mind. Then he can keep his robes unspotted from the world. If a man's life is like a broken harp, whose strings jangle out of tune, the cause is found in his thoughts. If a man's life is like a harp whose strings give forth the music of happiness and contentment, the cause is found in his thoughts. As a man 'thinketh in his heart, so is he.'"

What Mr. Shannon has said above is fine, but unfortunately it does not go far enough to be of the greatest value to those "simple seekers for Truth" who, as Mrs. Eddy tells us, are as "weary wanderers, athirst in the desert" (Science and Health, p. 570). It does not do much good to tell a discouraged and despondent mortal that he must think rightly, unless we tell him how to set about it. We must point him to the Principle of all right thinking. We must show him that the only true thinking is that which reflects infinite Mind, and that all other so-called thinking is unreal and untrue; without power and without authority.

If God is Mind, then He is infinite Mind; and man, who is the image and likeness of God, reflects this Mind. In defining man, Mrs. Eddy says, in Science and Health (p. 475), he "has not a single quality underived from Deity;" also that he "possesses no life, intelligence, nor creative power of his own, but reflects spiritually all that belongs to his Maker." Mortals need to be taught how to reject every evil suggestion and how to welcome every divine idea; how to distinguish between the real and the unreal, the true and the untrue.

The great value of Christian Science lies in its practical application to the needs of mortals, and the ability to distinguish between right and wrong which it imparts to its students. It is through this practical application of the teachings of Jesus that mankind may be freed from the bondage of both sickness and sin.

ARCHIBALD MCLELLAN.

SYSTEMATIC STUDY.

THE many thousands who study our Lesson-Sermons from week to week may gain a useful hint from the experiences of those who are engaged in gold-mining. A few years back it was known that large quantities of the precious metal were near the surface in some of our gold-fields, but even after the ore had been taken out, crushed, and subjected to intense heat, the gold could not be separated from certain chemicals which clung tenaciously to it. After years of patient and costly experimentation, however, a process was discovered by which the separation was made and a larger percentage of the gold secured. To-day greater care and improved methods of treating the ore yield yet better results.

In a similar way the great treasures of the Bible have for long years been practically unavailable for human need. It is true that here and there some one would find that the truth about God is more to be desired than gold, "yea, than much fine gold," but in general experience many sincere seekers after the truth admitted that while it seemed to lie at their very feet they did not possess it as did Christ Jesus and those whom he instructed,—they were unable to lay hold upon the "hid treasure," as did Peter when he said to the lame man, "Silver and gold have I none; but such as I have give I thee." Then he gave him his healing from the treasure-depths of divine Truth. Now, however, thanks to the tireless research of the Discoverer and Founder of Christian Science, the Bible is yielding up its treasures; the pure gold is being separated from the dross of human sense, the clinging errors of material belief which have made even the fine gold of the sanctuary "become dim."

Too long have sickness and sin, want and woe held sway in mortal experience, although all the while the infinite supply for every human need was within reach of all humanity did they but know how to "take forth the precious from the vile," as it is phrased in Jeremiah. This the study of our text-book enables us to do, and at each reading we find more and more of the treasure which awaits all those who seek diligently for it.

"Seek, and ye shall find," said the great Teacher, and in our study of the Lesson-Sermons we shall be aided by looking up in the Glossary of Science and Health the definitions of words used in the Lesson, when these do not appear in any of the sections, for by gaining the spiritual sense of one word, perchance, much light is thrown upon others. It is also surprising how much useful information is to be found in the "Teacher's helps," including a concordance, supplied as an appendix in most Bibles. In addition to this, an ordinary English dictionary within reach is invaluable, for it is simply astonishing how many well educated people there are who have very vague ideas as to the actual meaning of words. Too much cannot be said for the concordance to Science and Health. It is so well arranged that any passage may be found without delay by looking up the word which comes most readily to thought.

In this study our quest should not be for the letter only, but for the spirit which giveth life, and our actual gains will be manifest in an enriched sense of being, in the good which we embody and do. God's Word is an inexhaustible source of wealth, and its treasures are being found and utilized in Christian Science as never before in human history. At each sifting of the word of Truth greater values are found, and surely yet more remain if our spiritual city is to be paved with "pure gold" as St. John tells us. Well said the wise man, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding."

ANNIE M. KNOTT.

"BLESSED ARE THE PURE."

BE they erudite or ignorant, good or bad, clever or commonplace, there is no diversity of opinion among men respecting the truth of Jesus' words when he said, "Blessed are the pure in heart;" the exaltation and the supreme desirability of such a consciousness admit of neither denial nor doubt. To many this ideal seems so far removed from the plane of human possibilities that they never think of it seriously as a goal for which they might well strive; they classify it rather as the unattainable heaven of happy dreams. To others, however, and in all times, the ideal life has proved an irresistible attraction, and in seeking to win it they have illumined the tales of human heroism with colors that can never fade.

Many explanations lie behind human failures in this field, and among them this, that men have centered their thought upon the phenomena of an ideal consciousness rather than upon the ideal consciousness itself; upon conduct rather than upon motive, upon appearances rather than upon the right thinking which would determine appearances. Consideration for one's place and profession, for the adjustment of one's speech and acts to a high standard of consistency or conventional requirement, is not without value. Regard for their church and family and social standing no doubt helps many to the attainment of a better ordered life, even personal pride may impel one to take his stand against grossness; but there is an inevitable tendency in all this toward cant and pretense, that superficiality of moral view and attainment which would be well named "manufactured propriety," and seeing this, we see that the only basis of a genuine life of freedom, joy, and usefulness is an ideal consciousness. "The corner-stone of all spiritual building is purity" (Science and Health, p. 241). It is that state to which Paul refers when declaring that the weapons of the Christian's warfare are mighty through God to the casting down of "imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ." If we are not acquiring a purer thought and purpose, the effort to live a blameless life is an altogether hopeless undertaking.

In defining angels as "the inspiration of goodness, purity, and immortality, counteracting all evil" (Science and Health, p. 581), Mrs. Eddy has called attention to the protecting power of continuously clean thinking, the abiding right idea. It is this that disarms temptation and supplies the impenetrable armor which turns aside the shafts of evil. It is this that gives alertness to right impulse, freedom to the enthusiasm and spontaneity of our nobler nature, and it is this that begets susceptibility to those impressions of truth and goodness through which every budding of beauty and joy bursts into bloom.

Untrammeled by fleshliness, consciousness comes into its own, begins to experience the exhilaration of the prophet and poet, the native and eternal "liberty of the children of God." Purity of thought is a refuge also from the selfishness that would make men petty and mean, and from the fear that mothers all superstition. Purity has no kinship with error, but companies ever with honesty and rectitude and justice, with all the manifestations of Truth and Love. It is the safeguard from all sin, the very talisman of the soul, and apart from it there can be no true happiness.

Phillips Brooks has said that "he who most deeply feels his sin will ever seek the purest soul to tell that sin to," and in this he has recognized not only the gentle rule of righteousness, but the world's pitiful need of that comfort and strength which those alone can supply who have reached that highland of hope and of "sweet integrity" where dwell the humble, and where the Master's benediction is heard, "Blessed are the pure in heart."

JOHN B. WILLIS.

THE PUBLISHING HOUSE BUILDING FUND.

IN reply to inquiries that have been made I wish to state to the Field that the fund for the erection of an extension to the Publishing House made necessary by the publication of *The Christian Science Monitor* is not complete, and that further contributions to this fund sent to me will be welcomed and promptly acknowledged.

STEPHEN A. CHASE, *Treasurer.*

NOTICE.

A number of pages have been added to *The Christian Science Journal* during the past few months and the weight of the magazine has thus been increased to the point where it now requires three cents (3c.) postage on single copies to all points in the United States, Canada, and Mexico, and five cents (5c.) to other countries.

LETTERS TO OUR LEADER.

[Telegram.]

St. Joseph, Mo., Jan. 5, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—The representatives of churches and societies of Christian Scientists in Missouri, in annual conference assembled, unite in loving greetings to you, and pledge themselves to strive more earnestly, day by day, for the clearer understanding and more perfect manifestation of the truth which you have unfolded to the world, and by which sin and sickness are destroyed and life and immortality brought to light.

Yours in loving obedience,

CHURCHES AND SOCIETIES OF CHRISTIAN SCIENCE IN MISSOURI.

MRS. EDDY'S REPLY.

Chestnut Hill, Mass., Jan. 6, 1909.

Churches and Societies of Christian Science in Missouri:—"Well done, thou good and faithful servant: . . . enter thou into the joy of thy lord"—the satisfaction of meeting and mastering evil and defending good, thus predicating man upon divine Science. (See Science and Health, p. 227.)

Lovingly yours,

MARY BAKER EDDY.

U.S.S. Missouri, Yokohama, Japan, Oct. 23, 1908.

Dear Mrs. Eddy:—The cruise of the sixteen battle-ships is nearly finished,—only some twelve thousand miles more to be made,—then they will come sailing home, and all will be glad to be there. While many things have been written about them, I am sure that you will be pleased to hear the experience of a student who made the voyage and had the blessed privilege of visiting many Christian Science churches on our western coast, besides many others set like gems in the islands of the sea.

At San Diego, Cal., I commenced to fall in with these great western societies. From San Diego to Seattle, Wash., I met thousands and thousands of our people who are spreading the glad tidings. I noticed that at nearly every place the buildings were filled to the doors and plans were going on or had been made for new and larger buildings. I found all happy and enthusiastic over what Truth is doing for them and for the world. It seemed to me that at Los Angeles, Cal., the time is not far distant when one will not need to preach the gospel to his neighbor, for all shall know it. I heard one man, who had come to Los Angeles for the climatical conditions, telling several men at the hotel where I stopped, that he hoped to live a few

Digitized by Google

months longer by coming there and living in a bungalow on the beach. The sympathy of his listeners was sincere, but how blankly and helplessly they looked at him! Such gladness came to me as I realized how the truth could make him free, and change his thought from a prospect of death to life and freedom. Later, when we were alone, I told him about Christian Science and directed him to a Reading Room where he could get further information and instruction. This seemed to encourage and make him very bright and cheerful.

At Los Angeles and Santa Barbara we were supplied by kind friends with Christian Science literature, which was very helpful and interesting to many aboard. The stay was most enjoyable at San Francisco, where D. A. Woodward and Frank Gale saw that the ships were well supplied with Christian Science literature. From this place two Christian Science ladies each sent me a copy of the text-book to be used to the best advantage. At Vallejo, Cal., we remained over a month, and were just in time for Dr. Fluno's lecture, which all enjoyed very much. Here I became acquainted with the members of a very earnest little society, who are working faithfully in the vineyard and demonstrating their understanding by some beautiful healing. This is such a transitional place, so many coming and going, that it seems as though they would never have a church building of their own. I am sure that there are many who, if they knew the need of a small church here, would be glad to give these dear friends what they have desired so long; and while they are trying to realize that "divine Love always has met and always will meet every human need" (Science and Health, p. 494), I shall be glad to be one of the many to help our friends to build a nice little church of their own.

On leaving San Francisco for the East, that which always pleases, and eventually comes to all, happened: From the reading of Science and Health, another had started on the road that leads to Truth and Love, and by the time we reached Honolulu, T. H. (ten days), he was able to lay aside the glasses which he had worn for several years. So you see, we have gained one hundred per cent at least in numbers. For some time the Missouri only supported one student, now there are two. At Honolulu we found a very earnest band of workers. At a drug-store something that was said caused the druggist to ask me if I were the chaplain aboard, and when he heard that I was not, but just an ordinary Christian Science student, he said, "Well, I can't understand those people; but they surely have some secret, for we have a man here that had paralysis so that he was confined to his bed for a long time. Many doctors had treated him without any apparent result. At last a Christian Science woman took hold of him, and now, while he is not completely healed, he is walking in the streets and is improving daily." And so even outsiders, although unconscious of the fact, are testifying to the works of Truth through this earnest little band.

At Auckland, New Zealand, we looked for Christian Scientists, but did not find any. However, we found some very earnest people who were looking for Christian Science books, and who were delighted to have us leave them two copies of Science and Health, with other literature. From letters received since, we find that real, substantial progress has been made. At Sydney, Australia, we found a building filled with Christian Scientists, and as usual they were trying to get a larger one. At Melbourne, as in Sydney, we found a nice large congregation and splendid meetings. Even the excitement which the fleet caused, and that was no small commotion, did not keep them from the meetings, and both in Sydney and Melbourne we made many dear friends who will never be forgotten. Many spoke of the blessings that have come from the new By-law which allows a longer Sunday School experience, as it gives those between twelve and twenty such valuable instruction, together with some real work to do which they feel belongs to them alone, and which the young people of Australia need so much.

At Manila, P. I., we thoroughly enjoyed the Christian Science society, and when leaving found words wholly inadequate to express our thanks for the pleasure, instruction, and help that we had received while there. Until reaching Honolulu we did not know that Christian Science had found a permanent foothold in Japan, and so we had a happy surprise when we arrived at Yokohama, and found the Lesson-Sermon was being read each week by a small gathering.

Before closing my letter, I wish to thank you for making possible such conditions as we have found reaching entirely around the world. It seems so like the early Christian church, for on the whole voyage I have not heard one word of creed or dogma, but only how divine Truth is healing sin, sickness, and error of all kinds. I should be glad, if space permitted, to tell you of each one that I have met, of their work, and of their loving-kindness to us, which has made this trip one of peace, happiness, and joy.

K. D. GRANT, U.S.N.

Council Bluffs, Nov. 30, 1908.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—I want to express to you my gratitude for our text-book, "Science and Health with Key to the Scriptures, and for what it means to me and my family. For eight years it has been a continual revelation to me, taking on a higher meaning as I read it day by day. Whenever I remember what it means to be a true Christian Scientist, my thoughts go out to you and to the time when you stood alone without any human power to guide you, and when I am filled with a sense of the beauty and purity of your teachings, I remember that the fountain may be judged by its stream and that God chooses the "one who is spiritually near Himself" to be His messenger. Then I remember that we cannot fully understand Christian Science until we understand the revelator. I am glad that now and then I can catch glimpses of what your work has been and what it means to this and to future ages.

How much your work has meant in making our way in Christian Science comparatively easy, we may never know, but I am sure that there is no better way—and none that would be more acceptable to you—by which we can show our appreciation and gratitude than by striving to advance the Cause, so near your heart, by a noble example of daily living,—by practically remembering your words, quoted in the Thanksgiving Lesson, that "gratitude is much more than a verbal expression of thanks" (Science and Health, p. 3). I know by experience that Christian Scientists are indeed "a city set upon a hill."

Yours sincerely,

J. A. BARRIS.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local news-dealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

THE LECTURES.

MEMPHIS, TENN.

Bicknell Young lectured at the Lyceum Theater here on Christian Science, Oct. 29. He was introduced by G. T. Fitzhugh, who said in part,—

It has been said that all truth is like the parallel tracks of a railway, which lead to the same place but never cross each other. So if we be genuine seekers after truth there can be no real conflict between us, however different the paths which we pursue. To the great body of truth-seekers belong that army of cultured Christian citizens who have adopted the Christian Science faith. They are unwilling to remain always in the valley where men strive solely for the material and ephemeral things of life, but insist on climbing the hill-tops of knowledge, where above the broad and breezy sweep of earth the stars shimmer and the heavens open. They seek to scale the mountains of truth, whose lofty peaks, rising above the clouds of ignorance, prejudice, superstition, and doubt, are the first to catch the resplendent and dazzling scintillations from the divine orb, sparks of fervent heat, as well as radiant light, with power to enkindle the common mass of humankind.

Correspondence.

ATLANTA, GA.

One of the largest audiences that ever assembled in Atlanta to hear a lecture, assembled Sunday afternoon [Nov. 22] at the Grand Opera House to hear Mrs. Mims on Christian Science. For more than an hour the lecturer held the closest attention of her hearers. Among other things she said:—

The infinite, all-encompassing eternal Truth—that is, God—is also the infinite wisdom that is the infinite light of being. This light reaches human experience through that consciousness which offers the clearest transparency for its expression. Because Mrs. Eddy's consciousness was freer from the dross of matter, because she was divinely qualified, this flood-tide of truth has shone through her and is crystallized in her book, "Science and Health with Key to the Scriptures."

This light is irradiating consciousness with its unspeakable brightness, and is flooding the universe with God's glory. In this light the evil human mind is analyzed to its deepest depths, and is therefore ready for destruction. Its fruits are seen to be the Dead Sea fruits of the tree of the knowledge of good and evil, the eating of which brought death into the world. More and more as we see the tireless life of this beloved woman, lovingly keeping watch over a world that is even now budding and burgeoning into the flower and fruitage of a spiritual and practical Christianity, as we see the matchless wisdom that guides the great Christian Science movement, we recognize that prophecy and poetry have foretold this marvelous hour when, in the grand refrain of Goethe, "The Woman-Soul Leadeth Us On."—*The Atlanta Georgian and News.*

SPRINGFIELD, MASS.

The Hon. Clarence A. Buskirk lectured on Christian Science at the Court Square Theater, Nov. 29. He was introduced by Attorney Clinton Gowdy, who spoke in part as follows:—

To-day, standing forth in the white light of demonstrated truth, Christian Science is no longer an unknown quantity, even to the unbeliever, because if he will he may see many people who by its application have been saved from weary years of suffering or from untimely graves. A faith pregnant not only with hope for the future, but with the certainty of present realization, it spreads its benign influence by wondrous bounds. In no sense aggressive, it is eminently progressive. Growing in numbers as no religion in history has grown, it is still so far from the liability to any charge of proselyting that it is next to hopeless to attempt an argument with any of its devotees. They doubtless proceed upon the theory that there can be no quarrel where only one is quarrelsome. Christian Science, as we are taught to read it, goes back to fundamentals. Its teaching is world-wide and its practice is heaven-encompassing. It reaches down into the heart of despairing humanity and points the way to a heaven upon the earth as well as one beyond the stars. It teaches men to shun a hell of unutterable woe here, and thus obviate the necessity for one somewhere else.

Correspondence.

MARSHALL, TEX.

Frank H. Leonard lectured on Christian Science in this city, Nov. 13, and was introduced by W. A. Adair, who said in part,—

Though not a Scientist, I have enjoyed some of the benefits of Christian Science in seeing a number of friends find both health and happiness in its teachings, for there seems to be something in Christian Science which gives its adherents a new interest in life and fills them with sunshine and happiness; it brings to them that peace which they have not found elsewhere. I have never known a Scientist who was not happier after becoming one. Patience, gentleness, charity, and brotherly love seem to be their chief characteristics; to help, to elevate, to encourage, their mission.—*Correspondence.*

SANTA BARBARA, CAL.

There were nearly one thousand people present at the lecture given Sunday afternoon [Nov. 29], at the Potter Theater, by Judge Septimus J. Hanna. In introducing Judge Hanna Senator-elect L. H. Roseberry said in part,—

I will ask you to give the speaker about to address you both respectful and interested attention. He is to address you upon the matter of Christian Science and its foundation upon Biblical authority. Personally I consider the question of the modern religion of Christian Science as of very high importance to people seeking knowledge and help from a religious belief. It is more than interesting to intelligent people to consider the remarkable growth of so young a denomination in point of years, and among the class of people that largely make up its membership, —the intellectual classes,—for it is essentially a religion of the mind and intelligence, rather than of the passions and superstitions of men. Its membership is largely composed of the "better classes" intellectually. Some of the brightest men of this and other countries are embracing its doctrines after investigation, and they in turn are bringing in others. Leading magazines are publishing serious articles edited by scholars, and the public generally are giving it the respectful and earnest thought that it has proven itself entitled to receive. Its work with the physical side of the Science has some truly remarkable records for inspection.—*Correspondence.*

NOTICE.

Rev. Irving C. Tomlinson is so engaged that he cannot accept calls for lectures, and therefore he has been relieved from membership on the Board of Lectureship.

TESTIMONIES OF HEALING.

It is difficult to realize that the simple experiences in Christian Science healing are as important as the greater ones, although they prove the same underlying truths, viz., that "God is All," and "God is Love" (Science and Health, pp. 366, 2). Several years ago I endured for about eight weeks an acute attack of rheumatic trouble. It was a second attack, and refused to yield to electricity, massage, baths, diet, or medicine. One morning the pain was more severe than usual, and I was in a perfect passion of rebellion,—all the horrible pain, the miserable sin and sorrow that seemed such overpowering factors in life were really outrageous, and resignation contemptible.

A friend in passing stopped to ask me to dine with her that evening. She saw at once that physically I was not in condition to go about, but I was afraid she would see my thoughts were unfit also, and begged her to go away before I should voice them. She did not go quickly enough to escape hearing this, that if God intended life to be as I knew it, I was ready to curse Him. As she hurried away I remembered she was one of those strange people, Christian Scientists, and I called after her that if she could heal me in time, I would come to her dinner. She stopped on the veranda to ask if I really meant it, and I answered none too politely that I did. This occurred at noon, and a little later I felt very sleepy. I had slept only a few moments at a time for several nights, so I made myself as nearly comfortable as possible with pillows, and this was the last I knew about the rheumatic trouble. At the end of two hours I wakened, and was actually startled to find myself perfectly free from pain and soreness, and most wonderfully peaceful.

My thoughts flew back to a time in Austria years before, when a physician told me I might not live more than a few days. I recalled his astonishment when I refused to believe him. I asked him to look at the hills and sky he could see from my window. There was the peace God intended us to know, if only we could find the way out from the awful mess we called life. I insisted that I must know this peace before I could die, and here it was—just a little of it had come to me at last. My friend was young in Science; she never had worked for any one before, and asked me to go to a regular practitioner for explanations and to make sure the work was well done. I had much to unlearn and forget, so much more to learn, before I dared to call myself a follower of Mrs. Eddy, this patient follower of the infinitely patient Christ. "Wherefore by their fruits ye shall know them."

MRS. CLARICE GAYLORD, Chicago, Ill.

About fifteen years ago my health began to fail with stomach trouble and a complication of diseases, and although I had good medical attention I got only temporary relief. As years passed by my nervous system became unstrung, and I experienced spells of mental depression, during which time I was always tempted with the thought of self-destruction. By sheer will-power I would put these thoughts aside, but would always suffer from a relapse of my other ailments. Although we had five of the best physicians of our town, I could get no permanent relief, and in the summer of 1906 a new trouble developed which caused me great annoyance and terrible suffering. This trouble was declared by a doctor to be a serious condition of the bladder. I was put through a course of most awful treatment, which with dieting and the pain I was enduring weakened me so that I could not leave my bed for some weeks, but we thought the trouble was being overcome. As soon, however, as I attempted to leave my bed I suffered a relapse. I was extremely nervous and could not sleep, although I was taking medicines to induce sleep. At this time our physician told me that while he hoped to cure me, in all probability I would always have the bladder trouble. I had no hope, and any attempt to arouse myself seemed to bring renewed suffering. I wished for nothing better than to be allowed to die and be at rest.

About this time Christian Science was brought to my attention by a friend, but knowing little about it, I paid no heed to her and threw all my energy into a last effort to regain my health through material means, although I told my physician about Christian Science and asked his advice about it. He said it might relieve the awful nervous strain, but could never help my other trouble. My friend again urged Science, and one morning, when I had suffered terribly, I determined that if there was any help for me in Christian Science I would have it, and a practitioner was sent for, after a few days of opposition from my husband. It was early in November, 1906, when the practitioner first came to see me. I told her what our doctor had said, and that I believed it; all I cared for was to get relief from the nervous trouble, and I did not wish to become a Christian Scientist. I told her about my other trouble and the medicines I had taken regularly for thirteen years. I was told to put all this aside, and eat what I wanted. Before leaving she gave me treatment, and that night I enjoyed the first good sleep I had had for a long while. I sincerely believe that the healing of the bladder trouble was instantaneous, as I never felt the slightest sign of it after that day, and I took up my housework at once. The stomach and bowel trouble yielded after a few days, and there was no more nervousness for me.

After three weeks' treatment the practitioner thought I did not need further help from her. I gained the spiritual understanding slowly, but soon was able to overcome little ills myself. Among other ailments which are yielding to the truth are chronic liver trouble, a catarrhal affection, falling of hair, etc. There is scarcely a trace left of any of these. During the past year I have had some beautiful demonstrations of the healing power of Truth. I have studied Science daily since I was healed, and am not afraid to be called a Christian Scientist. It is wonderful what can be done in every direction through the Christly understanding of God. I am truly grateful to God, and to our dear Leader, for all the blessings received.

MRS. SARAH COYLE, Bay City, Mich.

[Translated from the German.]

About the last of October, 1900, my little boy, then four years old, was lost. With the assistance of our neighbors we found him about half past ten in the evening, in a field about two miles away. Through fear and anxiety his mind seemed to have been affected. He grew physically and seemed strong bodily, yet he appeared to be mentally deficient for his age. We called in a physician, who declared, after the boy had been under his treatment for four weeks, that he could do no more for him, nor could any other physician cure him, and in 1903 another physician made a similar statement.

In our despair a friend from San Francisco came to visit us, and he told us of his boy, who had undergone medical operations and had received only temporary relief, but who had finally been healed through Christian Science. He advised us to try it, and we decided to do so. My wife went with the boy to a practitioner in San Francisco; he said that all things were possible with God and that the boy could be healed. The child had nine weeks' treatment and made good progress, but time and circumstances would not permit me to let my wife remain there any longer, and she therefore returned with the boy. He improved slowly during the succeeding winter and

Digitized by Google

spring, yet now and then he would fall into his old dulness. Meanwhile, Christian Science had found its way to our town, and we called a practitioner, who gave the child treatment. After a short time this practitioner had to leave the city, but we turned the boy over to another, who has finished the good work begun in him. We may now say, with grateful hearts, that the boy has been healed through the truth. He takes his books and pen of his own free will, and is making good progress in school.

Last winter my children and my nephew were taken down with a fever. Eight persons in our home were ill with this high fever, and our house was quarantined, but all were given absent treatment in Christian Science and they were all healed through the truth. God be praised, who in His infinite goodness has made known to us this truth.—M. BUNDERSEN, Petaluma, Cal.

I applied for Christian Science treatment in a case of dentistry, with the result that all fear and dread were completely overcome and I had twelve teeth extracted in less time than it takes to tell this, with scarcely any pain or flow of blood. The dentist expressed great surprise and asked me if I would have a set of teeth put in immediately or wait three months. It seemed necessary for me to have them right away, so in twelve days from the time that the teeth were extracted the new ones were in my mouth. I have never experienced any trouble with them, and it has been over two years. I feel very grateful to Mrs. Eddy for this healing truth which she has brought to the world.

MRS. LILLIAN C. RICHARDSON, Littleton, N. H.

About a year ago a dear friend who had been healed in Christian Science came to visit me. She often told me that Christian Science would heal my troubles, and her parting assurance was, "God will take care of you." A few weeks later I had a severe illness, and deafness followed. For weeks I suffered greatly, until I thought I would lose my mind. When I was about to give up all hope my friend wrote, asking me to try Christian Science, and saying she knew God could heal me. As soon as I was able to go out I went to Champaign, a distance of nine miles, in search of a practitioner. I also secured a copy of Science and Health, and began in earnest to search for the truth that was to make me free. With less than a week's treatment I could hear better, and in a month after reading Science and Health my head was well and I could hear perfectly. I had been housed up all winter, but this winter I have been able to go when and where I pleased.

About a month after I began studying Christian Science my son, fourteen years old, had three large boils start on the back of his neck. He had been subject to them before, but this time, instead of poulticing them as I had previously done, I declared the truth for him, and told him God would heal him. That was the last I heard of the trouble, and in a day or two there was no sign of the ailment. I could tell of many beautiful demonstrations in our home as the result of using the little understanding I have gained. It has overcome worry and nervousness which formerly would completely prostrate me. My husband began studying Science and Health soon after I did, and in less than three months the tobacco habit, of about fifty years' standing, was destroyed; bad stomach trouble and headaches were also completely overcome.

These are only a few of the many blessings for which we are thankful, and we know that if we are faithful over a few things God will make us rulers over many. We are very thankful that Mrs. Eddy was so faithful and self-sacrificing as to give to the world this message of Love which heals the sick and brings such peace and joy.

MRS. JOHN BATCH, Tolono, Ill.

It is with grateful love and appreciation of our dear Leader's pure life that I send this testimony. About four months ago I was taken ill, my trouble being of the nature of a fever attack. As I seemed unable to cope with this trouble, I placed myself under Christian Science treatment, and the battle which was waged between the power of Mind and material sense quickly proved a complete victory on the side of Truth. I was given immediate relief from this trouble, and with added strength and vigor, mental and physical. I can say truly with the psalmist, "My cup runneth over."—GEORGE D. FOX, Winchester, Ky.

[Translated from the German.]

I wish to relate how Christian Science healed me. Last winter I was taken ill, and was so helpless that I could not move. My daughters called in a physician, who said I had influenza; that I was suffering from the weakness of old age, and that my heart was weak. He told them to call my other children home, because my time had come, and to mortal sense this seemed to be so. I then took treatment in Christian Science, and that same night I slept peacefully and naturally. Before this treatment was given I was unconscious most of the time. When I awoke from that first sleep I felt so happy, and could move and turn over in bed. In one week I was up.

I had been a member of an orthodox church for fifty-five years, but I had never found this spiritual peace which I have known since I began to try to live the life that Christian Science teaches us. I know I have much to do to lay off the old man, but like Paul, "forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

JOHN WAGNER, Gladbrook, Ia.

It is less than two years ago that I turned to Christian Science for help. When I look back over this happy period I can hardly realize the wonders of divine Love, so many blessings have come to me. For years I suffered from rheumatic, heart, stomach, and bowel trouble, and I had worn glasses for over seventeen years. My mother passed on years ago, from an assertedly dreadful disease, and it was held that I had the same disease. I could eat nothing without experiencing great distress. I had tried many physicians of different schools, had been to noted hot springs and various sanitariums without receiving any lasting benefit.

When I turned to Christian Science, as a last resort, I was almost instantaneously healed. Is it any wonder that my cup of rejoicing is full to overflowing for this and for the spiritual uplift, the "peace of God, which passeth all understanding"? What a loving Father we have,—"who healeth all thy diseases." The doctors told me that on account of my heart trouble I could not go to a higher altitude than five thousand feet, but last summer my husband and I went over the "Rockies," going up more than eleven thousand feet without experiencing any discomfort. There was no thought of heart trouble, for I felt the presence of the one Mind, and that divine, and knew that man is a reflection of this Mind. Peter asks, "Who is he that will harm you, if ye be followers of that which is good?" My husband and I had been members of an orthodox church for many years, though we always felt that something was

Digitized by Google

lacking; now we have found the "pearl of great price," and the Bible seems like a different book. We enjoy the Lesson-Sermons from the *Quarterly*, and are trying to follow our dear Leader even as she follows Christ.

After my own wonderful healing, my husband also took up Christian Science, and we have studied the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together, and have derived much help from reading her "Miscellaneous Writings" and "Unity of Good." In less than a month after embracing Christian Science I had several wonderful demonstrations, and since then have been instrumental in helping others, for which my heart goes out in deep gratitude to God, and to our dear Leader, who has shown us the way. We feel greatly indebted to our Publishing Society for the literature which they send out. I do not see how any one can get along without the *Sentinel* and *Journal*. We feel that we receive so much from them, and are glad to help toward the fund for building the publishing house.

My heart goes out in deep love and gratitude to our dear Leader, for what she has done and is doing for mankind, and above all to our Father-Mother God, who welcomes us so lovingly if we only come to Him in the right way, and who is ever ready to heal us of our sins and diseases. In Christian Science we learn that God "is a very present help in trouble," when we call upon Him in sincerity and truth.

MRS. EVA V. CRONKHITE, Nebraska City, Neb.

I have long felt a desire to express my gratitude for what Christian Science has done for me. I did not come into Christian Science for the physical healing, but I had always been looking for a God to whom I could go for help in overcoming the errors that seem to surround us in our daily life, though I did not find what I was searching for until I learned in Christian Science that God is Love, and that in Him, as the apostle Paul tells us, "we live, and move, and have our being." This truth is more beautiful to me than words can express.

About two and a half years ago four malignant growths appeared under my arm. I thought at first that I would try to meet this discord myself, but after two days the pain was so great that it seemed best to ask for help. I called up a practitioner, and almost immediately the pain stopped. In a very short time all trace of the bunches was gone, and they have never returned. I also had a very severe fall a few months ago, which injured my left side. The fear was more than I felt able to overcome, so I asked for help, and the suffering was destroyed in a very short time. I cannot express my gratitude in words for the healing power of divine Love, and also for the understanding of this priceless truth, but I hope my life may prove it. God bless our beloved Leader for bringing this truth to humanity.—JENNIE A. MCLEAN, Brooklyn, N. Y.

About six years ago, after studying Science and Health for several years as best I could, and knowing that wonderful healing was done by Christian Science, it occurred to me to try to help myself in the case of my hands, which had troubled me for twenty-seven years. The doctors called it a skin disease, and I suffered very much from it. Many remedies were tried, but nothing seemed to do any good. At first I did not realize the importance of relying only upon spiritual means, but applied different material remedies. As I did not get along very well that way, it came to me finally that I should trust to God alone to heal me, and so I did. One day when my hands were hurting me dreadfully, so that I hardly knew what to do, the temptation came to use material means, but I said, No, I am going to trust God to heal me now, even if I suffer more than ever in the trial. Then the temptation came to use just a little sweet cream, but I resisted it as before, and I continued to do so, going down on my knees and asking God to help me. And the help soon came! My hands grew less painful, I went to bed and slept, and woke up in the night to find that they did not hurt. By the next night they were smooth, and I thanked God with a full heart.

My hands have never troubled me since, but this is only one of many experiences for which I have reason to thank God since I have learned of Christian Science. My grandmother in Holland was a very religious woman, and her faith accomplished healing long ago. She passed from human view forty years ago, but I never ceased to long for her faith. When Christian Science came to me, about ten years ago, it seemed to me I had found that faith; and more than this, an understanding of how it is that the truth heals. I have been very happy trying to live Christian Science ever since. A friend is writing this for me, as I cannot write the English language with proper spelling, and still speak it brokenly.

MRS. SARAH TERPSTRA, Colfax, Ia.

I have had many proofs of the healing power of Truth through Christian Science. Fever, and the numerous other ills which so many children seem to have while attending the public schools, have been overcome. The case which seemed most wonderful I will relate, hoping to destroy the fear of accidents. I was spending the day at a summer resort near our home, with my parents and younger sister. To please this sister I started to ride in one of the numerous places of amusement, but fell, striking heavily on my right hand. There was quite a crowd standing around and several people cried out that I had seriously injured my arm, for they said they heard something snap. My mother and father at once declared the truth, and we separated ourselves from the crowd as soon as possible. They worked for me, but I began to grow faint, and mother and I started for home. My father said I had better go to a surgeon and have the bone set, and on the way home my mother asked me if I wanted to go to a doctor, or to go home and trust to Truth, God, whom we had trusted for everything since we had learned how to do so, some four years before, through the reading of Science and Health. I said we would go home.

It was twelve o'clock that night before I was free from pain, but I fell asleep about that time. The next morning my arm presented an alarming appearance and mother was fearful at first, but she put the fear down and placed Science and Health in my other hand, telling me to read and do some mental work for myself. She was obliged to dress me and dress my hair for two days, but the third morning I was able to do this for myself, and when I went down-stairs into the dining-room mother looked up, a little surprised. All she could say was, "Thank God!" It was really three weeks before the swelling was entirely gone, but I had no pain after the third morning. This was four years ago, and I have never been troubled with this arm since.

WILHELMINA ALICE MACGREGOR, New Haven, Conn.

From earliest recollection I suffered from toothache, having many distressing experiences with dental work. So deeply rooted were the teeth that the dentist refused to extract them unless an anesthetic was used. After one experience consciousness was not readily restored, and it was decided by the doctor in charge that this could never again be done. With the next extraction a new trouble developed,—excessive bleeding, which necessitated my lying very still for twenty-four hours.

Digitized by Google

After beginning the study of Christian Science for some so-called incurable diseases, I asked help for some dental work, which was done without pain. I even forgot about the former trouble, thus verifying the Scriptural declaration, "The former shall not be remembered, nor come into mind." The dentist asked when about half through if I would not like to rest, but I said that he could go on. After all my teeth had been extracted I was told that the jaw-bone was diseased. I then began to see the truth as taught in Christian Science, namely, that all causation is mental not physical. The struggle lasted about nine months, and occasionally I had a little help from one more experienced than myself, but for over two years now it has not given me any trouble. I have been perfectly healed of this ailment. I have seen acute and organic diseases in their worst forms fade out, in some cases slowly, in others instantly, before the truth taught in Science and Health by our beloved Leader, Mrs. Eddy.

INEZ MILTON, Bloomington, Ill.

For twenty-five years I suffered with what the doctors termed catarrhal disease of the stomach, taking medicine more regularly than I ate, for I could eat very little if at all. All the money that my husband could earn, outside of a livelihood for the family, was paid out for physicians and medicine, without my receiving any benefit until I tried Christian Science. A practitioner had given me only a few treatments when a marked improvement came, and I was relieved and healed. I am sure Christian Science is not only for sick people, but the spiritual uplifting is for one and all—a glad discovery.

I would also like to tell of the marvelous healing of my son. When a small boy his ankle was injured. An enlargement became chronic, and the ankle was alarmingly painful. The child was such a sufferer that the doctors decided it would be impossible to move him to the hospital, and three operations were performed at different times. The appearance of the limb was dreadful, and the foot became deformed after the operations. He was then removed to the hospital. On account of the intense fever a fourth operation was considered necessary, after which he walked on crutches for four years, never touching his foot to the floor and suffering much. The attending physician then ordered that we take our son to a specialist at Cincinnati for a fifth operation. At this time I heard of the works of Christian Science, and I took my son to a practitioner. His healing was very slow, but sure, and comforting the while. It was more than a year before he threw away his crutches, and eighteen months elapsed before he was free, but we had some beautiful demonstrations while the healing was taking place, the entire family of five members receiving physical benefits. We are residing on a farm, and when our neighbors came to our home to ask for medicine, I would point to the Bible and Science and Health, and tell them these were not only our medicine but our physician and pastor.

We are all grateful beyond words to express our thanks. I am sure I would not have been spared to my family had it not been for this help received from divine Love as explained in "Science and Health with Key to the Scriptures" by Mrs. Eddy. We all join in this expression of our gratitude.—MARY E. BLACK, Roanoke, Ind.

[This testimonial is also concurred in by F. W. Black, Charles S. Black, William Black, and Edward Black.—EDITOR.]

I feel that if I did not tell others of the wonderful help which I received recently, through the understanding of Christian Science, I would not deserve to have another blessing. Upon returning home from the morning service, I felt quite sick, with a general feeling of depression. As we do not hold an evening service, I always take that time to begin the study of the Lesson-Sermon for the following Sunday. I began to read it, and had finished only one section when I felt that it would be wise to lie down for a few moments; but as soon as I had done so I began to sink into oblivion. Then this passage from the 8th chapter of Acts, came to me, "And Saul was consenting unto his [Stephen's] death." In an instant I was upon my feet, declaring that there is no death, that all is Life, God, as we are taught in Science and Health; and that nothing could hinder me from doing my duty to God and to mankind. I again took my books, and finished the study of the Lesson, besides preparing my Wednesday evening reading. I was well! healed, absolutely harmonious, with a higher and clearer sense than I have ever known.

I am indeed grateful to God, and to Mrs. Eddy for Science and Health, and for the better understanding of the Scriptures it has enabled me to gain. The Bible Lessons in "Miscellaneous Writings" have been such a help to me many times, and I feel that the only way I can show my gratitude acceptably is to strive to do better work. The wonderful work of our Leader inspires us with courage to press on, and God will answer our prayers—"right desires"—with more light.

C. E. SEIBERLING, Ottawa, Ill.

I feel that I must have the Christian Science literature, for with the Bible and "Science and Health with Key to the Scriptures" it is my daily food. I used to give away my old copies of Science and Health when I obtained one of a new edition, but do not now think that the best way, as it has not had the desired results. I have three copies now, two of which I loan to those who appear to be interested in Christian Science. I have also given three copies of Science and Health to our public library, and with two other friends of our Cause have placed the *Journal* and *Sentinel* on the library table for the ensuing year. Later we shall doubtless subscribe for *The Christian Science Monitor*. I was informed recently that our news-dealer would have the *Monitor* on his counter when it came out. This dealer does not call himself a Christian Scientist, but both he and his wife think there is much of good in Christian Science.

The greatest returns which I or any other can receive, come from the investment of what mortal sense calls "money" in Christian Science literature, and the daily song of my heart is, "God bless our Leader."

HARRIET N. CORDWELL, Berlin, N. H.

With a sense of devout thankfulness to God I wish to acknowledge what Christian Science has done for me. A year ago I was healed of severe throat trouble and last winter of an acute attack of illness. For these physical benefits I am grateful to God, and also for all the spiritual good that has come to me through Christian Science.

MRS. NELLIE GIBSON, Atchison, Kan.

PRAISE to the One that shows the way
To life and light from death and gloom!
Praise to the One that rolls away
The stone from o'er the rock-cut tomb!
Then let your gladsome voices ring,
And in an anthem joyous swell,
That all may know the One we sing.—
The Holy One of Israel!

HAROLD SUSMAN

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

What makes us real disciples of Christ? To devote ourselves to those ministries of helpfulness which were the substance of his mission and which led the people to call him "Messiah." We are friends of Christ only when we are messianic men ourselves, engaged in works of relief and righteousness. We shall believe a great many things, but our essential Christianity will be the spirit of our lives. We shall observe various forms or rites, but our true discipleship will always be measured by our goodness. We shall be saved, not by lazily believing that he brought in the kingdom, but by the works of justice and mercy which we ourselves do to establish the kingdom. His love for humanity made Jesus the Messiah; our love for men can alone make us Christians.

[*The Independent.*]

The rising of Christ in our own day is what concerns us; and it is the continuous incarnation of God in the world that cheers on the centuries. . . . There is not one stirring passion of our times, individual or social, that is not reflected in the Gospel. Jesus was a workman and in full sympathy with our labor struggles. He was a free thinker and in full sympathy with progressive thought. He was a leader in the greatest religious and social revolt the world has ever known. The genius of Christianity is found in its adjustability to changing conditions. We grow nearer rather than more remote from the simple-hearted Teacher who took his pupils back to nature in the gardens and fields of Galilee.

[*The Churchman.*]

The note of this age is synthesis and construction. God's mind and purpose and love for humanity are finding expression in every phase of existence. It would spell disaster for organized Christianity if it were to acquiesce in the sectarianism of a divided Christendom. The inspiring fact is that there is not a body of Christians on the earth to-day that is not being leavened by a catholic conception of Christianity. The petty quarrels of sectarianism, in theology as in science, are being supplanted by the great search not merely for truth but for the life that enfolds all truth and relates men and things to each other and to God.

[*The Outlook.*]

There are always those whose eyes are holden so that they cannot see the beauty and holiness that wait in any place where men live, but must go to the ends of the earth in a vain search for that which stands at their doors. Sir Launfal leaves the Christ at his gates when he goes on the long and idle quest, and finds his Master only when he has learned that the divine is always close at hand. The illusion of the remote, complex, and obscure is the thinnest of veils to those who have once seen life face to face and passed through the process to the reality.

[*The Christian Register.*]

The great days of the churches and the preachers are at hand for those who have any mission and message to the heart of man, and who know how so to conduct themselves that those who come within the circle of their influence shall go away with bowed heads saying, "I want to be a better man," and then in the daily life attempt to make the wish a reality.

[*The Advance.*]

So many make the first day of the new year a day of resolution—so far this is good—but if resolution means anything it means sentiment plus action, and every day ought to present a record of plain devotedness to duty.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities to one address: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities to one address: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities to one address: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States and Possessions, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE. THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 20 pages.

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLYNN, M.D. 37 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 20 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. By EDWARD A. KIMBALL. A lecture delivered in London. 47 pages.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. By EDWARD A. KIMBALL. A lecture delivered at Harvard University. 28 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. This pamphlet is also printed in French. 25 pages.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. A Lecture. By FRANK H. LEONARD. 31 pages.

CHRISTIAN SCIENCE: OR, DELIVERANCE FROM EVIL. A Lecture. By REV. WILLIAM P. MCKENZIE. 20 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the JOURNAL. This pamphlet is also printed in German. 38 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By REV. ARTHUR R. VOSBURGH. 33 pages.

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. A Lecture. By MISS MARY BROOKINS. 37 pages.

PROPHECY: FULFILMENT: REVELATION. By CHARLES ADOLPHUS MURRAY, Seventh Earl of Dunmore. 42 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 81 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the JOURNAL. This pamphlet is also printed in German. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the JOURNAL. This pamphlet is also printed in German. 50 pages.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. 38 pages.

PRICE: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy . . . . . $.03
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Rev. Mary Baker G. Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. 20 Pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The United States Supreme Court has decided that the laws of New York state requiring the Consolidated Gas Company of New York city to furnish gas at eighty cents per thousand feet are legal. The gas company declared it could not afford to furnish it at that price. The court rules that the company cannot include in its list of property and good will its franchises, a free gift from the state, but which the company values at over $12,000,000 and on which it claims it must earn a fair return. "In this case," says Justice Peckham, who rendered the decision, "the complainant has a substantial monopoly of the gas business of the city of New York, and those who wish to use gas must take it from this complainant. In this case, as there is no possibility of competition, there should be no allowance for good will."

The Government's suit against the various railroads in the Union Pacific system and the half dozen men who control their affairs came on before a special examiner of the United States Circuit Court at New York, Jan. 5, for the actual taking of testimony. The Government's bill, alleging restraint of trade and competition, was filed in the district of Utah early last year.

It is expected that the coming sessions of the Legislatures of five New England states, Maine, New Hampshire, Rhode Island, Massachusetts, and Connecticut, will be particularly interesting this year, as the incoming governors in each state will recommend uniform legislation in the matter of forestry, fisheries, and automobiles.

National bank examiners will be put on a salary or per diem and expense basis, and the present fee system will be abolished, much to the betterment of all interests concerned, if recommendations made by Secretary Cortelyou, Comptroller Murray, and Deputy Kane of the Treasury Department are carried into effect.

The United States Supreme Court has declined to review the case of the $29,240,000 fine of the Standard Oil Company, which was reversed in the Circuit Court of Appeals and then carried by the Government to the highest court on a writ of *certiorari*. The case will now be retried in Judge Landis' court.

The total of public gifts and bequests for 1908 was smaller than the year before, but it still reaches $60,452,000. The distribution was: Educational institutions, $36,052,039; charities, $30,729,961; religious organizations, $4,413,950; museums, galleries, and public improvements, $9,401,631; libraries, $834,500.

The grand jury at Pittsburg, Pa., has found true bills against the seven councilmen accused of accepting bribes and conspiring to secure bribes, and the two former bankers accused of giving bribes.

Protests against converting the floor of the Hetch-Hetchy basin, a part of the Yosemite National Park, into a reservoir for a water-supply for San Francisco are being registered at Washington.

The sum of $400,000 has been appropriated by a Senate bill for the purchase or construction of a building in Paris as the home of the American ambassador.

The total excavations for December on the Panama Canal were 3,261,673 cubic yards, compared with 2,020,404 in November and 2,201,734 in December, 1907.

The Government receipts and expenditures for the first six months of the current fiscal year show a deficit of approximately $64,288,463.

The New York Teachers' College, affiliated with Columbia University, has just received a gift of over one million dollars in property.

International.

The Christmas postal traffic at London this year was very heavy, and in the parcels department a record was created. At St. Martin's-le-Grand it was calculated that during Christmas week about seventy million letters, cards, and newspapers were dealt with by London offices alone. The first colonial mail of importance was a despatch of 3,842 parcels to New Zealand, but the next mail took out 5,311 parcels. The total number of parcels despatched to India during the eleven weeks preceding Christmas was 73,072. The total number of parcels sent abroad from Mount Pleasant during the nine weeks ended the 10th of December was 468,736. During Christmas week 64,110 parcels were despatched to the Colonies and the Continent. During the week ending Christmas eve 58,861 parcels arrived from abroad.

Postmasters throughout the United Kingdom have begun the payment of old-age pensions under the act of the last session of Parliament to persons over seventy years of age. Seven hundred thousand applications for pensions have been received, of which two hundred thousand were disallowed, chiefly because the applicants have been in receipt of poor relief. It is estimated that the old-age pensions will cost the country $25,000,000 annually. The highest pension is five shillings weekly, which will be paid to applicants having an income below $105 a year. If their income exceeds $105 but is less than $155, small amounts will be paid.

The commission appointed in 1907 to investigate opium traffic in the Straits Settlements and the Malay States has presented a report against the closing of the opium shops, taking the ground that the evils arising from the use of opium are generally exaggerated and that they have not increased in the past decade. The commission recommends making the production and distribution of opium a government monopoly and increasing the price of the drug.

Belgium has relinquished the Pekin-Hankow Railroad to China upon the payment of the redemption price, about $30,000,000. China will at once dispense with the foreign employes of the road, retaining only the consulting engineers. China's initial success in constructing and operating the Pekin-Kalgan Railroad has created general confidence in her ability to take over and operate other foreign-built railroads as they become redeemable.

Wilbur Wright, the American, on Dec. 31, at Le Mans, France, broke all previous aeroplane records with a magnificent flight that lasted for two hours and nine minutes. He covered officially a distance of seventy-three miles. By his flight Mr. Wright wins the Michelin cup, valued at $5,000, and a money prize of $4,000.

With the induction into office of J. J. Fern as mayor, Honolulu became self-governing, in accordance with the charter granted the city by the Territorial Legislature at its last session. This is the first time in the history of the islands that local self-government has been delegated to any city or town in the group.

Industrial and Commercial.

The Memphis Steel Construction Company, capitalized at $100,000, announce that they will begin at once the establishment of a first-class plant for the manufacture of structural steel and bridge material. The company will devote much of its time to the construction of steel buildings in various parts of the South, most of which work heretofore has been done by northern and eastern steel companies.

Over nine hundred miles of railway have been equipped with automatic block signals during the past twelve months, and probably two thousand miles will be equipped during 1909. Other block signal progress is the addition of over one thousand miles of the "telegraph block system" by two companies, the Chicago, Milwaukee, and St. Paul and the Northern Pacific.

For the year just passed the fire losses in the United States and Canada amounted to $238,562,250. Aside from the Chelsea conflagration in April, causing a property loss of $10,500,000 and an insurance loss of $8,500,000, there were no fires of any great magnitude, but there was a steady stream of small losses throughout the year.

The principal plant of the Pressed Steel Car Company at McKees Rocks, near Pittsburg, Pa., which employs about six thousand men, has been placed in readiness for complete resumption soon. It has been practically closed in all departments for seven months.

Passenger travel across the Atlantic in the year 1908 shows a shrinkage of nearly one million persons, as compared with the preceding year. For the first time in many years, the eastbound figures are in excess of the westbound.

Early in 1909 New Bedford (Mass.) cotton mills will have in operation 2,137,811 spindles, an increase of 40,408. New Bedford cotton manufacturing corporations paid in dividends in 1908 an aggregate amount of $1,708,595.

Manufactures exported from the United States in the fiscal year 1908 aggregated $750,000,000. Of this grand total practically one-half went to Europe.

On Dec. 23 surplus cars on railroads of the United States and Canada were 222,077, an increase of 47,094 from Dec. 9.

Mining has the greatest future of any Siberian industry. Gold in placers is the chief mineral product at present.

An organization has been formed to promote the construction of a Toledo-Chicago inland waterway.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

EARNING AND GIVING.

REV. WM. P. MC KENZIE.

THE promises of good to the liberal soul are so many that liberality has been assumed to be a virtue to be striven for as such. Consequently men have deprived themselves of good in order to make a show of giving. The benevolent have been envied because of the prominence given to their donations; indeed, subscription-lists have been used to create classes and minister to pride—having the names of large givers in capitals. How different all this from the rule given by the Master, "When thou doest alms, let not thy left hand know what thy right hand doeth."

Ostentatious giving is not so much giving as it is spending. The main thought of interest does not rest in the good done by the giving, but centers in the prestige of the giver. There is no recognition of the Father who, seeing in secret, provides the reward of good within the heart of the giver of good. The pride of the spender must be sustained, and often he is not scrupulous in his endeavor to "buy and sell, and get gain." He does not make his wealth by earning so much as by exaction. Wordsworth often reminded men how much of life they were missing because of false ideals.

> The world is too much with us; late and soon,
> Getting and spending, we lay waste our powers;
> Little we see in Nature that is ours;
> We have given our hearts away, a sordid boon!

Among Christian Scientists liberality has a different meaning from its usual sense. It is not measured by comparison, since in the case of each giver the offering bears relation to his own sense of good, not to the amount another may be giving. The basis for him is not so much "in the abundance of the things which he possesseth" as in the fulness of the life which he enjoys. It is based on earning, not upon exaction. When a man earns money, he does service for what he receives. Wages in that case represents love and good will. When a man accumulates a fortune by exaction, he wrings the money from reluctant hands, and every dollar represents a curse. He is built up by the losses of others. How then can objects to which he may contribute represent actual good, or be other than the manifestation of his spending ability, or ostentation? Whereas, when a number of people who have themselves been enriched by a sense of spiritual good, make plans together to provide a church home to which their friends and neighbors may be invited, a sense of love pervades their deliberations. They each realize and measure their own sense of good, and then their gifts, flowing from that realization as from an unfailing spring, have a richness unprecedented. The poor show themselves to be rich, the timid to be unafraid, the economical to be liberal. With assurance that sickness may be healed and errors overcome, the fear of inability to serve mankind and so earn the reward of service is diminished so much that it does not determine action; thus the field is left open for the impulses of love to rule. Through Christian Science people become free to do what the heart prompts. They give and give liberally, but they are able to obey the liberal desire because they have first earned what they give. And usually they have been able to earn because they have been healed.

THE STUDY OF OUR TEXT-BOOK.

ROBERT NALL.

MOST people read a great deal, probably far too much, even of good literature, for there is a limit to the capacity of our mental digestion; but how many read with the thought of study? Without study the best books may be useless. We may read them, may for the moment be impressed by their literary charm, their moral precepts, their practical admonitions, or their wealth of information; but this impression may be so evanescent as to have vanished in a few hours. To study, however; that is a very different thing. What do we mean by study? According to the dictionary definition it is to bestow pains upon anything; to apply the mind to it; to examine closely in order to learn thoroughly; to form and arrange by thought; to con over. If we have really studied a book in this way we know something about it—its purpose, its teaching, the mentality of the author. If we have merely read it, in the common acceptance of that term, we know very little, if anything, about it. Therein is all the difference between using precious hours and wasting them.

Now let us apply this to that book which is indeed a "Key to the Scriptures." Those who have studied Science and Health the most, love it the most and are best able to appreciate it. They have followed the advice of her who wrote it; they have studied thoroughly the letter and imbibed the spirit (see p. 495), and their reward has been in proportion to their fidelity to this wise counsel. So far as the individual is concerned, any book is just as good as he makes it, and no more so. We may remember how delightfully Ruskin in his "Sesame and Lilies" talks on this subject. Some of his maxims might well be remembered and practised as we take up our text-book. "Be sure," he says, "you go to the author to get his meaning; not to find yours. Judge it afterward if you think yourself qualified to do so, but ascertain it first." How many of us did this when we began the study of Christian Science? How many are doing to-day what some of us did—criticizing and condemning the book all the time that we were reading it? We virtually started our examination into this profoundest of all subjects with the assumption that we knew more about it than did she to whom a revelation had been made, and who through years of communion with God, and patient toil and research, had come to that clear and certain knowledge of Truth which enabled her to give it, in language that can be understood by all, to an expectant and spiritually hungry world. Is it surprising that at first the book yielded nothing to us? We wanted to get our meaning into it, not the author's.

Digitized by Google

We came to it with preconceived and traditional theological notions, and with what we believed to be right interpretations of Scripture, and because we found that the teachings of the book did not harmonize with these, we rebelled.

It is easy to see how little advance would be made in the knowledge of any subject, if the study of its text-book should be entered upon with a belief on the part of the student that he knew as much as the author, if not more? Bias and prejudice are deadly enemies of true progress. In our study of Science and Health we are bound, if our quest for Truth is pure and earnest, to ask ourselves what is our motive. Are we prepared to be taught? Are we sincerely desirous of learning? Mrs. Eddy assures us that in Science there are "no secrets outside the teachings of Science and Health" (Miscellaneous Writings, p. 50). If therefore our purpose is really to know what Christian Science is, we shall come with an unbiased thought, and with the hearing ear and the understanding heart, to the diligent and respectful investigation of this book. In this attitude alone can we hope to ensure that profitableness which is the recompense of all devotion to spiritual research.

There are "books for the hour and books for all time," and this book is "for all time" because it voices Truth in a very remarkable way, and is entitled to be studied with intense purpose. It is not a book for cursory perusal, but it is one that comes under the rule laid down by Ruskin—to quote him again: "You might read all the books in the British Museum (if you could live long enough) and remain an utterly 'illiterate' uneducated person, but if you read ten pages of a good book, letter by letter, that is to say, with real accuracy, you are evermore in some measure an educated person." And without doubt if every one studied our text-book according to the method illustrated by Ruskin in the passage from "Lycidas,"—that word-by-word examination and search which alone can be called reading,—its real and therefore its true meaning would be more rapidly discerned and individual demonstration of the truth would be greater. It has been said that "true knowledge is disciplined and tested knowledge, not the first thought that comes." Carlyle mentions that he had heard of Mohammedan doctors who had read the Koran seventy thousand times—as if the mere reading meant the acquisition of true knowledge. But even with persistent and frequent perusal there may be missed the key to all profitable reading—that looking through the outward form of words *into* words, without which the effort to interpret a book is in vain.

As to when and where the study of the book shall be made, that is for the student to decide. A great preacher recently essayed the task of trying to teach the world how to pray. In doing so he attached much importance to physical attitude—prayer should be either when kneeling or standing and in one special place. What value attached to the attitude was not clearly defined. But there is danger, in laying any stress on details of this kind, that the objective will be overlooked. There are non-essentials which must be subordinated to the primary purpose when we are hungering for the truth, and there must be very earnest resolution that nothing shall frustrate the attainment of the object in view. The man who lost his one sheep searched "until he found it." The woman sought "diligently" for her lost piece of silver and was successful. The miner who abandoned his search for gold because it was not on the surface would soon discover that his pursuit must be profitless.

There is boundless spiritual wealth for those who seek aright. The source of supply never ceases. God has given; it is our privilege to take. But we must seek. The responsibility for spiritual poverty is ours if we suffer from it. "Men have come to speak of revelation," said Emerson, "as somewhat long ago given and done, as if God were dead. It is the office of a true teacher to show us that God is, not was; that He speaketh, not spoke." The spiritual understanding which we all need is here and now to be gained. How little desire there is for it. Has any one ever fathomed the immense spiritual riches still unearthed in the Bible? There are hundreds of passages, any one of which will yield a thousandfold if its deepest and truest meaning can be apprehended and applied. There is eternal truth in Science and Health, because it contains a divine revelation. There are passages in it which are gems of spiritual luster and brightness. The words are not true because Mrs. Eddy wrote them; she wrote them because they are the truth; and in her love for God and humanity she was impelled to proclaim them.

But if we are to learn from this text-book, we must come in a spirit of receptiveness. Are we willing to learn? And also a spirit of humility. Pride of intellect or theological prejudice becomes a stumbling-block to true spiritual education. There should also be some spiritual discernment. Truth is spiritual, and mortal mind is apt to resent that which will uproot its cherished passions and desires, because it is purely material. Mrs. Eddy tells us that "Christianity and the Science which expounds it are based on spiritual understanding" (Science and Health, p. 274). This spiritual understanding is available for all. The door of the temple of Truth is always open; but its spiritual riches are for those alone who enter. What food for thought there is in the pages of this book,—pure and inexhaustible, free to all, enriching and blessing all, in proportion to the effort made to infuse the spiritual teaching into their lives.

It is not necessary to dilate upon what the book does teach. The student finds, when he has gained some insight into its purpose, that its teaching is definite. The charge of incertitude or inexactness has never been brought against it. "In Christian Science mere opinion is valueless" (Science and Health, p. 341). Thomas à Kempis said that "he to whom the eternal Word speaks is delivered from a multitude of opinions." And the true prophet voices the eternal Word, which is Truth. It is our privilege by the exercise of patient care and heedfulness, and that disposition of thought which welcomes any new light, from whatever source it may stream, to discover the underlying truths and seek to interpret accurately that which was in the mind of the author. In Christian Science, to a large extent, this task is greatly facilitated by the *Quarterly* Lessons, the daily study of which is indispensable to growth in the scientific interpretation of the Scriptures. To this must be added, as before indicated, a close analysis of terms, in order to become imbued with a knowledge of their meaning as used by Mrs. Eddy. This is necessary not only for self-education, but also that we may understand how much of the misapprehension of Christian Science teaching arises from a failure to understand these terms. Every author is entitled to use what words he pleases to express his thoughts; every real student bases his efforts to apprehend the views thus expressed and the knowledge thereby conveyed upon the acceptance of this fact.

Above all, we need to remember that this text-book is essentially pure and spiritual, and that if we come to its study in something of the same spirit, we shall more quickly find its treasures. In the Talmudic saying,

> To him alone can knowledge ever stay
> Who for its sake his baser self does slay,

we have a dictum that may well impress itself upon the minds of those who are hungry to hear the voice of Truth through our text-book. We need to come not in a critical spirit, but reverently and with the thought that here is a holy place where our highest impulses may be awakened,

Digitized by Google

and where is that wisdom which is "better than rubies," and which, once our precious possession, will make for righteousness and peace beyond mortal comprehension.

ON THE WAY TO WORK.

THOMAS POGSON.

IN the Christian Science churches we sing a hymn by Bowring which tells of

> New regions blest, new pow'rs unfurled,

and it goes on,—

> So Truth reveals the perfect whole,
> Its radiance shall o'erflow the world.

When singing this at one of our services I realized how Christian Science gives us the clearer consciousness of the "regions blest" with the knowledge of the power of good.

A day or two after this I was going from one side of London to the other, on my way to work, and was enjoying to the full the glories of a spring morning. I skirted one of the city's great parks, where the tall trees were gently nodding in the breeze, and the many birds swinging in their boughs were piping out a blithe good-morning,—the joyous calls of the thrush, the chaffinch, and the blackbird. Under the great heads of the big trees nestled the smaller lilacs, full of mauve blossoms; and o'ertopping them were the laburnums, with their golden showers, while the air was sweet with the scent of the May trees. I crossed over one of the prettiest of the river bridges, and saw old Father Thames swirling away on a downward tide, twirling round the black buoy in mid-stream, and catching the sun's rays all aslant on his flowing robe.

Reaching the embankment on the other side—reminiscent of Turner, Carlyle, Rossetti, and George Eliot, I passed through the little garden in the middle of the road, where bunches of blue iris shot straight up out of the green lawn and the birds were hopping about to find their breakfast, and as I went on to the station it suddenly dawned upon me how different this journey to my work appeared to me now from what it did before I knew of Christian Science. Then I went to work simply because there was no other way of getting my living. Usually I left my going to the last minute, and scurried through the streets with my senses all benumbed. The environment was commensurate with my thoughts, because had there been a scene of beauty it would have been greatly in dissonance. Then my work was done merely as so much work for so much money. My mental attitude toward my employers and the managers was one of retaliation. Now, although I have not yet overcome all the problems, through Christian Science I am beginning to find joy in my daily task. I look forward to lending somebody a helping hand through the day, and at night I return home feeling glad that I know how to work for my living.

In England we hear much of the "right to work." Christian Science teaches me that my right to work is the right to work honestly, the right to work joyfully, and the right to work unselfishly,—to play the man; and as I demonstrate this the fear of failure in supply vanishes, for I have already found that Principle (good) rewards with both hands all right endeavor.

OVERCOMING TEMPTATION.

ALICE B. WORKS.

THE only evil we have to combat is the carnality of human sense, which is constantly whispering untrue, unkind, unholy thoughts,—thoughts of envy, jealousy, hatred, revenge, covetousness, and such like. Says Mrs. Eddy, "If mortal mind knew how to be better, it would be better" (Science and Health, p. 186); and this carnal mind has always been the bane of humanity. Even Jesus felt the working of the human mind when, at the beginning of his ministry, after being in the wilderness for forty days, he was three times tempted of the evil one; but even though "an hungred," he was able to overcome them all. When, at the pinnacle of the temple, the devil, in derision of his claim that he was the Son of God, tempted him to throw himself down from thence, assuring him it was written that God would give his angels charge concerning him, Jesus answered: "It is written again, Thou shalt not tempt the Lord thy God." Once more he was tried with a mortal, material thought,—a thought of how much worldly honor and prestige he would gain, what great power he would have over all the kingdoms of the world, what a following would be his, if he would renounce God and serve evil; but Jesus said, "Get thee behind me, Satan." Then, we are told, evil departed from him for a season, and "angels came and ministered unto him."

Mortal mind was then as now ready to whisper thoughts of distrust and discord. In the garden of Gethsemane, Jesus prayed that if it were possible the cup might pass from him; but even then he said, "Nevertheless not as I will, but as thou wilt." Temptations pursued Jesus up to the time of his crucifixion on Calvary. We hear him saying, "My God, my God, why hast thou forsaken me?" The physical or mortal element was fighting against the spiritual; but Spirit overcame, as it always does if we "cling steadfastly to God and His idea" (Science and Health, p. 495). What Jesus overcame he knew others could overcome, for he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Nor was he unmindful, when he gave this command, of "the sin which doth so easily beset us." The apostle Paul says, "For we have not an high priest which cannot be touched with the feeling of our infirmities; but was in all points tempted like as we are, yet without sin." If then Jesus, our elder brother, was beset with the same temptations of mortal mind that we are, he understood the many false beliefs we have to overcome; and being the Wayshower, he left his example for us to teach us how to do this. He vanquished evil and proved the power of God, good. Every evil belief that came to him was met and overcome —its nothingness proved—according to divine Science. Through our inspired Leader the way which had been lost through the pride of this world and the lust of the flesh, has once more been opened to suffering and sin-sick humanity.

OUR RESPONSIBILITY.

ROSE GIDDINGS.

THE record of Uzzah's sin, as given in II Samuel, has been a salutary lesson to the writer, who in the first years of membership in the Christian Science church erred, as did Uzzah, in thinking that her responsibility was to steady the ark of God. A spirit of criticism crept in; it seemed that church rules were lacking; that the Readers were not wisely chosen, etc.; and all this was through pride of opinion and a lack of faith in the absolute government of divine Mind. But how a few years of real work in Christian Science has changed this mental condition!

Do we stop to realize how we are limiting the work of others, how we are checking the natural unfolding of their spiritual perception, when we hold up a standard too high for their present understanding to reach, instead of gently fostering the budding thought of Truth and helping it to grow? We all had to have a beginning, and many of us remember with love and gratitude those who gently led us along and helped us to trust "Truth, the strong deliverer."

Digitized by Google

to guide us "into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226).

It is only when we become confident that "divine Love alone governs man" (Church Manual, p. 40), and are able to rest in this assurance, that we begin to see that the new cart (church organization) is solidly made and supported by Truth; and thus we are able to give up meddling with the perfect work of divine Mind. To know the truth, and to live it so as to be a shining light to those who at present seem immersed in darkness,—this is our present responsibility.

HAPPINESS.

VIOLET KER SEYMER.

IT is not conceivable that a God who is at once goodness and Love, should not have provided happiness for His creation, since every idea must be a reflection of the creator's own pure joy. "The fruit of the Spirit is . . . joy," says St. Paul. This being so, why is not happiness apparent on every side? Because "happiness is spiritual, born of Truth and Love" (Science and Health, p. 57), whereas mortals seek happiness in matter. Genuine happiness does not depend upon youth or environment, for where there is spirituality there is a happiness which increases as the spirituality increases, and as surely diminishes if the spiritual activity diminishes. Spirituality produces a mental and kindly activity, while materialism is slothful and selfish.

Properly speaking, spirituality itself cannot change, but the human being who, in seeking to demonstrate it, has yielded to the perpetual suggestions of apathy, laxity, indifference, procrastination, or false pleasure, for the time being, foregoes true progressive happiness and gives up something in exchange for nothing. Happiness comes as a result of obedience to Principle, and it indicates a degree of at-one-ment with Life, Truth, and Love. Our text-book gives the recipe for it in these words: "For true happiness, man must harmonize with his Principle, divine Love" (Science and Health, p. 337). Such accord entails literal obedience to the constant behests of God, good. It involves, in moments of fear or other temptation, complete loyalty to the acknowledged fact that God is all-powerful and ever-present; it means prompt thought and action, and as prompt a rejection of false thought before it can be expressed in speech or action. This harmonizing means the seeking of happiness in goodness, and the bestowal of it upon others in all the little every-day human expressions of divine good will toward men, whoever they may be. Pure happiness of this kind is safe in God's keeping, for it is the precursor of spiritual joy, just as disinterested human kindness is our link with and our sure proof of divine Love. Thus the reason of any lack of happiness is not far to seek; and the way to its possession is even closer at hand for all who are willing to seek it in "the straight and narrow way" of spirituality.

HELP ACKNOWLEDGED.

B. SOLON HAGLER.

AN article on "Compassion" which appeared in the *Sentinel* some time ago brought to me a special lesson and much comforting assurance. Ever since I became a student of Christian Science, a few short years back, and through its beneficent influence gained a desire for purer affections and a transfer of faith in material things to the things that are real,—to spiritual things,—I have often been burdened and cast down through the seeming reality of the belief in matter, and because my friends and family continued to hold this belief, and no explanation I could give would change their views or induce them to make anything like an honest investigation of Christian Science as given to the world in Science and Health and Mrs. Eddy's other writings. In this way I sometimes came to feel that the truth would be my destroyer, because it seemingly isolated me from the ones I held most dear; but at length I was forced into knowing that truth does not destroy any good thing. I came to see that the agony I endured was only self-seen mortal mind being forced by its own convictions of the truth to give up its belief in matter, and in dependence upon personality. The process was to me a great struggle, but after each battle with self, and the burial of the dead beliefs, I took a new lease of life through a better understanding of the allness of God, good, and the impartiality of divine Love.

Such an understanding leads us to relinquish any and all strenuous expressions or actions in our efforts to change others' opinions. Rather do we learn to look inward for the erroneous beliefs which would drive us to attempt to do God's work, or any work, without the knowledge and guidance of divine Love. But Christian Science is an inexhaustible subject, and I rejoice that so many are now writing such valuable and helpful articles for our periodicals, by which we are helped on our way to the realization of the truth of being.

DOING AND WAITING.

STOKES ANTHONY BENNETT.

THERE are few who are not familiar with Longfellow's beautiful lines,—

> Let us, then, be up and doing,
> With a heart for any fate;
> Still achieving, still pursuing,
> Learn to labor and to wait.

Mrs. Eddy quotes this as a conclusion to that dynamic article, "Improve Your Time," on page 230 of "Miscellaneous Writings." How beautifully inspiring in every word are these lines! How full of real sentiment, promise, and veritable hope! As a panacea for that dreaded of ills, discontent, they lift their healing lights high above all, showing that in real and honest effort there is joyous peace, complete satisfaction, and righteous ambition.

Ere I found the truth in Christian Science, the quatrain in question was but a creation of pretty euphony. Despite the frequent study bestowed upon the sentiment, and its verbal repetition, it failed to convey what I deemed it should, sinking me deeper and deeper into speculative and most inharmonious conditions. To-day it rests like a benediction upon me, coming into my thought as a message pure and undefiled. It explains away a longing that has dwelt with me since early years—a longing for rapid and lofty advancement, notwithstanding the marked absence of due preparation. Now, after some pointed and impressive lessons, I realize that Longfellow understood full well his intrinsic purpose when he gave expression to these verses, of which our beloved Leader has made such noble use. Their uplift, which means so very much to me in daily endeavor, has been wholly interpreted through my transformation in Christian Science.

As the hours come and go, I rejoice with all my being that the understanding of Truth has entered into my life and is proving to me that in doing what my hand findeth to do and patiently awaiting my reward, I am progressing as I never progressed before. I am thankful beyond measure for just this one lesson, which is constantly emphasizing itself and which, after all, is the chief cornerstone in the foundation upon which I am striving to build a sure and lasting superstructure. My unceasing prayer is that I may always be awake to the call of duty; that I may respond more efficiently each and every day, and that I may imbibe the spirit of holy activity in the way which God has appointed through Christian Science.

SELECTED ARTICLES.

[From an editorial in the *Philadelphia Public Ledger*.]

Where it is not a matter of principle, there is often needless controversy, simply because some people never learn that there is such a thing as bending without breaking, and that a man may give in for the time without giving up for always. Tactfulness, diplomacy, often accomplish more in ten minutes than a month of bulldozing and browbeating is able to achieve. A recent Arctic explorer has said that the reason for failure to attain "farthest north" in the generality of cases was the leader's inability to manage men. Cecil Rhodes always wore the shabbiest hat at the directors' meetings of his companies, and he always came away with what he wanted. That was because he knew how to overcome this man's crotchets and the other man's idiosyncrasies with his infinite tact and urbanity. To try to get along in human society without these qualities is like trying to keep machinery in motion without oil.

To get along with people one must be conversant with their language and their peculiar dialect of that language. "Honor among thieves" is not quite the same thing as honor among honest men. "It takes two to speak the truth," says Thoreau, "one to speak the truth and one to hear it," and he meant by that, of course, that there must be a receptive medium as well as an audible sound. Otherwise it is a waste of time to speak. They that have ears to hear will do the hearing, and no others.

Sometimes there are tragic misunderstandings where a word or two would set all right, and yet that word remains unspoken. It may be false pride or undue sensitiveness that keeps one from explaining. The one who feels the first impulse toward explanation that may lead to reconciliation should give that impulse rein. The apostle admonishes, "Let not the sun go down upon your wrath." We sometimes let our resentments and reasonless suspicions smolder beneath the surface, consuming us inwardly, when it would be far better for our spiritual health to allow the fierce blaze of a moment's anger to burst forth. And then, our wrath being open and evident, it would be possible to salve the wound or make atonement for the deed that was the cause of it.

People who get angry at you and never tell you why, are the more difficult human beings to get along with. The best way is to make peace with thine adversary quickly, to go to him and request of him an explanation. More than half the time the result of such frankness will be the discovery that, after all, there was no cause for quarrel—that it was due to a mere misunderstanding.

How grateful we are to any one who interprets us aright—to those who read our real motives and do not impute motives of which we are innocent. With some persons we know that we do not have to explain ourselves, that we shall be understood even before we speak. A word, to their wisdom, is sufficient to make clear our intent. We are under no necessity of explaining at great length just what our motive might have been. The real friend knows us better than we know ourselves, and has more faith in us than in our lifelong acquaintance with our own natures we have acquired.

Many misunderstandings are due to an unfortunate expression in a letter. Few misunderstandings survive the contact, face to face, of honest men. A man's countenance is too eloquent in his own behalf or against him. His handclasp, his attitude, his manner, tell you almost more than what he says. There are all kinds of overtones and undertones in conversation, however, that are lost on paper and cannot be noted through the receiver and transmitter of the telephone. The best way to compound a difference is for the parties to the quarrel to meet *in propria persona*. It is astonishing how often furious wrath is appeased, and anger reduced to the "still small voice" of peace and harmony, when "two strong men stand face to face." The meeting proves fatal to the misunderstanding.

[Frederick Dixon in the *Weston Super-Mare Gazette*.]

"Sickness," writes Mrs. Eddy on page 460 of Science and Health, "is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." Where the critic has come to grief is in not understanding in the very least what is meant to be conveyed, in Christian Science, or in scientific idealism for that matter, by the word real. To the Christian Scientist that only is real which is of God, all else is a mere temporary sense, relatively true or untrue, of something unlike God. When, consequently, he says that a man is healthy, he is alluding to the spiritual man, made by God, who is Spirit, perfect, in His own image and likeness, and not to the material counterfeit of that man, subject to all the laws of the flesh, to sin, disease, and death. Devoting, as he is, every moment he can spare to the effort to arouse mortal man from a false sense of life into "the glorious liberty of the children of God," the Christian Scientist is little likely to underrate the agonies of human suffering. But because in his struggle with sickness and misery and sin he declines to handicap himself by describing them as real, that is, as part of the divine creation, it does not imply that he denies that they may seem, relatively, very real indeed to the human consciousness.

Finally the critic explains that the way to get rid of sickness is by prayer in conjunction with a doctor. Now no Christian Scientist has a word to say against those good men who have engaged in a lifelong struggle with disease and pain in the way which seems truest to them, but for themselves they are conscious that they have found a better way, a way that binds up not only the physically wounded but the broken-hearted, which heals not only pain but remorse, which conquers sin as well as sickness. Which kind of a physician did the speaker really think Luke was? Does he believe that the man who raised Eutychus from the dead in the street at Troas, sent for a man practising the medical methods of the first century to heal him of some minor form of sickness? The medical methods of the first century have been laid bare to us by Pliny. They were of the nature of spells and serpent-gazing. The gall of a weasel was a specific for an asp's sting, the blood of a tortoise for that of a serpent. Bad sight could be healed by means of the liver of a she-goat, poison could be dissipated by tabloids of charred viper's flesh. Will your readers accept such a picture of the "beloved physician," or will they accept that of that great scholar, Professor Harnack, who has written, "His medical profession seems to have led him to Christianity, for he embraced that religion in the conviction that by its means, and by quite new methods, he would be enabled to heal disease and drive out evil spirits." This method Harnack boldly terms the Science of Christianity.

[Jno. M. Dean in *The Commercial Appeal*, Memphis, Tenn.]

There is not the slightest element of "mysticism" in Christian Science; it is a revelation and not a covering up. That it differs radically from other systems is true, but unthinking acquiescence in established opinions does not make them true. Every great truth has met with scorn and derision when first presented. Jesus was crucified because his teaching was against the accepted order; Galileo was imprisoned for daring to assert that the earth was not flat.

Digitized by Google

As to diagnosis, probably the doctor is not aware that a large majority of those who come to Christian Science for help turn to it as a last resort only after they have "suffered many things of many physicians," and were "nothing bettered, but rather grew worse." Thus the diagnosis in most cases is that of the physician and not of the Christian Scientist. That "Christian Science is cruel" is so pathetically untrue that one who knows realizes at once that the assertion is prompted by prejudice against or ignorance of the subject under discussion. No one should or does express more of loving, gentle compassion than the Christian Science practitioner, and it is the divine Love thus expressed that heals the sick and the sinner in the way the Master taught.

If our brethren of the medical profession had made but a moderate percentage of failures there would never have been a demand for any other method of healing, and the very fact that Christian Science exists as such only goes to prove the woful inadequacy of a system that has existed in varying forms for more than four thousand years. It would seem that until the medical profession has drawn a little nearer to perfection, less adverse criticism along certain lines would be more becoming to its votaries.

[From an editorial in the *Toledo* (O.) *Times*.]

Dr. George Cutton, the University of Chicago professor who assailed Christian Science in his recent lecture in Toledo, went a step too far when he branded the views of Mrs. Eddy as "hodgepodge." If the distinguished gentleman were convinced of the truth of his statement, he surely possesses enough common sense to know that he lowered the dignity of his discourse by personal abuse. His contempt for a book which is recognized to-day as a masterpiece on the subject of Christian healing, and which has done more to revolutionize the thought of mankind than any work of recent years, his utter disregard of the personal convictions of others, has made him the logical target of scores of Toledo people who do not accept the teachings of Christian Science.

However deeply rooted one's convictions may be as to the value of Mrs. Eddy's work, the fact remains that this book, which is accepted by her followers as a spiritual interpretation of the Bible, has brought more comfort to the suffering, has alleviated more pain, has uplifted and upbuilded more men and women than all the medical treatises in the average physician's library. Had the volume done nothing more than set men to thinking, it would be given a high place of honor in the world of literature, but the work is used as a commentary and key to the Scriptures by Christian Scientists. The Chicago professor shows very little respect for the Christian Science church and for Mrs. Eddy when he condemns a work and a movement which has done so much good and is based on such sacred teaching. Had he referred to any other church the members of that church would have been up in arms and made it decidedly interesting for him. The only consoling thought is that after all the address is but one man's personal abuse, and it should be treated accordingly.

LINCOLN DAY LESSON-SERMON.

The Society is prepared to furnish leaflets of the Lincoln Day Lesson at the following prices, postage prepaid: 5 copies, 7 cents; 10 copies, 12 cents; 50 copies, 40 cents; 100 copies, 75 cents.

Address orders to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY,
Falmouth and St. Paul Streets, Boston, Mass.

THE LECTURES.

PEORIA, ILL.

A packed house greeted Rev. Arthur R. Vosburgh of Rochester, N. Y., at the Grand Opera House last night [Nov. 2], to listen to his lecture, "The Idealism of Jesus." He was introduced by Miss Edna Earnest of this city, the Second Reader of the Christian Science church in Peoria, who said in part,—

Time was when Christian Science had few friends, when it suffered persecution from pulpit, press, and home. Nothing but its redemptive work, proving it to be the truth, could have brought it safely through the darkness of misunderstanding into the light of the broad-minded charity of the present. To-day Christian Science takes its rightful place as the healing and saving religion which mankind have always sought. It has won its way to respect and permanency by its fruits—the healing of sickness and sin. Thousands of sane and intelligent men and women witness to this healing.—*Peoria Herald-Transcript.*

CAMBRIDGE, ENGLAND.

A lecture on Christian Science at the Victoria Assembly Rooms on Thursday afternoon [Oct. 29] attracted a large audience. The meeting was held under the auspices of the Christian Science Society in Cambridge, and was presided over by A. Hervey Bathurst. The lecturer was Clarence C. Eaton, Tacoma, Wash. In opening the proceedings the chairman remarked that the subject of Christian Science had been frequently misrepresented, but always by those unacquainted with its teachings. Mr. Eaton had not come that afternoon to proselytize, or even to suggest they should accept the teaching of Christian Science, but he had come to tell them the plain truth about the subject and its Discoverer. Mr. Eaton had a message to deliver, a message which so many had learned to apply to their own needs, and it was because of the practical proofs they had experienced of the healing of physical suffering and the destruction of discord and sin, that they were able to say, in the words of Job, "I know that my redeemer liveth."

Cambridge News.

ROME, GA.

An event out of the ordinary, and of more than the usual interest to all thinking people, was the lecture on Christian Science Sunday afternoon [Nov. 15] at the Opera House, when Mrs. Livingston Mims of Atlanta charmed her hearers. The speaker was to have been introduced by Dr. J. B. Robins, pastor of the First Methodist church, but at the last moment he found himself unable to attend, and instead wrote the following note, which was read to the audience:—

I write this note to express my regret to those interested in the lecture by Mrs. Mims, and also to express my personal disappointment. It is always a privilege to hear a cultivated, thoughtful, refined woman talk, and especially one like Mrs. Livingston Mims. I long ago reached the point, in my own religious thinking, where I do not ask what one believes or professes, but what can he do to make the world better. Can he think some better thought for it, give it some larger view of life, or reduce its sadness and increase its joy. Mrs. Mims, through her strong life and well-equipped mind, has brought sunshine to many a life and gladness to many a heart. She is trying to make the world better, and I wanted to hear her this afternoon.

Before the afternoon was over, all within sound of Mrs. Mims' voice were heartily willing to agree with Dr. Robins' estimate.—*The Rome Tribune-Herald.*

CHICAGO, ILL.

Bicknell Young delivered a lecture on Christian Science for Eighth Church of Christ, Scientist, Nov. 7. He was introduced by H. O. Sprogle, counsel for the Civil Service Commission, Chicago, who said:—

We are to have the pleasure to-night of listening to an exposition of a subject which is commanding wide attention. Only those who have some familiarity with the Christian Science movement can appreciate how far-reaching the interest in it is. Christian Science has spread over this continent, over Europe and Australia, and its benign influence has penetrated even into Africa and the Orient. Without some apprehension, to a greater or less degree, of what Christian Science really teaches, one perhaps cannot realize the magnitude of the promise it brings to mankind. In its fulness it professes to solve every perplexity, to banish every anxiety and care, to cure every ill; in a word, to remove all the evils that confront and hedge about the individual and the human race.

Many of those present in this audience have demonstrated to their own satisfaction its efficacy, in sweeping from their paths, by Truth's power, the thorns which heretofore infested their way, in the shape of sickness, sin, anxiety, and fear. Others have but a vague idea of what Christian Science really is, and they come seeking more light. This occasion is arranged for the diffusion of light. How we may come into the knowledge, to some degree, of this wonderful power, we shall learn this evening from one who comes to us with the authority to expound it.—*Correspondence.*

PITTSBURG, PA.

A large and appreciative audience listened to a lecture on the subject of "Christian Science and Christian Scientists" by Dr. F. J. Fluno of Oakland, Cal., in Carnegie Music Hall last night [Nov. 16]. The lecturer was introduced by Col. Samuel Harden Church, secretary of the Carnegie Institute, who spoke in part as follows:—

I believe most firmly in the efficacy of faith-healing. But the cure of the sick is not the whole business of life, most happily. There are other questions that come up in the religious lives of men and women. It is sent to heal the broken-hearted, and to cure the mind of its afflictions. And this is much more largely the work of the Christian Science church than of this much-disputed question of healing the sick. Why, only this morning, in conversation with a Christian Science friend, when we were discussing the case of a poor woman whose life had been blighted by the cruel treatment of her husband, and I was indulging in some quite severe denunciation, I observed that my Christian Science friend was not mad at all, and pretty soon I stopped and gave him a chance, and he went on to talk in the most quiet way I ever saw about the happiness and love that was still left for this woman's life. Every life has or will have its tragedy, and every human soul must have its day of crucifixion, and the episode of this morning, and many others that have come to me with my friends in the Christian Science church, have shown to me the marvelous degree of power that lifts them out of their afflictions and teaches them, as my friend showed me this morning, that in spite of the darkest clouds there is still some happiness and love for every one. So I was pretty nearly ready to join this church. But now, my friends, that is the message which will repay us to come to hear. When we see fruits of the Spirit such as this—and it is impossible to look upon the membership of such a church, filled as it is with noble, intelligent, and elevated people, and see the softening power of its influence upon their lives, as I saw it this morning, without feeling that this church does embrace a most overwhelming part of that philosophy and wisdom and truth which can come from no other source but God in heaven; and that is what I firmly believe.—*Pittsburg Herald.*

LYNN, MASS.

One thousand people assembled in the Auditorium Sunday afternoon, Nov. 1, to listen to a lecture on Christian Science by Frank H. Leonard of Brooklyn, N. Y. The speaker was introduced by Edward H. Keach, First Reader, who spoke in part as follows:—

All down through the ages, perhaps with varying degrees of interest, there has been a growing desire for more light, for a better understanding of God, for a higher consciousness of His ever-presence, and for a greater knowledge of God's relation to man and of man's relation to God. This desire, with the unreserved freedom of expressing it and with the breaking away from conventionalities, is greater to-day than ever before, and we feel that the teachings of Christian Science have been a great factor in bringing about this condition of thought.—*Correspondence.*

SANTA ANA, CAL.

A large and attentive audience of representative citizens greeted Judge Hanna at the Opera House last evening [Dec. 1] and listened attentively to his interesting lecture. William Gregg, First Reader of the local Christian Science church, introduced the lecturer, saying in part:—

Your presence here would indicate a desire to know more of this great subject that is arresting the attention of all thinking people. We are living in an age of thinkers. Dissatisfaction with old conditions, and a consequent advancement in arts, sciences, and inventions, have marked the century. In the line of the spiritual, too, there has been an earnest seeking after the truth, such as has not been seen since the days of primitive Christianity. To-day the efficacy of prayer is more generally believed in and thought is more receptive to the teaching of our great Master, Jesus of Nazareth. In our reaching out for more light and a betterment of human conditions, we have found the teachings of Christian Science sufficient for our needs. In my own experience I have witnessed the healing of various forms of sin and sickness through the understanding of this truth. I have seen love and kindness replace hate and envy, poverty give place to competence, and sorrow to peace and joy.—*Daily Blade.*

LONDON, ENGLAND.

Clarence C. Eaton's second lecture, at the Queen's Hall, on Friday night [Oct. 30], attracted as large an audience as on the occasion of the first, and though the lecture was mainly addressed, and the seats for the most part allotted, to non-members of the Christian Science community, every word of Mr. Eaton's long discourse was followed with the closest attention, and the firm hold he soon succeeded in establishing on the interest of his audience was none the less remarkable because it was made up of representatives of every section of society—not by any means the type of audience likely to furnish appropriate material for the making of a packed house.—*The Onlooker.*

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE WAY OF WISDOM.

MARY BAKER EDDY.

No man can serve two masters: for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon.—Matthew 6 : 24.

THE infinite is One, and this One is Spirit; Spirit is God, and this God is infinite good.

This simple statement of oneness is the only possible correct version of Christian Science. God being infinite, He is the only basis of Science; hence materiality is wholly apart from Christian Science, and is only a "suffer it to be so now" until we arrive at the spiritual fulness of God, Spirit, even the divine idea of Christian Science,—Christ,—born of God,—the offspring of Spirit,—wherein matter has neither part nor portion, because matter is the absolute opposite of spiritual means, manifestation, and demonstration. The only incentive of a mistaken sense is malicious animal magnetism,—the name of all evil.—and this must be understood.

I have crowned The Mother Church building with the spiritual modesty of Christian Science, which is its jewel. When my dear brethren in New York desire to build higher,—to enlarge their phylacteries and demonstrate Christian Science to a higher extent,—they must begin on a wholly spiritual foundation, than which there is no other, and proportionably estimate their success and glory of achievement only as they build upon the rock of Christ, the spiritual foundation. This will open the way, widely and impartially, to their never-ending success,—to salvation and eternal Christian Science.

Spirit is infinite; therefore *Spirit is all.* "There is no matter" is not only the axiom of true Christian Science, but it is the only basis upon which this Science can be demonstrated.

"I HONOR MY FATHER."

NOT infrequently in times past heroic struggles for freedom have been attended by the sacrifice of thousands of lives and the loss of untold millions of property. Nations have willingly hazarded such a possibility and bravely borne the consequent grief and burden of debt because they knew of no other way to secure the coveted prize. The destruction and death have not been the less dreadful, but the longed-for freedom, though "bought with a price," has seemed to compensate them for their sufferings. When, however, a catastrophe like that which has recently visited one of the most historically interesting and picturesquely beautiful regions of "Sunny Italy" is utterly barren of any emancipating or educational significance, and no hint is given of a way of escape from the possible repetition of its meaningless horrors, so that there is absolutely nothing to mitigate the dreadfulness of the experience, then its incongruity with any right and just order makes irresistible appeal to thought; it is manifestly altogether out of keeping with the government of a beneficent intelligence.

Dreadful, however, as this catastrophe may be, we can but realize that it is quite insignificant when compared with the loss to the Christian world were it to be separated from that faith in the wisdom, justice, integrity, and love of God which has ever been its most priceless possession. This greater loss cannot come for the many, though it may be hazarded to-day for some as the result, strange to say, of an entirely unwarranted adherence to that medieval and materialistic concept of God and His law which Christian Science has shown to be no less unscriptural than unphilosophical.

A prominent Christian weekly lies before us, which enlarges upon the urgency of the call for help for the Italian sufferers, and which then adds,—

We appeal to every reader of this paper to do promptly his share toward relieving the fearful disasters that follow this inscrutable dispensation of Providence.

It would seem that the contradiction embodied in this remarkable statement must appear to every thinking person, for if, as Jesus taught, God is wholly just and good, all that results from His activity must also be good, and if, as the above statement intimates, earthquakes were the manifestation of God's law ("Providence"), then they would be the expression of absolute right and justice, and hence could not bring "disasters." If we stand for a God who is infinitely good, we cannot question the good of His manifestation without violating the requirements of consistency. Again, all Christians agree that to honor God is the very vital of Christianity, but when He is made responsible for conditions which are unspeakably cruel and unjust, a concept of the divine nature is presented from which thoughtful men can but turn away with sadness in their hearts or a sneer upon their lips.

But, it is queried, what other can Christian Scientists say of such dreadful events? This: that they are the phenomena of a false, material-sense world which is the expression of error, not Truth, of false mortal belief, not divine Mind, and that God is no more responsible for them than He was for the torture of the poor woman whose ills Jesus attributed wholly to Satan. Says Mrs. Eddy, "The manifestations of evil . . . are called in the Scriptures, 'The anger of the Lord.' In reality, they show the self-destruction of error or matter and point to matter's opposite, the strength and permanency of Spirit" (Science and Health, p. 293). Christian Science honors God by holding Him superior to and wholly separate from any act or manifestation which violates His integrity as infinite good; and men are rapidly coming to see the contrast between this concept of God and His government and that which is still entertained by many Christian believers. More than this, they are also coming to see the significance of this worthier concept to the world's retention of a spirit of respect for that source of all true being, of whom Jesus said, "I honor my Father."

JOHN B. WILLIS.

SPIRITUAL WRESTLINGS.

IT is not possible to overestimate the value of the spiritual unfoldings which come to us as we study the Scriptures in the light of Christian Science. As we begin to recognize spiritual facts, we likewise see material conditions which have seemed very threatening to human sense, disappear before a dawning apprehension of Truth and Love. A spiritual fact or experience is as indestructible as Truth itself. It has its place in universal consciousness, and is there to enrich all those who have eyes to see and ears to hear in all time.

Such is the story of Jacob's experience at Peniel, when he wrestled with the angel and communed with God "face to face." Jacob had left his father's house many years before, because of the fierce anger of his brother Esau,

Digitized by Google

but the time came when he was bidden to leave the idolatrous surroundings of Padan-aram and return to the land of his kindred. We read that he was pursued by Laban, his father-in-law and business partner, and that a treaty of peace was made between them after their differences had been settled. Then we are told that, as Jacob went on his way, "the angels of God met him," and helped to prepare him for another peaceful victory. Our revered Leader gives us an enlarged sense of angels when she tells us that they are "pure thoughts from God, winged with Truth and Love, no matter what their individualism may be" (Science and Health, p. 298). By their coming Jacob was better prepared to meet his brother, who in the days gone by had threatened to kill him, and who was now approaching with four hundred men.

We are told that Jacob sent on his servants with a princely present for Esau, but well he knew that something above and beyond the material was needed to heal their feud; so we find him alone with God, in the silence of the night, face to face with the infinite demands of Truth and Love. Wonderfully does Mrs. Eddy describe Jacob's wrestling and its perfect result. She tells us that he "did not loosen his hold upon this glorious light until his nature was transformed" (Science and Health, p. 308). From this victory came his name Israel,—a prince who had prevailed, and who had "power with God and with men."

This beautiful story would be incomplete without the meeting of the long-alienated brothers. We are told that they embraced each other and wept, and that Esau declined Jacob's proffered gift, saying, "I have enough, my brother; keep that thou hast unto thyself." But Jacob pleaded, "I have seen thy face, as though I had seen the face of God, and thou wast pleased with me. Take, I pray thee, my blessing. . . . because God hath dealt graciously with me, and because I have enough. And he urged him, and he took it."

How often does it happen to-day, that in the face of impending danger, whatever its character, men are willing to be alone with God, as was the patriarch, and to wrestle spiritually until the light breaks upon them? Would failure ever be possible to the one thus prepared? Never since the days of Christ Jesus have so many found what is to be gained by the wrestling which says to the divine idea, "I will not let thee go, except thou bless me," but still more should seek in the spiritual Peniel their own healing and that of others. Truly says the poet,—

> For hath one such uplifted hour
> Upon the sense redeeming power;
> And in its light through after days
> We travel our appointed ways.
> And all the lowly vale grows bright,
> Transfigured with remembered light;
> While in untiring souls we bear
> The freshness of the upper air.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Essex Junction, Vt., Jan. 5, 1909.

Beloved Leader:—Words cannot express my gratitude for the sweet messages of love you have sent me by my husband. We are making no sacrifice for you, dear Leader, but our hearts are filled with joy that our thought has been so lifted up that you could ask us for help. Only twice has the thought of separation suggested itself, as Robert and I sat down to breakfast, and then it was quickly banished.

My reward is the proof of healing. This morning, about eight, my sister asked help for her oldest boy, who said his head ached and his throat was so sore he could not get up. At noon his father came and said the boy went to school as usual.

These words in the late edition of Science and Health are with me continually,—

> Oh! Thou hast heard my prayer;
> And I am blest!

Robert joins in love to you,

CHARLOTTE W. BOWMAN.

Concord, N. H., Jan. 8, 1909.

Rev. Mary Baker Eddy, Brookline, Mass.

Dearly Beloved Leader:—At the annual meeting of the members of First Church of Christ, Scientist, Concord, N. H., held Jan. 7, 1909, the following resolution was unanimously adopted:—

Resolved: That we, the members of First Church of Christ, Scientist, Concord, N. H., assembled in annual meeting in the beautiful church edifice which is the generous gift of Mary Baker Eddy to us, desire to and hereby do express our appreciation of and deep gratitude for such a Leader and friend as she has been to us, and we pray that divine Love may bless her and the noble and unselfish work which she is so faithfully doing for mankind.

Lovingly yours in behalf of the church,

ANNA MEEHAN, MARIAN W. HERING,
EVA MOORE CLARK, *Committee.*

Brookline, Mass., Jan. 6, 1909.

Dearly Beloved Teacher:—Would that I knew a language which could adequately express my love for you, and my appreciation of your faithful work for the betterment of mankind. Surely our debt of gratitude is very great, and the least we can do is to watch and pray with you.

Quite recently I had such a beautiful dream about you and me. Words are again inadequate to describe the sweetness of it. The seeming was of two individual natures welded together. We seemed submerged in a sea of love. I never before experienced anything so wonderfully sweet, and the sense of it remained with me for many days; I consider it a foretaste of perfect Love.

Our *Monitor* has been well received by the whole world. A few days ago I visited the observatory in the publishing house from which the public can see the wonderful printing-presses at work, turning out this splendid paper by thousands,—indeed an inspiring sight; to my sense, a press in action is a wonder. You would be pleased to see the boiler-room, so neat and orderly. I wish I could put you in my pocket and show you the beautiful church and publishing house. The changes that have taken place within the last six years are truly marvelous. Our Cause is truly a great Cause.

God bless you forever, our beloved Leader, is the prayer of Your grateful student,

JEANNETTE R. MCLELLAN.

New York, N. Y., Jan. 1, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Listening to God's voice through every avenue for good, I have this day chosen to follow Spirit, not matter, striving thereby to become a consistent Christian Scientist. Through your teachings and writings I have gained health, joy, and understanding. For these precious gifts I tender loving, grateful thanks.

With love for thee and thine, faithful Christian Scientists throughout the world,

Devotedly yours,

GEORGE WILLIAM OTIS.

Digitized by Google

Boston, Mass., Jan. 5, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I often think of the wisdom which led you to ordain the Bible and "Science and Health with Key to the Scriptures" to be the "only preachers" for your church. These books furnish an endless variety of lessons or sermons, appropriate for all occasions, and they teach unadulterated Christian Science. When you avoided the shifting sand of human personality, and instituted this impersonal preaching, you built your house upon the rock.

The attendance at The Mother Church during the past quarter has been uniformly good, and the testimonies at the Wednesday evening meetings have been particularly helpful.

Gratefully yours,

CLIFFORD P. SMITH.

Ipswich, Suffolk, England, Dec. 27, 1908.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Fifteen months ago four persons began to meet in a home for the study of the Lesson-Sermon; to-day, with some few added to our number, we are taking the first step toward the establishment of Christian Science services in this town, by the transfer of our meeting to a public room. With hearts overflowing with love to God, we feel impelled to send an expression of our deep gratitude to you, whose devoted love and life-work reach even this far-away corner of East Anglia. In humility we rejoice in the blessings that have come to us through your inspired teachings; and our earnest prayer is that divine Love may so govern our every thought and deed that we may grow into fit channels for His healing truth, and become worthy of the name Christian Scientists.

Lovingly and faithfully,

EUGENIE GOODCHILD, CHARLES J. SMITH,
DOROTHEA BUTCHER, ELIZA SMITH.

Lynn, Mass., Jan. 6, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Lynn, Mass., in annual meeting assembled (Dec. 17, 1908), hereby express our gratitude and thanks to you for the truth which, because of your close walk with God, you were able to bring into our consciousness and understanding. We also wish to tell you of the growth of Christian Science in this city—at one time your home. That there are many here who are yearning for a greater understanding of God, is evidenced by the constantly increasing attendance at our church services. The growth of the Sunday School is equally gratifying. We are continuing the practice of devoting the collection taken on the first Sunday of each month to our building fund, and at the proper time we shall have a church home of our own. We feel that it is a great privilege to be permitted to work in the city where the revelation of this great truth first came to you, and where you are held in kindly remembrance by so many.

With heartfelt gratitude for your years of faithful, glorious work, we remain

Lovingly yours,

EDWARD H. KEACH, ANNE MAY LILLY,
EMMA F. PRESCOTT, *Committee.*

Syracuse, N. Y., Jan. 5, 1909.

Mrs. Mary Baker Eddy.

Dearly Beloved Leader:—There has been an irresistible longing on my part to express to you in this humble way my gratitude and thankfulness for my healing. Five years ago I telegraphed a relative in Buffalo, N. Y., for treatment. I was instantaneously healed of the drinking habit of fifteen years' standing. I had tried every known means to free myself of it, but to no avail. I was also healed with one treatment of lung and throat trouble, for which I had twice made a change of climate, but with no lasting benefit.

The physical healings I have received have been many, and I am indeed grateful, but they are only a drop compared to the regeneration of self,—the constant uplifting and purification. My whole life has been renewed, and that which seemed to be life and substance has vanished into the nothingness of no thing. I am deeply grateful for all our reading-matter, including our daily paper, the *Monitor*. These are daily food to me; they sustain and nourish and comfort. I connected myself with our loyal church, also with The Mother Church, and have, as opportunity has presented itself to me, been able to lift others from the bondage of sickness as well as the enslavements of wrong habits. I am earnestly striving to bring out more of the truth in my life, that I may be better fitted for the only work which never fails to give us our reward. My one desire is ever to follow your teachings, and learn from them as you learn of the great and only intelligence.

With sincerest gratitude and love for what you have given and are giving to all the tired children of earth, through your inspired book, "Science and Health with Key to the Scriptures,"

I remain lovingly and obediently,

ABBIE M. CRANDALL BACHMANN.

Corvallis, Ore., Dec. 28, 1908.

Mrs. Mary Baker Eddy.

Dear Leader:—Words cannot express the gratitude I feel for the many blessings that have come to us through you; first the healing of lung trouble, which was fast taking my husband from me, nineteen years ago. (He is still with me, and is now hale and hearty.) This healing was followed by numerous demonstrations, all proving the power of Truth. Now comes the daily blessing in the form of the *Monitor*, presenting only clean, wholesome news in our family. I feel that we can best show our love for you by living as becomes loyal Christian Scientists, striving to follow our Leader as nearly as we can.

With love and gratitude,

RETTA G. WHITING.

NOTICE.

Some of Mrs. Eddy's writings in new bindings are now on sale. See notice in the column of special announcements, page 398.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local newsdealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

AMONG THE CHURCHES.

LOS GATOS, CAL.

Work on the fine new Reading Room of First Church of Christ, Scientist, on Broadway, is progressing very favorably. The building is all up, roofed and enclosed, and though none of the rooms are finished as yet, one can readily imagine that they will all have a very cozy appearance when completed. The exterior will be an attractive rustic finish.—*Los Gatos Mail.*

SANTA CRUZ, CAL.

At a meeting of the members of the Christian Science church to-day [Nov. 23] it was decided to proceed with the erection of a church edifice on their lot at the corner of Ocean and Dakota avenues, and work will begin at once on the first section of the building. The exterior will be finished in cement and will present a handsome appearance, being designed in the Greek-Corinthian style, surmounted with a large dome.—*San Francisco Chronicle.*

CHAMPAIGN, ILL.

The new church edifice of First Church of Christ, Scientist, located at University avenue and Elm street, was dedicated Sunday, Jan. 10. Only a portion of the building is at present completed. The building is constructed of Bedford limestone. Its general form is of the type of the early Christian basilicas. The design is based upon the form of architecture developed by the Christian church in the days before ecclesiasticism had produced its effect upon it. It is a style of architecture of the utmost simplicity, yet having at the same time a most profound religious quality. It was not, however, the thought in the minds of the architects to reproduce a particular phase of architectural development, but rather to use the above-mentioned type and mark a step in advance of it, producing a form of building and type of design which shall be distinctly characteristic of the fundamental teaching of Christian Science.—*Champaign Daily Gazette.*

TRENTON, N. J.

In an address at the dedication services of First Church of Christ, Scientist, Dec. 13, the First Reader said in part,—

Looking back a little over five years, we trace the history of our church to the appearance of a little sign, placed at the entrance of one of the public office buildings on East State street. This sign had printed upon it simply the words, "Christian Science, Room 14." Many passed it unnoticed, but soon it began to attract the attention of one and another whose eyes and ears were receptive to the call of Truth, and these found their way up the two flights of stairs to ask about Christian Science and to seek aid for themselves or others. Meantime, beginning Sept. 3, 1903, Sunday services were held in the little room, with an attendance of three in all at the opening service. Soon others joined the trio, and it was not very long before Wednesday evening meetings were held and the newly awakened were led to give grateful testimony for benefits received. As the weeks passed the room began to fill, and at the end of the first year thirty-three found their way to this unpretentious place for Sunday worship.

June 17, 1904, we were duly incorporated under the laws of the state as "First Church of Christ, Scientist, of Trenton, N. J.," with twelve charter members. The growth continued steadily, and progressive steps were taken. Though the difficulties which confronted us at times seemed great, we found it indeed true that according to our faith and obedience we were prospered. At length it became apparent that the time had come to take a more public stand as a church, and enlarge the place of our tent.

In February, 1907, a building fund was started, the collections taken the first Sunday in each month being set apart for this purpose, and no sooner had this stand been taken than—to our great joy—word came from one of our dear members that a lot had been secured, and would be presented as a gift from her to this church. Plans were considered for a modest structure to cost about two thousand dollars, but finally they developed into larger proportions, a five or six thousand dollar building being thought better suited to our needs, and the laying of the corner-stone took place on the morning of Easter Monday. Contributions to our fund were all voluntary, and to those who have worked and contributed so lovingly to the building of this church, it is indeed a temple of God, "an house not made with hands."—*Correspondence.*

ALEXANDRIA, EGYPT.

Our readers will be interested to learn that the Christian Scientists have of late made considerable strides not only in Egypt, but throughout the civilized world. Here in Alexandria the work started, as we suppose it did in many other places, by friends reading in private. But the time has now come when even these few have seen the advisability of taking suitable premises, and after a little search have decided on Davies Bryan's Buildings in Cherif Pasha street, to be the Christian Science Reading Rooms. The premises are suitable in every respect, and the position is central and easily accessible. A lift takes one to the third floor, where one finds three well-lighted, comfortable rooms. There is an assembly room, which we understand will be the library and will be open half an hour before and after the services. This leads into a spacious apartment intended for the service. To the right of this lies the Reading Room, where silence is the one requirement for the privilege of its use. Service is to be held each Sunday at eleven o'clock, to which the workers extend a hearty invitation to those who are seriously interested in the subject. We are indeed pleased to learn that our local friends have made such headway in a work from which good must naturally result, and we wish them continued and even greater success.—*Egyptian Daily Post.*

MEMPHIS, TENN.

First services in the new church home were held by the congregation of First Church of Christ, Scientist, Sunday morning [Dec. 27]. The first floor of the new edifice, Dunlap street, at the corner of Monroe avenue, opposite Forrest park, has been completed, and will be used until the entire building is finished. This part of the church has been fitted up in an attractive way. The church plans to use the room which has been completed for a Sunday School room, when the upper story is finished. The new part will contain the main auditorium. By following the plan of completing part of the building now, the congregation is provided with a home for the winter.

The membership of First Church has been growing steadily, and the prosperous condition of its affairs is shown by the handsome building, now partly completed. When finished the building will be one of the finest church homes in Memphis.—*Memphis News-Scimitar.*

TESTIMONIES OF HEALING.

About four years ago I noticed that several warts had appeared upon my hands. These were thought little of at the time, although others suggested material remedies for their removal. Though I had not yet begun the study of our text-book, I was becoming interested in Christian Science, and did not resort to drugs or chemicals for the removal of the excrescences. When at length I turned earnestly to the investigation of Science, it was not for physical healing. I was hungering for the spiritual food it had to offer. In the blessed pages of "Science and Health with Key to the Scriptures" by Mrs. Eddy I found the wonderful truth that fully satisfied me. With the light of the truth which was penetrating into my benighted consciousness I was enabled to conquer many false desires and ambitions, to eradicate errors that infested mortal mind, and to make several demonstrations over various acute physical disorders, but I did not yet realize the necessity for active work in destroying the parasitic growths upon my hands. In this period, when mental indolence assured me that a cursory treatment now and then was all that was needed to destroy so harmless, albeit unsightly, a manifestation, they multiplied. There were twenty-six upon one hand alone, and they appeared also upon my arms and dotted them to the elbows.

Having become somewhat sensitive concerning the condition, and finding my own fear-begotten efforts of no avail, I went to a practitioner. I had been speedily helped on previous occasions when it was necessary to call for aid, and I believed that this last difficulty would yield as easily; but although the dear lady labored faithfully for many weeks, and lurking errors in mortal mind were uncovered and destroyed, not the slightest change was discovered in the state of my hands and arms. Several months later another practitioner worked for me a long time, but with no outward result. I gained in spiritual understanding each day, however, and was able to overcome financial difficulties, fear, and worry. After witnessing the healing in Christian Science of a woman whom five physicians had failed to help, and beholding the disappearance of two alarming diseases before the declaration of truth, an added understanding and faith in the power of the word as spoken in Christian Science were given me.

At this time I was also awakened from a dream in which sense testimony had long held me, and made to see that selfishness and indifference largely permeated my thought. With this realization I turned humbly to my neglected duties. Although these were of so pressing a nature that they left me but little leisure, I yet found a few minutes each day in which to realize the truth concerning myself as God's child; that man is spiritual, not material, reflecting purity, spotlessness, and perfection; that "the word of God is quick, and powerful, and sharper than any twoedged sword,"—that it is indeed adequate to destroy in mortal mind all selfishness, hardness, and indifference, and in the mortal body all appearance of abnormal growth. The result of this realization of the truth was not long in coming. Almost immediately the manifestations began to disappear. For three weeks I spoke the word each day, and at the end of that time all the warts had disappeared. This occurred a little over a year ago. Since then the scars which indicated where they had been have nearly all faded out.

For this and many other proofs of the healing truth concerning man's real being, as revealed in Christian Science, I am deeply thankful; but an even larger gratitude fills me for the spiritual help accorded at all times. I am realizing more fully each day that God never leaves us nor forsakes us, and my daily prayer is for more gratitude to God, and to our revered Leader for this great revelation, Christian Science,—a gratitude which may be best expressed in good thoughts and deeds.

BELLE KANT, San Francisco, Cal.

I have thought many times I should write and let others know of my healing by Christian Science. About three years ago I was taken with a terrible pain in my back and legs. A local physician treated me without any benefit. He then advised me to get some other physician, as he was afraid he did not understand the case. I sent for the best in the state, and he pronounced the case a dreaded disease and incurable. He also said that I had but a short time to live, and that if I did live longer I could never walk. I then turned to Christian Science, without much faith in it, but at the second treatment there was a decided improvement. I have never had any return of the disease since. I am over seventy-three years old and am in better health than for some time.

Words cannot express my gratitude to God, and to Mrs. Eddy, through whom this great blessing was brought about.

EDWIN NICKERSON, Pentwater, Mich.

I feel it a duty as well as a pleasure to acknowledge publicly what Christian Science has done for me. I took it up for the physical healing, as the last resort. I had been an invalid for more than two years, suffering with intestinal trouble in its worst form. Every known remedy in *materia medica* had been exhausted. I had had the best medical aid, and three reliable physicians had told me that I could have only temporary relief, but that by adhering to a strict diet I might live for some time. I was, however, gradually losing flesh, and after two years' trial of this way of living, material remedies ceased to have any effect. I was entirely healed in Christian Science in less than ten days. I have not taken any medicine since the first treatment, and have gained twenty pounds. I have had many other demonstrations, both physical and financial, besides the great spiritual benefit.

Words cannot express my gratitude to God, and to our Leader, who has labored so patiently to give us this spiritual understanding.—MRS. C. L. GAMBLE, Evansville, Ind.

In love and thankfulness to God, I wish to acknowledge some of the many benefits I have received from Christian Science. It healed me of a fever when my life was despaired of, and later of a distressing headache and all its accompanying ills, from which I had suffered all my life. I sought help from many physicians, who attributed the head trouble to everything from the stomach to a tumor on the brain, but I received no help till I turned to the truth which gave me light for darkness and love for hate. I have had many difficult problems to solve, and have passed through dark places of fear, but with the light of Christian Science I have always been able to see my way. A few years ago, my entire face, neck, left arm and hand were terribly burned by an explosion of gas. By applying the understanding of Truth and Love, they were healed without a scar.

That I have been able to demonstrate this truth is due wholly to the example and teaching which have always shown me the way. May divine Love help me to lead such a life that I may add one jewel to Mrs. Eddy's heavenly crown and be worthy to be called a Christian Scientist.—MARY HOOPER PRINDIVILLE, Chicago, Ill.

Digitized by Google

As I have read a good many testimonies published in the *Sentinel* and *Journal*, and have found them very interesting, I resolved to write my own experience. I am a member of the dental profession, and like so many dentists, in the course of years I got run down till I was a physical wreck. I then consulted a physician and was drugged to the limit. At length I was ready for Christian Science, and through the aid of a practitioner I was restored to a normal condition. I certainly could not describe the happiness thus gained—it was heaven all about me.

I must also tell of another instance of healing which occurred last winter. My beloved daughter, on leaving the house, slipped on the ice and struck the back of her head so that she was unconscious. She was brought in the house, and when she came to had an alarming attack of considerable duration. We telephoned at once to the faithful practitioner who had helped me, and with her aid my daughter was healed almost instantaneously. My daughter had also been of an irritable disposition, but since she received Christian Science treatment she is a different child; is obedient and affectionate in all her ways. She had also been troubled a great deal with an eruption on her face, but this is disappearing, and all through Christian Science.—J. F. GOGER, D.D.S., New York, N. Y.

When I first began to read "Science and Health with Key to the Scriptures" it was to help my husband, but after nearly a year I found that several ailments from which I had suffered had disappeared. I had been subject to headaches which seemed to prostrate me from thirty-six to forty-eight hours at a time, leaving me so weakened that I could scarcely move. I had one or two of these attacks during this first year, but had no desire to resort to medicine for them. Then, for a period of about six months, I had no more headaches, and thought that I was free from them. At the end of that time I became a member of a Christian Science church here, but evidently the fear of headaches was still with me, for one morning soon after I awoke with the sense of headache. My first thought was that I had burned my bridges behind me, that I could not take any medicine now. This fear caused the pain to become intense, but I fought it all the morning. I had promised to spend the afternoon and evening with a friend at her summer home. On reaching there I was obliged to lie down immediately, but after resting a while I called my daughter and told her to telephone for help to a Christian Science practitioner. This lady sent word to have no fear; that man is God's perfect child. I seemed to realize the truth of that statement, and I lay quiet and peaceful for a time. Soon I became conscious that the pain was gone, that I was well; and oh, so grateful for the release from suffering. I then got up, dressed and went downstairs, and ate a hearty supper. The next day I did my regular work without being troubled by any lameness as formerly. This healing took place about a year ago, and I have never had the least sign of a headache since; and what is better, no fear of one, for I am sure I "stand fast . . . in the liberty wherewith Christ has made us free."

MARY E. PRESTON, New Haven, Conn.

I wish to express my gratitude for what Christian Science has done for me. About eight years ago I was healed of stomach trouble of fourteen years' standing, after all medicines had failed to help me. I was very weak, as what little food I ate disagreed with me, and I could not do any work. One day I met a lady who advised me to try Christian Science, and she explained to me what it is and what it does for those in need. I believed what she told me, so I bought a copy of Science and Health and had read it about four days when I found out that I was healed of my stomach trouble and a pain in my right side which I had for many years; also of weak eyes. All these ailments left me at once, and now I feel young in place of old.

For the last few years I have been able to treat myself and have helped others, so I am very thankful to God, and to Mrs. Eddy for giving us this spiritual understanding, the understanding of Life and Love.

SAMUEL HOCHULI, Los Angeles, Cal.

In January, 1908, a family in an adjoining flat was quarantined on account of throat trouble, and as we were afraid for our two small children we went to visit relatives. After the quarantine was removed we returned, my husband bringing with him a copy of Science and Health which he had borrowed, and we both became interested in reading it. Another case of throat trouble developed in the building, and in a few days our baby, ten months old, became ill. We did not wish to use material remedies, and did not know that there was a Christian Scientist in the town, as we had lived here only a short time, so we read Science and Health ourselves one day and night. The second day the symptoms became so alarming that I telephoned to my husband, who then went in search of a practitioner. He learned where the Christian Science service was held, and a gentleman in the building gave him the address of a practitioner, who was soon found. Treatment was given the child at once, and the improvement was almost immediate. In two hours he was able to take the first nourishment since the attack; he slept soundly all night, and was entirely well in the morning. Since this experience Christian Science has been our only remedy for all discord. We are continuing the study of Science and Health with the *Quarterly*, and hope soon to unite with the church. We are attending the services and our oldest child goes to the Sunday School. Words are inadequate to express our gratitude to God; and to Mrs. Eddy for her unselfish devotion to mankind.

MRS. BLANCHE RYDBECK, Independence, Mo.

[The above testimony also signed by G. A. Rydbeck, the husband of the writer.—EDITOR.]

I am very thankful for all the help we have received in Christian Science during the past ten years. This year was our first experience with a so-called contagious disease in the case of our little girl. We were in doubt whether or not to report the illness, but the Christian Science practitioner told us to do so. The next day, when the health officer came, the child was playing about the house, with only very slight signs of the eruption. He asked several questions, and particularly who was the physician. I replied that we had a Christian Science practitioner. He then asked if we had ever had a contagious disease in the family before, and I told him this was our first experience. Before he left the house we had a very pleasant conversation on the subject of Christian Science, and I invited him to visit some of the churches in the city. He made his third visit a day before the time for the fumigation, saying that he was in the neighborhood and thought that I was probably anxious to be through with it. Before he left he said we had done the proper thing in reporting the case, even though we had Christian Science treatment.—MRS. BELLE PRIM, New York, N. Y.

Having been interested in Christian Science for some years, and realizing the great blessing which it has been to my children in always bringing about quick healing, I would like to tell of some instances. The children have not had any medicine for nearly six years. The first demonstration was the healing of a dreaded cough in the

Digitized by Google

case of my little daughter. This cough was the thing which I greatly feared, but I had Christian Science treatment for her and studied Science and Health, and to my surprise, after the first few treatments there were no more of the distressing symptoms, and in a very short time the coughing ceased. The healing of other ailments was also brought about most beautifully under Christian Science treatment, in four or five days. One night, after coming home from one of our Wednesday evening meetings, the little daughter manifested a severe cold, and my first thought was that she had been out too late. I then took her up and repeated to her the first stanza of that beautiful hymn, "In atmosphere of love divine," from the Christian Science Hymnal. I continued with the rest of the hymn, and then put her to bed. She went to sleep, and there was no more thought of cold or a croupy cough. Recently, this daughter, while running home from school, fell and ran two rusty nails into the palm of her hand. Two ladies brought her home, and at once began to advise me what to do, and to tell me what might happen, which seemed to frighten us both. The child's hand began to swell, and she was so restless and feverish at night that it seemed best to ask for help in Christian Science. Treatment was begun on Saturday afternoon, and by Tuesday she was healed. That night I telephoned to the practitioner that the child was entirely healed; she had been using that hand the whole afternoon. Before coming into Christian Science my oldest daughter was subject to a distressing cough as soon as cold weather came. This trouble has entirely disappeared since she has been studying Christian Science.

Words cannot express my gratitude to God for what has been accomplished in my own case. I feel most grateful for the spiritual uplifting; and my daily prayer is that I may reflect more of Truth and Love. My deep gratitude goes out to our revered Leader, the Discoverer and Founder of Christian Science, for her loving labor in bringing this truth to mankind.

MRS. DORA L. DIEHLMANN, Baltimore, Md.

I wish to tell others what Christian Science has done for me, in the hope that this may lead some one to the truth that makes free. I suffered from stomach trouble for twenty years and tried all kinds of medical treatment and medicines with only temporary relief, and most of the time not even that, until I came into Christian Science five years ago. I am very grateful for this truth which teaches us how to work out our salvation from all evil. I was also healed of rheumatic trouble and mumps, the latter being destroyed after a few treatments. I am thankful to God for revealing this truth to our beloved Leader, Mrs. Eddy. It has led me out of darkness into God's glorious light. I am indeed thankful for the many blessings I have received from following the straight and narrow road of Christian Science.

KATIE CRUMRINE, Helena, Mont.

I have been helped so often by the testimonies of others, that I wish to add my own and express my gratitude. I heard of Christian Science about seven years ago, but paid little attention to it until I began to suffer with a sore finger, which a physician pronounced serious. After suffering for two weeks, walking the floor night and day, I finally decided to try Christian Science. In a very short time I was relieved from pain and slept at night. The finger remained disfigured for a short time, but there was absolutely no pain.

I have three children, all of whom were born under Christian Science treatment. The births were natural and almost free from pain, and in a few days I was able to be up and about my work. About three years ago, when a dreaded epidemic was at its worst here, my eldest child, then four years old, was suddenly taken ill with all the symptoms of this disease. I immediately telephoned to a Christian Science practitioner for help, and within a few hours the fever went down. That evening she was able to be up and dressed and went out to meet her father. A day or two after this she became perfectly yellow, even to the white of her eyes, and the clothes which she took off were yellow as with age, so I knew that she had been spared from the dreaded fever.

About three years ago the three little girls were taken with a severe attack of an eruptive disease. The two older ones recovered very quickly, through Christian Science help, but the baby became very ill, and one night I telephoned to the practitioner that I feared she could not last throughout the night. The practitioner reassured me, saying that I could make no laws for God's children, that the baby was in God's hands and that I need not fear. I went upstairs much relieved by being thus reminded of the Father's care for His little ones, and by morning the child was very much improved. She opened her eyes,—a thing she had not done for some days,—was able to take a little nourishment, and was soon herself again. She is now a fine, healthy child.

I have not had any medicine in the house since I have known of Christian Science, and have found God to be an ever-present help in time of trouble. I am indeed thankful to God for all the help I have received, and grateful to our dear Leader, Mrs. Eddy.

MRS. ALINE VEZOUX, New Orleans, La.

It is with great thankfulness that I testify to the healing power of Christian Science. It has never failed me once since I first began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, more than twelve years ago. I did not come to Christian Science for physical help—the need was far deeper than that—but the healing followed, and from being a delicate girl with a strong tendency to lung trouble, I became a strong, well woman. I have found the peace and contentment that belongs to each child of God, and no day passes without some proof of the truth of Christian Science coming to me, either in my own home or in some other.

Recently I have been healed of eye trouble, and will tell of this demonstration because it proved to me many things. My eye had been injured many years before. It was considered only a slight injury at the time, but later the eye was apt, under certain conditions, to give me pain. Finally the pain became continuous, and it was nearly a week before I was free from it, even with the help of Christian Science; but when the healing was accomplished, I had gained in many ways. I found that Mind is the only substance, for this material condition did not stop me from doing anything that was necessary and right. I wrote letters, read, and went about as usual. But far more significant than all this, I was able, when suffering most, to heal a very sick child, to bring this little one out of fever and unconsciousness in less than three hours. *Materia medica* would have placed me in a dark room for some time, and then given me glasses to wear; while to-day, through Christian Science treatment, I am free from every sense of pain and my sight is normal. A year ago I met with a serious injury to the other eye, and this was overcome in less than two days.

Our three little daughters are always healed through Christian Science treatment, and there is never for one moment the slightest doubt but that they will be benefited, no matter what the ailment may be. Our love and gratitude to Mrs. Eddy must needs be great, for without her loving courage in giving Christian Science to the world our oldest daughter would be to-day a cripple. *Materia*

Digitized by Google

medica said, five years ago, that the child would never recover from an attack of paralytic trouble, but Christian Science healed her absolutely in less than three months. Just recently a stranger, who saw her dancing, remarked to me afterward on her strength and fine physique.

God is good, and we who are naming His name and trusting Him to-day for our every human need, can declare understandingly that Christian Science is the truth. Mrs. Eddy has shown us the way of Life, has taught us what it means to be indeed the very "sons of God," and for this we can but love and revere her.

MRS. FRANCES C. GROVES, Chicago, Ill.

Often as I have desired to express my gratitude for Christian Science and what it has done for me, I really cannot find words to do so. I had been a sufferer for over thirty years and had tried all known remedies and many physicians, but got no permanent relief. My first experience in Christian Science was when, at the invitation of a friend, I attended a public lecture on June 20, 1907. The lecture so infused me with hope that I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and have studied it faithfully ever since. I began to read this book at the chapter on Prayer, and the words of the first line of the spiritual interpretation of the Lord's Prayer (p. 16) gave me a glimpse of the heavenly light of Truth. In August, 1907, I had a severe attack of summer complaint, with which I had been troubled regularly for thirty-five years. I asked a Christian Science practitioner for help, and with the first treatment I was instantaneously healed of this trouble and of another ailment of over thirty years' standing. After taking several treatments I was also healed of rheumatic trouble, which I had about five years, and for several months just before I came into Christian Science I had not been able to use my right arm or bend my right limb from the effects of it.

In my home and in doing my work I find Christian Science a very great comfort and source of strength. I have had many difficulties to overcome, but Christian Science has dispelled them all. I trust that this testimony to the power of Truth may be a ray of hope to lead into Christian Science those who are seeking for health, happiness, and the true way of life, knowing as I do that it will help them as it has helped me if they will only accept the truth in God's way. My heart goes out in love and gratitude to Mrs. Eddy for the blessings I have received and for the good work she has done and is still doing for the world. I am most grateful to God that He has guided me into His truth, that I may have life and have it more abundantly.—MRS. CHRISTINA KERN, Canton, O.

Having been healed of a so-called incurable disease through Christian Science, I feel it my duty to express in some way my gratitude to divine Love for the healing work which has been and still is being done in my behalf. For about eight years I suffered with kidney trouble, which in August, 1900, was pronounced incurable by two local physicians. I took different material remedies, and also tried hypnotism and magnetism; but all to no avail. During the winter of 1902–1903 I was told to go out West for a change of climate, as a last resort. The western climate, however, did me no good, the trouble getting decidedly worse as time went on.

I had heard of Christian Science before this, but had not given it any serious consideration; now, when all was hopelessness and despair, I decided to give it a trial, much in the same spirit as a drowning man grasps at a straw. Instead of the straw, however, I here grasped the very foundation of health and strength. Three weeks later, I was working at my regular occupation, that of a locomotive fireman, and although my complete healing was somewhat slow, I kept on gaining health and strength until, after two years of almost steady treatment, the disease finally vanished into its native nothingness. In the fall of 1905 I had to undergo a physical examination, and the physician who examined me pronounced me well, not a sign of the former trouble remaining.

To God first do I render thanks, then to our faithful, beloved Leader. I have been awakened from dark error's dream, and with St. John I can say, "I saw a new heaven and a new earth: for the first heaven and the first earth were passed away; and there was no more sea."

FRED SWANSON, Duluth, Minn.

From the time I was four years old I was troubled with hay-fever and an affection of the eyes. For many days at a time I have had to stay in a dark room because of the pain in my eyes, and oculists failed to give permanent relief or even to offer much hope of curing me. About three years ago my mother took up the study of Christian Science, and shortly afterward she treated me. Almost immediately all symptoms of these ailments ceased, and since then I have been able to do many things that I had not dared to do before. For this healing, and for many other blessings which I have received since then, through Christian Science, I am truly grateful.

JAMES ZAMIE EMERSON, Denver, Col.

I write in loving gratitude for the peace that Christian Science has brought to me. For over twenty years I had been struggling for something I could not find, but I have found it in studying "Science and Health with Key to the Scriptures." For several years I would come down regularly with an attack of illness, and in February, 1908, I had a severe attack. This time I called a Christian Science practitioner, and was healed immediately, so that I was able to be up and eat supper with the family. I am thankful every day that Mrs. Eddy has given us this "Key to the Scriptures," so that we may learn more and more of the power of divine Love.

MRS. MALINDA FRAZER, Lake Charles, La.

[Written for the *Sentinel*.]

"PRAISE YE THE LORD."

EDITH PITKIN.

PRAISE ye our heavenly King!
Let every nation sing
Praise to His name.
His love and grace are such,
That none can ask too much.
How gentle is His touch!
Praise ye His name.

God's ways are just and true,
Let every creature do
His holy will.
Praise ye His glorious name,
His loving-kindness claim,
His promises the same,
He will fulfil.

Then let your songs abound,
O'er the wide world around,—
To God we sing;
He is our Life, our all;
List to His loving call,
He reigneth over all;
Praise ye our King.

FROM OUR EXCHANGES.

Universalist Leader.]

The closing words of Romans, 8; the apocalyptic vision of Matthew, 24 and 25; John's splendid description of the New Jerusalem and the river and tree of life, are specimens of that music of the spheres which beats and throbs and sings in the consciousness of the great souls who have felt the presence and the power of God. It will be useless to try to make Mr. Hardhead—Mr. Theological Hardhead—understand that all this means something more beautiful, suggestive, inspiring, prophetic than the old literalism and the ancient prose of faith. He has no wings. He cannot fly. He travels on the ground, not by the way of the sky, and so he misses all the high lights, all the glinting, gleaming, hinting glory of the infinite and illimitable. The world beyond the dawn, the perspective beyond the clear light of day, does not exist for him.

["The Optimist" in *Christian Work and Evangelist.*]

For the last fifty years the churches have been following the star. They have been taking their eyes off these lamps of earth and fixing them on this clear star of the heavens which is named mercy, love, justice, service, walking with God, the immortal life lived now. They have been following the star, and, lo, it is bringing them together on the road to Bethlehem, and they are all together taking their gifts to the Child. It is rather remarkable that just before Christmas all Protestant churches of America have been together in one room for the first time. For this happened at the Federal council of the churches in Philadelphia. They talked not one word of lamps and candles, but all had their eyes on the star, the star of God's love and man's love.

[Lyman Abbott in *The Outlook.*]

When men were brought to Jesus afflicted with disease, his compassion was aroused, not so much by the disease and its consequent suffering which sin had produced, as by the sin which had produced the disease and the suffering; and it was the sin which he wished to cure. How often did he thus identify sickness of body with sickness of soul, or look beyond the sickness of the body, and almost pass it by as a matter of no consequence, while he fixed his attention and that of the patient on the soul sickness! To the sick of the palsy—"Son, . . . thy sins be forgiven thee;" to the impotent man—"Behold, thou art made whole: sin no more, lest a worse thing come unto thee."

[*The Advance.*]

That a man shall live his own life and think his own thoughts does not mean that there is no value to the lives that have been lived and the thoughts that have already been expressed. The one who is living most abundantly and thinking most truly is he who honors the lives of those who have given their best to the world in character and thought by embodying their noblest efforts in his life, for the sole purpose of assuring to those who shall come after a world that is still better.

[*Christian World,* London.]

The world wants, above all things, a gospel of cheerfulness. Our future needs a clean sweep of hoary superstitions and gloomy forebodings that have darkened it. For these are false to the order of things under which we live. We are in a good universe, whose character will bear investigation, and whose promises will be kept.

[*The Independent.*]

What we need is a real Christ-mass; a continuous resurrection of the spirit of Jesus in our hearts and our lives, in our ways of teaching, preaching, and voting; in our social as well as our private affairs.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50; six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel.*

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature which appeared in the *Sentinel* of Jan. 9 to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

A number of new Pamphlets and Reprints have recently been published by the Society and these will be found listed in the advertising columns on the opposite page.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States and Possessions, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 05 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 04 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The commission on public service corporations appointed by the Connecticut General Assembly of 1907 reports that it would be desirable to vest in a permanent public utilities commission these powers and duties: To grant franchises to public service corporations; to supervise the condemnation of land and construction of fixtures by these corporations in so far as the same affects the public safety or interest; to supervise the capitalization of these corporations; to ascertain the facts relating to the financial condition of these corporations; the physical condition of their plants and equipments, and the cause of accidents resulting from their operation; to supervise their operation in so far as the same substantially affects the public safety; to fix the rates chargeable when existing rates are unreasonable.

A bill has been filed in the Massachusetts House of Representatives providing that, in any city or town accepting the act, party lines shall be forbidden in municipal elections. The bill provides for a preliminary election for nominations, candidates for nominations being required to file papers ten days in advance of the preliminary election, with twenty-five signers for each ward.

Secretary of State Root and Ambassador Bryce of Great Britain have signed a treaty for the settlement of all international differences between the United States and Canada. The agreement has been popularly alluded to as the "Waterways treaty," but its scope is much broader. Provision is made for a joint high commission, to be made permanent in character.

Comptroller of the Currency Murray is appointing examiners-at-large to supervise the work of the regular examiners, in accordance with his purpose of making a special examination of every national bank in the country found to be in an unsatisfactory condition, and requiring its affairs to be immediately placed in satisfactory shape.

On appeal from the Probate Court the Supreme Court of Massachusetts decides that the law is constitutional which directs that deposits in savings banks, remaining unclaimed for more than thirty years, may be turned over to the treasury of the commonwealth. A further appeal to the Federal Courts may be taken.

The Senate Committee on Appropriations has voted to increase the salary of the President to $100,000; Vice-President and Speaker of the House each $20,000; chief justice of the Supreme Court, $18,000; other Supreme Court justices, $17,000; Federal Court judges, $10,000.

The President has appointed a commission to investigate and report on the uses of the St. John river. This river forms part of the boundary between Maine and Canada and differences have arisen from its use by lumber interests.

The estimated amount required to resurface the state highways of Massachusetts the coming year is $684,000. It is estimated that $366,000 of this will be required to repair the damage done by automobiles.

The total immigration for the fiscal year ending June 30, 1908, was 782,870, which is 502,479 less than for the year 1907. In the fiscal year 1907 13,064 aliens were rejected; in the past year 10,902.

Prof. Abbott Lawrence Lowell has been formally elected president of Harvard University to succeed President Charles William Eliot, whose resignation will become effective in May.

The United States battle-ship fleet is now at various points in Mediterranean waters, and receptions are being arranged. A few of the ships are rendering aid at Messina, Sicily.

Secretary Root has signed with Dr. Lafinur, Minister from Uruguay, a treaty providing for the settlement of disputes between the two countries by arbitration.

The electoral vote for the next president and vice-president will be counted in the House of Representatives Feb. 10, at one o'clock.

The appraised value of the estate of the late Marshall Field of Chicago was placed at $83,459,032.

Eight men on trial in Kentucky, for night riding and murder, have been found guilty by a jury.

International.

The Russian Douma has unanimously rejected the ministerial bill regulating the disposal by public sale of oil-bearing tracts of land in Baku province. The public sales of land as conducted in the past increased the holdings of the large oil producers, whose monopoly the Douma desires to limit.

The diplomatic corps at Pekin has made a strong collective representation to the Chinese government concerning the board of communications having usurped the full control of the Pekin telegraph office, which the Chinese government in 1901 agreed should be under foreign superintendence.

The International Association of Aeronauts, which has just held its second session at London, adopted a resolution that the Federation should found prizes to the value of $240,000 for aviation and dirigible balloons.

During the year just ended 1,057 persons were sentenced to death in the Russian empire and 782 executed. Sixty-three newspapers were suppressed and others fined to an aggregate amount of $53,000.

The Russian loan of $225,000,000, recently authorized by the Douma, is to be issued simultaneously at St. Petersburg, Paris, and London on Jan. 23. London bankers will take $30,000,000.

The British, French, Russian, and Italian war-ships have done good service this last week, says the *Independent*. Why not turn all the navies over to the Red Cross Society?

The Brazilian government is planning the construction of about ten miles of new docks at Rio Janeiro in addition to the two miles already provided for.

The English Treasury Return of Revenue and Expenditure for the first three quarters of the financial year (April 1 to December 31) is £92,868,347.

The Turkish government accepts the offer of Austria-Hungary of £2,500,000 as an indemnity for the annexation of Bosnia and Servia.

The Gas Light and Coke Company of London sells its gas at 2s. 9d. per one thousand cubic feet.

It is announced that King Edward and Queen Alexandra will visit Berlin in February.

The Imperial German Bank, Berlin, on Jan. 7 held $202,750,000 in gold.

Industrial and Commercial.

The Pennsylvania Railroad has gained its point in regard to specifications in its negotiations with steel rail producers, and orders amounting to one hundred and thirty-five thousand tons have been accepted by the manufacturers on its terms. About twenty-five per cent of the top of the steel ingot is now cut away before the rails are rolled, which insures a "sound rail." The specifications declare that the name of the maker, weight, type, and month and year when made shall "appear on the web of each rail in raised letters and figures." In many accidents of past years there have been misunderstandings as to when and by whom the rails were made.

It has been decided to build a railway line from the main line of the Southern Pacific into Mexico, beginning at a point east of El Paso, and extending through the new oil-fields in northeastern Chihuahua and the timber region of north-central Mexico to a connection with the Guayamas and Guadalajara line now being built.

Arrangements are being made for the exportation to Japan of large quantities of crude oil from Mexico. An oil refining plant erected at Yokohama, Japan, at a cost of $3,000,000, finds the domestic supply of oil insufficient for its needs.

The dividends paid by South African gold-mining and other companies in 1908 amount to £13,070,442, as compared with £12,618,341 in 1907. The total dividends to date paid by the Transvaal gold-mining companies reach the sum of £55,506,080.

Over 1,500,000 tons of shipping are laid up for want of employment, and freights all over the world are lower than ever before. There are at least one million tons of old and obsolete tonnage that could be discarded to advantage.

The first steel rail has been turned out at Gary, Ind.,—a new city built up wholly by the Indiana Steel Company's plant.

Last year, for the second time in its history, Michigan produced more than six million barrels of salt.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SPEECH "SEASONED WITH SALT."

M. G. KAINS, M.S.

PROBABLY every one has played that amusing and instructive game which has so aptly been called "gossip." A dozen or more people take part, the more the merrier and the better the chances of success. Number one whispers some remark to number two, who, without waiting to make sure of what was said, repeats the remark as nearly as he can to number three, and so on until the last person gets the message and announces it to the group. The characteristic result is a message so distorted that it may bear no resemblance whatever to the original either in thought or words, and when compared with what each person actually said to his neighbor will show unaccountable alterations from start to finish. This will occur even when every member of the group honestly tries to repeat exactly what was whispered, but when some members—just for fun, of course—distort the remark purposely, the effect is still more striking, although this is not, strictly speaking, a legitimate method of playing the game.

If we, the reader and I, happen to belong to that rare class of people who have become addicted to thinking, this game, or even its description, will teach us a lesson. We will see that if an innocent remark in a harmless game can so easily become distorted, the same result is more than likely to follow in every-day life, especially when a little tang of malice, or envy, or jealousy, or spite is added, consciously or unconsciously, as the remark is bandied from mouth to mouth. Then, turning our thoughts upon ourselves, we will see the wisdom of protecting ourselves by maintaining a golden silence rather than by risking the possible passage of counterfeit silver speech when a thought presents itself for utterance. Nay, further, we will wisely refuse to accept such thoughts when presented not only by people who may be more or less envious, spiteful, or malicious, but by those who imagine they are giving us a timely and kindly warning by promiscuously ladling out unkind stories. We will see that if we lay ourselves open to accept such things from and about others, we must expect to have similar things said about ourselves; therefore, we will take to ourselves that well known and but imperfectly heeded verse,—

If you your lips
Would save from slips
Five things observe with care:
Of whom you speak,
To whom you speak,
And how, and when, and where.

If you your ears
Would save from jeers,
These keep you meekly hid:
Myself and I,
And mine and my
And what I do, or did

This whole matter of gossip comes under the jurisdiction of the ninth commandment, "Thou shalt not bear false witness against thy neighbor." But self-justification, always alert to elude the law, offers as extenuation or as proof that some one saw the act, heard the remark, or told what occurred, and as this person could not possibly be mistaken, therefore, etc.! What of it? How many people are yet free from mental strabismus? Have we not all, through association and false education, acquired the busybody's squint? I mean, do we not still accept sense testimony, not only as reliable but as convincing, authoritative, final?

Some eager self-justifier, however, will say: "Now that we have come into Science we know that those things are unreal," but why should those who have come into Science continue to think, talk, and act as before they came in? And what is it to "come in"? Is it merely to be cured, or is it to be healed? Is it to give verbal assent to the Christian Science tenets, or to put the tenets in practice? Is it to become a member of some church, or to busy one's self about our Father's business? Is it to overwhelm the novice with familiar-sounding but meaningless words,—to him a veritable jargon,—or is it so to manifest Christian tolerance that we will draw the sinning, the sick, the world-weary to our little fountain for the pure water of Life? What *is* the test for a Scientist? Let us listen! "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father."

This doing the will of the Father seems to be the hard part with all of us. So long have we found it easy to talk about others' sins of omission and commission and to conceal our own (to believe we do, rather!), that some of us have required ten or even more years to become aroused to our wrong methods of thinking and acting. Even yet we do not seem to have gotten quite all the sleep out of our mortal eyes. We wonder why we or members of our families have bodily pains, poor business, false friends, lack of means, or a dozen and one other things unpleasant or worse. We slash away at some bodiless embodiment of "error" to which we give a pet name, while all the time feasting this unrecognized guest, false thinking, on choice morsels of false witness, quite forgetful of Paul's counsel, "Let your speech be alway with grace, seasoned with salt."

But what is it to bear false witness? In ordinary parlance it is almost limited to perjury in court, but somewhat less popularly it has also the wider application of telling an untruth about any one. Upon this basis, however, many things pass current as true because we have seen them with our eyes, heard them with our ears—in a word, accepted sense testimony. Too often we have not gone deep enough to examine motives, but have judged by mere surface indications, and have consequently been deceived. When, however, even a rudimentary understanding of Science has been gained, we learn that all testimony such as this must be rejected, because it is not in harmony with the definition of man as the image and likeness of God. When once we actually comprehend this definition, and even begin to live up to it both for ourselves and for others, we will see the folly of talking gossip and strive

to do the more eagerly as our Leader counsels us (No and Yes, p. 8): "Be long-suffering, faithful, and charitable with all. To this small effort let us add one more privilege—namely, silence whenever it can substitute censure."

"CLOTHED UPON."

HELEN FRIEND-ROBINSON.

LAST spring, when the call went out for more funds to build the Christian Science publishing house, I searched in my inmost heart for reasons why I, personally, should help to build this "watch-tower of the world" (Science and Health, p. 235), which has for years been sending out the beacon-light of wisdom and love to all mankind, and radiating a full salvation from sin, disease, and death to all who walk in this light. In meek retrospection I pondered on my life before and after coming into Christian Science.

I thought of my lifelong bondage to earthly pleasures, resulting in three years of hopeless suffering from nearly all the ills to which flesh is heir, and of the fulness of joy that had been my portion since I was instantaneously healed of all these ills during my first visit at The Mother Church. I thought of my home, made discordant and unhappy in the past by the selfishness and irritability of chronic invalidism, and of the permanent peace now established there by the possession and study of all the works of our Leader, and of the welcome advent of *The Christian Science Journal* and *Sentinel*, ever bringing the "Peace, be still," of hope and good cheer to still the turbulent waters of worldly thoughts and aims. I thought of the many periods of sickness which had assailed my child, and of my constant fear and dread that some contagious disease might at any moment rob me of her forever, now replaced by confidence in the power of divine Love to shield her from harm at all times and in all places.

I thought of the oft-repeated visits of the family physician and of his quite as frequent bills for services, superseded by a long-continued reign of health and harmony, ruled over by the "great Physician," He "who healeth all thy diseases," who answers every call without money and without price. I thought of the financial lack and limitations in the old régime and of the liberal benefactions of the present, through the understanding that spiritual supply is equal to every demand made upon it with right motives. At last I thought of the years of helplessness to alleviate one iota of suffering, either for myself or my fellow-man, through the study of the Bible as taught me formerly; and now the Bible so illumined by the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that the days are full of loving helpfulness to humanity. With this dominion within, this understanding of the Christ-healing, the Christian Scientist may speak with authority to any and every phase of disease, and when called to the bedside of invalids he can with this Christ-spirit raise the suffering ones to speedy health, in proportion to his fidelity to Principle.

This communion with self so overwhelmed me with the vastness of my obligations to the Christian Science teachings, that I exclaimed, "What sacrifice is too great to express my gratitude for all this!" Before this time I had been contemplating the purchase of a spring suit, which I had thought much needed, but this résumé of my blessings enabled me to give it up, and I gladly sent at intervals to the treasurer of the publishing house building fund the amount of money which would otherwise have gone to the purchase of this clothing. The sacrifice seemed very slight, for later I found that by a little renovation an old suit could be made quite presentable, and so I learned a further lesson in self-sacrifice. However, for the time being I went on my way, rejoicing in the secret bounty of spiritual affluence, being "clothed upon" with the garments of righteousness, which never go out of style. An occasional twinge of regret seized me, as I saw the beautiful new suits of many of my friends, showing that the lesson had not in my case been sufficient to lift me above the "sordid conditions" of the fleshly coverings.

One extremely hot day in July, after receiving a call to visit a patient a long distance away whom I had never seen, the same old temptation returned in an acute form. For some time I had been planning to send another thank-offering to the fund for the publishing house, but error insisted loudly that I needed a linen suit for this journey, as the other one had been worn long enough and was too heavy anyway for this extreme weather. The temptation to use the money I had on hand, for this suit, and trust to the future for my thank-offering, came quickly and clamored for recognition, arguing that I really needed this clothing to make myself respectable in going among strangers.

At this appeal to vanity, the conflict was apparently gaining on the side of error, but our Leader tells us that "Truth is always the victor" (Science and Health, p. 380), and thus it proved in this case. After a few sharp and energetic turns, I decided that until the publishing house was completed, I would clothe myself in love from within, so that all whom I met, whether strangers or friends, should so feel the radiance of Spirit that they would not see the "outward man" which perisheth, but rather the "inward man" which is renewed day by day. The battle was over, and although that day the journey was hot and uncomfortable, the next day a cold rain set in which lasted until I arrived home. I was so grateful on the journey that I had not bought the thin dress, which would have presented a ridiculously bedraggled appearance from the incessant rain. I should also have been much more uncomfortable during the two days of cold weather, with the thin clothing than I was the first hot day with the heavier dress.

This lesson meant much to me, and I realized as never before what St. Paul meant when he said, "Not for that we would be unclothed, but clothed upon." I learned how Spirit always blesses a true endeavor to seek our own in another's good. I rejoice in the spiritual uplifting which has come to me through this beautiful lesson in self-sacrifice.

"WHAT THINKEST THOU?"

J. WELLS WENTWORTH.

WHEN I first undertook the study of Christian Science the most attractive feature of its teachings, as it seemed to me, was that it crowned "the power of Mind as the Messiah" (Science and Health, p. 116), and taught that according to the channels in which our thoughts flow, so do we map out our lives; that we are not the helpless victims of every evil wind that blows,—springing from nobody knows what and bound nobody knows where,—nor are we cast rudderless upon the seething sea of existence to float with the tide and finally to be engulfed in the maelstrom, but that being rests upon a divine Principle whose laws are perfectly demonstrable; and that Principle is Mind, and that everything that is, is the thought, or reflection, or expression of Mind, and is and of necessity must be as perfect as the Mind from which it emanates.

My early concept of God, gathered from the religious teaching I had received, was of a being of perfect purity and goodness, who sat serene in the heavens, who had all power and was infinitely good, and could give every good and perfect gift to His children—yet, in His "inscrutable wisdom" (so the phrase ran), chose to pour out direful

Digitized by Google

want, hideous diseases, bitter sorrows and disappointments, injustice, violence, and death upon a suffering world that owed Him allegiance, and whose duty it was to say, "Thy will be done." What thinking man or woman can work among the poor, go down into the slums (where my activities led me for many years), get a practical knowledge of "How the Other Half Lives"—and pray that prayer with such a sense of its meaning, from an honest heart? I could not—and so I ceased to pray at all. I protested and rebelled! And what is all the organized charity, so called, in the world to-day but a protest against such a monstrous and illogical concept of God! With its lips society says, "Thy will be done," but in its heart of hearts it rebels and organizes to circumvent that will—as so understood.

How different is the meaning of that prayer to a Christian Scientist. To him it is a pean of joy, for in Science we learn that God's will is good,—perfect, eternal, omnipotent, and omnipresent good; that He is, Himself, all good, and there is none beside Him; that He could not will evil, for in the divine Mind—the All-good—there is no thought of evil nor any evil thought. Therefore, when the Christian Scientist says, "Thy will be done," he means that life and health and strength shall come into human consciousness; that joy and happiness, peace and prosperity shall come and make us all-harmonious; that the universal brotherhood and sisterhood of man shall appear, and he prays that prayer with joy every day and hour, knowing that it will be answered, must be answered, for it *is* God's will to give to His children "every good and perfect gift," and "no good thing will he withhold from them that walk uprightly"—those who think aright.

Our beloved Leader bids us, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261). She not only points the way but she has blazed the path which leads upward to the "Horeb height where God is revealed" (*Ibid.*, p. 241). God grant us all grace to follow her into that rarefied mental altitude where abides the peace that passeth understanding.

SPIRIT AND MATTER OPPOSITES.

REV. G. A. KRATZER.

Two subjects under consideration are opposites, if when carefully examined they manifest no qualities or characteristics in common. Applying this test to Spirit and matter, we find that Spirit is infinite, matter is manifest only in finite form; Spirit is unchangeable, matter is changeable; Spirit is inapprehensible to the physical senses, matter is apprehensible only to these senses; Spirit is eternal, matter is temporal; Spirit is not subject to imperfection, matter is subject to imperfection; Spirit is intelligent, matter is non-intelligent; Spirit is indivisible, matter is divisible, and so on, in every point at which the two can be examined. Hence, under the definition, Spirit and matter are opposites, even as light and darkness, good and evil, truth and falsehood are generally conceded to be opposites.

It is inconceivable that light should create darkness or anything dark, that truth should create falsehood or anything false, that good should create evil or anything evil, that Spirit should create matter or anything material. Spirit could not do so, any more than truth, good, and light can create their opposites. The Scriptures declare God to be Spirit, and the sole creator. Spirit as the sole creator could not and did not make any matter, and therefore matter is impossible as an actuality, merely the name for a false appearance, a false sense of substance, the opposite of Mind, Spirit, which is the only real substance.

In Hebrews we read, "Through faith we understand that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear." They "do appear" to be made of matter, but the things which are seen materially are "of such stuff as dreams are made of," while the unseen, spiritual things are really substantial, and Spirit, creative Mind, is their substance. In this connection the following, adapted from a letter from a friend, may prove illuminating:—

If a man holds that matter and evil are real, I hold that such a man is in a dream as to life and its surroundings and experiences; and being in a dream, he cannot understand clearly what I say to him about the non-reality of matter and evil until the dream is broken. As an incident of his dream or deluded state he will, in all probability, combat what I say, because it does not seem so to him. He is like a man hypnotized,—given false suggestions as to his surroundings; you cannot convince him that things are different from what he thinks them to be, until you can release him from the hypnotic trance. As mortals we are all in this dream sense, but by reasoning from the nature of the creator we can intellectually understand that matter and evil are falsehoods, even before we can break the shackles of the mortal dream sufficiently to make them seem so. Ultimately, the dream will be completely broken.

AT HAND.

ETTA L. CHAPMAN.

In Matthew's Gospel we read that Jesus, after his temptation in the wilderness, "began to preach, and to say, Repent: for the kingdom of heaven is at hand." When knowledge is at hand, ignorance disappears; as truth makes its appearance, the lie nears its vanishing-point; with the coming of the morning light we feel sure that we shall be in darkness no longer; as good begins to come into our thought, evil, its opposite, takes its departure. If the kingdom of heaven, "the reign of Spirit" (Science and Health, p. 587), is at hand, it follows in like manner that "the end of all [material] things is at hand," as Peter writes in his first epistle.

It has been truly said that knowledge is power; hence ignorance, its opposite, is powerless. The child at school bends his efforts to the acquiring of knowledge. His teacher hands him a picture with instructions to count the objects represented, name their color, tell their shape, etc. She does not say to the child, "Think how little you know about number, color, and shape, and tell me what you see." She and her pupil utterly disregard ignorance as a factor in the working of the problem, for it is powerless—no thing. Those who have learned that the kingdom of heaven is truly at hand, should bend all their energies to the task of grasping, realizing, the presence of this kingdom; and in proportion as this realization comes into our consciousness, the end of material things follows.

The child never looks to ignorance as a means of gaining knowledge, neither should we use the material in gaining the spiritual. A friend said to me not long ago, "I do not wish to think there is no matter." What would be her reply if her child should say, "I do not wish to think that two and two do not make five"? Would that be a good and sufficient reason for his holding to the wrong thought? Just as knowing that two and two are four fits us for knowing other truths about numbers and for arithmetical calculations, giving us that mathematical knowledge which is power, thus putting an end to ignorance, so the knowledge that man is spiritual and not material fits us for further spiritual progress and for working out the problems of life; and this means the end of material belief for us.

POSSESSION AND UTILIZATION.

KATHERINE PUFFER.

As with every other phase of human thought, the sense of possession undergoes a change when we learn through Christian Science the spiritual facts of being. In mortal existence the prevailing desire is to possess—and the popular estimate of a successful career is governed by a man's possessions, by the wealth he has accumulated. But, as thought turns to contemplate existence from a spiritual and not a material standpoint, we learn that God is All, and all belongs to God—that, as the psalmist sang, "the earth is the Lord's, and the fulness thereof." We also learn that man possesses only as he reflects or utilizes divine realities, and no longer prays with the motive of gaining something but with the desire to be Godlike, to possess only the consciousness of true being, for he knows that all things are already his as God's image, and therefore the desire to possess gives place to an earnest effort to utilize the divine power or law which when understood becomes operative in human consciousness to heal, to enrich, and to bless.

Mrs. Eddy says in "No and Yes" (p. 39), "Prayer is the utilization of the love wherewith He loves us." Jesus said to one who desired to follow him, "The Son of man hath not where to lay his head." Yet he was the richest man that ever trod the globe, for his wealth was in his ability to utilize man's true possessions. When called upon to render tribute to Cæsar, he told Peter to take the needed money from the mouth of a fish, and when he wished to feed the multitude he furnished a bountiful repast by utilizing the divine law of supply. When called upon to heal the sick and the sinning, he utilized the ever-operative law of Life.

In mathematics we possess a knowledge of the basic law only as we are able to use it or make use of it; likewise in music the law of harmony remains unknown to us until we understand and apply it. This is equally true of the Science of being, or Christian Science; we possess just what we use or apply, we know only what we prove. There is no teaching of Christian Science that tells us to strive to possess in the sense of seeking earthly possessions, but through the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we are enabled to begin to utilize the law of man's being; in other words, by seeking first the kingdom of God and His righteousness (right thinking), "all these things" are added unto us.

Some one remarked recently, "I have always noticed that Scientists begin to be prosperous, even if they have not been so before." In so far as this is the case, it is because they have ceased to strive for possessions and are learning to be Godlike,—to reflect God,—and are thereby coming into man's rightful heritage, "dominion" over all the earth. In the sense of true possession, or possession through reflection, there is no rivalry, no greed, no unjust law that what is one man's gain is another's loss, for through the divine activity of thought "whatever blesses one blesses all" (Science and Health, p. 206), for as we seek and find the source of man's being we see that this source is available for all who keep God's commandments.

To be honest, to be kind; to earn a little and to spend a little less; to make upon the whole a family happier for his presence; to renounce when that shall be necessary and not be embittered; to keep a few friends but these without capitulation; above all, on the same given condition, to keep friends with himself,—here is a task for all that a man has of fortitude and delicacy.

ROBERT LOUIS STEVENSON.

SELECTED ARTICLES.

[E. M. Ramsay in the *Edinburgh* (Scot.) *Dispatch*.]

In the *Evening Dispatch* of Friday there appear two short paragraphs announcing and commenting on the alleged discovery by Professor Laurent of a new method of curing cancer. Does it not seem more natural and reasonable to suppose that every disease could be cured did we but know enough, than to suppose that some illnesses are essentially incurable? We cannot admit that anything which is truly desirable is unattainable; the very desire for good is the promise of its fulfilment, though the time and the method of that fulfilment may at the present moment be hidden from human ken. In the first paragraph to which we have alluded the writer proceeds to warn the public against quack cancer cures, and attacks faith-healing and Christian Science as mere quackery. In a sermon preached by the Rev. R. J. Campbell, of the City Temple, on the 15th of this month, he says:—

"When there is so much evil-doing in the world, why should we waste so much time as we commonly do in attacking those who are in earnest about doing good? One of the saddest and least admirable things about average human nature is the intensity with which it will oppose the efforts of those who are doing good in an unaccustomed way, while allowing sheer wickedness to pass comparatively unnoticed. You all know that at this present time, just as with previous ages, the people who stir up the fiercest antagonisms are seldom those who are living right-down selfish lives and inflicting loss and sorrow upon their fellow-men, but those who are doing their best to help them, though doing it in ways which do not commend themselves to religious or political orthodoxy."

Christian Scientists are engaged in a war of extermination with sin, sickness, want, and woe. They accept Christ Jesus as the great Wayshower, believe that he meant what he said when he bade his followers heal the sick, and accept unreservedly his definition of illness as the work of the father of lies, which a right understanding of Truth will destroy. The success which Christian Scientists have met with in the treatment of disease has led many people to look into the subject, and this surely is natural enough. . . . Christian Scientists believe that their method of healing the sick is the best method, and they confidently anticipate that before long the difference between things spiritual and things psychical will be clearly recognized by the public. An immense gulf separates the healing by divine Mind from the healing by human suggestion and will-power.

The aversion with which many regard the attempt to heal by prayer is, we believe, mainly founded on the mistaken belief that the spiritual is one with the supernatural. Christian Scientists do not believe at all in the supernatural. To them the idea that the First Cause of the universe acts spasmodically and miraculously is as absurd as it is to the agnostic. Christian Science teaches that God is the unchanging law of good, of life, of harmony to the whole creation, and that when men recognize this and submit their erring will to the divine, they will taste of the peace which the world can neither give nor take away.

[Editorial in *Egyptian Daily Post*, Alexandria, Egypt.]

Through the medium of a friend, we have received a copy of *The Christian Science Monitor*, a twelve-page daily which is the organ of the Christian Scientists published by The Christian Science Publishing Society, at Boston, U.S.A., and which made its appearance on the 25th of November last. It was with pleasure tempered with a sense of curiosity that we scanned its pages, mainly from

Digitized by Google

the fact that it was introduced to revolutionize daily journalism, and while embracing the news of the world in its many departments, to furnish the reading public with only such news as is clean and wholesome, avoiding sensational piffle. The introduction of a paper of this description, which has set a high moral standard, is but a sign of the times. It not only indicates the progress of forty-three years of hard and persistent labor by Christian Scientists under the leadership of Mrs. Eddy, but confirms the theory that both men and women are awakening to a deeper and finer sense of discrimination between right and wrong.

Speaking of the paper itself, it is extremely well written and newsy, implicit and truthful in its arguments, shunning what is harmful both to mind and soul; in a word, a stylist in American newspaperdom. Another great advantage, which will certainly recommend it to the reading public, is that its advertising columns are not the resort of sharks and swindlers, and if only it can become self-supporting on such stringent lines, it will give to homes, both on this and the other side of the "great pond," a record of the day's news which will be readable by both young and old. It should certainly be accepted by all men and women who have the betterment of humanity at heart, and will moreover be welcomed by all honest toilers in the great world of newspaperdom. We wish *The Christian Science Monitor* every success. It can be seen in Alexandria at the Christian Science Reading Rooms, Davies Bryan's Buildings, Cherif Pasha street.

[The Rev. H. B. Bard, as reported in *The Daily News*, Grand Rapids, Mich.]

Love is stronger than hate in building up a business; the honest man sleeps more peacefully than does the dishonest man; sunshine is more conducive to happiness than clouds, and cheerfulness is a better tonic for life than is misery. . . . Cheerfulness is an asset in business. The man with a cheery face and disposition will accomplish more with those with whom he works and those who work under his direction than could a sour-faced man. One sour-faced man in an office will disturb the dispositions of all his fellow-workers, and in that much will destroy their efficiency. Likewise, the man of cheer will enliven and inspire every one with whom he comes in contact, and better and more work will result.

We must realize that it is not easy always to be cheerful. The burdens of life are often such as to bear us to the ground. We lose money, friends; our ambitions are not fulfilled; our ideals are not attained; life does not work out as we expected it would. These burdens are real and they take the zest out of life. But we should remember that just here we have a great, brave duty to perform. Here is the opportunity for heroism on our part. Let us school ourselves—if for no other reason than as a mere matter of duty to our fellow-men—let us school ourselves to put a brave face on the matter. Let us go to the world, not with our trials and burdens upon ourselves, but with a calm, cheery face, so that we may spread helpfulness to the hearts of our fellow-men and not gloom.

We are very largely responsible for the world in which we live. God has given us the power of choice. Our friends, companions, books, and thoughts are with us a matter of choice. Some people continually choose the books that deal with depressing and morbid thoughts. The result is that they become morbid and depressed. It is in their power to read the books that will inspire cheerfulness and hope, that will give to them the brightest outlook on life. We are responsible for the thoughts that day after day surge through our minds. We can think the thoughts that give life and health or those that give misery and death. As a man "thinketh in his heart, so is he." Too much thought upon one's self, the trials, sorrows, disappointments, and defeats of life, is sure to make one miserable. If there were no other reason for commending the Christian Scientists, this work of getting people to cease thinking altogether of themselves and to think of others; to get them to cease thinking of evils and to think of good; to cease counting their miseries and go to tabulating their blessings, would be worth while.

We are held too much in the power of two devastating elements in life,—selfishness and conceit. We think that we are absolutely right and all others wrong, and we think that the welfare of the world is dependent on our having our own way, forgetting the other fellow and the things necessary to his happiness. We need to remember that others have rights, and that one of those rights is that we shall spread, in all our intercourse with our fellow-men, cheer, good will, good fellowship. Far better than much medicine, they are the elements that make for larger health and happiness.

[Frederick Dixon in the *Norwood* (England) *Review*.]

Christian Science is the effort to give back to the world that supreme consciousness of God which made the first century of the Christian era the age of miracles. Now a miracle is that manifestation of the power of God which, though supremely natural to a mind conscious of His omnipresence, is mysteriously supernatural to a mind convinced of the reality of matter.

The word "reality" is used in Christian Science to describe all that is eternal and indestructible; in a word, God and the spiritual kingdom. It is used to separate the absolute from the relative, in the way, as one of the greatest scholars and churchmen of modern times has shown, John separated them in distinguishing "the truth" of Jesus from the mere "truth" of Pilate. It follows that no Christian Science "healer" could or would attempt to heal a condition that was real. What he does is to attempt to destroy the mere relative sense of what the patient considers the reality of sickness and sin, which is quite another thing. And if he succeeds in this, there comes to the patient some understanding of "the truth," or absolute truth, which was what Jesus referred to when he said, "Ye shall know the truth, and the truth shall make you free."

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local news-dealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

THE LECTURES.

FORT SMITH, ARK.

One of the most representative audiences that has assembled in Fort Smith for many months gathered at the Grand Opera House Thursday night [Nov. 19] and heard with great interest the powerful lecture on Christian Science delivered by Frank H. Leonard of Brooklyn. He was introduced by Judge J. V. Bourland, who said in part,—

I come as a student; indeed, truth to admit, I can make no claim to a general acquaintance with the literature of Christian Science; although in all frankness let me confess that, having studied its fundamental work by Mrs. Eddy, and tested its teachings by every canon at my command, not one of them am I prepared to deny as untrue. Having thus tested, ever so imperfectly, what institutional influence or personal motive shall debar me from further reading, or from hearing, under whatever auspices, an exposition of truth whose sole animus manifestly is the betterment of humanity?

"Nearer, my God, to Thee," shorn of the purely mythological, is a prayer which is destined ultimately to have universal rational cognition. Standing squarely upon Biblical grounds, the free mind may readily perceive that rugged orthodoxy or the statical habit of thought has held science at arm's length as something essentially unchristian; but this disposition, happily, is gradually losing ground; for the difficulty, as the least that may be said, has not been with true science, since how can there have been any rational ground for antagonism, when we know that science at last is but truth ascertained, complete knowledge! Science, broadly, is the orderly examination not only of objective phenomena as affecting states of consciousness, but it comprehends an examination of consciousness itself, as a phenomenon or manifestation of divine Mind. Nor is it at all competent to limit the sphere of science to so-called physical phenomena and relations, or to substitute non-rational faith as a means of correspondence with the infinite.

I have not been able to perceive that the causative processes of science, or the searching powers of the mind, are to be viewed as base and unworthy, whenever God and godliness are broached as subjects of sublime contemplation. The development of science being but the unfolding to consciousness of the nature and relation of things, science can be inimical to that only which is false. It is an accepted postulate, as well scientifically as Biblically, that the truth will make you free; and free from what, pray, unless it be from that bondage which error and ignorance impose. If it yet be replied that by faith only may we approach God, it will be found that the point of difference is more apparent than real, being thus shifted only to the mere significance of terms; for what is faith but a state of consciousness, a sensible harmony, lovingly confided in as righteous, whose complement is truth ascertained. Indeed, at last, the sum of all science is but an orderly record of states of consciousness in respect of phenomena, psychic no less than physical, a classification of conditions, an assemblage of causative faiths, whose enveloping essence is the irrefragable mind. And from the essential constitution of mind, I, for one, with present lights, though often flickering and uncertain, cannot look upon any association or sect, medieval or modern, as holding an exclusive franchise upon the investigation of truth. The imperative upon the individual mind by its own innate processes cannot be relinquished to attain that ultimate consciousness which in terms of music is recognized as universal harmony, or in terms of philosophy as "at-oneness with universal Mind."—*The Fort Smith Times.*

SEATTLE, WASH.

Bicknell Young lectured here for First Church on Sunday, Nov. 22, afternoon and evening. Allen H. Armstrong introduced the lecturer in the afternoon, and Hon. C. G. Austin in the evening. Mr. Armstrong's introduction was in part as follows:—

The people of this church and denomination occupy at present a unique place in the Christian world, because they have entered into a conviction that the statements of the Scriptures are true, and that the salvation therein promised is a present possibility. The Bible is devoted wholly to explaining to humanity a way and method of salvation. In their attitude toward this way the people of so-called Christian nations may be roughly divided into two great classes. At present the greater number believe that the promises rest upon an insufficient basis and are therefore incapable of demonstration. The second class confess to a belief in the promises but insist that fulfilment is possible only at a future time and in a future state of existence. Christian Science comes with its declaration that the promises rest upon a sufficient eternal basis and law; that, therefore, demonstration of them is inevitable. Again, because they rest upon such basis, demonstration of them is possible now, and Science confirms these declarations with the irresistible logic of demonstration.—*Correspondence.*

CANON CITY, COL.

Bliss Knapp lectured here on Christian Science Nov. 29. He was introduced by Judge J. L. Cooper, county judge of Fremont county, who said in part,—

It is a pleasure to me to introduce the speaker on this occasion, and in doing so to express my admiration for the Christian Science church. I am familiar in a very general way only with the benefits and doctrines of Christian Scientists, but I have been a keen observer of the methods of Christian Science, and its results. I know that where results are good, the methods, or doctrines, or beliefs which produce good results are in themselves meritorious. I know that the teachings of Christian Science develop a refinement of mind, a kindliness of heart, and a quality of living which result in the highest Christian citizenship. I know that in promulgating and disseminating their beliefs Christian Scientists are the most modest, unassuming, and tolerant of the beliefs of other people, of any denomination, sect, or class of people with whom I am familiar.

I believe that practice has greater influence than precept, that the life one leads has far more influence than his beliefs or his preachments, and I believe that to the outsider the most attractive feature of Christian Science is the quality of citizenship which it develops, the high standard of lovable Christian character which Christian Scientists hold up before us, as living examples of the result of their teaching. No matter whether you believe in Christian Science or not, if you will but observe you will come to the conclusion that its teaching and practice develop the ideal father, the ideal mother, the ideal son and daughter, the ideal home life, and the ideal neighbor and citizen. It develops that quality of heart which makes the whole world kin. It develops that quality of mind which makes us masters of ourselves and enables us to take a broad and optimistic view of life. The very structures which Christian Scientists erect as places of worship have about them that air of quiet, simplicity, beauty, and refinement so symbolical of the true Christian life. If these be the results of Christian Science, we can rest assured that the beliefs and teachings which produce them will bear the closest investigation.—*Correspondence.*

BIRMINGHAM, ALA.

Mrs. Sue Harper Mims lectured here on Christian Science, Dec. 13, to an audience that filled the Opera House. The lecturer was introduced by F. Harley Davis, Second Reader, who said in part,—

We say that Christian Science is the Science by which our Lord and Master, Christ Jesus, performed his marvelous works. We go farther and say that when the laws of God are understood in Christian Science, one becomes a healer, is imbued with ability to heal himself and others. This is not a mere theory, but a fact that every Christian Scientist is able to prove in accordance with his understanding. Now, while in no way desiring to undervalue the physical aid I have received in Christian Science, yet I must frankly state that the spiritual peace and harmony which have come to me through Science mean infinitely more than do the physical benefits. Before coming to Science I was not a Christian and had a positive aversion to the Bible; now I love it. Friends, what Christian Science has done for me it has done for hundreds of thousands of others, and still the good work goes on. Small wonder, then, that we cannot find fitting words to express our gratitude to that pure woman, Mrs. Eddy, who by her discovery and her unselfish devotion to the Cause has made it possible.—*Correspondence.*

MEADVILLE, PA.

Rev. William P. McKenzie gave an interesting lecture on Christian Science for the students of the Theological School Friday afternoon [Dec. 11]. A number of resident Christian Scientists were present. Taking it for granted that his audience knew something about the history of Christian Science, Mr. McKenzie dwelt primarily on the aims and methods of the movement.

We find, said he, that all leaders in the Christian world have had visions which have prompted them to noble actions and to sacrificing themselves for their neighbor or for the world. It was through a vision that Luther was stirred to his wonderful work, and Wesley and Edwards and Parker had visions which inspired them. It is not strange that a vision should come to a woman, for through the ages she has been the mainstay of the church and she has exhibited self-sacrifice much more than has man. The vision came to Mary Baker Eddy in 1866. She had met with an accident and was not expected by her doctor and minister to live very long. Then came the light from God. She felt that salvation was possible here just as well as in the world beyond. In a mysterious way she had been healed. In her joy over the recovery of health she decided to retire from the world to study the Scriptures to find out how the power of God had redeemed her. She read the accounts of healing in the Bible and from her own experience she was able to get behind them, and discovered the law of causation which she sets forth in her book "Science and Health with Key to the Scriptures."

The Republican.

SHARON, MASS.

The Hon. Clarence A. Buskirk lectured here on Christian Science Dec. 8. He was introduced by the First Reader, Charles M. Conant, who said in part,—

At this particular season the thought of the civilized world is directed toward the manger at Bethlehem,—and the gospel of "on earth peace, good will toward men" is the watchword of the hour. This interesting period is especially dear to the hearts of Christian Scientists, because the Christianity which was taught and demonstrated by the Bethlehem babe has made it possible for them to observe Christmas with an intelligent understanding of the infinite God,—yea, the fatherhood and motherhood of God and the true brotherhood of man.

Those who have accepted Christian Science as being the Christianity which was taught and demonstrated by Jesus, have found it to be a religion based absolutely on the Scriptures, a religion which they had always believed but had never clearly understood until it was explained and illuminated through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Thousands have been rejuvenated and regenerated by understanding that there is a scientific way to be a Christian as positively as there is a science of mathematics; and they have found that this scientific way is to "heal the sick, cast out devils," in accordance with the command of the great Wayshower.

Jesus demonstrated the power of Christian Science to heal the sick and reform the sinner, and that this power has ever been even temporarily lost sight of is a source of wonderment to those who have been blessed and uplifted through its teachings and manifold proofs. The apostle James said, "Show me thy faith without thy works, and I will show thee my faith by my works." Jesus said, "He that believeth on me, the works that I do shall he do also." Christian Scientists have accepted these sayings literally, and they know that they have found the truth,—the truth which Jesus said should make us free.—*Correspondence.*

SAN DIEGO, CAL.

Frank H. Leonard addressed a large audience at the Garrick Theater last night [Dec. 3]. He was introduced by C. Edwin Pierce, First Reader of First Church of Christ, Scientist, who said in part,—

Almost two thousand years ago Jesus of Nazareth appeared upon the earth, teaching the truth, the truth about God and man. He taught his followers to heal the sick as well as the sinful, and to realize, here and now, that they are the sons and daughters of God. He sent his followers out into the world to do the works that he had been doing. For this he was reviled, persecuted, and finally crucified. After the crucifixion of our Master the light in the church seemed to wane, until finally, during the reign of Constantine, the healing power entirely disappeared from the church. About forty-three years ago a New England woman discovered the divine Principle upon which Jesus' healing work was done. This woman struggled hard and long before there were many who would listen to the message she has for the world, but to-day she rejoices in knowing that she has unnumbered followers in this and other lands,—people who have all been healed of either sin or sickness.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"WHERE SHALL WISDOM BE FOUND?"

New York, N. Y., Jan. 17, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill,
Brookline, Mass.

Revered Leader:—When searching for the answer to Job's question, "Where shall wisdom be found? and where is the place of understanding?" we found it in you, our beloved Leader, who are wisdom's mouthpiece to this age.

The demonstration of our church is the direct result of your instructions obeyed, and we shall continue to follow as you forever lead on in "the way of wisdom." You are continually pouring into our lamps the oil of consecration, and we are drinking of the wine of inspiration which you provide. The word has gone forth, "Hurt not the oil and the wine."

In grateful acknowledgment of the redemption of the first-born, mindful of the ever-present protection of divine Love, we will enlarge our spiritual phylacteries, binding them as frontlets between our eyes, that we may "demonstrate Christian Science to a higher extent." Having completed our demonstration of the church militant, we will strive more earnestly to attain the higher understanding which will reveal the church triumphant, where "Spirit is infinite; therefore *Spirit is all;*" no mistaken sense whose incentive is in malicious animal magnetism can prevent this unfolding.

The "spiritual modesty" with which you have "crowned The Mother Church building" has been and ever will be our abiding inspiration in building upon "a wholly spiritual foundation." Glorious, indeed, is it to have the horizon of our spiritual vision thus widened by virtue of your vigils on the watch-tower of Zion.

Loyally yours,

The Board of Trustees of First Church of Christ, Scientist, of New York City.

E. F. HATFIELD, *Chairman.*
JOHN D. HIGGINS, *Clerk.*

THERE IS "POWER IN THE PLAIN GOSPEL."

THE *Detroit News*, in an editorial upon a recent consolidation of two churches of one denomination in that city, says,—

The church is not a social institution like the corner grocery that must follow the trade: it is the organized testimony that a certain Master spoke glowing words centuries ago, which if a man test to-day he will be brought into a very real and helpful contact with that Master. That is the work of the church: it is a torch, a lighthouse, a spiritual inn, a haven, and its place is where the darker waves dash on the shore-line between good and evil.

It is almost a certainty that other down-town churches will move in time. Some of them are making desperate efforts to retain their footing and "draw the crowd." Heaven help the church that throws itself at the feet of the crowd! None of them ever think of advertising the message of light, but they do advertise their music and their specialties and their piquant topics. All this is a sign of the end. The audience gathered by sensational methods is an audience that loses its respect for the church the moment it yields to the lure of the posters. This is not power, but weakness. Either there is or there is not power in the plain gospel, and the churches will never determine this until they discard everything else for it. If it is powerful still, the church has its work cut out for it for years to come: if it is not powerful, then consolidation is only the postponement of inevitable bankruptcy and annihilation.

The conditions of which the *News* complains are but the natural result of an evident belief that mankind are not really in search of Truth, that men and women must be wheedled into an interest in things religious, and that the word of God is not sufficient of itself to interest humanity. We do not find that Jesus and the apostles after him thought it necessary to adopt "sweetened water" methods in order to bring their message to the attention of the people. They got to the point at once, they showed the people that the gospel which they preached was "with power," and they demonstrated this power in the healing of the sick, the saving of the shipwrecked, and the raising of the dead.

The reason for existing conditions with many churches is that preaching without practice largely took the place of our Master's method, and that the true concept of the church and its mission lay hidden for centuries until Mrs. Eddy with acute clear-sightedness defined it as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle;" and again as "that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick" (Science and Health, p. 583). The remedy lies in the acceptance of this definition, and the doing of the works there specified.

The marvelous growth of the Christian Science church since its organization barely three decades ago, goes to prove that what the people need to-day is the simple gospel of our Master and the early Christians, and that in ever-increasing measure they are coming to recognize that this simple gospel is all-sufficient for their need. When once they know, through demonstration, that they have received this gospel, nothing can separate them from it.

ARCHIBALD MCLELLAN.

HABIT.

WE are all familiar with the expression, "force of habit," though we may not have thought much regarding its significance. The dictionaries define habit as "a tendency or inclination toward an action or condition, which by repetition has become easy, spontaneous, or even unconscious: in theology, tendency or trend." Strangely enough, the word habit has come to be more generally associated with evil than with good, which is an amplification of the mistaken belief that it is easier to do wrong than to do right. All this points to another fundamental error, namely, that although God is Spirit, man, whom the Bible declares to be His image and likeness, is material. The history of mortal man shows that his tendencies are evil, and St. Paul refers to this in saying, "When I would do good, evil is present with me;" but he also points the way to deliverance from this deplorable condition when he says, in that famous 8th chapter of Romans, "That the righteousness of the law might be fulfilled in us, who walk not after the flesh, but after the Spirit."

We find, both in the study of the Bible and in human experience, that the fetters of evil habits are never really broken except as the individual's thought is to some extent spiritualized, and that entire freedom can only come through entire spiritualization; yet this is surely a prize worth striving for. In Science and Health (p. 62), Mrs. Eddy says, "The entire education of children should be such as to form habits of obedience to the moral and spiritual law, with which the child can meet and master the belief in so-called physical laws, a belief which breeds

Digitized by Google

disease." In another place she tells us that the understanding of the truth "makes the nerves, bones, brain, etc., servants, instead of masters" (*Ibid.*, p. 216).

Now we often hear complaints that the nerves, etc., are very disobedient to their owners' wishes, but said owners do not see that these disobedient habits began, possibly, in infancy and continued with the years; that these were not merely habits of disobedience to parental authority, but of disobedience to God's spiritual law, and that without obedience to this law there can be no true basis of health, happiness, or prosperity. Happily for humanity, Christian Science has come to show the naturalness and permanence of good habits, as concerns both mind and body. A great deal is being said at the present time respecting the sense of exhilaration experienced by those who ascend in balloons, but although many of us may not have this particular privilege, one much greater is within our reach. We can daily realize the exhilaration of rising above the downward tendencies of disease and sin, and breathing the pure air above the mists of materiality.

The permanence of all that expresses intelligence was recently illustrated to the writer by a homely experience. A bit of fine needlework was taken up which had not been attempted since school-days, but the fingers had not forgotten how to obey the directing thought, and it was a surprise and pleasure to find that a good habit, although unused, had been growing throughout the years along with the thought which had been expanding and working in other directions. It also showed that there is no excuse for poor work in any direction, and that there can be no poor work, if we are responsive to the activities of divine Mind. What a glorious prospect to contemplate the unfoldment of man's infinite capabilities and possibilities under the guidance and government of divine Principle, the infinite Mind that never slumbers nor sleeps! Thus guided and governed, we shall instinctively and intuitively express good in all we think and do, and our habits will be links in the chain of Science, binding us to the divine order and harmony.

ANNIE M. KNOTT.

HEALING AND HUMANITARIANISM.

CONCERNING no other matter, perhaps, have Christian Scientists been more frequently and more grievously misjudged than with respect to their attitude toward the humanitarian spirit which has made such wondrous advance in the last half century. Time was when the poor, the imbecile, and the decrepit were left to the makeshifts of beggary, wholly dependent upon the scant provisions of unorganized charity. To-day the care of these unfortunates has become a public charge, and institutions for their benefit are found in every city and well-nigh every town of the Christian world. That these institutions witness to the advance of Christian brotherhood none can question, and that Christian Scientists are not looking to the multiplication of such means for the solution of the problem of human suffering and want has been interpreted again and again as evidence of their lack of humanitarianism, of an unsympathetic attitude toward the unfortunate and needy which, it is averred, is but a logical outcome of their teaching respecting the unreality of all material things.

Christian Scientists have only the kindliest thought toward all who are endeavoring, as best they know how, to improve human conditions. They recognize that the effort to remedy ill effects is a good thing, but they have come to see that contentment with such efforts to make the ills of life more endurable, and the practical denial of the possibility of their being healed, is a very bad thing. To provide an asylum or home for the sick and maimed may be an altogether praiseworthy act as a present-day expedient, since it is the only thing that the many know how to do for their suffering fellow-men; but when such provision is declared to be the distinctive and permanent feature of Christ's rule on earth, when Christian ministers assert that it meets and discharges the responsibility which Christ Jesus imposed upon his disciples in counseling them to heal the sick, then the higher ministry of Truth is interdicted through unfaith, and an order of things established which actually conduces to the multiplication of human miseries rather than to their removal.

It is against this neglect to do the more important thing which has been left undone by the church at large, this content with the palliation of human sufferings for the removal of which provision is made in the gospel, that Christian Scientists protest. They have awakened to the fact that the love which would help but cannot heal is incommensurate with human need, and while not neglecting the call for present humanities, they are endeavoring to measure up to the demands of the situation, and to obey Jesus' commands. If the great Wayshower had stood for alleviation instead of cure, if he had inaugurated the building of hospitals and asylums as the solution of the problem of sickness and suffering, then those who declare that in this line of work they are meeting their responsibility as his followers, would have a ground for their contention which is now wholly wanting.

It should be noted in this connection that even the wisdom of this world is perceiving that in caring for the infirm and feeble without curing them well-meaning charities are really increasing the disabilities under which mankind as a whole is placed, by presenting a seductive temptation to that shiftlessness and pretense which lead directly to mental and physical degeneration. From every point of view, therefore, it becomes apparent that the only thing for Christian people to do is to follow the example of the Master by healing the sick and establishing that economic justice which would speedily do away with most occasions of poverty and want. In laboring for the realization by each individual of that freedom, physical, mental, and economic, which means health, independence, and happiness, Mrs. Eddy is standing for the true and adequate humanitarianism of Christ Jesus, and in this she is the world's true friend and helper.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., Jan. 17, 1909.

Dear Teacher:—May I occupy just enough of your precious time to thank you for your good lesson on humility published in the last number of the *Christian Science Sentinel*. What a church ours would be if all competition therein consisted of an honest, earnest effort to outdo our conduct of yesterday, an effort to be more kind, charitable, forgiving, Godlike, than we have ever been before! To be sure, you have given us this lesson over and over again in your writings, as well as in your private teaching, but it is always new and acceptable from the one whose life so amply commands the respect that justifies the preaching.

I have for many years been associated with you in the business affairs and labor of the church, and I have also been a member of your household, therefore I am in a position to know whereof I speak when I declare with gratitude that I have never known a mortal with such broad and forbearing charity as I have witnessed in you. I have never known one whose every thought, word, and deed so nearly conformed to the exalted standard of Christ.

Your loving student.

ALFRED FARLOW.

Worcester, Mass., Jan. 12, 1909.

Dearly Beloved Leader:—It was voted at the annual meeting of First Church of Christ, Scientist, Worcester, Mass., that a letter be written to you to express our appreciation and to thank you for your able leadership, through which so much has been accomplished for the good of mankind. We are especially grateful for *The Christian Science Monitor,* which marks an epoch in newspaperdom and which brings one step nearer the realization of the kingdom of heaven.

While we note with gladness the growth and prosperity of our Cause in the Field at large, we are rejoiced and encouraged in the spiritual progress and harmony of our own branch of the true Vine. Last year our Sunday School increased in size to the extent that larger quarters were necessary, and Dean Hall was secured for the purpose. The location of our Reading Room has also been changed from a somewhat obscure locality to the principal business street of our city. Although these changes meant an added expense to the church, the steps were taken without regard for the financial depression which the business world experienced, and divine Love has supplied every need.

In all our work we have been inspired and helped by the unswerving persistency of your loyal example, and we wish to prove our gratitude by evincing greater activity in the interest of our Cause, with the hope that through obedience to divine Principle our church may demonstrate to mankind the efficacy of a healing religion.

Lovingly and gratefully,

MAUDE CORBETT SMITH, *Clerk.*

HARRY T. KNIGHT, HORATIO GATES,
STELLA T. MERRITT, HENRY BANCROFT,
Board of Directors.

Concord, N. H., Dec. 19, 1908.

Dear Mrs. Eddy:—A member of my family having recently become the recipient of God's love, as made manifest through Christian Science, I wish to state in a few brief words the appreciation and heartfelt gratitude that we all feel toward you for what you and your faithful coworkers who, by God's help, as His chosen instruments, are doing through Christian Science for suffering humanity in all parts of the world. As the Discoverer and Founder of Christian Science, the people of the world owe you a debt of gratitude they can repay only by consecrating themselves to God and cooperating with you in the dissemination of this divine and all-essential and scientific truth, until it covers and conquers the forces of earth as the waters cover the sea.

I am frank to acknowledge that prejudice (ignorance), which has closed the doors of reason and darkened the windows of men's souls for ages, is to-day, as in the past, shutting out the truth from unnumbered homes, bringing to the occupants of these homes, as it did to ours, fear, doubt, worry, sickness, and suffering. But at last, when *materia medica* had utterly failed to give relief to my wife, a nervous invalid, who for over two years had three different doctors in attendance, two of them claiming that nothing short of an operation would give relief from a complication of ailments,—in this condition of despair we were persuaded last August, through the influence of relatives and friends, to try Christian Science. The result seems altogether miraculous, for in less than four weeks from the time we called a Christian Science practitioner to our home, my wife was up and about the house, eating heartily, even of things which she had not been able to eat for years. To-day she is well and happy, having almost regained her usual weight and strength.

Since this great blessing has come to our home through Christian Science, which dispenses health and joy in place of sorrow, sickness, and suffering, I would that I could help carry this message of Truth to the uttermost parts of the earth, and impress upon the minds and hearts of men the great lesson taught in "Science and Health with Key to the Scriptures" (p. 340): "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars," etc. How true, how ideal, how sublime is this passage! What a beautiful world this will be, what a noble race, what a happy people in all the earth, when these Science ideals have been exemplified and fully realized in the lives of all the people of the world!

Very respectfully and sincerely yours,

W. H. MCFALL.

[Telegram.]

St. Louis, Mo., Dec. 10, 1908.

Mrs. Mary Baker Eddy, Chestnut Hill.

Beloved Leader:—First Church of Christ, Scientist, of St. Louis, in meeting assembled, with hearts overflowing with gratitude for what you have done and are doing for mankind in pointing the world to an available Saviour, even the Christ, Truth, thus breaking asunder the bonds of sin and sickness, seek again the blessed privilege of renewing their pledge of fealty to you—evidencing itself in a deeper consecration to the Cause which you have established, that this branch of the parent Vine may bring forth abundantly "the fruit of the Spirit;" "for then shalt thou have thy delight in the Almighty, and shalt lift up thy face unto God."

O. B. BARROWS, *Chairman,*
JOHN S. WILLIS, *Clerk.*

Savannah, Ga., Jan. 6, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—At the business meeting of First Church of Christ, Scientist, of this city, it was unanimously agreed that a letter expressing our gratitude be conveyed to you from this field. Our debt to you, beloved Leader, is boundless, for your untiring and unselfish labor of love in giving to us the boon of Christian Science, and the golden key to the Scriptures, Science and Health, thus opening to us in truth the "tidings of great joy." We are glad to report a marked growth of Christian Science in Savannah. We are happy in the outward manifestation of this growth, and we have made a demonstration recently by moving into a beautifully furnished hall. This we use for both church and Reading Room purposes. We are having a full attendance both at the Sunday and Wednesday evening services.

We are endeavoring to rise into the consciousness of good by putting in practice and proving daily, hour by hour, what you teach us of the truth. We are also striving to keep our thought pure and unadulterated by the faithful study of all your teachings. May we as a body reflect Christian Science so clearly that it will "draw all men." In this way only can we hope to repay you in some measure for your work of love.

Gratefully yours,

The Members of First Church of Christ, Scientist,
A. HAZEL COHEN, *Clerk.*

London, England, Christmas Day.

Beloved Leader:—My heart is so full of joy for sorrow lifted and sickness healed that it overflows to you, who have given to the world the understanding of Life, Truth, and Love! My daily increasing desire is to give unto others as it has been given unto me—"good measure, pressed down, and shaken together, and running over."

Yours in love and gratitude,

ROSE A. BAINBRIDGE.

AMONG THE CHURCHES.

HAMILTON, BERMUDA.

On Sunday morning last [Nov. 22] the little band of Christian Scientists held the first public service in Bermuda at their Reading Room, Burnaby House, Burnaby street, Hamilton. The service, which included the singing of Mrs. Eddy's "Communion Hymn," was very dignified and impressive. Eugene C. Pearman was First Reader, Mrs. W. T. James, Second Reader. The subject of the Lesson-Sermon was "Soul and Body." Among those present were the Worshipful W. T. James, mayor of Hamilton, and Mrs. W. O. Swink of New York, whose beautiful voice added much to the interest of the service.

Royal Gazette.

NEW ROCHELLE, N. Y.

First Church of Christ, Scientist, of New Rochelle, opened its new church building at 19 Locust street, Dec. 27. The church has been holding its services in Herman Lambden's Hall about seven years. Three months ago it bought the present site and remodeled the old house and built an addition to serve for a meeting-place. This hall seats two hundred persons, and the front rooms have been artistically decorated and furnished to serve as Reading Rooms. The contract is let for a new front of classic design. Services were held at 11 A.M. and 3.30 P.M., and the church was completely filled with a very attentive audience. Many congratulations were received by the members, and there were numerous expressions of surprise at the beautiful demonstration just made. Divine Love has supplied all our needs, as the building neared completion, even to the securing of a new organ (which at first was thought to be an impossibility), and for which we are very grateful.—*Correspondence.*

CHICAGO, ILL.

Regular business meetings of the nine Christian Science churches in Chicago were held last night [Jan. 7]. The names of those who will unite with the churches on Communion Sunday, the day after to-morrow, were presented and annual reports were read. The increase in membership for the past year shows a gain of about twenty per cent, which is the average rate of increase maintained for many years. Reports from the downtown Reading Rooms, which are maintained jointly by the nine churches, and from the local Reading Rooms which were opened in connection with the different churches in the past year, show a large increase in the attendance of visitors and in the sale of Bibles and Christian Science publications. The annual election of directors and the triennial election of Readers in the Christian Science churches in this city and suburbs, as well as in many cities throughout the state, will occur next Thursday.—*Chicago Record-Herald.*

SUNDAY SCHOOL WORK IN SPOKANE, WASH.

In reviewing the work of the Sunday School for the past year we note many steps which indicate an onward movement from the mechanical routine of teaching to the spiritual, from the personal to the impersonal. During the past few months there has been maintained a definiteness of work never reached before in this Sunday School, a more practical demonstration of the teachings of Christian Science as applied to Sunday School work. The clearer ideal of the teacher as to what should be accomplished by the class is already showing good results. The interest taken by many of the children in the study of the Commandments, the Lord's Prayer, the Beatitudes, and the Lesson-Sermons is being manifested by their faithful and conscientious preparation of the work required. Definite, orderly methods in teaching and in assigning lessons quicken the pupils' thought to honest work. The teachers are trying to impress upon their pupils the ethics of Christian Science, without which our Leader tells us there can be no true healing. We read in Science and Health (p. 98), that Christ's teachings "are not theoretical and fragmentary, but practical and complete." The true teacher sees that there should be such a degree of completeness in the instruction given as would enable another to continue the work without delay or confusion. All connected related work brings to the child's mind a sense of satisfaction and completeness.

During the past year a Sunday School committee appointed by the trustees have worked faithfully in behalf of the Sunday School. The Sunday School teachers' meetings, held the second Monday of each month, have been well attended and have been a helpful feature in the work. Although the growth of the Sunday School should not be based upon mere numbers, still I would make mention of a constant increase in attendance. The children have within the past year given one hundred and thirteen dollars and seventy-seven cents to the publishing house building fund at Boston, also have lately given one hundred dollars to the building fund of this church. They have given to the charity fund at different times, and have subscribed for *The Christian Science Monitor,* to be sent to the Lyon School for Boys.—*Correspondence.*

CENTRALIA, ILL.

The members of the Christian Science church of Centralia for some time have been looking for a suitable location for a church site, and in purchasing the easterly half of the lot at the corner of Broadway and Maple street they have found an ideal location. They will at some future day, we hope not far distant, erect a church edifice which will not only be a monument to their beautiful religion but also a credit to Centralia. For a number of years there have been a few faithful followers of this faith in Centralia. The organization of a church, however, did not take place until July, 1906. Since that time the church has had a steady growth, and probably there is no other religious body which is having such a phenomenal growth throughout the world to-day.—*Centralia Sentinel.*

[Written for the *Sentinel.*]

A SONG OF PROMISE.

CASSIUS M. LOOMIS.

In the silent caverns 'neath hill and rock,
In the sunbeam streaked with gold,
Christ speaks to the hearts of his chosen flock,
And the story ne'er grows old.
As we listen there falls on the willing ear
A message so tender and true,
That the sparkle of life with its song of cheer
Makes the old-time love seem new;

Makes the words of the Master seem more real,
Makes the light of the day intense.
Have ye thus awakened, that now ye feel
The bondage of mortal sense?
Then truly at last shall ye find the goal;
Tread on, for the hour draws nigh
When the world shall bask in the realm of Soul,
'Neath a sunlit, cloudless sky.

TESTIMONIES OF HEALING.

As a regular practising physician and surgeon, I naturally took some interest in what was being said regarding the healing power of Christian Science; I had heard a great deal about the cures that had been made, but really knew nothing about Christian Science; therefore I concluded about six years ago to attend some of the meetings which were then being held in a hall in this city. Like many others, I was at the beginning somewhat skeptical, and in fact inclined to ridicule the idea; however, when I saw the character of the people who attended the meetings, their pleasant and satisfied expression, I began to think that there must be something in Christian Science, otherwise so many apparently well-to-do and intelligent people would not attend. I bought a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it over carefully, but found that it required considerable study in order to get the proper understanding of the subject. The more I read the book, the more the truth therein disclosed began to unfold itself to me, and finally I saw plainly why the people I met at the meetings looked so well pleased; they had simply found the truth, and showed it in their demeanor. I became so interested in the meetings that I could not very well keep away from them, and now I do not want to keep away. Christian Science has completely captured me, and bids fair to hold me for the balance of my sojourn here.

The first practical experience or physical benefit I derived from Christian Science was about two and a half years ago, when I had a very badly swollen face, resulting from an ulcerating tooth. My jaw was very sore and the teeth ached terribly. It was a case which, according to the dentist's method, needed lancing, and I was advised to have it attended to at once. Besides that, I was very much tempted to take something for the intense pain it caused me. I, however, concluded to try Christian Science, and proceeded to the office of a practitioner and took treatment, with the result that the swelling went down, the pain lessened and finally stopped altogether, and I have not had any such trouble since. Before this happened, I was obliged to use lukewarm water when washing my teeth in the morning, otherwise I would have the toothache, but since then I have been able to use cold water daily for that purpose without any trouble whatever. My second experience took place about six months after the first. I had a clearly defined case of acute appendicitis; all the diagnostic symptoms were present, and pointed to the necessity of an immediate operation. Instead of resorting to an operation, however, I went to a Christian Science practitioner and had four or five treatments. Gradually the pains stopped, all symptoms disappeared, and I was completely cured without the use of the surgeon's knife; nor have I had any return of the trouble since.

I certainly have a great deal to be thankful for in what Christian Science has done for me, not only physically but also for the spiritual uplifting accorded me through these wonderful channels, and I now take pleasure in recommending those who come to me for medical treatment to a Christian Science practitioner for relief, whenever I think the person will take kindly to the proposition. I may be injuring myself financially by so doing, but trust that all will come out right in the end.

C. B. WALLER, M.D., San Francisco, Cal.

I gratefully submit my testimony to the healing power of Truth. In the spring of 1903 I was very much run down, as well as discouraged and despondent. I thought each day that I must give up my position, feeling I had not strength enough to continue in it. My family advised me to give it up, but I wished to finish the term's work of teaching. An aunt of mine, a Christian Scientist, wrote often that she could help me through her understanding of Christian Science, but I repeatedly declined her help. I soon realized, however, that I must have help of some kind or give up my position, and as I had lost faith in medicine, I reluctantly wrote her to give me treatment. She sent me a Christian Science pamphlet to read, and began to treat me. The results were most gratifying. Two troubles of ten months' standing yielded almost immediately. With the healing came a joy and peace that I had not experienced for a long time, and life, which before had not seemed worth living, took on a brighter aspect. I gained in flesh, and came back to my work with a desire to study into Christian Science. I left my former church friends, who were very dear to me, and went alone to the Christian Science service, not being acquainted at that time with any one who was interested in this subject. I read, studied, and pondered. I made some progress, though I sometimes slipped back into the old ways.

For many months previous to this experience, I had suffered severely with boils. One had lasted two weeks, although it was lanced and dressed every other day, all of which was very painful. At this time (in January, 1905), to my surprise and dismay, an ugly carbuncle manifested itself on my face. The crucial moment had arrived. Should I have it lanced as of old, only to have another appear, or should I have Christian Science treatment? I wanted to be healed, and I felt that Christian Science could heal me. When the time came that the physician would have said the carbuncle was ready to be lanced, I went to a Christian Science practitioner. She talked to me with assurance, and gave me treatment. I left the house with no pain and the swelling greatly reduced. I knew I was healed, and did not feel that I needed any more treatments, but the practitioner gave me two more, until all trace of the trouble was gone.

My gratitude was unbounded. Here was a healing power indeed—and how good it was to know that disease can be destroyed without the use of the surgeon's knife! Then my study of Christian Science began in earnest. It had been proven to me beyond a doubt that Christian Science heals, and with the healing came a great desire to know more of its Principle. Since then I have earnestly desired to "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495), and so be worthy of the name Christian Scientist. It is good to adhere to a religion that heals the body, but I am more grateful for other benefits which have come through the study of Christian Science. First it teaches us how to love our neighbor as ourselves. It gives us a God we can understand; it teaches us how to "pray without ceasing," for prayer is the consciousness of God; it makes "a new creature" wherein old things pass away, and best of all it awakens an interest in the Bible never before dreamed of. The Bible becomes our constant companion, and is truly a "sufficient guide to eternal Life" (Science and Health, p. 497).

I wish to express my gratitude to Mrs. Eddy. I am very grateful that there was one in this day and age who lived near enough to God to receive this marvelous truth and reveal it to us in her book "Science and Health with Key to the Scriptures."

GRACE D. ELY, Duluth, Minn.

Christian Science means more to me than a healing agency; it brings a peace of mind, a happiness that I will not attempt to describe, and a true understanding of God and man's relation to Him. Through Christian Science treatment I was healed ten years ago of serious lung

Digitized by Google

trouble, and have enjoyed almost perfect health since that time. In late years, through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible, I have been able to keep myself almost entirely free from the little ills that present themselves to mortals. I am striving to love my neighbor as myself, knowing that by so doing I can best express my gratitude to God and to Mrs. Eddy.

MRS. CORA ROSEBROOK, Omaha, Neb.

That "divine Love always has met and always will meet every human need" (Science and Health, p. 494) has been demonstrated to me to such an extent that I now know "that my redeemer liveth," and I am free from a great many apparently insurmountable difficulties which seemed to come between me and an understanding of the truth of man's being. When I took up the study of Christian Science I was looking for physical help, little knowing that I would eventually have to work out the spiritual part, and for a time I was able to overcome all of my own troubles. Soon, however, they came back to me with such force that I needed to have treatment, and later on even that seemed to be of no avail. By continuing the study of Science and Health I came to realize that Love alone rules all things, and that as soon as I could understand Love rightly I would get the desired results. I have learned to love more and am reaping a harvest which is greater than I can take care of. I am grateful to Mrs. Eddy for Christian Science, and to God, whose fatherhood has become to me a reality.—PETER H. ROSEBROOK, Omaha, Neb.

I have long felt it to be not only a privilege but a duty to give the testimony of my healing. It is about nine years since Christian Science first came to my notice, at a time when I was a wreck, mentally and physically. I was suffering from a complication of diseases, which were pronounced incurable by no less than five regular physicians. When I was treated for one trouble it aggravated the others; I was even afraid to eat food prepared with my own hands. I had Christian Science treatment given me, and the practitioner also asked me to study the text-book, Science and Health, which I commenced to do. I was healed of severe and dangerous bowel trouble, and of chronic throat trouble. I had not been able to eat any solid food for many years, and for eight years I could not walk without a supporter or truss. I will not mention any of the other ailments which have been overcome, but it will be seen that I have much to be grateful for.

Words fail to express my gratitude. It is only by letting my light so shine that some other sufferer may be benefited, that I can do so. My greatest desire is to know God aright. I am indeed grateful to our revered Leader, and to God who is our Life. I am humbly striving to live this grand truth.

MRS. JENNIE P. VAN GIESEN, Marshall, Mich.

For over six years I was a sufferer from a so-called incurable form of rheumatic trouble, termed by the doctors a hardening of the joints. During this time I tried every form of material treatment supposed to be beneficial in such cases, including electricity, osteopathy, etc., without receiving any help. None of the doctors consulted, and they were not a few, held out any promise of doing more than to check the course of the disease; and the last one, a specialist, refused even to handle my case. He advised a complete change of climate as the only hope, not of a cure, but of some measure of relief. This step I refused to take, as I felt that the prospect of separation from my family meant an added burden which I could not possibly endure. A course of "mental science" seemed to give temporary relief, but I soon relapsed into a worse condition than ever.

Completely discouraged, I had resigned myself to a life of hopeless suffering and permanent invalidism when, some three and a half years ago, Christian Science was recommended to me. I reluctantly consented to give it a trial, although without any faith in it, as I was convinced that nothing could help me. My progress was very slow, in fact almost imperceptible, but I gradually got to the place where I began to hope again. Then there suddenly developed an acute attack, and for weeks I lay at what seemed, to my relatives and friends, the point of death. The faithful and untiring work of the practitioner finally prevailed, and since then I have gained steadily, until today I am free, able to care for my own household duties and my family of three children, the last born in Science with practically none of the effects supposed to be incidental to such experiences, and particularly so with any one who had so long suffered with the disease above indicated.

While my healing was slow, I have gained so much spiritually that I can look back and count every minute of the time as a blessing. From being a despairing, hopeless invalid, I have been transformed into a healthy, happy woman, with an outlook on life which daily grows brighter. I cannot, in words, adequately indicate my sense of gratitude to God, and to Mrs. Eddy, for having been so lovingly aided in gaining an understanding of Christian Science, but I am striving so to live that my life shall daily express it.—MRS. EVA D. ARNOLD, Chicago, Ill.

I am glad to tell what the truth did for several members of my family, who were healed solely by Christian Science treatment, without the aid of any physician, in the case of an eruptive fever. My oldest boy was the first attacked. He had high fever, cough, an eruption, etc. My wife immediately telephoned to a Christian Science practitioner for help, and the board of health was promptly notified that there was a case of illness in our household and that we were going to rely wholly on Christian Science treatment. A doctor immediately visited us, and placed a notice on our front door. The boy commenced to improve at once, and on the fourth day he was entirely well, playing around as if nothing had happened. Meanwhile, however, the disease had developed in the rest of the family, the two youngest children having severe attacks, the next boy a very light attack, and my wife and daughter being apparently very ill. For two days my wife was unable to move out of bed, but the third day she commenced to improve, and by the end of the week no more treatments were necessary. The board of health was notified a second time when the others came down with the disease, and again a doctor visited us and made another examination. Finally, at the end of the second week, the last examination was made and the notice removed from the door.

We received very courteous treatment from the board of health throughout, although we told them at each visit that we were relying wholly on Christian Science. The healing of these six members of my family was perfect, with no bad after-effects in any case.

JOHN M. JONES, New York, N. Y.

It is with sincere gratitude to God for the truth which heals that I give this testimony. I came into Christian Science in the spring of 1907, after four weeks of severe illness. I was too ill to undergo an operation, but as soon as I commenced to get better the physician

Digitized by Google

said I must be operated upon, as it was his opinion that I never would be able to get around again until this was done, as for a number of years I had suffered with intestinal trouble, and he thought the appendix must be removed before I could be well. While I was endeavoring to gain strength enough for this ordeal, a friend asked me why I did not try Christian Science. I did not know anything about it, and did not have much faith that it could heal me, but I was willing to try anything that would save me from the knife, so this friend loaned me a copy of "Science and Health with Key to the Scriptures." I read the book about a week, and as I had become very much interested in it I decided to call a practitioner and give Christian Science a trial. I did so, and was completely healed in one week, and have had no return of my troubles in any way. Mere words are inadequate to express the wonderful uplifting and the peace and comfort that came to me as my spiritual eyes were opened,—when I realized the blessed assurance that "God is All-in-all" (Science and Health, p. 113). It was as the opening of a door, by which a prisoner is let out into the pure air and sunshine of heaven. My son also has been healed of varicose veins, for which there is no cure in medical science. He had been obliged to wear rubber stockings all the time, but he has not worn them now for more than six months.

Thanks be to God, and to our dear Leader, Mrs. Eddy, that we have been guided into the truth and light in which there is no darkness, and that we have found God to be an ever-present help in time of trouble. Jesus said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."—Mrs. L. S. Parker, New Haven, Conn.

The psalmist said, "O give thanks unto the Lord: call upon his name: make known his deeds among the people." It is with thanks to God for the good we have received through Christian Science that I will make known the healing power of Truth. For six years I suffered constantly from stomach, liver, and bowel trouble, at times being very ill, and was under the care of a physician most of the time. I was treated by several physicians, tried mineral springs, dieting, electricity, and everything I could hear of, but found very little relief.

In March, 1907, my health was so poor that I turned to Christian Science and found help immediately. The first treatment was given me late in the afternoon, and by night the pain and fever were gone and I slept all night. I was healed in eight treatments, and have had good health ever since. While having some dental work done I had one treatment for nervousness, and this fear left me and did not return. Catarrhal trouble disappeared without special treatment and I feel that I have been made free indeed.

My husband, who is a traveling salesman, also needed help, as he had not been well for about five years, at times being unable to travel for several weeks at a time. He had catarrhal, stomach, liver, and bowel trouble, and every winter would bring an attack of malaria, for which there seemed to be no cure, as he had tried every material remedy. Seeing the proof of Christian Science healing in my case, he began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. His health improved, but he did not entirely give up the use of medicine until December, 1907, when he had one Christian Science treatment, and he now has perfect health. Several times he had tried to give up the use of tobacco, but could not. Since coming to Christian Science, however, the desire for tobacco has disappeared.

We are very thankful to God for the blessings we have received, and to Mrs. Eddy for giving us this truth by which so many sufferers have been healed.

Mrs. D. W. Beck, Bloomington, Ill.

Last winter, while my two-year-old baby was quite sick with cold and fever, a most distressing cough suddenly appeared. The coughing being practically incessant, and the breathing very unnatural, I called in help. That night the child seemed worse, and I again called in a practitioner to remain through the night. We went to bed, but I lay there shivering,—fighting my fear,—declaring that God is All, and all things are in His hands; that "perfect love casteth out fear." After three o'clock we all rested, and during the day the baby looked brighter and seemed a little better. In two more days she was entirely healed. Two weeks after this experience, another child had an attack of acute lung trouble, with distressing symptoms. Things looked very dark the first two days, but the Master's promise was ever before me, "Ask, and it shall be given you;" and the practitioner called my attention to this passage from Science and Health, "To those leaning on the sustaining infinite to-day is big with blessings" (Pref., p. vii.). No one knows the comfort I derived from those words of true wisdom written by our dear Leader, words of comfort and cheer to uplift weary, fainting hearts. This little girl was healed in five days. Mrs. Eddy's book, Science and Health, reveals God as divine Love, and should we not gratefully acknowledge the good we have received and the joy that has come to us through knowing that "God is Love"?—Mrs. Osce Roberts, Birmingham, Ala.

"Come unto me, all ye that labor and are heavy laden, and I will give you rest," said our Saviour. Christian Scientists know what he meant. Christian Science came to me as the good Samaritan when the illusions of mortal mind were making so-called life a burden,—a continuous evil dream,—lifted me above it, and showed me its unreality. Kind friends, whose loving character makes them stand as lights in the world, have helped me over the difficult places. I have much to overcome, and often stumble, but I am going ahead, trusting that divine Love will take care of His children. I wish to testify here to the uniform loving-kindness manifested by Christian Scientists I have met, sometimes under trying circumstances. It is time that this public acknowledgment should be made, for we ought to give all glory to God, who has given us through Mrs. Eddy this beautiful and practical exposition of the teaching of our Master, Christ Jesus.

C. A. Raymond, Toledo, O.

I suffered eleven years from a paralytic trouble of the right arm which at times affected my head and all of my right side. I took a doctor's prescriptions, also tried electric treatments and vapor baths, etc., but to no effect. I then had Christian Science treatment for about a week, and in the twelve years since that time I have had no trouble. I am thankful to Christian Science for my health and cannot say too much for it.

Lovina Jacobs, Basalt, Col.

For many years, more than I care to say or think of, I was almost an invalid. Extreme nervousness, stomach trouble, and severe headaches which attacked me almost weekly, were my constant ailments. About three years ago I became interested in "new thought;" but it helped me very little, so I gave it up. A year and a half ago I was quite ill, and sent for a Christian Science practitioner. I was instantly relieved. Since then I have had very few and slight headaches, for I have received practically instantaneous help. The nervousness has almost entirely left me, and the stomach trouble is a thing of the past. Science and Health, by Mrs. Eddy, is my constant companion, and in it I find help for every need, physical as well as spiritual.—Reine L. Haas, San Francisco, Cal.

As a child I was much impressed with the words of an old song, one verse of which ran like this,—

There's a kind angel watching
Thy bark on its way,
His white wings are over thee
By night as by day.
Glide on thy way unfearing,
No ill shall come to thee,
There's a kind angel watching
O'er the dark, stormy sea.

Naturally, this angel was to me the one of "suggestive feathers" (Science and Health, p. 298), and I wondered much how it could follow and protect me; but I accepted the statement in a vague kind of way and was not a little comforted by it. Later on, this overshadowing presence was more clearly defined to me as a loving Father, and often I sought His protection and guidance, and found great comfort. As a schoolgirl I became a member of an orthodox church, and I loved its services, especially its dignified and lofty songs of praise, in which it was my privilege to take part, but there came the inevitable "lessons of life," experiences in which spiritual support was much needed, when I seemed to ask in vain—to seek and not find, and I was not satisfied. Many times I turned to the Bible for guidance, relying upon this definite promise of Jesus, "If ye shall ask any thing in my name, I will do it;" still no light came. I did not then realize the meaning of the clause, "in my name," or in the understanding of the Christ-power, nor did I comply with its conditions; in other words, I asked amiss.

While in the mountains of Pennsylvania one summer, in search of health, which had steadily failed, I was asked to accompany a party of friends up the side of the mountain, in a car propelled by a strong cable. I hesitated, when suddenly an angel voice seemed to whisper that I need not fear. At once confidence took the place of fear, and the ascent was made in perfect security. In the Bible we read, "Behold, I send an Angel before thee, to keep thee in the way, and to bring thee into the place which I have prepared." This "Angel," or message, which came to me from God, was then awakening me to a still clearer sense of God's "supporting influence and protecting power" (Science and Health, p. 387), as on my return home I decided not to submit to an operation which had been pronounced necessary by my physician. I was thereafter gently led to accept the care of the "great Physician," was healed, and became a student of Christian Science.

In demonstrating the Truth-healing for little children, I have found most helpful this significant saying of the loving Saviour, "Their angels do always behold the face of my Father which is in heaven." The receptivity of the child-thought and ability to apply the teaching of Science was touchingly exemplified in the case of a six-year-old boy, who was playing with a younger brother and saw him at a little distance, much absorbed, in front of a street-car which was about to start. Knowing that any warning from him would be unheeded, and his mother not hearing his cry for help, he quietly stood and declared in all confidence, "He shall give his angels charge over thee, to keep thee in all thy ways." While the mother did not hear the call of the child, she did respond to the prompting of Truth. Feeling impelled to go to the children, she reached the scene in time to lift the child from the track, and in answer to her inquiry the motor-man replied, "No, madam; I had not seen him," showing the peril of the situation. As a little child would I become, that I might enter into a fuller realization and reflection of our dear Leader's interpretation of "Angels," as given in "Miscellaneous Writings" (p. 306), an interpretation so dear to all Christian Scientists, for in the dark hours it has brought the "sweet assurance" which comforts the weary heart and uplifts thought into the altitude so beautifully described by a well-loved poet,—

Above all peaks there is peace,
Upon the heights perceivest thou scarcely a breath.

MARY E. DUVALL, Louisville, Ky.

Over seven years ago I came to Christian Science for healing from a dreaded fever, and was healed at the one visit of the practitioner. Since then I have received many physical benefits, for which I am very thankful and feel that an acknowledgment of them is proper; but the understanding of the Bible which I have gained is far more to me than the physical healing. Before reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, my Bible was very seldom read, because I could not understand it. I tried to believe that if I lived a good life here, its promises and blessings would be realized by me after death; still I was afraid of death, and what I thought might follow.

Christian Science has cleared up all my doubts and fear of death. It has shown me that God can be understood here and now, and that I do not have to die to realize the promises of the Bible, because God, the giver of all good, is good now, and ever will be. I am thankful to God for my healing in Christian Science, and grateful for having had it proved true to me. I cannot express the gratitude I feel to Mrs. Eddy for giving us Science and Health. To God be all the glory and honor that is due His holy name.—WILLIAM DAVIDSON, Swissvale, Pa.

Christian Scientists can truly say with Paul; "If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." I took up the study of Christian Science for physical healing. The first year certainly was one of overcoming sickness, and I can thank our Father that my needs were all met. I thought I had so many ills to overcome that I would leave the treatment of my eyes until some future time. I had worn glasses for twelve years and it seemed to me to be impossible to do without them, but Truth has no future time and my glasses were broken. I asked help from a practitioner, and with two treatments was able to go on with the work myself, and was absolutely free in two weeks. I am grateful for this demonstrable religion.

MRS. CORA J. SUTHERLAND, Chicago, Ill.

[Written for the *Sentinel.*]

SING ME THY SONG.

ROMEO FRICK.

SING me a song, bright morning stars,
Of holiest harmony.
Teach me to chant in rhythmic bars
A heavenly symphony.

Sing me a song of Life and Love,—
Truth's glorious melody;
Angelic voices from above,
Uniting joyously.

Sing me thy song, eternal voice,
Blending my strain to thine;
Teaching me truly to rejoice,
Thy will replacing mine.

Sing me thy song, sweet heavenly choir,
A child-voice grant me, pray,
To sing and climb up higher, higher
Along the perfect way.

FROM OUR EXCHANGES.

[Rev. Principal Forsyth, D.D., in *British Congregationalist.*]

If the churches are not vital it is because the fraternity of faith has ceased to be vital, and is replaced by the fraternity of humanity. The love of the brethren is not the enthusiasm of humanity. That is what is the matter with the churches, and what is sapping their service of humanity. They are sacrificing the Christian brother to the human neighbor. The distinction between the two is very marked in the New Testament. And the power of the church with man and for man does not turn on our love of man, but on a love and faith of Christ which makes the bond between his lovers and believers take the lead of all the compassions and sympathies of our kind. Men are but our neighbors; the members of Christ are our brothers.

[*The Universalist Leader.*]

Do we quite understand that it is not so much intelligence, not so much knowledge and information and education, as it is a certain native capacity for music and for poetry which is necessary for that liberation of spirit and emancipation of soul which the great faith of the wide vistas and the open world may realize? Is not the perpetual effort to put the latest wisdom and the largest thought concerning spiritual things into any formula, other than the language of worship and of music, one of those fatal blunders which leave many of us fluttering on the ground when we might as easily put ourselves in touch with the very stars of hope and adoration?

[*Christian Life,* London.]

It is no exaggeration to say that from the intellectual and historical side, "orthodox" Christianity is in a woful plight. The creeds and ceremonial of the churches have ceased to ring true to the thought and spirit of the age. The ecclesiastical edifices of our time are strewn with the wreckage of ancient beliefs. Yet the best life of the British people is still identified with the great cause of religion. There is an eager conviction, or at least an instinctive longing, in the minds and hearts of men that religion is the richest, most sacred possession in all the world.

[Rev. Lathan A. Crandall, D.D., in the *Examiner.*]

If we are to reproduce in our age the Christianity of Christ, we must undertake to make all human conditions what God would have them to be. It is not enough to declare our faith in God. It is not enough to rest in the belief that our individual souls have been saved. The Christianity of Christ will seek the redemption of society as well as of the individuals that compose society. It will love man as well as God, and understand that it is vain to profess love for God when we fail to love our brother.

[*Christian World,* London.]

We never sneer at the extreme in talent and genius. The highest there commands our ready homage. And naturally, for the homage costs us nothing. It is in the moral realm—the realm of will and purpose—that the difficulty comes. We grudge here the higher level because it condemns our lower one. So we stone the new prophet, while we build the tombs of his predecessors. It is a custom out of which it is time we had grown.

[Rev. G. Campbell Morgan, D.D., in the *Advance.*]

I repeat, holiness does not need to be talked about; it talks. I quite agree with you that the nearer a man lives to his Lord, the less he announces his nearness in actual words; but the more evident it is in tone and temper, and these are the things of holiness.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50; six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel.*

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

A number of new Pamphlets and Reprints have recently been published by the Society and these will be found listed in the advertising columns on the opposite page.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States and Possessions, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE. THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 29 pages.

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D. 37 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. By EDWARD A. KIMBALL. A lecture delivered in London. 47 pages.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy, . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman E. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A concerted action is to be made by sportsmen in all sections of the country and the Audubon Societies, with a view to ascertain the amount of game birds and animals taken each year. In the state legislatures which are beginning to convene for the new year special efforts to obtain legal provisions for this game census are being planned. In this task the officers of the National Association of Audubon Societies have been promised the hearty assistance of the director of the National Conservation Commission. "The proposed census," says the president of the National Society, "is the only sure way of determining the extent of the existing commercial bird butchery and the means to check it. Though we shall, of course, have to fight the organized and financially powerful market hunters at every step toward this end, I feel sure that the support of the sportsmen will help us greatly, and that we may rely upon the support of every patriotic American as well. The whole public debt of this nation has just been reported as $107,349,751. With a known annual loss of many millions more than this due to the growing inroads of the insects which our game birds destroy, I do not think Americans can ignore this subject much longer."

President Roosevelt has recently created a Council of Fine Arts, and directed that hereafter the heads of executive departments, bureaus, and commissions, before any plans are formulated for public buildings or grounds, or for the location or erection of any statue, must submit the matter to the council, and follow their advice unless for good and sufficient reasons the President directs otherwise. This action is in accordance with the President's announcement a few days ago and is the outcome of suggestions to him by the American Institute of Architects.

During the period of litigation, representing some twenty-one months, the Waters-Pierce Oil Company of Texas, the defendant in the ouster proceedings, has received approximately $3,000,000 in gross earnings. Taxes of $60,000 are due out of this and will have to be paid by the receiver. That being done, the earnings of the company still will be sufficient to liquidate the court's judgment, pay operating expenses, and leave a surplus that will revert to stockholders. The fine amounts to $1,623,000.

When the taking of testimony in the Government's suit to dissolve the Standard Oil Company of New Jersey came to an end in New York last week, it was estimated that the case thus far had cost both parties together about $4,000,000, and that it might cost at least another million before it is finally decided by the Supreme Court of the United States.

President Roosevelt has signed a proclamation adding 600,135 acres to the Humboldt national forest in the northern part of Elko county, Nev., bordering on the Idaho line. This area contains a large amount of pine, fir, and aspen timber, estimated at 64,000,000 linear feet. This addition gives the national forests a total area of 1,158,818 acres.

Secretary Straus of the Department of Commerce and Labor is preparing invitations to a number of leaders of labor organizations and others interested in the problems of labor throughout the country, to meet him in a general conference in Washington late this month or early in February.

The chief of the Massachusetts Bureau of Statistics of Labor recommends the establishment throughout the state of a uniform fiscal year for all its cities and towns. This will facilitate the drawing of comparisons in regard to municipal finances.

The Government receipts for the first six months of the current fiscal year, at the close of business on the 15th, were only $25,000,000 below the figures at the corresponding date in the last fiscal year. Jan. 15, 1908, they were $341,067,095.16.

On Jan. 28 at noon the Cuban people came into their own, for the second time, at the hands of the American Government. May 20, 1902, the American flag was first hauled down in favor of the blue-striped, single-starred ensign of Cuba.

The treaty between the United States and Great Britain concerning the boundary waters between this country and Canada has been ordered favorably reported to the Senate at a meeting of the Committee on Foreign Relations.

Last week, owing to the scattered positions of various vessels of the navy, welcomes were extended to naval officers and crews by British, Italian, French, Greek, Turkish, Franco-Algerian, and South American officials.

The Committee on Naval Affairs has fixed the amount needed for the maintenance of the naval service during the fiscal year 1910 at $135,662,888, as compared with $122,662,485, the present appropriation.

The appointment of a Wall Street investigating commission by Governor Hughes of New York has moved the New York Stock Exchange to the most active housecleaning in its history.

International.

The Spanish Minister of Public Works has drawn up a bill for the construction of a railway from the port of Valencia to Madrid. This line will be of such commercial value to the capital that it is already being said that Valencia may be regarded as the port of Madrid. The journey between the two cities is about two hundred and fifty miles and will be covered on the projected line in five hours.

Militarism continues to impose a tremendous burden on Europe, according to M. Gervais, who has made a calculation, for a report to French authorities, of the average military expenditure of the six chief European Powers—Russia, Germany, France, Austria-Hungary, Italy, and England. He finds the total amount spent annually to be no less than $1,000,000,000, and the number of men which they can put into the field to be over thirty-one million. The average cost per man in Germany is $260 and in France $220.

The total imports into Spain in the year 1907 amounted to $186,509,800, and the exports to foreign countries to an almost equal amount. The total imports into France from foreign countries amounted in 1907 to $1,122,740,000, and from the French colonies to about a tenth more. In the same year the exports from France to foreign countries amounted to $982,503,000.

The famous Cullinan diamond, which was the largest ever mined, has been returned to King Edward at Windsor Castle, after having been divided and cut. There are now two brilliants, the largest in existence and, perhaps, the finest in quality, and a half dozen smaller stones. The original stone was a present to the King from the Transvaal.

Besides the thirty big chartered banks, Canada has 1,916 branch banks. The Canadian chartered banks have sixteen branches in the United States, twenty-four in Cuba and the West Indies, three in London, one in Paris, and one in the City of Mexico.

The service of the French Cable Company between La Guayra and Curacao will be resumed immediately under the direction of M. Brun, the former manager of the company at Caracas. M. Brun was expelled from Venezuela by President Castro.

The French customs statistics of imports and exports in 1908 show a decrease of $26,400,000 and $64,800,000, respectively.

Industrial and Commercial.

A German firm at Wurzburg has recently placed on the market a patented artificial stone, called vulkanol, for paving purposes, for which much is claimed. The stone is composed of crushed basalt or other similar rocks collected in part as refuse from quarries and mixed with a small percentage of cement. The mixture is subjected to heavy hydraulic pressure and formed into blocks of convenient size for paving. They are then subjected to a high temperature for twelve days and afterward cooled slowly. The blocks are tough in structure and, it is claimed, withstand all the ordinary tests as to crushing, frost, disintegration, and so forth; that they do not become smooth or slippery by use, and are as durable as natural granite. On a concrete foundation, stones six centimeters (2.36 inches) in thickness are said to be ordinarily sufficient. On a macadam foundation, stones of eight centimeters (3.15 inches) in thickness are preferable. By reason of its hardness and close-fitting joints, pavements of this material are comparatively free from dust and filth. The cost of paving with this material is said to be less than where granite or asphalt blocks are used, and slightly more than the first cost where sheet asphalt is used.

The catch of herring in Newfoundland waters during the season which has just ended, amounted to about seventy-five thousand barrels, valued at about $180,000. The catch in 1907 amounted to one hundred and forty-two thousand barrels, valued at $352,000. Of this season's catch forty-six American vessels took fifty-nine thousand barrels.

During the past ten years the product of potato-starch in Maine has fallen off nearly three fourths. Competition of corn-starch, increased cost of manufacture, and, most of all, the fact that there are comparatively few poor potatoes in the Aroostook crops in recent years, account for this.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE TRUE ORTHODOXY.

PROF. J. R. MOSLEY.

WHATEVER is true and right and good is orthodox; whatever is not is heterodox. The true orthodox spirit is the spirit of sincerity, candor, and truthfulness, as well as the spirit of love, kindness, and good will. It is the desire and effort to be undeceived wherein one has been deceived, and neither to deceive nor be deceived about anybody or anything. In its highest meaning it is the spirit of truth, the spirit of freedom, and the spirit of goodness. Unfortunately this is not the popular conception; for, as Robertson says, "there is a tendency in the masses always to think—not what is true, but—what is respectable, correct, orthodox." And one will readily see that correct is used in its low and not in its high sense. Even respectable is not used in its best sense, as nothing ought to be respectable nor really is, that is not true and right and good.

Tolstoi, in his translation of the Gospels, refers to the scribes and Pharisees as "orthodox people." This is just what they were according to the popular and corrupted meaning of orthodoxy, and just what they were not according to its high and true meaning. Jesus, on the other hand, judged by the standards of the scribes and Pharisees was the prince of heretics, but judged by the true standard of orthodoxy he is the ideal orthodox man, not only of his own age but of all the ages. While the leaders of the popular and traditional parties of his time, as well as of all times, put the past above the present; tradition, custom, and authority above reason, conscience, and love; popular opinions above unpopular truths; definitely formulated and lifeless creeds above unfolding and living truth, Jesus regarded nothing as orthodox which was not true and right and beneficent, and everything as orthodox that was.

Jesus made the truth the basis of religion, and taught that a knowledge of the truth is freedom, life, and immortality. He made the Spirit of truth the highest and final authority, guide, and teacher, and he put as much emphasis upon doing the will of God (living the truth) as he did upon knowing the truth. Right thinking and right living were never divorced either in the teachings or in the life-work of Jesus. To love the truth above all traditions, opinions, and theories about the truth, is to know the truth; and to know the truth is to love the truth, as well as to have its freedom, life, and immortality. To love is to know, and to know is to love; and both the power to know and to love the truth are universal gifts of God.

Although we may see the truth through a glass darkly, we can always know as much truth as we are willing and ready to live. Although the imperfections and limitations of material selfhood may read into God's perfect ways and works the appearance of evil, through faith, rational intuition, spiritual discernment and love we immediately know God and the things of God, and we know that we know. Whatever may be our limitations and imperfections, the Spirit of truth and love may always be ours; and this Spirit leads into the way of all truth and blessedness. As Mrs. Eddy says, "The purpose and motive to live aright can be gained now" (Science and Health, p. 326). This purpose and motive, with faithful efforts to live the truth already known and as fast as it is and can be known, leads to the knowledge of perfect Truth. Christian Science, in common with primitive Christianity, also teaches that the truth as it is known and lived brings to light all good and frees from the sense of all evil.

Truth is not only a fact of immediate, rational, and spiritual discernment, but it is also known by its fruit. Fulness, wholeness, and harmony of life, as well as love, joy, peace, and righteousness, are the "fruit of the Spirit" and knowledge of the truth. Barrenness, incompleteness, stagnation, discord, and death are the fruits of fear, prejudice, and error. A truth-loving, a truth-seeking, and a truth-living intent not only leads into the way of all truth, but makes life quantitatively rich as well as qualitatively perfect. Truth is Life, and the Spirit of truth is always a life-giving Spirit. Error is stagnation and death, and the spirit of prejudice and the spirit of conformity to custom and to popular opinion, instead of to what is true and rational and right, always produce barrenness of thought and life. The people who are most alive are always longing and seeking to know the highest truth and the whole truth about everything that engages their attention. They are the people who will not express blind judgment. They seek the perfect vision of perfect love, which sees all things as God sees them—as they are.

Truth—not any human conception, theory, or formulation of the truth, but the truth itself and the actual knowledge of this truth—is seen to be the only true orthodoxy there is, ever has been, or ever can be. Our human conceptions and formulations of the truth are orthodox just to the degree that they are true and adequate, and heterodox just to the degree that they are false and inadequate. The same is true of the historic forms of religious beliefs and practices. Those that are most inspired and inspiring, most comforting, most healing, and most helpful, are most orthodox; those that are least so, are least orthodox. Our lives are orthodox or heterodox according to the same standard. Those who are most sincere, most true, and the most loving are the most nearly orthodox; those who are least so are most heterodox. It is the test the Master gave: "By their fruits ye shall know them." The truest and most universal religion, as well as the highest and most growing life, has for its ideal all that is true, beautiful, and good, and the rejection of all that is not true, lovely, and good. Then, too, it is always ready and striving to discard the less adequate for the more nearly adequate, the less perfect for the more nearly perfect. It has for its fruitage as well as for its ideal the most abundant and perfect life, love, joy, peace, and harmony.

Majority and popular opinion can never make anything

Copyright, 1909, by Mary Baker Eddy

Digitized by Google

true and right and good that is not already inherently so, even if all men believe it to be such for ages upon ages. Neither has human opinion power to make anything false that is true, however long and persistently it may declare it to be such. Thousands of years of false belief never made the sun revolve around the earth, neither has it ever made any false opinion true nor any wrong practice right. When false belief and evil have done everything they claim to do, they have really done nothing against the truth. The worst that false belief can do is to succeed for a time in making itself seem to be true. The best that it can do is to yield to the truth; acknowledge itself to be false and the truth to be true. This is the necessary victory of truth and the inevitable fate of error. As Patmore says,—

> When all its work is done, and the lie shall rot;
> The truth is great, and shall prevail,
> When none cares whether it prevail or not.

And since the lie can never really satisfy any one, the truth will finally prevail by the will of all as well as by its natural and divine might and right. Sooner or later all will long to see, as well as have to see, things as they are, and conform to reality,—respond to the love and will of God. Not only will every knee bow and all tongues witness to the truth, but all hearts will love it. The prodigals must all tire of the husks, come to themselves, seek the Father's house and receive the Father's welcome; and the sooner this comes to pass, the happier for the Father, the better for them.

WAKEFULNESS.

MARTHA SUTTON-THOMPSON.

WHEN reading the account of an interview between Mrs. Eddy and a representative of the press, a sense of keen rebuke came to me in the following words of our Leader to this gentleman: "I would ask you to sit down, but this is my time for work. It is a work of eternity. The hours do not give me time enough." I thought, with regret, of the many interruptions which I allowed to break in upon my time for work, and of the difference between the number of my hours of labor and hers, and there came to me the memory of the days of my childhood, when my mother rose at four or five o'clock in the morning and labored for a large family of children until late at night, often finishing a garment or a little stocking at two o'clock in the morning. And how thoughtless we children were, taking it as a matter of course that mother should work all of the time; satisfied if we worked a little each day, and feeling injured if we were not allowed the most of the time for play.

Following this memory came another and later one,—the time of awakening, when I suddenly saw that her life was a continual sacrifice for her children. She had been giving uncomplainingly the riches of a mother's changeless love in a selfless labor for us, and receiving little appreciation on our part; but her love had remained the same, and I saw that the depth and purity of her affection had sustained her strength beyond what would have been possible under other circumstances. Then I thought of all I might have done to make her work lighter and her smile brighter! After that, whenever at home, I always wanted to work as long as mother did, and one of the most comforting recollections I have is her deep enjoyment of my affectionate helpfulness and her evident sense of having come into a great reward.

To-day I think of our "mother in Israel," who is laboring for us all from the impulse of spiritual love. When many of her followers are being entertained or entertaining, she is elucidating the pages of that priceless text-book which alone explains our Scriptural chart; or she is finishing some message that is called for by a given condition or individual need. We, too, her students and students' students, take it too much as a matter of course that she has found it necessary to work so constantly, and perhaps unconsciously we hold the thought that we are privileged to work but a part of the time and may have the remaining hours for play, *i.e.*, for mortal mind modes which constitute idleness. Underneath this is a comfortable and selfish satisfaction and sense of safety that our Leader will tirelessly work in our behalf and keep us back of the danger-line.

Well do we know that if our parents had not labored without stint for us in our helpless childhood, the wolf of want would have come in at the door, and now our knowledge of the evils that assail mankind assures us that just as surely would the wolves of enmity toward the truth break in upon us to-day and devour us, mentally, morally, and physically, if our dear Leader were not ceaselessly at work in the interests of this great Cause,—in the uncovering of evil, and in the scientific instruction as to its destruction and annihilation. But we are no longer babes in the truth,—we are men and women,—and she should not be expected to do our part of the work for us. We have come to years of understanding, and must solve our own problems in the way she teaches and demonstrates, following in her very footprints as she follows Christ. She is listening for and hearing the word of Truth, and interprets it in language comprehensible to human sense. She frames it into By-laws, and propagates the teaching and healing through the church organizations, the Board of Lectureship, the Publication Committee, the periodicals, the teachers, practitioners, etc. If we are not in hearty sympathy and close touch with all of these institutions, if we belittle or would set aside or deny the necessity and efficacy of the means which express her wisdom in the advancement of our Cause, we are not in touch and in sympathy with her through whom God has voiced the revelation of divine Science.

To be in touch and sympathy with our Leader and the institutions of Christian Science, we must be obedient to the By-laws of The Mother Church, and this necessitates our entire consecration. She labors constantly for the salvation of the whole world, and we must be colaborers. Can we think that anything we may do to assist in this vast undertaking of saving all mankind from the bondage of sin and suffering is too much or too hard? Surely not! The consecrated worker will find his field ever enlarging, for he that is faithful over a few things will be made ruler over many things. This is a divine law, and if at first we find nothing more to do than to mail or to hand a copy of the *Sentinel* to a needy brother, doing this in recognition of that law, greater opportunities will come to us as the inevitable result of the ceaseless operation of that same law. We who live where Christian Science churches are established have abundant opportunities to commence with; our attendance upon all the services is a moral impetus in the destruction of error, and so is our financial support of the Cause. We can be very effective workers if we are zealous for the Cause more than for self, and the longer we are actively engaged the more capable do we become to do our part well. Experience unfolds that essential wisdom which cannot be attained in any other way, so the worker in Christian Science is not laid upon the shelf like a superannuated preacher or college professor, but time well spent and faithful labor only increase his usefulness, his value to the world.

As our devoted Leader stands at her post, doing loving service for even those who fail to appreciate her, so we must do the same, praying for that loving zeal which never flags, which listens for the voice of God and is instantly obedient thereto. I am often warned by the thought, "If I

Digitized by Google

have come into Christian Science to save myself only, I shall never do it until I get a wider purpose, for I can be saved only by doing Christ's work, and his work was ever for others."

Jesus said, "I am come that they might have life, and that they might have it more abundantly." Only by doing well the work now at hand, shall we obtain results and desire to work more and more. Our Leader's love for humanity grows with her work, and her work grows with her love, and our labors in divine Science will be governed by the same law. The power of divine Principle demonstrated is touching us to wakefulness. As Mrs. Eddy once declared, "The measure of life shall increase by every spiritual touch, even as the leaven expands the loaf" (Miscellaneous Writings, p. 175). If we be lifted up above apathy,—if we be thoroughly awakened and keep awake,—then shall we be in that mental condition which will enable us to awaken others, to "draw all men" unto God, unto Life, Truth, and Love.

If each Christian Scientist in the world should at once begin and continue to take advantage of every opportunity to destroy error in his own consciousness, such burning, world-wide zeal would so sweep away barriers that in many places the experience of the apostles would be repeated, for thousands would be converted in a day. The happy Christian Scientist is the one who, in the spirit of true love and true charity, works all the time, mentally and spiritually.

THE HIGHER COURT OF APPEAL.

FRANK B. HOMANS.

He was a bright young fellow, full of hope, cheerful, patient, and almost happy, as he lay on his none too comfortable couch, with surroundings that indicated poverty, but an earnest attempt to look fine. He had lain there for many months, suffering a great deal of pain, but uncomplaining and optimistic. The doctors had told his mother he could never be cured. First it was only a question of months, then weeks. The doctor came one afternoon as usual, and with a bright smile his patient asked, "Doctor, how soon can I expect to get out of this? As you know, I have some business matters that very much need my personal attention." The doctor, acting under a sense of duty, answered gravely but kindly, "My boy, you can never get well—you probably will not live to see next month." Tears filled his mother's eyes, but the boy bore it bravely. Not until he was left alone did he yield to saddened thoughts, and then only for a moment. Again his seemingly inexplicable and inexhaustible hope came to the rescue. "That doctor is mistaken," he said; "I know I shall get well."

This sick-room tragedy has been enacted thousands of times, and not infrequently the doctor's verdict has come true. In this instance the doctor knew, as every doctor knows, that the patient's best medicine is hope, his worst enemy, fear; nevertheless for years doctors have felt it a duty, under circumstances like the above, to administer a dose of the patient's worst enemy, fear, and at the same time tear from his longing heart his best friend, hope. This has not been done ruthlessly or heartlessly, but lovingly and kindly; still the result has been the same. This course has been thought of as a professional duty, under the belief that every one should have time in which to prepare for death, but even from a purely material standpoint it is inexcusable, and for the reason that thousands of people have recovered after the doctors have said that there was "no hope—nothing to build on." In view of this fact would it not seem both kind and wise to withhold fear and give hope every chance, even up to the last moment and against the physician's own belief regarding the case?

Prior to the discovery of Christian Science there was no one to challenge such proceedings, but now, with thousands of well-authenticated cases of healing by Science after the doctors have said there was "no hope," how can the physician excuse himself who tells a patient that he must die, and withholds the helpful thought that although there is no hope in medicine there may be a chance in Christian Science. He may not believe in Christian Science for himself, or may not care to endorse or recommend it, but in view of the unnumbered cases of healing, respecting which every physician knows more or less, it would seem to be his plain duty to give his patient this one chance of life.

In the case of the young man to whom we have referred, Christian Science was brought to his notice and he was healed. His case is only one of thousands which can be cited at any moment to substantiate the claims of Christian Science, and every doctor should recognize that there is a higher court of justice than that of *materia medica*, and that every man should be advised to apply to this higher court before submitting to the sentence of death from a lower. The same can be fittingly said to the man who is sick unto death, and whom the doctors have given up all hope of saving, if he knows of Christian Science and yet refuses to try it even as a last resort. True, he may be said to hold his life in his own hands, but could not the suicide offer the same excuse for his deed? If God is a loving Father, there can be nothing out of keeping in turning to Him as such, and in trusting in Him alone to save us in time of trouble.

OPPORTUNITIES.

REV. JAMES J. ROME.

Jesus said to his disciples, "Ye are the light of the world," and "Ye are the salt of the earth." This is equally true of his followers to-day. Without going into detail as to the particular value and necessity of light and salt to mankind, we very readily gather that Jesus meant his followers to be the source of salvation to the world. This should be our great desire, and for every opportunity afforded us to accomplish this end we should feel extremely thankful. For this reason we should regard with the highest appreciation and gratitude the life and labors of the Discoverer and Founder of Christian Science. The foresight and wisdom she has displayed prove that it must have been more than a mere human guidance on which she depended. Through her discernment of the greatest needs of humanity and the best methods and means of meeting those needs, Christian Scientists have had vast opportunities presented to them whereby they may accomplish grand achievements for the benefit of mankind.

While Mrs. Eddy took upon herself the arduous task of outlining and blazing the way, she has left us the privilege of carrying forward the work and enjoying the results. No one need regret that he has not had the privilege of taking part in what has already been done, for no sooner is one undertaking accomplished than another of as great or perhaps greater importance, in which all may share, is opened up to us. Surely there are none who feel that their part in this glorious work is a burden. No one who understands the nature of the work can think for a moment that when one part is finished he will be relieved so that he may indulge in the ease of indolence. The successful student is not the one who merely works out a problem in order to get through with it, but rather is he the one who regards the solution of his present problem as a step toward a better understanding whereby he may work one which is higher, and thus continually advance to greater attainments.

In the work of Christian Science we have seen great

Digitized by Google

things accomplished, but there are yet greater ahead of us. Surely no Christian Scientist will listen to the temptation that he is burdened by the part he is taking in this work. If he entertains such a thought, then he will be burdened indeed until he rises above it. If, on the other hand, he meets such a temptation with the understanding that the service of Truth is not a burden but a privilege, and that he is fully able to accomplish his part and even rejoice therein, then he will find the Master's words true, "My yoke is easy, and my burden is light."

When the Christian Science publishing house was finished and further contributions were asked for to meet another urgent demand,—one which means so much to the world,—was it a burden? Was it a tax on the endurance of Christian Scientists? If it is a right demand, whence comes the supply to meet it? Is the source limited? We know it is not. Then who would demur at being the channel through which that supply shall be manifested? Is it not, rather, a great privilege to be permitted to draw on this inexhaustible supply of infinite good and give, give to help in the work for good? Let us seize our opportunities, and so honor God and bless our fellow-men.

"UPON THIS ROCK."

W. PETCH.

IN the first book of Kings we read that "Solomon sent to Hiram, saying, Thou knowest how that David my father could not build an house unto the name of the Lord his God for the wars which were about him on every side, . . . But now the Lord my God hath given me rest on every side, so that there is neither adversary nor evil occurrent." This mention of David seems, in the light of Christian Science, to be an illustration of the individual consciousness which is still struggling with thoughts of good and of evil, taking the side of good more firmly since its partial awakening through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, but not yet fully convinced of the absolute nothingness of error, therefore still more or less at war or in conflict. But God had promised David, "Behold, a son shall be born to thee, who shall be a man of rest; . . . He shall build an house for my name."

We find that in the most recent editions of Science and Health Mrs. Eddy has omitted the word "strive" from the last of the tenets of The Mother Church (p. 497), so that it reads: "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus." Does not this indicate that many Christian Scientists are reaching, or have already reached, that altitude of spiritual understanding of the one Mind, even God, good, which is the basis of true peace and rest,—the purer concept of God, and of man as His likeness, which is the foundation for the rebuilding of the house of the Lord, the universal consciousness of Love, upon the everlasting rock, Truth?

Above all other gifts and honors Solomon had requested the one gift of the knowledge of God, which is the only true wisdom and which includes all other blessings. His prayer was granted, and through this knowledge Solomon was enabled to overcome all his enemies, even as we learn in Christian Science that the understanding and demonstration of the one Mind overmasters whatever is wrong in human consciousness. In the degree that Christian Scientists attain the conscious certainty of the omnipotence of God, good, they must of necessity rest more peacefully upon the rock of Truth, ceasing from much of their former sense of painful wrestling with error because of their knowledge of its nothingness and powerlessness, thus finding increased respite from their enemies in which to build anew their house of God, to "reconstruct timid justice and place the fact above the falsehood" (Science and Health, p. 238), to establish faith by demonstration, to work with the Father-Mother God who seeth in secret,—themselves rewarded openly with the joy of the appearing of the "Sun of righteousness," whose light forever dispels the gloomy shadows of sickness, sin, and death.

Solomon prayed, "Now therefore arise, O Lord God, into thy resting place, . . . let thy priests, O Lord God, be clothed with salvation, and let thy saints rejoice in goodness." To behold the truth of being is to become conscious of the fact that we all, "as lively stones, are built up a spiritual house" of God. Every individualization of good is inseparable from the temple or body of Christ, Truth. Mrs. Eddy defines the word "church" as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (Science and Health, p. 583), and elsewhere she tells us that we "rest in Truth" and that Truth is "triumphant" (Science and Health, pp. 387, 493); thus the church triumphant is beheld a present reality.

There is a passage of great tranquillity in Paul's second epistle to Timothy which accentuates the thought of the ultimate and universal acceptance of peace: "The servant of the Lord must not strive; but be gentle unto all men, . . . In meekness instructing those that oppose themselves; if God peradventure will give them repentance to the acknowledging of the truth." Gradually, as the world's thought becomes purer and therefore better able to discern the infinite meanings of Truth, this manifestation is acknowledged in what it does for humanity. Instead of sickness and sin, we behold health, joy, and peace, and this acknowledgment is the beholding of the star whose divine light guides the individual consciousness toward its final awakening, to the knowledge of man's own and only source, our Father-Mother God. With what glorious gentleness Jesus gave Love's message to the world: "Come unto me, all ye that labor and are heavy laden, and I will give you rest"!

We are told that when Solomon built the house of God there was no sound of hammer or of axe to be heard at work upon the stones, but that every one was fully "made ready" before its final uniting with its fellows took place. Christian Scientists know what is meant by the preparation of the individual consciousness before it is wholly prepared as the stones in God's collective temple must be. But once recognized and really commenced, this building upon the revelation of the eternal truth of God and His reflection must ever be progressive, the manifestation or offspring of the one universal good,—one absolute Principle, and one infinite idea.

Drop thy still dews of quietness,
Till all our strivings cease.
Take from our souls the strain and stress,
And let our ordered lives confess
The beauty of Thy peace!

"Matter makes itself known to us by the testimony of the senses. We see it, hear it, smell it, taste it, touch it. But observe, that, after all, this is indirect testimony. These impressions are all of them simply brain impressions. We see, hear, smell, taste, touch, in our consciousness only. We cannot assert therefore that matter exists apart from this consciousness. Science has nothing to say about the ultimate nature of matter. Science studies matter simply as a fact of human experience."

"We are not concerned in physics with what things really are, but solely with their properties and behavior. Physics neither offers nor seeks an explanation of the universe. It leaves all such problems to metaphysics."

From the text-book on physics by Henderson and Woodhull of Columbia University.

SELECTED ARTICLES.

[Frederick Dixon in the *Christian Commonwealth.*]

The material senses of the people amongst whom Jesus moved rarely rose to a clear perception of his words; and so, telling them that if they could not believe for the word's sake they must found their belief upon the works, he healed the sick and raised the dead and walked upon the waters, breaking every physical law in demonstration of the fact that those laws were not God's laws, and that a knowledge of God's law—that is, the spiritual law—would give man the dominion which the Bible declared God had given to him.

What, then, is the origin of the material law, the law by which sin entered the world, and through sin death, and everything that is unlike God? The question is simply a new demand for an explanation of the origin of evil; and the origin of evil never has been explained, and never will be, because a negation never had an origin. There is exactly one way to grasp the nothingness of evil, and that is by understanding the allness of God, just as until a boy grasps the fact that two and two make four he will never understand why two and two are not and never were five. The only occasion for the misconception that two and two are five is that they are four. Spiritual things, writes Paul, are spiritually discerned, and only in the persistent struggle to blot out from their consciousness all that is unlike God, in the effort to attain the Mind that was in Christ Jesus, can men hope to begin to gain the spiritual and scientific knowledge of God—that is, of Truth—and so discern evil as "a liar, and the father of it."

The Christian Science church is perfectly well aware that in a world in which the manifestation of evil is so prevalent, the unreality of evil will remain a pious theory unless the truth of it can be demonstrated practically. Jesus did demonstrate it practically, and the religion he preached was essentially a practical religion. He never suggested that he was gifted with a supernatural power denied to other men. On the contrary, he insisted in the most unequivocal terms that those who believed on him, understood his teaching, would be able to do his works, that is, reduce their knowledge to demonstration. Mrs. Eddy has shown the Christian Science church that it was the Mind of Christ which destroyed the appearance of evil in the first century, and which will to-day prove the unreality of it by its destruction, exactly in proportion as men let that Mind be in them which was in Christ Jesus; and so she has taught her followers that, like the early Christians, they also must prove their faith by their works.

[J. V. Dittemore in the *Marlborough* (N. Y.) *Record.*]

Unbiased investigation will prove beyond question that Christian Scientists are neither "weak-minded" nor "easily tempted by illusive bait," but that they have embraced this faith because it has been proven to them through actual experience to have met their needs, in sickness as well as in health, in a more practical and efficacious way than did the systems previously employed. Neither Mrs. Eddy nor any other Christian Scientist ever claimed to have "the power within their frail anatomy" to accomplish anything. They do affirm, however, that if the Bible is true and if history is reliable, both Christ Jesus and his followers for three hundred years were able to prove that Christianity, when correctly understood and applied, gives to mortals a full salvation from sickness as well as from sin, and that if all the "works" promised by the Master are not forthcoming to-day, it is not because God has changed His laws, but because mankind have failed to prove the dominion which faith should provide. Christian Science affirms that sin, suffering, and disease are wholly abnormal and illegitimate; that they do not exist in accordance with any law, but are the phenomena of the false beliefs of human experience, the result of failure to know God aright. It affirms that "the will of the Father" is the same now as two thousand years ago, and that the proper knowledge and application of God's laws to-day will accomplish the same results as they did during the ministry of the Master. . . .

Our critic endeavors to prove that in his healing work Jesus Christ did not depend on spiritual means, but relied on material remedies. In proof of this contention he mentions the incident of putting clay and spittle on the eyes of the blind man. If it was not the spiritual understanding of Christ which healed, but was the clay, it seems queer that our specialists of to-day do not prescribe so efficacious a remedy when a case of blindness is under their care. Surely that which was able to produce so marvelous a result in one instance is at least worthy of a trial in our own age. It is manifestly unfair to compare the failures of the present immature practice of Christian Science with the successes of any other system. The only fair method would be to compare both the failures and successes of one system with the failures and successes of the other. If this be done, Christian Science has no fear of suffering by the comparison.

Christian Science does not deny the reality of disease as an experience of mortal existence, nor does it ignore pain and suffering. It does declare, however, that all that is of God is real and permanent, but that all the discords of this world are destructible and therefore unreal in the sense of having no inherent power of continuance when the truth which is equal to their destruction is correctly understood and thereby made available. Christian Science affirms that humanity's salvation must come through the metaphysical practice described by Jesus as "knowing the truth," and that in proportion as the truth about God and His creation is understood, mortals will be made free from the bondage of every discord which hinders their realization of the kingdom of heaven—the ever-present possibility to those who earnestly strive to follow in the way pointed out by the Master.

[Charles K. Skinner in the *Allegan* (Mich.) *News.*]

If there were nothing to be considered in the treatment of children by Christian Science but the argument of those whose knowledge of the system had been learned only by hearsay or by superficial reading or theory, the talk of our critic might be taken seriously. Happily for mankind generally, and for believers in the omnipotence of God to heal not only the diseases of adults, but also of little children, there is much to be said on the other side. Because one or more children may have died under Christian Science treatment within a year, in a state where nearly one hundred thousand people are interested in this method of treatment, and where during the same time nearly nine thousand children under four years of age died under medical care, according to the mortality statement of the state board of health, the suggestion of legislation to enforce medical attendance upon the children of Christian Scientists would not only be an unreasonable exercise of the power of the majority over the minority, but an unwarranted abridgment of their constitutional rights as citizens. . . . It would be quite as unjust for any state or municipality to force Christian Science parents to administer medicine to their children, as it would be to force parents who believe in the use of medicine to depend upon Christian Science. . . .

It is not so long ago that members of the old school of medicine were heard to say of their new competitors, the homeopaths, "They are either fools or knaves." Legisla-

Digitized by Google

tion to control the so-called "quacks" was as freely talked of then as it is now against Christian Scientists, but we have lived to see the day when the homeopath is as much respected as the allopath, and both are brothers. Is it yet possible that we shall live to see the day when the omnipotence of God to heal "all our diseases" without the intervention of drugs will be generally acknowledged?

[Charles M. Howe in the *St. Joseph* (Mo.) *Gazette.*]

The healing of the most inveterate forms of disease and sin through Christian Science proves conclusively the impersonal appearing of Christ, Truth. And not only Jews, but Christians and all other nationalities are beginning to discern these facts, and the signs are rapidly following. Jesus of Nazareth once said, "Ye can discern the face of the sky; but can ye not discern the signs of the times?" The most bitter opponents of Christian Science are daily getting their eyes opened to the great fact that the kingdom of heaven is at hand—not that heaven is a location, but a condition of consciousness of Truth, whereof Jesus said, "The kingdom of God is within you." All men are endowed with this spiritual intuitive faculty, which is rapidly developing, turning mankind away from the material to the spiritual, from the mortal to the immortal, yea, from the false and unreal to the real and eternal, wherein, as St. Paul said, "we live, and move, and have our being"—in Spirit, not matter; in Truth, not error; not in hatred and prejudice and ignorance of God, but in Love, in that enlightened understanding of the sons and daughters of God which it is for each one to understand and realize.

[William J. Bonnin in the *Southport* (Lancashire, Eng.) *Visitor.*]

Christian Science affirms that the only indestructible eternal essence is good, and that to seek to impose upon mankind the necessity of believing in the actual existence of a rival and hostile power is the strangest disservice that can be attempted in the name of him who came to destroy, for humanity in distress, the devil and all his works. That the belief in sin will be punished so long as the belief lasts is the teaching of Christian Science; so long, that is to say, as men invest evil with a supposititious attractive force (and its only power is that bestowed upon it by its victims), so long must they take the consequences, so long will they sin, so long will they sicken and die. Not many years ago Christian Scientists were to be counted in hundreds; to-day a vast multitude, to be counted in hundreds of thousands, proclaim that they have ceased to believe the liar, as our Master stigmatized it, and in consequence have escaped from its tyranny. When it is borne in mind that this host of people is largely composed of those deemed in their sickness or their sin to be beyond human help, and when the astonishing transformation in their mode of life is marked, their proclamation rings convincingly in our ears as the fulfilment of the promise, "Ye shall know the truth, and the truth shall make you free."

[Clarence B. Hadden in the *Republican-Gazette*, Lima, O.]

As the statements of Christian teaching are understood, it will be acknowledged by the honest and earnest follower of Christ that the theology and philosophy of Christian Science is as perfect in its simplicity as the Science of Christianity is exact and invariable in its Principle and rules.

Christian Science invites the sincere investigation of every seeker after Truth, and the more such an one studies the Bible in the light of its spiritual interpretation in Christian Science, the more profound becomes his reverence for God and all the good that is unfolded in His creation. Perhaps the suggestion is not unwarranted that before criticizing a religion like Christian Science it is well that every one should not only study exhaustively its theology and philosophy, but should do as Christ Jesus taught by example and precept: "Heal the sick, cleanse the lepers, raise the dead, cast out devils;" as well as "preach the gospel." If he does this, he will find that Christian Science is performing these practical works which the Master enjoined in the true spirit of Christianity, regardless of the different human theories that are advanced in explanation thereof.

[Charles B. Jamieson in the *Berlin* (N. H.) *Reporter.*]

A clerical critic says, "If religion is capable of healing the infirmities of the body, then religion is science, in so far at least as its relation to the human organism is concerned; and more than that, it is healing and healer combined." Christian Science furnishes proof positive of this. Jesus' religion was his understanding of God, Spirit. His practice of it reformed sinners and healed the sick. His understanding of God was an exact Science of Truth, and he said: "Ye shall know the truth, and the truth shall make you free," mentally, morally, and physically. Christian Science teaches this exact knowledge of God, systematically arranged, hence it is scientific. It heals the mentally, morally, and bodily sick; assuages grief; comforts the sorrowing; is emulating the example of Jesus, and is therefore Christian, hence the name "Christian Science."

The reverend gentleman seems to have directed his criticism, not against superstitious faith in material things, not against the more modern systems of auto-suggestion, or self-mesmerism, and hypnotism, but against that pure spirituality which was taught by Christ Jesus (of whom he is a professing minister) and which is now taught in Christian Science. Thus did the rabbis (ministers) in Jesus' time.

[Thomas A. Barnes in the *Seattle* (Wash.) *Times.*]

The sense of the average man or woman is almost entirely focused on their material sense experience. It is only occasionally that some inspiration, coming usually from outside, lifts them for a brief period to the plane of spiritual consciousness which is the natural and true home of the soul. This spiritual consciousness is not merely the cause of love, joy, and peace, it actually is itself the essence and substance of all these qualities. . . . All this, of course, has been vaguely known in the past, and was beyond question the source of Christ's power to heal, because he understood the truth and its application. Almost all religious movements have contained some glimmerings of this truth; but the peculiar merit of Christian Science is that it has brought to the modern world, and has developed, a certain form of teaching which has enabled its votaries in great measure to transcend the mortal mind and to focus the consciousness on that level where fear, anxiety, and regret and all their attendant troubles have no existence. It has, in short, brought this teaching into practical application and has healed both the bodies and souls of many thousands of men and women.

The secret of Christian Science is the secret of the silent strength of the inner spiritual life. The Cause of Christ is not to be served by violent attacks upon alleged heresies of any kind whatsoever. These attacks are merely boomerangs, which ultimately return with damaging effect upon those who launch them. The true kingdom of God is not the kingdom of strife and contention, and that church which is best calculated to uplift the community is not

Digitized by Google

necessarily the one with the most splendid edifice, the largest congregation, the most eloquent preacher, or the most attractive musical service, but the one in which the true spirit of Christ most effectually manifests itself—the spirit of peace and of brotherly love and helpfulness.

[Albert E. Miller in the *Item*, Philadelphia.]

Mrs. Eddy does not claim to have originated Christian Science, but to have discovered it. The precepts of Christian Science may be discerned by any one in the life and works of Christ Jesus, and even he did not claim to have originated the truth which cures all human ills, for —speaking of his divine nature, or selfhood, which apprehended this truth—did he not say: "Before Abraham was, I am"? thereby indicating that the truth is without beginning. Mrs. Eddy does not claim to have originated that which is beyond the power of the human mind to originate.

Truth is universal—all can partake of its benefits. It may be that the world has not been ready until the present hour to grasp this fact that the truth is the one effectual remedy for suffering humanity's heavy hearts and heavy burdens. It is an indisputable fact, however, that Mrs. Eddy, the Discoverer and Founder of Christian Science, has set in motion a force which is being felt in the uttermost parts of the earth and is bringing to human discernment a realizing sense of the practical adaptability of our Saviour's teaching.

Christian Science draws the line clearly between the speculative and imaginative theories of mesmerists and the sound and practical teaching of our Master. In its practice it rises high above the plane of human impulse and partakes of the divine nature of our Saviour, who came "not to destroy, but to fulfil."

[C. R. Munro in the *Hamilton* (Ont.) *Times*.]

Those who ascribe the healing in Christian Science to the power of suggestion, understand neither Christian Science nor its method of healing. Those critics who talk so glibly of the power of suggestion as being the basis of the healing works wrought by this Science, will find that it requires vastly more than suggestion or human will-power to heal chronic organic disorders, such as cancer and tuberculosis. Yet these diseases and many others of a like serious nature have been healed many times through Christian Science during the past forty years. It was not so long ago that the opponents of Christian Science refused to believe that healing could be accomplished except by purely material means; and now, when the healing work of this Science has reached such proportions that it compels belief, critics endeavor to give the credit to anything but the right source, namely, the divine Mind, God. The fact is, people are so loth to believe that God is willing and able to heal, that they are ready to ascribe the healing power to a multitude of other agencies, rather than to render "unto God the things that are God's."

In a word, the difference between Christian Science and all other systems of mental healing is that these other systems exalt the human mind or will as the healing power, thereby dethroning God, the great Physician, while Christian Science brings the human mind or will under subjection to the divine Mind, God, which is recognized and proved in Christian Science to be the only true healing power.

[George Shaw Cook in the *Chicago Tribune*.]

Our critic is quoted as having said: "There is a striking difference between Christianity and Christian Science, so called." There is a "striking difference" between Christian Science and certain phases of so-called orthodox Christianity, but a longer and better acquaintance with Christian Science will some time show the critic that there is a striking similarity between Christian Science and primitive Christianity. Christian Scientists do not, as critics sometimes seem to think, ignore pain and suffering, and do not attempt to brush them aside with the mere declaration that they exist only in the imagination. They know that pain and suffering amount to solid conviction with the invalid. While trying to help the sufferer to understand that pain is abnormal, illegitimate, and, in the broad sense, unreal because destructible, the true Christian Scientist exercises the utmost compassion, tenderness, and patience in ministering to the sick.

[R. Stanhope Easterday in the *Indianapolis* (Ind.) *Star*.]

Christian Science is a recapitulation of the teachings of Jesus, and its line of argument and methods of treatment are identical with his. His treatment of economic and social questions was a reasonable one, and Christian Scientists to-day follow out the same rational line of procedure in handling such matters. Christian Science has to do with the Mind of Christ, or the Mind of the Father, and the successful Christian Scientist subjects his own human will to the divine and thinks and acts under the supervision of the Mind "which was also in Christ Jesus," the Mind which never errs and never wills ill to any, the Mind which knows and includes all good and blesses all alike in the working out of its divine behests. The individual thus dominated only by good and subject only to the will of the Father, is in a position to think and act intelligently, just as the mathematician or musician imbued with the basic teachings of his art fears neither error nor discord and recks not the opinions or "thoughts" of any.

In this line of metaphysical reasoning there is no mystery except the "mystery of godliness," made clear in the Scriptures. Mrs. Eddy's text-book on Christian Science, "Science and Health with Key to the Scriptures," is but a recapitulation of the teachings of Jesus, and contains a clear, concise exposition of Scriptural truths, which has enabled the many thousands who constitute the Christian Science following to grasp the plan of salvation as worked out in example by our Master, and to make practical his teachings in the healing of their diseases and sins and in solving the knotty problems that come up in the experience of all.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* is two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico is five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul streets, Boston, Mass., or through local Reading Rooms. Subscribers in Greater Boston and New England who desire carrier service, may order the *Monitor* directly through their local news-dealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE HELPING HAND NOT WITHHELD.

A WRITER in the *Evening Telegram* of Portland, Oregon, in commenting upon Christian Science asks some questions which are well worth considering and well worth answering, questions which may have presented themselves to others who are not entirely familiar with what Christian Science is doing for the world. The article referred to is so long that we cannot publish it in full, but its trend can be gathered from the following paragraphs:—

In all my looking through Christian Science periodicals, I find invariably . . . the prevailing note to be one of personal selfishness. "I was healed." "My circumstances have been much improved." "Life is so much pleasanter for me than it was," and as we know, the large majority of Christian Scientists are well-to-do people. No one can be otherwise than glad that Christian Science is lessening the sorrow and ill health in the world; no one need regret that Christian congregations are prosperous, both as organizations and individuals. That is matter for congratulation both for them and the world. But to apply faith to improve one's personal circumstances or health is not by any means to do all that Jesus did or all he told his followers on earth to do. He made it his especial and particular business "to plunge right down into the mud and mire of the world," as it then was. He was royally indifferent to wealth and all the insignia and trappings of worldly power and ease—things for which "Scientists" have a reasonably normal appetite, to say the least, while to the casual observer many of them show a positive apathy regarding the economic problems of the day.

Will not such indifference and aloofness from the terrible conditions under which little children are working; the wrong and abuses being daily perpetrated on criminals in prisons; the monstrous inequalities in material things that work such degradation and death to the souls of the very rich and such incredible suffering for the very poor, tend to weaken in the land the power of Christian Science? It is not unfriendliness—far from it—that prompts this query. It is asked because it can be answered to add further glory to Christian Science and increase the list of its notable achievements.

If there are Christian Scientists prominent in the business enterprises of the cities of the country, how are they regarded by the people who should love them and look to them for justice and fair dealing? If there are prominent business men known to be Christian Scientists, are they following in the beaten track of graft and grab, or are they more concerned about the greatest good to the greatest number, and so not acting like the average profit-crazed, dividend-hungry dollar-hunter?

While we do not admit the truth of these implied strictures upon Christian Scientists, we may be pardoned for their reproduction here in order that Christian Scientists may not only be on guard against every temptation toward selfishness, but that they may know that the world is holding them to a strict accountability for the alinement of their works with their professions.

In acknowledging this friendly warning, we need but call attention to the fact that the growth of Christian Science has been quite rapid; that it has appealed to "all sorts and conditions of men"—and of women as well—who were in need of relief from sin and sickness and poverty,—from the very conditions which our critic describes,—and it should also be noted that each one who has escaped from these conditions did so through a helping hand extended by some one who had traveled the same road before him. Those who received this help yesterday are helping others to-day, and so the good work goes on.

It would seem that this questioner has been misled by appearances into making the statement that "the large majority of Christian Scientists are well-to-do people," if she means by this that Christian Science appeals only to the rich or leisure class. She will find upon investigation that the congregations of Christian Scientists are made up of those of all classes who have suffered in "mind, body, and estate," and that many whom she rates as well-to-do are simply in comfortable circumstances by reason of their ability to work steadily instead of being incapacitated by sickness from earning a living for themselves and their families.

As to the "Christian Scientists prominent in the business enterprises of the cities of the country," this writer is in a good position to obtain information, and we think she will find them consistently Christian. If they are not, they need more understanding of Christian Science, and this they will obtain only by following more closely the teachings of their professed religion.

Our friend should not complain because those whose testimonies are published in our periodicals testify to the benefits which they themselves have received from Christian Science. The psalmist said, "Let the redeemed of the Lord say so, whom he hath redeemed from the hand of the enemy." These testimonies are printed for the benefit and encouragement of those who have not yet had personal experience of the healing power of Christian Science, and, as everybody should know, testimony of those who have a personal knowledge whereof they speak is the only kind worth while, and the only kind which will appeal to those in dire need.

ARCHIBALD MCLELLAN.

THE ONENESS OF TRUTH.

IN identifying Truth with God, Christian Science gives the supreme statement and proof of the oneness of all truth,—that in the whole realm of the divine manifestation there are no contradictions, no discordant forces or laws. It follows that in so far as God has been revealed to human consciousness, in so far men have come into a common possession, and every new revelation has been a fulfilment of all that was good and true in the prophecy and perception which came before. Spiritual advance in all times has been the dawning of God's great day, and had this but been realized by religious men, Christ Jesus would have been welcomed, and history would not tell us of the "stoning without the gates" visited upon the world's seers and prophets.

This oneness of all truth was clearly enunciated by John when he spoke of the Christ as "the true Light, which lighteth every man that cometh into the world," and Christian Science teaches that the realization of this fact is the one ground of genuine, practical brotherhood. Mrs. Eddy has expressed this in that immortal passage on p. 340 of Science and Health, beginning, "One infinite God, good, unifies men and nations;" and the breadth and embrace of her statement will not have been compassed until all struggle and disharmony shall have passed into their native nothingness, and God rule on earth as in heaven.

It must be apparent to all normal thought that the inherent nature of truth is not affected in any way by its apparent association with error in human consciousness, and it follows that if there be but one single ray of light in a given grade of belief, that ray is golden; it is of God, and its very isolation renders its recognition all the more important. Forgetting this, religious prejudice condemns undiscriminatingly and unhelpfully. Not so Christ Jesus. He saw the single spark of good cherished in the heart of her whom men had pronounced worthy of death, and with words of gentle brotherliness he fanned that spark into a flame. To his disciples he said, "Love your enemies,"—know as brothers the heathen and the hated. How? By recognizing and honoring for its unmarred and eternal value the little light they have, thus contributing of your oil for the increase of their glow.

Digitized by Google

In standing for God, Spirit, as wholly good, and in proving that the sovereignty of good is demonstrable, Christian Science has established a standard of determination between truth and error, good and evil, which is of transcendent value. More than this, it enables the faithful Christian Scientist to apply this standard effectively, to discover the vein of gold in the mountain of error, and to act accordingly. The gospel of Christ Jesus meant the passing of the great bulk of the ritualism and beliefs that were so sacred to his people, but he honored and utilized every grain of good therein. Remembering that divine Love has ever been finding entrance to human hearts, and that all truth is one, we are sure to find some common right idea in our touch with every fellow-man, whether Jew or Gentile, bond or free. His glimmer of truth may be expressed in a sense of beauty or of power, a spirit of gentleness or of patriotism,—whatever it be we may join hands right there with a brother man and lead him to think of us as a truth-seeking friend.

If the world's missionary workers had thus thought of the oneness of all truth, if they had been willing to recognize any ethical, or even poetical value in the beliefs of those to whom they have gone, it is probable that they would have found many an open door where to another attitude of approach the way has seemed hopelessly closed. Men may be driven otherwise, but they are won only as we show them that we are impelled by a sense of brotherhood, a sense that springs immediately from the realization of the oneness of all truth.

JOHN B. WILLIS.

"THY KINGDOM COME."

Do any question that the ultimate good, for which all mankind hope, will be realized? Why should any doubt? "Because it has been so long looked for but never attained," some may answer. Here, however, we must not forget that a great change has come to the world in late years, a change which is vastly greater than anything known in the past. Things are far better for mankind at large than they ever were before; hitherto unknown resources are being discovered, so that it now seems actually puerile to talk of possible want because some source of supply seems to be exhausted. No thoughtful person can deny that there is abundance for all human need, the question is only as to the "industry, intelligence, and integrity" required on every side to make the supply available for all, —in other words, the righteousness which sees the infinite provisions and demands of God's law, and which is ever ready to lay hold upon the former and to obey the latter.

In the 72d Psalm we have a wonderful word-picture of the reign of righteousness, the coming of God's kingdom, for which so many pray daily, with little hope that it will come in their time although it was two thousand years ago that Christ Jesus commanded his disciples to announce it as "at hand." The psalmist had declared that righteousness, peace, and abundance were to be the characteristics of the Christly reign, and that the ideal ruler should "save the children of the needy," and should "break in pieces the oppressor." *How* this should be done is indicated in the words, "He shall come down like rain upon the mown grass: as showers that water the earth." No aggressive material sovereignty this, but rather a spiritual power so mighty that "all kings shall fall down before him: all nations shall serve him."

Of old the Pharisees demanded of the great Teacher *when* this kingdom should come, and he answered that it "cometh not with observation," and he added, "The kingdom of God is within you." In other words, we must be conscious of the reign of Truth and Love—the reign of righteousness—within ourselves before we can see it made manifest outwardly. We should never forget that if we become conscious of the rule of divine Principle, and obedient thereto, we shall each enjoy the peace and abundance which are promised as attendant upon righteousness. Peter tells us of the scoffers who should come in the last days, saying that the material order, with all its discords,—its sin and disease,—must continue, and asking, "Where is the promise of his coming?" To this query Christian Science answers that promise and fulfilment are upon us to-day as never before in human history; men are actually seeking "the kingdom of God, and his righteousness," and are finding, as Mrs. Eddy says, that "Truth and Love reign in the real man, showing that man in God's image is unfallen and eternal" (Science and Health, p. 476).

When all men seek the spiritual as diligently and intelligently as the world's progressive men have sought their highest concept of good on the material plane, universal harmony will be established here on earth, material belief —"the oppressor"—will then be broken in pieces, and will have no power to make any sick or sinful. The windows of heaven are even now being opened, and if our allegiance to Truth is what it should be, the promise is that the blessing will be such "that there shall not be room enough to receive it."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

New York, N. Y., Jan. 25, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill,
Brookline, Mass.

Beloved Leader:—We desire to express our gratitude and thanks to you for your protecting love, as evidenced by your recent communications and your giving to the Field our letter to you.

Lovingly and loyally yours,
BOARD OF TRUSTEES,
First Church of Christ, Scientist, of New York city.
EDWIN F. HATFIELD, *Chairman.*
JOHN D. HIGGINS, *Clerk.*

Boulder, Col., Jan. 22, 1909.

Dear Mrs. Eddy:—It gives me great joy to tell you that the sense of separation is being gloriously overcome. Indeed I feel it safe to say it is overcome, and the full realization of its nothingness was brought to me by your message, sent in my husband's letter, that what we were doing was "not sacrifice, but offering." Then the burden vanished, and the joy that came to me is indescribable; I wish I could tell you how ready and happy I am to be of service to you. Each day it is a greater privilege to make this offering of love, for I have long cherished the desire to give you positive proof of my gratitude for your noble, selfless labor in behalf of suffering humanity.

Meeting this claim of separation has been the supreme test of my life, but by the grace of God and your messages of love and encouragement I have been able to stand the test, and have proved the truth of your inspired utterance in "Miscellaneous Writings," that "time and space, when encompassed by divine presence, do not separate us" (p. 110).

With continued assurance of my loving allegiance to you, beloved Leader, and to our Cause, believe me

Gratefully yours,
ELLA S. RATHVON.

New York, N. Y., Jan. 23, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The board of directors of the Christian Science Reading Rooms of New York city extend to

Digitized by Google

you their loving greetings, and desire to report a summary of the work of the Reading Rooms during the year 1908. The Reading Rooms located at 23 West 23rd street and 123 West 125th street have been visited by an increased number of inquirers and purchasers of literature. Science and Health has been loaned and renewed 1,419 times, and "Miscellaneous Writings" 195 times. The reference libraries at each Room, recording the growth of Christian Science, have been gradually enlarged and are in constant use. Copies of *The Christian Science Monitor* are received daily at the Rooms for sale and distribution.

The librarians report a deep sense of gratitude expressed by visitors for your great work in lifting humanity out of a material sense of existence to the spiritual understanding of Life as God, and they also report benefits received by visitors from the reading, at the Rooms, of the Bible, your writings, and the publications of The Christian Science Publishing Society. The cooperation of the committee on publication has been most helpful in the work of the Reading Rooms. The distribution committee reports the elimination of much of the prejudice previously existing against Christian Science. They also report the distribution of and proper classification of Christian Science literature in public institutions, such as penal institutions, industrial libraries, public libraries, steamships, industrial schools, economic clubs, colleges, hotels, actors' clubs, Y. M. C. A. rooms, lunch clubs, homes for aged, indigent, and incurable, hospitals, lighthouses, railroad cars, etc. Further extension of the work of the Reading Rooms is now under consideration by the churches cooperating in this work.

In presenting this brief report of the work the board of directors desire to express their gratitude to God for the privilege of extending the truth of Christian Science through these channels, and to express to you their loyalty and loving wishes for the blessings you have given to mankind.

Yours sincerely,

The Board of Directors of the Christian Science Reading Rooms of New York city.

H. L. GWALTER, *Chairman.*
R. E. CAREY, *Secretary.*

Ashtabula, O., Jan. 6, 1909.

Dear Mrs. Eddy:—I, like thousands of others, owe all I have—health and every condition—to Christian Science. I realize that, but for your untiring, unselfish devotion, we would still be "groping" in darkness. I wish to convey, however feebly, something of what I feel,—I desire to be known as a witness to the healing power of Christian Science, in exemplification of Jesus' words, "The truth shall make you free." For fifteen years I experimented with able medical men in Canada and England for a disease pronounced chronic. I grew gradually worse, and according to a capable English physician I could never be well. I employed nearly every known curative agent,—electricity, osteopathy, magnetic treatment, mental science, massage, —but returned to this country in despair. If any one had suggested Christian Science I should have been annoyed, the very name was offensive to me. However, peculiar circumstances made it necessary for me to go to the Reading Room in the city where I was just a year ago this month. My object was not friendly; nevertheless I was affected by the particularly peaceful conditions and lingered. I talked with a practitioner, and decided that as I had tried everything else I would add Christian Science to the long list, though not believing for a moment that I could be cured; but before twenty-four hours had elapsed I had been so greatly benefited that I wanted to know something of this Science which heals instantaneously and which I now know to be the most powerful factor in the world because its only force is divine Love.

I have had much evidence of Truth's ability to control every condition, if we understand even a fraction of the Science and being.

Yours with much love,

MRS. ANNA DAVIDSON.

Hyde Park, Mass., Jan. 19, 1909.

Beloved Leader:—Having just finished a three-years term as First Reader in this church, I feel that my work is not completed until I have expressed my gratitude to you for the great privilege and blessing this labor has been to me. Established on the sure foundation, Love, our growth has been steady, strong, and sure. Three times we have sought larger quarters; now we are looking forward to building. Our Sunday services and Wednesday meetings are not only well attended and never lacking in interest, but many cases of healing, simply from being present, are reported.

A few weeks ago a stranger to Christian Science scalded her hand, and while on her way to the drug-store was invited to our meeting. One of our members related the cure of a scald, and when the stranger within our gates looked at her hand it was perfectly healed. Again, two weeks later, a member reported that her child had been healed of croup in one treatment as the result of a thought brought out during the evening. Quite a number of our congregation, of varying ages, have laid aside their glasses as the result of the healing truth there present, and say that they see better than ever before. In every department the good work is progressing, and in this way we prove the gratitude and desire to serve you which we orally express. I can think of no grander, nobler aim than to follow the teachings of Christian Science. With an earnest wish to learn more of God, and reflect more of His love, I am

Your willing follower,

FRANK B. HOMANS.

Barre, Vt., Jan. 14, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Leader:—Four years ago the Vermont Legislature passed a medical law making it a misdemeanor, punishable by a fine or imprisonment or by both, for a person without a license from the state medical board of registration "to follow the occupation of treating disease by any system or method." At this session of the Legislature the board of medical registration asked for additional legislation which would make the law even more stringent. Their bill passed the Senate, and the Christian Scientists asked to have a hearing, Jan. 5, before the House committee on public health, composed of seven members, five of whom were M.D.'s. At this hearing the Christian Scientists asked to have the bill amended by inserting, at the proper place, "but shall not apply to persons who merely practise the religious tenets of their church without pretending a knowledge of medicine or surgery." The bill, as amended, was reported favorably by the committee, passed by the House, concurred in by the Senate, and signed by the governor this afternoon. Thus the laws of Vermont and all of the other New England states are favorable to the practice of Christian Science.

In behalf of the Christian Scientists of Vermont I wish to bear grateful testimony to the fact that the truth you have proclaimed to the world is leavening thought and bringing out better conditions of human consciousness.

Yours sincerely,

F. A. WALKER.

THE LECTURES.

BUFFALO, N. Y.

Teck Theater was filled to its utmost capacity, including the uppermost gallery, yesterday afternoon [Dec. 13], to listen to a lecture on Christian Science by Miss Mary Brookins of Minneapolis. Her presentation of the subject was not in the least perfunctory, but partook of a positive and genuine conviction, coupled with a kindly and gentle persuasiveness that not only kindled in the thought of her listeners an absorbing interest but a desire to know more of a philosophy which is presenting such strong claims for recognition throughout the civilized world. Miss Brookins was introduced by Charles Holcomb of First Church of Christ, Scientist, in Buffalo.—*The Buffalo Commercial.*

PORTLAND, ME.

Hon. Clarence A. Buskirk of St. Louis addressed a large audience at the Jefferson Theater last evening [Dec. 6]. In introducing the lecturer, Frank C. Barrett, the First Reader of the local church, said:—

Christian Science is more widely and favorably known to-day than ever before, principally because of the fact that through its ministrations hundreds of thousands have been healed of all manner of sickness and sin; and each attempt to criticize our Leader, Mrs. Eddy, has only served to reveal to the world her true character and purpose.

Portland Express.

TULSA, OKLA.

A crowded house at the Grand yesterday [Dec. 6] listened to an able address on Christian Science by Bliss Knapp of Boston. The lecturer was introduced by Attorney H. W. Randolph, who said in part,—

By reason of my ignorance of Christian Science I am unable to realize what it is, but it is something alive and growing—a vital influence in the lives of thousands of good men and women. "He that runs may read." Christian Scientists seem to be happy and contented, without ceasing to strive for better things. The thought that good destroys evil,—that God is good and that God is All-in-all,—is a beautiful thought to have ever present.

The outward influence of Christian Science on the individual may be one of its less important features, but it is a feature which must be apparent to any one who will look for it. And it is not more in the healing of physical sickness than in the general change in conduct and character that this influence appears. I had a cousin who was about my own age. As a boy he was wild and reckless; was suspended from school, went to a private school for a time, and left that to go to work; lost one position after another because he would not attend to business. When he was about twenty years old he became interested in Christian Science, and since that time he has been steady, industrious, happy, and growing. He has been a success in his work and holds a position of much responsibility. He is now a Reader of the Christian Science church in a western city. Such changes as this as a result of Christian Science are common, and they alone are enough to make us want to know more.—*The Tulsa Democrat.*

SPOKANE, WASH.

In the Auditorium Theater, Sunday afternoon, Nov. 29, a lecture on Christian Science was delivered by Bicknell Young to the largest audience ever assembled for this purpose in our city. The theater was packed to the last seat in the top gallery, many were standing, and a large number could not find even standing-room. The speaker was introduced by Mrs. Mabel C. Lucas, First Reader of First Church of Christ, Scientist, of Spokane, who said,—

One cannot give a truly contented man anything. Satisfied with his own intellectual attainments, he recognizes no necessity for instruction. Neither sorrowing nor in affliction, he requires not a Comforter. He is not sick, therefore has no need of healing. He may even be asleep in sin, knowing not his need of God and desiring only to be left undisturbed in his false security. But there are others, thousands upon thousands of suffering, sorrowing, despairing men and women, the burden of whose daily existence is almost greater than they can bear. Hungry, they are crying vainly for bread; sick, they are weary with a ceaseless search for health; sorrowing and broken-hearted, yet can find no Comforter. We have gathered here to-day to hear what Christian Science has to offer such as these. As one of them, erstwhile far within the valley of the shadow of death, its sweet message of "Immanuel," or "God with us," came to me some ten years ago and healed me of diseases which are universally considered incurable. Since then, Christian Science, revealing the ever-present Christ, has been guide, physician, comforter; and day by day, as I have grown to depend upon and understand its teachings better, it has made God's tender love more real, more practical to me. This is its message for you to-day. It is brought by one whose experience and practical demonstration of its truths enable him to speak with the authority of personal investigation and proof.—*The Orator-Outburst.*

LOS ANGELES, CAL.

Frank H. Leonard lectured for Second Church last Sunday, Nov. 29, at Shrine Auditorium. Over five thousand people attended, and the lecture has created a great deal of favorable comment. The lecturer was introduced by A. F. M. Strong, who said in part,—

Pilate's question, "What is truth?" has come down the centuries, and is as vital a question to-day as it was when first uttered. No doubt a large number in this audience are here because they are asking the same question. It makes no difference to truth what you and I believe, but it makes a great difference to you and me if what we believe is not true. Let me give you an illustration of the power of a belief. I have a friend whose friendship has become a part of my being. Some supposed friend says to me, "He is not a friend, he has said this about you, something no one could say of a friend." Now this is a lie, and has no power; but if I believe it, the belief seems to have great power. It destroys the friendship, the loss brings grief to me, and this mental state undermines my health and some disease develops in my body,—all caused by a belief.

Now is it not probable that a belief about God which is not true will bring a like result? Through the love and devotion of a good woman, Mrs. Eddy, a statement of truth called Christian Science has been given to the world. It claims to destroy sin and heal disease, and some ask, Is it true? If I were to ask that those in this audience who have been healed by Christian Science arise, no doubt at least five hundred persons would so testify. I cannot do this, but I can say that four years ago I began the study of Christian Science because my wife was healed by it of diseases called by physicians incurable. With the help of practitioners and the study of the text-book, Science and Health, I have lost from my consciousness much fear and distrust, and there has come in courage and love, and my diseases have been healed.—*Correspondence.*

TESTIMONIES OF HEALING.

Mrs. Eddy says, "Christianity is again demonstrating the Life that is Truth, and the Truth that is Life" (Science and Health, p. 97). Every day has for me some proof of the correctness of the above statement, and I joyfully bear testimony to the healing and saving power of Christian Science. Through the study of Science and Health and the loving help of loyal Christian Scientists I have been lifted out of a religion of faith without works to a gospel of works by faith, and as a result of this mental journey of a few years I have been greatly strengthened, physically, mentally, and spiritually. A chronic rheumatic trouble of many years' standing was healed through reading Science and Health.

A recent experience of healing in our family proved to us the value of the *Sentinel,* and the need of the full armor of Truth in demonstrating God's allness. I received a telephone message one morning from my wife, that our baby girl had run upon a hot register in her bare feet, burning them terribly. I seemed unable at once to "hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261), until the experience of a father, as given in the *Christian Science Sentinel,* came to my thought. His child was threatened with a contagious disease, and by knowing the truth,—that "no sin having been committed, no suffering was possible, for such would be contrary to God's law,"—this had restored health and harmony. I at once took our little girl mentally to the arms of divine Love, feeling safe and secure in the thought that Truth and Love were sufficient for her. Anchored in thought to the idea of omnipotent good, I denied sin and held to God's allness, adhering strictly to the rule, "Thou shalt have no other gods before me," knowing that this innocent child should not suffer pain, as it would be contrary to God's law—God being Love —and that in Love there is no pain. I kept right along in business while working mentally, and upon arriving home in the evening I was told that our baby had not suffered any and had taken her morning nap as usual. During the progress of that healing, which in a few weeks was complete, the child suffered no pain or discomfort. Her usual round of play and sleep was not interfered with, except that she played sitting down instead of running about.

Our entire family strive daily to live the truth as taught in Science and Health and the Lesson-Sermons. The church services and Sunday School were a great help in maintaining mental order during this experience of healing. To God, and to God's messenger, Mrs. Eddy, we are sincerely grateful for the peace and happiness which Christian Science has brought to our home.

C. J. BROBERG, Peoria, Ill.

It is with a feeling of gratitude and love to God that I give my testimony, trusting it may help to bring health and happiness to some one who is in need of this wonderful truth which makes us free. I had heard of Christian Science many times, as a brother had been interested in it for several years, also some dear friends. They had all spoken to me of Science, but I had so many ailments, according to the decisions of *materia medica,* that I thought it could not reach my case. I had never been strong since childhood, and was always under the doctor's care, and at this time I had been quite ill for seven or eight months, helpless most of the time, although I had kind physicians, who had been faithful.

I had prayed earnestly and faithfully for the dear Father to show me if it was right for me to accept Christian Science, and I felt I was willing to do so. I had several copies of the *Sentinel* and *Journal* which friends had sent me, and read these, also a copy of Science and Health which my dear brother had given my mother two or three years before. I had read it then, but never seemed to grasp the full meaning, although I could see many beautiful things in its teachings. Then had come an attack of throat trouble, when antitoxine was administered, and it seemed as if I could not recover. I was a nervous wreck, also had heart and stomach trouble, besides an abdominal trouble, for which an operation had been suggested as the only hope of permanent relief. I was taking various kinds of medicine for the many different diseases, also massage, yet I was confined to my room all this time, was able to go downstairs only a few times with my husband's help. After being in this condition for seven or eight months, I finally decided to try Christian Science. I looked in the *Journal,* praying that God would lead me to choose the right practitioner. I finally selected one, and wrote her, asking her to come and have a talk with me. She did so, and I felt better. I thought the matter over, and decided to give up my medicines and put myself in God's care. My first treatment was on Feb. 26, 1907, and the next day I was downstairs for lunch. I was down to dinner when my husband came home that evening, and I thank God that I have been able to do this ever since. That date will always be memorable to me, we were such a happy family. My husband could hardly believe his eyes, and the little girl said, "I love to set the table tonight."

Only those who have experienced such a blessing can realize the full meaning of all this. I cannot find words to express my gratitude for these blessings and many others; and my prayer is that I may be able to live and reflect this blessed truth and be able to help others. I am indeed grateful to God for having had this truth revealed to me.—MRS. VALERIA MARDEN CONYNE, Austin, Ill.

With the wish to show my gratitude for the benefits I have received, I gladly give my experience to others. Just one year ago, through the solicitation of a kind friend, I sought the help of a Christian Science practitioner for relief from severe nervous trouble. To my joy and great surprise I was healed in one treatment, and have never experienced that condition since. For a short time I lived as one still in a dream, but slowly the realization came that I was every whit whole, and that my life before me was all sunshine, instead of the dark cloud that had seemed to be hanging over me and becoming darker all the while. Something seemed to tell me of a new life, and the response was an inward shout for joy.

Such was my release from bondage of over two years' standing. Not only a transformation of the body, but a new understanding of what the real Life is, comes from even a little knowledge of Christian Science; and I am even more thankful for this understanding, as it brings a joy and peace of mind that drives all care and trouble away. My aim now is to progress, and help others to gain what I have gained. We cannot be thankful enough to God for this wonderful truth, also to its Discoverer, Mrs. Eddy.

MRS. E. K. SPERRY, Port Huron, Mich.

It is with sincere gratitude for the many blessings Christian Science has brought me that I give this testimony. About two years ago I was suffering with what was pronounced a tuberculous condition of the throat. I was under the care of a physician, making three and four calls a week at his office for treatment; but I received no relief whatever, the rather I grew steadily worse. Having seen many proofs of God's power to heal, through Christian

Digitized by Google

Science, in my own home, I desired to give it a trial. After disposing of all the material remedies which I had about the house, I called for a practitioner, who came to my home. She explained this truth to me, and although I could not see it very plainly at first, by constant study and frequent visits with my practitioner the light was revealed, and it grew brighter day by day.

My healing was slow but permanent. At times I would get very much discouraged, but it was then that I would study all the harder. I am now in perfect health, and I thank God for this healing, also for the spiritual knowledge I have gained since I began the study of the Bible and of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

B. F. HONNELL, Austin, Minn.

It was not for physical healing, though I was sadly in need of it, that I commenced the study of Christian Science, but merely out of curiosity to learn, if I could, how my husband's healing had been accomplished. Greatly to my surprise, after about three months' reading of Science and Health, one chronic ailment, severe headaches, and several minor ailments, left me entirely, never to return. I had known of Christian Science for some years, and know now that I had been benefited by my mother's changed thought. When she found the truth, she was anxious for me to have the comfort of it, and so I read Science and Health, but I read it hurriedly and uncomprehendingly, for I was then too densely material in thought and desire to understand anything so lofty and spiritual as is our wondrous text-book.

The saying that "man's extremity is God's opportunity" was true in my case, for after groping in spiritual darkness and becoming utterly tired of everything in life, embittered by the passing away of our only child, holding rebellious thoughts toward God, sick in every sense, and on the verge of "ending it all" (as I then believed death would do), I turned with my husband, who had been healed in ten days of asthmatic trouble, to the study of Christian Science. In my reading I was strongly impressed by the sentence, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), and suddenly the understanding of God as Love burst on my thought. I cried for days, to think of all my wasted years, given over to worldly pleasures; then I turned in gratitude to God for His goodness in giving to this age one dear woman, pure and unselfish enough to bear such a message to sin-sick, tired humanity. Before knowing the truth as taught in Christian Science, I was considered very nervous and extremely sensitive, but Christian Science has taught me that supersensitiveness is selfishness, pure and simple, and my daily desire is to be as a little child in thought, open to Truth, and "sensitive" only to good. I have been almost entirely relieved of nervousness, and some severe attacks of sickness have been met and overcome in truth.

A little one has come to us since we have been studying Christian Science. It was an almost painless birth, and I had a very rapid recovery,—a very different case to that with my first child, born under *materia medica*, and from the effects of which I passed several miserable years. The most severe case of illness I ever had, a distressing throat disorder, was met in Christian Science without one application or a drop of medicine, our entire reliance being in God, through the help of our dear teacher and faithful friend. Every condition was met perfectly, though not at once; but I never wavered, for my trust was in God, good, and Truth won over a very stubborn case of a dreaded disorder. I feel confident that but for Christian Science my earthly life would have been closed some time ago. As a result of this illness my eyes gave me great trouble for several weeks, but through clinging to the spiritual interpretation of "eyes" (Science and Health, p. 586), the case was met, and now my eyesight is better than before. I also became almost helpless for a time, but the truth of being was manifested in a perfect restoration to physical health, which I realize must be the case when the mental state is in harmony with God.

The *Sentinel* and *Journal* are constant sources of information and spiritual supply, and mean much more to us all than we realize at present. In looking back it seems to me that the only years of my life worth living are the few I have lived since knowing the truth. I feel deeply grateful to God for all these blessings, and wish to express my loyal love to Mrs. Eddy. My desire is to be worthy of the name Christian Scientist.

MRS. PEARL M. HOLMES, Butte, Mont.

I am indeed grateful to God, and to Mrs. Eddy, for what Christian Science has done for me. I have had many wonderful proofs of healing. Two years ago I had a severe attack of nervous trouble, when I was so ill that I could not be left alone. A Christian Science practitioner came to see me every day for one week, and at the end of that time I was well enough to go to her office for treatment. I was entirely healed in two more treatments. I am not only grateful for this physical healing, but much more so for the spiritual uplifting. Christian Science has made me better in every way, and healed me of many fears. It has given me peace and joy, and has made me feel a greater love for others. It has also been a wonderful protection to me, and through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, I am gaining a higher understanding of God each day. Words cannot express my gratitude for this beautiful truth.

THEODOSIA SWAIN, Kansas City, Mo.

Almost eight years have passed since I first heard of Christian Science. At that time I came to know a family of Scientists, and from the friends who were antagonistic to their belief, and from reading literature denouncing it, I gained what I thought to be a true description of Christian Science. Shortly afterward I moved from this section of the state, and heard no mention of the subject until about two and a half years ago, when it was again brought to my notice, and I was given access to Science and Health and many of the other publications. As I had always enjoyed pretty good health, I had no need of any physical help, but I can now see how greatly I was in need of spiritual healing. While I had been a member of an orthodox church for almost ten years, and had always been actively engaged in some department of church work, I was still in a state of doubt and discontent. I doubted if I really knew God, and I certainly did not, for I had no proofs. I had read the Bible and prayed to my far-away God daily, not so much for the benefits to be received, but because I felt it a duty. In this mental condition, although greatly prejudiced, I began to read a few of the truths in Science and Health from time to time. After reading but very little, I saw clearly, although not ready to admit it, that I had found the truth. For this reason I put the book down many times, declaring that I would never look inside its covers again, for fear that I would find something which would cause me to give up my church and the work in which I was interested. I continued to read, however, and as Truth kept leading me from paths of darkness into light, I saw that I had nothing but discord to give up, and everything to gain.

Since gaining this new concept of God and a better understanding of the Bible, I have been healed of bowel

Digitized by Google

trouble and various minor ailments. A sense of selfishness and stubbornness has also been overcome, at least to some extent. Business problems, which heretofore would have caused me a great deal of worry, have been solved many times with this better knowledge of Principle. At one time, when everything seemed dark before me, I decided to leave the entire matter with Him who doeth all things well, and through this trust in the omnipotence of Truth and right, the clouds have been slowly but surely dispersed, proving to me that I do not have to depend upon man for anything. My desire is to be ever willing to be guided by Truth, and no matter where it leads me, I know that I cannot go wrong. For all these blessings, and for the peace of mind "which passeth all understanding," I am truly grateful, and want my life and deeds to be the test of my sincerity and gratitude.

ERWIN FLOYD SWANK, Dayton, O.

It is with a heart full of gratitude for what Christian Science has done and is doing for me, that I give this testimony. I first became interested in Science six years ago, and the benefits I have received since then are many, both physical and spiritual. For some years I had severe trouble with my eyes and head, had worn glasses constantly for over five years, and also suffered from bowel trouble. I was getting very much discouraged over it when I heard of Christian Science, and decided to give it a test to see what it would do for me.

I put off my glasses after the first treatment, and have never had them on since. After one week's treatment the other ailment disappeared, and there have been no indications of it since. But greater than the physical healing is the spiritual uplifting, which enables me to know God aright. I am deeply grateful to God, and to Mrs. Eddy, for all these blessings.

MRS. DORA SMITH, San Diego, Cal.

My first knowledge of Christian Science came to me through taking a friend who was in distress to a practitioner for treatment. His trouble, which was very serious and of years' standing, was cured in one treatment. He had asked me to take him to the practitioner, and I, with a good deal of curiosity as to what Christian Science is, was willing to do so. Some time after this an eruption appeared on my right leg. When the doctor had done for me all that he seemed able to do, he said I would have to lose the limb. After he left me I began to think of what I had seen of Christian Science, and decided that if it could cure my friend it could surely help me. I had a high fever, but with great effort I got downstairs, and though on the way to the practitioner's home it seemed to me that I could not go on, I finally reached the house and was given treatment. I was so relieved by this treatment that I was able the next night to go to a social gathering, with only slight inconvenience. In a few days, still taking treatment, I was entirely cured. This was in October, 1906.

I would like to tell also of the healing of my little grandson, a baby one year old. His father, whose home was in the country, telephoned me that the child was not expected to live, being in the last stages of acute lung trouble. Two doctors had pronounced the case hopeless. I went out at once to the home, where I found the house filled with sympathizing friends, and all expecting the child to die at any moment. Relatives at a distance had been sent for, and the day set for the funeral. I tried to encourage them, but the mother insisted that my son and I should bring the doctor out once more. When we found the doctor he said it would be of no use for him to come, as he could do nothing, so we started back without him. On the way I began to tell my son all I could of Christian Science and the cures of which I had known, and said that if he wished me to I could stop at some house and telephone to a practitioner for help. He consented, and I did so. The practitioner said she would begin working for the child at once, and that we would find him better on reaching home. We had just driven into the yard at my son's home when we were told that the little one was better. I took care of the child that night, while the others slept. He rested well, and in a few days was as well as ever.

I feel that I have great cause to be thankful for Christian Science, and I am very grateful to its Discoverer, Mrs. Eddy. I am always glad to tell others of God's healing power, which cures both sin and disease, and I have been able to help others with the knowledge that I have gained in Christian Science.

LEWIS C. HENDERSON, Arkansas City, Kan.

About ten years ago I became fully convinced of the efficacy of Christian Science healing in the case of other ailments than "hysteria and imaginary diseases." While residing in Portland, Ore., I saw the notice of a Christian Science meeting to be held at a private residence. At the time I was suffering from a very painful attack of bladder trouble, and although I had had no experience with this method of healing, it did not "seem a thing incredible" that the power had been conferred on those accounted worthy, according to Christ's promise. With the utmost faith I applied for healing, which resulted in a gradual improvement with each treatment. It required only six to effect a complete and permanent cure, not only of the acute ailment, but also of a chronic bowel trouble of fifteen years' standing, although I had been assured by an eminent physician that I need not expect relief except I submitted to an operation. Being cognizant of the fact that an operation of this kind was not likely to give beneficial results, it did not appeal to my judgment.

I will add that although I have arrived at the age of eighty, when it is customary to say that an ailment, whatever it may be, is incurable on account of the advanced age, Christian Science has repeatedly given me prompt relief from attacks of disease which I have had during the past ten years. It is not unreasonable to say that Mrs. Eddy is the most wonderful woman of this or any age, and that she has conferred the greatest benefits upon mankind.

D. PUTNAM, Lewiston, Idaho.

Less than two years ago I had a severe attack of fever, all the dreaded symptoms appearing, but I was healed through Christian Science in one treatment. After about three months the symptoms reappeared, but in two treatments this was entirely met. I am very grateful for this healing, and for the many other benefits that have followed through Christian Science.

CORAL A. EMERSON, Denver, Col.

God has done great things for me and mine through Christian Science, whereof I am glad, and I want to add my testimony to the many thousands that are rising daily from grateful hearts. I had always suffered with my head and stomach, although I was under medical treatment constantly, but received no permanent help from any of it. About two years ago my troubles became more aggravated. I was reduced to a mere skeleton, could eat nothing but the simplest food, and often not that. I was having very alarming attacks and suffered untold agony.

A friend not in Christian Science suggested that I ask help from a practitioner whom she knew. I did so, and

Digitized by Google

in one treatment the pain was relieved. Only once since then did it return, but it was quickly met. I continued to take treatment for several weeks, as my whole system seemed to be out of order, and my many ailments vanished. Since then my husband, two sisters, my niece, and my brother's wife have all come into Science, and are rejoicing in the understanding of ever-present Love. Various difficulties have been overcome for each and all of us, and we have found that "God is a very present help in trouble."

I am most thankful to God for enabling our Leader to make plain to us the truth, as taught by Christ Jesus the Wayshower, and am surely grateful to her for the love and self-sacrifice she has shown in doing this work. My heart is full of gratitude for this healing truth, and "forgetting those things which are behind," I press forward, like Paul, "toward the mark for the prize of the high calling of God in Christ Jesus."

KATE P. COLLIER, Los Angeles, Cal.

For two years I was a constant sufferer from severe rheumatic trouble, and tried every means for getting relief, going to different springs as a last resort. At Paso Robles, Cal., the best physician pronounced my case incurable. I was, however, healed by Christian Science treatment in a few weeks. I am grateful for my physical healing, but even more grateful for the peace and contentment that have come with it than for any blessing the world could give.—N. JOHN RONBERG, Marshfield, Ore.

I wish to express my gratitude for what Christian Science has done for me. I had suffered for two years from a serious kidney trouble, and was under the doctor's care most of the time. I was compelled to wear a rubber bandage, which caused me much discomfort and did not improve the condition, and this, with great fear of an operation, led me to try Christian Science. I was healed in a very short time; other ailments also disappearing, and much fear and unhappiness being eliminated from my consciousness. Many other demonstrations have also been made for me, and I have learned to know that God is an ever-present help. My heart overflows with love and gratitude to God, to Mrs. Eddy, and to all who have encouraged me to strive for more understanding of the truth which makes us free.

ESTELLE HODGDON, New York, N. Y.

The apostle Paul wrote to the Galatians, "Be not deceived; God is not mocked: for whatsoever a man soweth, that shall he also reap." This verse had often come to me in my life, but it did not mean much until about three years ago, when I had to turn to Christian Science for help. This I did just to please some of my friends, whom I afterward found to be friends in every sense of the word, for they knew the Love that would not let me go my way. Like some others, I wanted to condemn Christian Science without a fair trial. It was only after I had suffered for years, and had been to the best physicians without any permanent relief, that I gave up and asked for help through this truth. With two treatments I was healed of stomach and bowel trouble of years' standing. It was then that for the first time in my life I knew I was near the God who heals. With that evidence I went to work to read Science and Health, knowing that I would be healed of a dreaded rheumatic trouble, although, with help at times from a practitioner, I was eighteen months in overcoming that trouble. But this slow healing brought with it an understanding for which I have not sufficient command of language fittingly to express my gratitude to Mrs. Eddy. Through these months of study I learned that God is an ever-present help; that His work is and ever has been done, and that I was the one who had to get right and to know man's real relation to Him.

These are a few of the many blessings which have come to my family and myself. We are trying each day to live such lives as will prove our gratitude to God for these blessings, and our appreciation of our much loved Leader, Mrs. Eddy, for showing us the way to the God who is Life, Truth, and Love.—WILLIAM O. MOORE, Indianapolis, Ind.

In my case there have been many proofs of the power of Christian Science over what might be called lesser ills, but which still prove the power of Principle understood. One experience, of several years ago, was the healing of a very bad bite from a dog. As a good deal of fear was manifested, I thought it best to have the aid of a Christian Science practitioner. Treatment was given, and the following day I was able to use the hand with but slight inconvenience, as the pain was almost immediately destroyed. In four days the hand was perfectly healed. Under *materia medica* this would have been considered quite a serious case, and the treatment itself would have caused considerable suffering.

Christian Science proved a great help to me in my course in dentistry. It was especially helpful in destroying the fear of examinations, thereby enabling me to write a much better paper than I could otherwise have done. To know God as all-intelligence means much, and enables us to accomplish what we could not without this truth. In my dental practice I have seen some very beautiful demonstrations over fear, and in many cases have been able to do work, usually considered very painful, in such a manner as to cause little or no suffering.

For these, and for the many other blessings which I have received, I wish to express my deep gratitude to God, also to Mrs. Eddy, for the help which Christian Science has been to me.

JULIUS E. HERONEMUS, D.D.S., Baltimore, Md.

I wish to express my sincere gratitude for all the blessings that have come to me through Christian Science. For forty-two years I suffered from varicose veins, and at times could not walk, although I wore an elastic stocking for years. I also had an eruption for twenty-two years, for which I used all kinds of lotions and medicines, but with no relief. The disease spread and got worse: then, while I was in great trouble and grief, a bad case of kidney disease set in. I was treated by a specialist, but only grew worse, till finally the doctor told my husband that he could do no more for me, and I could not live. It was then, through the advice of an old friend who was a Christian Scientist, that I decided to try Christian Science as a last resort and to satisfy my husband. I had no faith in it, but I consented to see a practitioner and began treatment. The kidney disease yielded in a few weeks, and the eruption and varicose veins also disappeared.

I now am able to do my own work, and am in good health after suffering so many years. I am very grateful for the healing I have received. Christian Science has helped me mentally as well as physically, and I am thankful to God, and to our dear Leader, for all these blessings.

MRS. C. BARNETT, Santa Monica, Cal.

Who puts back into place a fallen bar,
Or flings a rock out of a traveled road.
His feet are moving toward the central star
His name is whispered soft in God's abode.

EDWIN MARKHAM.

FROM OUR EXCHANGES.

[Rev. Otto S. Rappe in the *Universalist Leader.*]

In the nature of things it must be true that in the end every knee shall bow in acknowledgment of the supremacy of the good, and every tongue confess the beauty of holiness; and yet meanwhile we may try every path of unrighteousness and drink of every fountain of unholiness, but infallibly to find that the paths of unrighteousness are beset with increasing difficulties and pain. We are doomed to be saved. However wilful our wanderings, we must in the end reappear at our Father's gate, though in the case of many of us that return be as piteous as the return of the prodigal.

[Rev. Charles F. Aked as quoted in the *Universalist Leader.*]

The doctrine of a personal devil is preached. I know, but sensible and scholarly persons reject it absolutely. It is denied, moreover, on every page of the New Testament. There will be suffering for sin, of course, but the thought of everlasting torture is simply horrible. I do not know what is to happen when we die, but I am satisfied to believe we shall live on as we have lived here, made better by experience and the chastening we have received on earth. I was born into this life, and I shall die into another. And God, it is clear to me, will give sinners a chance.

[*Christian Register.*]

The old beliefs have passed away, or are passing, through a natural revulsion that has made the recoil extreme, and has discredited religion in some minds. Hence the withdrawal of spiritual experience, that once was worn upon the sleeve, to the private heart and conscience. It is now tongue-tied because the sincere and earnest soul will not endure the exposure of its deepest emotions. Like love, they cannot be expressed in words. It is part of the modern Renaissance that is freeing itself from hypocrisy and cant and reverting to a purer spiritual type.

[Lyman Abbott in the *Outlook.*]

Christianity, as we find it in the Four Biographies, as it was without a formulated creed or an organized system of theology, so it was without a formulated ritual or an organized church. Creed, theology, ritual, and church were all later developments. The Christianity of Jesus Christ was all summed up in love; its theology, God is love; its law, the law of love; its ritual, the spontaneous expression of love to God; its church organization, cooperation in the service of others inspired by love.

[*The Standard.*]

Every determination to reproduce his spirit and his [the Master's] service enlarges our spiritual capacity and increases our likeness to himself. Every act of helpfulness makes it easier to perform another. No one undertakes to drive out selfishness and enthrone good will without distinct growth in the nobler qualities of character.

[*The Examiner.*]

Only when the churches are retransformed beyond all recognition, and come again to be true churches of Jesus Christ, can there be any "real Christian union" between them and those who are faithful to the truth as revealed in the New Testament.

[*New York Observer.*]

Every year added to a man's life is a gift, and a gift to be accounted for by strenuous endeavor and faithful fortitude under trial. Each day is a test, and a year is an aggregate of trials.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50; six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel.*

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

A number of new Pamphlets and Reprints have recently been published by the Society and these will be found listed in the advertising columns on the opposite page.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid. In the Greater Boston postal district the MONITOR will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST

National.

After the Pennsylvania Railroad has advanced farther with its terminal station and other improvements in New York city, work will be started on a bridge from Port Moreys, a suburb of New York, to Queens County, Long Island. With the approaches it will be three miles long, and span the Hell Gate ship channel with an enormous arch one thousand feet in the clear. The train floor of the bridge, instead of resting on the crown of the arch, will be hung from it. The crown will be three hundred feet above the water and the floor one hundred and forty feet, enabling the largest steamers to pass under with ease. The bridge will have four tracks, two for passenger trains and two for freight.

Secretary Newberry's plan for the reorganization of the Navy Department which recently received the unanimous approval of a conference of men who have been prominent in naval affairs, called together at the direction of the President, contemplates the abolishment of the bureau system at the navy yards, the enlargement of the general board of the navy, and the reorganization of the board on construction, so that there may be more complete coordination in the work.

By virtue of an important decision affecting the diamond cutting and polishing industry of this country, rendered by the Department of Commerce and Labor recently, eight Belgian diamond cutters, whom the Diamond Workers' Protective Union of America succeeded in having detained at Ellis Island on the charge that they had been brought to this country in violation of the contract labor law, will be permitted to enter the United States.

Further results of the work of Dr. H. W. Wiley, chief of the Government Bureau of Chemistry, in promoting food purity are indicated by the formation of the American Association for the Promotion of Purity in Food Products. Its membership includes some of the leading food manufacturers of the country who are especially opposed to the use of chemical preservatives and colorings in food.

A bill has been introduced in Congress that will require all vessels carrying fifty passengers or more going on journeys of five hundred miles or more to be equipped with wireless apparatus, clearance to be refused vessels whose owners fail to comply with the law. Foreign vessels not equipped with wireless, the bill provides, shall be refused admission to American ports.

A bill is to be introduced in the Texas Legislature which will give the state railroad commission the same jurisdiction over telephone and telegraph lines as that body now exercises over railroads. This power includes the fixing of rates of these companies and in requiring that whatever improvements to the various systems the commission may order shall be carried out.

The Government has filed thirty-five suits against the Oregon and California Railroad Company, the Southern Pacific Company, and more than one hundred other individuals and private corporations to recover from the railroads and their grantees an aggregate of 353,288 acres of land, within the "Old Oregon and California land grant." The lands are valued at over $15,000,000.

State Forest Commissioner Whipple estimates the forest fire losses in New York state alone, during the past year, at nearly $800,000. Of 700 fires reported, 90 are attributed to hunters, and nearly 400 to railroad locomotives. A total area of 177,476 acres was burned over, of which 50,000 acres were state lands.

President-elect William H. Taft and party, including a small staff of distinguished civil engineers selected to inspect with him the Panama Canal, arrived at Colon last week on the cruiser North Carolina. The plans for the Panama Canal may yet be changed to provide for a sea-level waterway.

The passage of a public utilities bill by the Vermont Legislature at the present session has the effect of bringing all telegraph, telephone, express, and other public utility corporations under the same state regulation which has previously applied to railroads alone.

A favorable committee report on the Weeks' forest reserve bill having been secured in the House last week, the advocates of forest reserves in the White Mountains of New England and the Appalachians of the South are hopeful of the complete success of their bill.

The fifty-two savings banks, forty trust companies, and thirty-five loan and building associations now doing business in the state of Maine have total assets of $140,635,861, a gain of $4,257,548 over last year.

The entire American fleet of sixteen battleships assembled at Tetuan Bay on the north coast of Morocco, Jan. 31, to coal and provision for the homeward journey.

The bill making appropriations for the support of the Indian service, as reported to the House, carries a total of $9,913,828.

International.

One of the last acts of Governor Magoon of Cuba was to sign a decree authorizing the incoming president of Cuba to issue bonds amounting to $16,500,000, to be applied to the payment of the contracts for the waterworks construction at Cienfuegos and paving and sewering of Havana. The bonds are to run for forty years. The rate of interest is left to the discretion of President Gomez, but must not exceed five per cent.

Marquis Katsura, the premier; Count Komura, the minister of foreign affairs, and Viscount Terauchi, the minister of war, declared in the Japanese Diet last week that Japan's relations with the Powers of the world were so improved that the proposed reductions in armaments and the like were fully warranted.

Owing to the protest of the diplomatists against the taking over by China of the entire control of the telegraph office at Pekin, a proceeding which was contrary to the agreement of 1901, a foreign superintendent of telegraphs has been appointed. A reduction of twenty per cent in the rates on internal telegrams became effective on Jan. 22.

President Gomez has restored the exequaturs to the French consuls in Venezuela, and Senor Lorena, the Brazilian minister, has assumed charge of French interests. This means the restoration of diplomatic relations with France.

The French Senate has adopted a bill providing for the construction of a dry-dock and basin at Havre, capable of accommodating the largest liners. The cost of the work will approximate $20,000,000.

It is reported that an agreement has been reached between Venezuela and the Netherlands on all the principal points at issue between the two countries.

Industrial and Commercial.

The Rhode Island Coal Company was incorporated Jan. 18 under Maine laws, with a capital of $5,000,000, to operate the anthracite coal-mine on the island of Rhode Island in Narragansett Bay. The coal deposit to be worked is said to be one of the largest in the country, but owing to the lack of volatile matter in the coal, all attempts to utilize it as a commercial product have failed. It is claimed that the problem of making it commercially valuable has been solved by applying to the coal a cheap chemical solution which makes it burn with efficiency equal to, and in some respects greater than, high-grade Pennsylvania anthracite.

A syndicate of wealthy Mexicans, who own land adjacent to its proposed location, are behind a project to build a railroad down the Mexican coast from Matamoras to Tampico, a distance of about three hundred and fifty miles. It is understood that the road will ultimately form a part of the government system.

A merger of independent fertilizer interests, under the name of the Independent Fertilizer Company, capitalized at $50,000,000, has been accomplished. The company will have an annual output at the start of one million tons.

According to a report of the United States consul at Calcutta, officers of the Tata Iron and Steel Company of India state that the ore in their Ramrana manganese property has proved to be of the highest value.

General.

Seventy-five of the peaks of the Himalayas in India are over twenty-four thousand feet high. Two peaks, Mount Everest and Kinchinjunga I., are over twenty-eight thousand feet in height. Thus far eight hundred and eighty-seven mountains have been measured whose elevation is twenty thousand feet or more.

A new world's record of 138 feet for ski-jumping was made recently at the Northwestern ski tournament by Oscar Gunderson of Chippewa Falls, Wis. The previous world's ski record was 135 feet, made by Nels Gjestvang at Modum, Norway, in 1902.

There are now thirty-eight lighthouses to give warning to mariners of their approach to the New Zealand coast and to guard the entrances to its harbors. Their maintenance last year cost in all £16,007.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

GOD'S OPPORTUNITY.

SAMUEL GREENWOOD.

THE familiar saying, that "man's extremity is God's opportunity," expresses a truth which should stimulate mankind to a livelier examination of their position and their mental conditions. The divine presence is not humanly recognized or appreciated except as place is made for it, even as light cannot enter and illumine one's house unless there is an opening. As absolute Truth, God is ever present, and where God is "there is no need;" but human consciousness rests upon the belief that God is not ever present, and the truth of God's allness can permeate and destroy that belief only as it finds opportunity. As Christians, working out our salvation from a sense of evil, we may well ask ourselves what opportunity God finds in us, or how we can expect the Christ to enter and redeem our thought unless it is unreservedly opened to Truth.

Human need comprises many and varying conditions. The sick and suffering call for harmony and peace; the victims of sin cry out against the misery that results therefrom; the poor and the unfortunate suffer from lack of food and comfort. What opportunity do these give to God, from whom alone permanent help can come? How gladly do they turn from the errors that enslave, to welcome the truth that makes free? Where do we stand in this category,—we who still struggle with a sense of error's reality, and who are discouraged at times over slow progress? How much room does God find in our thoughts and affections? How large a place do material pleasure, ambition, business, etc., occupy in our consciousness? The difficulty with us may be that we are not ready to see our extremity; in other words, we are not quite through with the material world. We think it still holds pleasure for us, that material things can add to our joy, that "mortal mind" has yet some intelligence apart from God. We have not reached the point where the "prince of this world" finds nothing in us. We do not recognize that there is no help or joy or gain or good in anything but God. If these things are so, we are not giving God the opportunity to become All-in-all to us. How can we honestly ask God to do more for us than we are permitting Him? How can we expect the truth to liberate our thought, if our thought is closed against it?

The sufferer who asks help from Christian Science may think that his consent to be treated is all the opportunity God needs to heal him; or that so long as the practitioner is willing to treat him and he is willing to pay the money price, he is under no other obligation except to receive the benefit. The Christian Scientist cannot lessen God's requirements, or abrogate one point of His law, however hard he may work to effect the patient's healing. God says to mortal man, "Give me thine heart;" that is, turn away from all that is unlike God, and have no other hope or faith or trust. When one reaches his extremity he knows there is nothing for him but God, and he desires nothing else. Are we giving God such an opportunity? or do we love aught else than good? The desire for physical health does not necessarily include the desire to forsake the errors that underlie the sense of disease. While one clings to wrong thoughts, and seeks to be rid only of the sufferings that result from them, he has not reached the point where he is ready to be healed by God in God's way. Human extremity is expressed, not so much by the physical sense of need, as by the moral and spiritual sense of need. It is the point where the human reaches the willingness to give up itself and grasp the divine.

Can mortals force this condition? No; but they can hasten it by cherishing the truth as it is perceived, by encouraging to its fruition every spiritual desire, every influence for purity, every unselfish motive, and by discouraging every unspiritual thought or tendency. Mankind should not wait for punishment to become willing to forsake error. Mrs. Eddy puts it pointedly when she says, "If we desire holiness above all else, we shall sacrifice everything for it" (Science and Health, p. 11). If we do not "desire holiness above all else," God is without His opportunity in our case. If we desire aught besides holiness we are sinners in our thought, and to that extent are turning away from instead of toward God. We are far from our extremity if we are willing to sacrifice spiritual gain for the delusive attractions of materiality.

Truth cannot enter and transform thought while one adheres to and loves error. The sinner who believes in the pleasure of sin has not reached his extremity, and neither has the invalid who believes in the power of drugs and other material means to heal him. To look to matter for life, health, happiness, is to close one's mental door against God. So long as mortals believe they can live without God, so long as they believe they can be happy without goodness, God has no opportunity to help them, no matter how great may be their need. It is assuredly out of place to complain of the little good we receive, when we reflect upon the allness of God and remember that good only waits for the opportunity we ourselves give it to enter and abide in our consciousness.

Every Christian Science practitioner has probably had experience with cases where there seemed little or no response so far as physical benefit was concerned, and while each case is marked by its own peculiar conditions, so that no general diagnosis can be given, it may be that the difficulty frequently is in the absence of that mental extremity where the whole thought is willing to accept God for all that He is. Physical health is not the primary need of mortals, and its presence or absence is not sufficient evidence for correct judgment. The physically healthy are not, for that reason, necessarily more holy than the sick; and the physically diseased are not always more willing to rely upon God than are others. A sufferer may be induced to turn for help to Christian Science with no higher hope or desire than for strength to pursue ambition, business, or pleasure; but such motives would limit God's opportunity, and the patient may have to wait until the heart

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

recognizes its greater need. God is ever ready to respond to the human call, but the human is not always ready to yield to the divine, and further discipline may be requisite to effect that end.

It does not follow, however, that there is no hope in Christian Science for those who, as yet, think of little above the physical healing, for if these turn honestly to God they will be led to see their spiritual need. As more of the truth enters thought, the presence of error is made more manifest; and if there is the willingness to forsake it, God's opportunity is enlarged and progress is realized. There may be many of these stages before the desired healing is gained, but in the struggle for holiness "above all else" one may be called upon to "sacrifice" his desire to be healed first physically, while letting the spiritual come afterward as of secondary value. The first may have to become the last, in order that the last—the sense of spiritual need—may become first.

This we know, that divine Love is equal to every human demand. Our Master spoke of the Christ as standing at the door, knocking to enter, and waiting only for its opening to illumine the human heart and bring in the consciousness of the kingdom of heaven. What closes the door upon the Christ, "the spiritual idea" (Science and Health, p. 333), but the belief of life in matter, the belief in its pleasures and pains, its sorrow, sin, and suffering? But as human hopes deceive and decline, and material sense ceases to satisfy; as existence without God becomes an unthinkable thing, and its sinful pleasures end in unendurable pain, the door begins to loosen and unclose. When the truth enters the heart ever so little, the poverty and wretchedness of material existence begin to be revealed, and mortal man discerns his extremity, his nothingness without God. This becomes "God's opportunity," and human thought is redeemed and regenerated until man is recognized in the likeness of God.

CHRISTIAN SCIENCE AND THE BIBLE.

HELEN WARD BANKS.

CHRISTIAN SCIENCE changes one's views on many topics, and in no respect, perhaps, do we find a greater change than in our attitude toward the Bible. When we know even a little of Christian Science we find that it has given us not only a key to the Scriptures in Science and Health by Mrs. Eddy, but that the key has turned in the lock and the Bible is at last an open book. Technically I was familiar with the Bible long before I knew of Christian Science. Among my earliest memories are the hot summer afternoons when we listened breathlessly to the stories of our favorite Bible heroes. The reader's voice would droop and almost die away as drowsiness crept over her, but with childish eagerness we would demand the climax of Joseph, or Micah, or Daniel, or Paul. One never outgrows the influence of such early teachings; we grew up thoroughly grounded in the narratives of both the Old and New Testaments. Later, in an orthodox Sunday School, I learned many chapters by heart; and still later, as a teacher, I studied diligently the history, from Abraham, through the patriarchs, the warriors, the judges and kings, to the lives of Christ Jesus and the apostles.

As literature, therefore, the Bible was very familiar and much beloved. I was thrilled by the poetry of the Psalms and the books of the prophets; I was interested in Paul's reasoning; I had a vague comfort from some of the promises; I was touched by the life of Jesus of Nazareth into higher moral endeavor; but the deep spiritual meaning was hidden under its very familiarity, and the great truths scarcely seemed true. When I read, for instance, "For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened," I supposed it must mean something,—as it was in the Bible,—but it meant little to me. I had seemingly asked and sought and knocked—and received very little. The parable of the pearl of great price raised only doubt in my mind. Perhaps some people felt as strongly as that about their religion, but I knew in my innermost heart that other things seemed more attractive. The 40th chapter of Isaiah moved me more than any other poetry I read, but to me it was only poetry. Finally, the kingdom of heaven, which we are told to seek "first," did not seem a wholly interesting kingdom. It would satisfy very good people, doubtless, and perhaps in some far-off eternity it might satisfy me, but in the mean time there were a good many empty spots.

Into the midst of such thoughts came the illumination of Christian Science. Previous to this I had not been reading the Bible very steadily, for I was so familiar with its wording that it did not tell me anything new; but with the knowledge that God—Life, Truth, Love—is All, and that man as His image can never be for a moment separated from Him, all was new. All the well-known words—the 1st and 14th chapters of John, the 40th chapter of Isaiah, the 91st Psalm, and hundreds of other passages—were no longer merely poetry or vaguely inspiring words; they became the elucidation of a glorious, infallible Principle which makes man forever free and loving and upright and strong and joyous, with no room in his consciousness for fear or hate or bondage. For, if God is Love and man can never be separated from Love and good, he can find nothing less than the fullest satisfaction in that everlasting harmony. There is no doubt now as to the pearl of great price; one would sell every material thing he possesses to obtain it. Now, one asks and receives strength; one seeks and finds peace; one knocks and Love opens the door. We know that Isaiah was not thinking of the beauty of his words when he wrote, "They that wait upon the Lord . . . shall run, and not be weary; and they shall walk, and not faint." We know that "the meaning of that passage is not perverted by applying it literally to moments of fatigue, for the moral and physical are as one in their results" (Science and Health, p. 218). The kingdom of heaven that before seemed somewhat dull, is now irradiated with light, and we "search the scriptures" to find out all we can about this kingdom of eternal harmony, into which we take our first step with the first gleam of our new understanding about God. It is the only satisfying and possible place for God's children.

I am grateful for all my technical knowledge of the Bible, but far above this rises the spiritual knowledge. I no longer leave the Bible unread. I read it eagerly, with a light shining over the well-known pages that now reveal the Truth eternal. The poets and prophets "caught glorious glimpses of the Messiah, or Christ" (Science and Health, p. 333), and worked out their salvation as we work out ours now, gaining, little by little, that understanding of God which enabled them to write words the fuller unfoldment of which we are enabled to comprehend in the light of Christian Science.

SALVATION BY SPIRIT.

REV. W. L. SWAN.

MANY of the best men in the churches to-day are in doubt as to the value of the modern revival meeting. They admit that good is done, but the lack of permanence to much of the work, together with the reaction that so frequently follows, makes them skeptical as to whether the results warrant the money and energy expended in the modern spiritual campaign. All this leads the thoughtful to inquire if the cause of these undesirable results may not be too great dependence upon human will and personality.

Digitized by Google

Many times the so-called magnetic speaker is the most successful evangelist, measured by the number of converts, but may it not be possible that these men, perhaps quite unintentionally and unconsciously, effect their ends by the use of human will-power in some phase of its application? Do not some of the methods used lend themselves to this kind of influence? Very few people would approve such means. Certainly the ideal is for the preacher to live so in communion with God as to gain a clear spiritual vision of the truth, and then, like John the Baptist, be nothing but a voice to proclaim the message. Men will be led to see the same vision that he sees, they will have a renewed mind, the change will be regenerative, permanent, wholly good. Is it not clear that to the extent that human will enters in, the work is not of God, hence neither good nor permanent?

The failure to distinguish between the human sense and the divine Mind may confuse many honest seekers after God. The lack of soul-satisfaction and permanence may be attributed to the failure of the gospel of Jesus Christ to meet these needs, so that the gospel is put in a false light before the world, and if these things are true in relation to salvation from sin, are they not equally true in relation to salvation from sickness? The psalmist says, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." Jesus said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise and walk."

If God with us, divine Truth appearing in human consciousness, is the only means by which the sick are truly healed, is it not a serious thing to obscure this fact by seeking to blend the mortal with the spiritual, by using any manifestation of human will in the name of religion? The unfavorable results in some revival meetings from such admixture may well prove a warning to the church. Paul said, "And the very God of peace sanctify you wholly." Salvation is a unit. God is the author of a full salvation from all evil. Let dis-ease of mind and body send us to Christ, Truth, the "great Physician," the healer of all our seeming ills, for certainly "other foundation can no man lay than that is laid, which is Jesus Christ." The seeking of relief through a spiritual understanding of Truth always lifts us to a higher plane of living. The destruction of error by Truth is the process by which we may attain "unto the measure of the stature of the fulness of Christ." As Mrs. Eddy says, "Only through a radical reliance on Truth can scientific healing power be realized."

Mrs. Eddy has made the world her debtor by clearly defining the distinction between the mind of the flesh and the Mind which is Spirit, emphasizing the words of Jesus, "That which is born of the flesh is flesh, and that which is born of the Spirit is spirit;" and again, "It is the spirit that quickeneth; the flesh profiteth nothing." The history of the church shows that in all ages there has been a tendency for the sensuous to crowd out the spiritual. The fight of the true church has ever been to maintain the spiritual, and it is a great protection to know that flesh and Spirit never mingle, never cooperate, any more than light and darkness. The knowledge that the carnal, mortal mind is "enmity against God" protects us from unholy alliances.

NATURE'S PROMISE.

BLEECKER LUCE.

WHEN I was a boy, though by no means an especially good one, I seemed to drink in unconsciously the beauties of nature portrayed in the mellow sunlight, the glad promise of spring, the fragrant glories of summer, the flaming wealth of autumn; and some especially impressive scenes of nature are indelibly photographed upon the tablets of my memory. Twenty years ago, when well into the meridian of human life, I grasped, from an engulfing sea of despair, at Christian Science, and have been a seeker along that line ever since, with a much greater measure of health and marked moral regeneration as progressing consequences. For about eight years I have been trying to be a consistent Christian Scientist, deeply sensible of my obligation to Mrs. Eddy for her teaching, and earnestly striving for that humble receptivity which will enable me to realize in a fuller measure Truth's glorious promise.

In my experiences as a Christian Scientist I have often noted that the realization of harmony has been accompanied by recurring glimpses of the stored delights of nature above referred to, and the success of my realization has usually proven to be worthily measured by these angel visits from memory's heaven. I have frequently alluded to this enjoyable phenomenon, and wondered inconclusively at the implied connection. With maturer development in Christian Science, the explanation seems to come to me with, as I humbly conceive, indications of intuitional clearness. Christian Science teaches that God, good, is All; that the real man (not the mortal misconception usually taken to be man) is His idea, and that like cause, like effect,—as God is, so must the true man be. The inquiry presents itself, both generally and specifically: Where is this true man? Jesus, in the parable of the tares, speaks of the tares and the wheat growing together side by side until the harvest, the final and inevitable separation. So the true and the false concepts of man are thus, to mortal sense, mingled together; first one and then the other speaking, according to the nature of the invoking influence. Hence I, young worldling, and enslaved to materialism though I was, could not escape the blessed consequences of a certain mental alertness. A picture of external harmony would invoke the true harmonious identity from within, upon the obvious rule that like produces or is reflected in like, or according to the beautiful illustration which Mrs. Eddy gives in the spiritual interpretation of the Lord's Prayer, "Love is reflected in love" (Science and Health, p. 17).

I love to realize that man's foundations are ever in God, and that the wealth of the divine unity expressible by man, as God's chosen medium of expression, may be and continually is incited to a true manifestation, notwithstanding the seemingly dense clouds of befogging materiality. I feel impelled to add that there is much in the daily experience of men which suggests the might of Mind. Can we not see that a mighty force struggles for true expression even in the casual promptings of an untutored thought? True thought may well be likened, as we realize the tremendous nature of its power, to the thunderbolt of Jove; and thus in our homely experiences there constantly thunders within us the demand of divine necessity, "Acquaint now thyself with him [God] and be at peace."

These reflections were especially incited by a recent specific experience. I had a short time since read, in one of our periodicals, an article upon "Gratitude," the governing idea of which was that we should always begin our prayers by giving thanks. I was so impressed with the truth and value of this suggestion, that I immediately began to put it in practice by addressing my thought directly to the enfolding blessedness, with the sense if not the exact words of the Master's utterance, "Father, I thank thee that thou hast heard me." This practice seemed to bring to me a nearer, more lovable, more real sense of the divinity in whom, as St. Paul says, "we live, and move, and have our being;" and it was while thus engaged in giving thanks, which resulted in a fairly exultant sense of God's nearness and love, that I became aware of one of those familiar visions of nature's beauty.

What we love and seek in nature is the peace typified by its harmony, beauty, and repose; what I caught in the original scene was a soul-satisfying peace for which my

Digitized by Google

sense-ridden consciousness thirsted and longed, and which was recalled from memory's depths as my realization of the truth grasped a clearer sense of God's great unity of peace, as revealed in Christian Science. How joyous the thought that man belongs to God, that false conceptions must slough off "until he come whose right it is;" when man's capacity to think harmony shall be continually invoked, and we shall find a right and complete response to all true desire, a satisfying echo to every longing.

"TEACH US TO PRAY."

LAURA DOORLY.

THE beginner in Christian Science often asks, "But how am I to pray? I feel as if I could not pray!" The eleventh chapter of Luke's Gospel has helped me very much on this subject. The disciples' entreaty, "Lord, teach us to pray," receives a practical and detailed answer from Jesus, who clearly teaches them how to pray, showing that perseverance and unfaltering trust should be ours; that we should stand firm, nothing doubting, even though results may not be immediately forthcoming; and, as St. Paul says, "having done all, to stand."

Illumination came to me as I read the Master's reassuring words, "How much more shall your heavenly Father give the Holy Spirit to them that ask him." Our heavenly Father, Spirit, Mind, gives of the things of Spirit; therefore we must ever pray for the best gifts,—for that understanding which is "a well-spring of life unto him that hath it;" for the real substance, "that which is eternal and incapable of discord and decay" (Science and Health, p. 468), for the Mind "which was also in Christ Jesus;" and thus seeking "first" the kingdom of God, shall all other things be added unto us.

Our key to life eternal, the Christian Science text-book, clearly expresses on page 4 the means of gaining real substance: "What we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds."

[Written for the *Sentinel.*]

WITHIN THY HOUSE.

MARION COOK.

WITHIN thy house, O blessed pilgrim stranger,
Watch well lest error creep in unaware!
Hold dear its sanctity,
Inviolate let it be
From rude intrusion and earth's stagnant air!

Insistent voices from without are calling,
The sense-world claims admittance as its due:
Now fain would enter in
Clamors of fear and sin,
Sorrow and pain and all a heart's full rue!

The false beliefs that ages have but sanctioned,
Into the chambers of thy growing thought
Glide stealthily and still,
Nor pride nor human will
Can stay their coming nor the havoc wrought!

God's man should dwell in airs serene and quiet,
The sweet security of Love to know;
The flowers of His care
Should bud and blossom there,
And all their fragrance on His own bestow!

He builded well: guard thou thy habitation,
And glorify it for thy Lord to see!
Each secret place keep bright
In His pervading light,
And shape thy dwelling for eternity!

SELECTED ARTICLES

["A German Workman" in *Gross New York Zeitung* (translation).]

Three years ago my attention was called to Christian Science, and I began to study it. In my younger days many questions troubled me, and, desiring to find the truth, I read the works of many famous men pertaining to philosophy, medicine, religion, etc.; but my questions remained only half answered, and I was not satisfied. After I had studied Christian Science faithfully for almost three years, many things were made clear to me, and the night of ignorance was turned into day. I advise every one who is seeking God, Truth, to study this Science, and he will find peace, satisfaction, and happiness.

Christian Science contains the solution of the true socialism, the brotherhood of man. The time is not far distant when Christian Science will beneficially influence all social, economic, and political questions. Healing the sick is not the only purpose of Christian Science, but it also makes true men and women, who are at one with the source of their being, the creator of all things, and it leads them out of the labyrinth of wrong thinking into the knowledge of man's spiritual perfection.

The writings of Mrs. Eddy, the Founder of Christian Science, are to be had in English only, but there is a German periodical, *Der Herold der Christian Science*, published in Boston and to be had in the Christian Science Reading Rooms, which will help in the study of Christian Science; the German practitioners also will explain it. Christian Science makes a new and better man of the old one.

[James Phelps in the *Wisconsin State Journal*, Madison.]

Christian Science does not teach that "there are no human ills." It teaches, on the contrary, that sin, disease, and death are experiences of human, mortal existence, and while they are very real to this mistaken sense of being comprised in human consciousness, unenlightened by spiritual sense and ignorant of the truth of being as taught in Christian Science, wherein man is conceived to be the image and likeness of God, Spirit, who made everything that was made, and without whom was nothing made that was made; and who saw everything that He had made and pronounced it "very good," they are found to be nothing but illusions when this true sense of being is attained. With this true understanding of God and His creation, more or less clearly discerned, the Christian Scientist is daily demonstrating his position by the destruction of "human ills" more surely and with a greater degree of success than the advocates of any other system of therapeutics yet promulgated. . . .

There is no authority in the Scriptures for combining medicine and God for the relief of the sick and suffering. Christ Jesus was the most successful in overcoming them, and he never consulted a physician or used medicine. When his disciples asked him why they had not been able to heal a certain case, he said: "Because of your unbelief;" adding, "Howbeit this kind goeth not out but by prayer and fasting." He said to his disciples that they should do the works that he did, and even greater than he had done; he instructed them to go into all the world and preach the gospel and heal the sick, adding, "These signs shall follow them that believe: . . . they shall lay hands on the sick, and they shall recover."

[Rev. C. D. Reynolds in the *Manchester* (N. H.) *Union.*]

The standpoint of Christian Science is that there exists a sharp distinction between the life and teachings of Christ Jesus and all others, that there is a radical difference

Digitized by Google

between the Christ-method of healing sickness and sin and all other systems. We claim that the words and works of Jesus are distinctive and unique, a difference so fundamental as to require that his method shall stand by itself and not be classed with any other. To those who understand Christian Science the fact is clear and capable of scientific proof that Christ Jesus departed wholly from the doctrines and material methods of the world. He did the Father's will not by conformity with the world's theories and practices, but by introducing in opposition thereto a method wholly spiritual and pure, and which was not understood but was resisted and rejected by those who relied upon the evidences and methods of the material senses. He made good his statements: "My doctrine is not mine," "I am not of the world," "I speak to the world those things which I have heard of him." "He gave me a commandment, what I should say, and what I should speak," "I do always those things that please him," "All things whatsoever thou hast given me are of thee," "Because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you."

There is abundant evidence that Jesus distinguished sharply and absolutely between his method, as shown by his words and works, and all others. When he was accused of doing his healing works by Beelzebub, a name for the most hidden type of evil, his reply contained a sharp denial and rebuke. He saw that they were trying to fasten upon him the same evil methods which they themselves believed in, and he knew that there is a vast and impassable gulf between them, and that they must be kept separate and distinct. There are those today who are trying to reinstate healing into the church as an essential part of its program, but who seem entirely to have lost sight of, or forgotten to ask, the question, How did Jesus heal the sick? They seem to proceed upon the assumption that there is no difference at all between work as he accomplished it, and that of any other method. They assume that healing is healing, however brought about, whether by Beelzebub, by *materia medica*, by mesmerism and hypnotism, or by the Christ-method—the power of God.

Now as of old some are stumbling over the apparent good results which, it is claimed by some, may be brought about by material methods, which require no direct dependence on God, faith in Christ, or any religion whatever, but are capable of being practised by avowed unbelievers, and even atheists. If it be accepted that Jesus healed the sick by his religion, and that his followers should follow him in this respect, let the same method practised by him be reinstated. To practise the world's methods in his name is neither following him nor honoring him. Before the healing works can be intelligently and profitably engaged in, the church must decide what the Christ-method of healing is. To lack clearness on this point is to let slip the key that unlocks the Scriptures and enables us to catch their meaning. From Genesis to Revelation this distinction between the healing wrought by the Christ-method of faith in God, and the world's material ways of striving to attain good, but finding naught, runs like a golden thread, showing the difference between the wheat garnered of an absolute faith in God and the tares resulting from the erroneous method of faith reposed in matter and human will-power. Jesus said: "If I cast out devils [evil] by the Spirit of God, then the kingdom of God is come unto you."

Christian Scientists, acting upon the assured fact that the Christ-method of healing is absolutely distinctive and unique, believe that the purity of this method demands that it be kept separate, and that every attempt to unite or mix with it what is unlike it must be carefully avoided. This will explain why Christian Scientists find it advisable to employ every available means of keeping clear the line of demarcation between the Christ-method, or Christian healing, and all others. Only by so doing can confusion, doubt, and darkness be avoided. Furthermore, this is the only way we have of keeping the vision clear, and "the hope set before us," pure, uncorrupted. Because of the failure to keep it pure, healing as Jesus taught and practised it was lost to the church and its redeeming power to the world.

Christian Scientists long to see the day when this true healing shall be welcomed back in all its purity and wholeness by the church. Unless this is done implicitly, the Christian Science movement has a distinct mission to fulfil. Christian Scientists cannot accept a garbled and disfigured material counterfeit as a step toward the restoration of the "seamless robe." The introduction and indorsement by the church of suggestion and hypnotism and *materia medica* and surgery, and such like methods, is not the introduction of the Christ-method or way of healing, however much those practising these methods may be actuated by a genuine love for mankind and the desire to help and heal all who suffer. These systems but touch effects as they appear. The Christ-method goes beneath the surface and removes the evil causes which produce the inharmony and disorder which pervade every department of human experience.

The psalmist wrote: "Thou, Lord, only makest me dwell in safety." Christian Science is taking up that refrain anew, the sick are being healed, the sorrowing comforted, the sinful restored. These are the signs which Jesus said would follow those who should accept his word.

[Capt. Geoffrey Wilkinson in the *Kentish* (Deptford, Eng.) *Mail*.]

Christian Science is based on the self-evident proposition that there is one great First Cause, and that this First Cause is intelligence, or Mind—in other words, Spirit, God. Perfect Mind is expressed in perfect ideas, so that God's creation is spiritual, ideal, perfect in every detail. Matter, that which appears to the senses, is the negation of this, is in fact a false, imperfect sense of God's spiritual perfect creation—it is "the flesh" which "profiteth nothing," which God never made. Material objects are the counterfeits of spiritual ideas, and therefore, speaking absolutely, unreal, much as the distorted landscape seen through a bad pane of glass is unreal; material selfhood is a false, imperfect, mortal sense of man's true, spiritual, eternal individuality in the image and likeness of God. It is "the old man" which must be "put off," and as it is put off, as the false selfhood vanishes, "the new man" is "put on," man's true selfhood appears. Hence the absurdity of our critic's remark, "Sin meant nothing, when they could say, as Christian Science taught, 'I am no sinner. The idea that I am is illusion. I have only to believe in my own perfection.'" The fact is that sin means a great deal in Christian Science. It is the claim to reality of that which is unlike God, unlike good, and the sinner is admitting this claim, is making a reality of that which is unreal, and is therefore actively engaged in making his own hell, for as Mrs. Eddy has said, on page 537 of Science and Health, "error excludes itself from harmony."

The simple truth is that our critic has absolutely failed to grasp what is meant by the unreality of evil in Christian Science. It is not Christian Science to "tell a sufferer, 'You are not ill; you only imagine it.'" If disease were real in an absolute sense, it would be true, part of eternal Truth, and it would be futile to attempt to destroy it. That disease, however, has a relative reality to the erring human consciousness it would be foolish to deny, and the Christian Scientist therefore proceeds to dispel this false sense of reality by bringing to the patient's consciousness the truth of being, by bringing to him that understanding of spiritual law, the law of God who is Love, which annuls the physical

Digitized by Google

so-called law. And so it is with every problem of human existence, however seemingly important, however relatively insignificant. The Christian Scientist does not move in a sort of fools' paradise, thinking that the mere ignoring of evil is the proving of its unreality. He will prove its nothingness in the degree of his understanding of the omnipotence and omnipresence of God, and he will understand this in proportion as he lets that Mind be in him "which was also in Christ Jesus." This is not the work of a moment, it calls for constant effort, and just in proportion as man gains that Mind will he gain dominion over all material conditions. In intimating that Christian Scientists should walk through brick walls or dispense with money,—by which he would seem to imply that they should dispense with food,—our critic forgets that Christ Jesus appeared through closed doors only a short time before his ascension above all material conditions. To do without food would be equivalent to overcoming death, and St. Paul said, "The last enemy that shall be destroyed is death."

[From the *New York Herald.*]

Informed that persons representing themselves as Christian Scientists had been importuning Mrs. William T. Bull, wife of the surgeon who is ill at the Hotel Plaza, to accept their services, and that some of them had gone so far as to give him absent treatment without his knowledge or consent, J. V. Dittemore, chairman of the Christian Science committee on publication, yesterday sent a letter to Mrs. Bull, deploring the affair and denying that any such practices are a part of legitimate Christian Science.

"Many years ago," said Mr. Dittemore in his letter, "the Founder of Christian Science wrote on this subject as follows: 'For a student of mine to treat another student without his knowledge, is a breach of good manners and morals; it is nothing less than a mistaken kindness, a culpable ignorance, or a conscious trespass on the rights of mortals' (Miscellaneous Writings, p. 283). Soliciting practice or forcing attentions on any one cannot be justified by a Christian Scientist any more than by any one else.

"I will also take occasion to assure you that any worthy Christian Scientist feels the utmost sympathy and tenderness toward one who is passing through experiences such as yours. Most of them also have passed through great tribulation, and many have exhausted their last hope before learning of Christian Science; hence, more than others, they should feel for their brothers that tenderness which must always remain the dominating characteristic of the true Christian."

[Gray Montgomery in the *Pueblo* (Col.) *Star-Journal.*]

The world at large is ignorant of the many subtle forms of error, but Mrs. Eddy has shown her followers how to detect its workings. She has not, however, implanted any fear of evil in their minds; she has on the contrary taught them how to overcome evil with good and thereby destroy the workings of animal magnetism. Our critic is wrong to say that Christian Science has "caught and held the half-developed consciousness of the human race" by fear. It is universally recognized by all acquainted with Christian Scientists that they are a joyous, happy people, who have been brought out of much sorrow and tribulation and lifted into the sunshine of Truth by Christian Science, which has turned them to a God of infinite tender love and which has banished their fear. Animal magnetism or hypnotism is simply the wrong mental influence of one human mind over another—the operator dispossessing the subject under his mental control and placing him in a condition of mental slavery. Animal magnetism is, however, wholly devoid of power to the Christian Scientist protected by his understanding of God as all-powerful infinite Love.

Christian Science teaches that the "devil" is evil and is only an illusion, a lie without power or place. It teaches that animal magnetism has only supposititious power, and when one is freed from the belief in it by the understanding of Truth, its seeming power is destroyed. It is only the influence of the carnal mind at enmity with God. . . .

Our critic insists that healing is "occult." The Century Dictionary defines the word "occult" as "mysterious; beyond the bounds of natural knowledge." The phenomenon of Christian healing is as natural and apparent as the disappearance of darkness before the presence of light. It is the natural result of a realization of the presence and power of God and the understanding that nothing apart from God has presence or power. The pure consciousness of perfect spiritual existence expels all thought of error, every fear, every disease. It is not a hidden power, unseen by the spiritual senses; it is as manifest to the Christian Science healer as is the solution of a problem in mathematics to the mathematician.

Christian Science refutes the belief in "spirits." It recognizes God as Spirit. It accepts the Biblical teaching that man in the image and likeness of God is therefore spiritual, not a spirit, and is the reflection or idea of God. The claim that all is Spirit and therefore the assertion that "each man is a spirit" denies the omnipotence of God. A ray of sunlight is not the sun, though in essence it is the same as the sun; so the real man, though spiritual and one in quality with God, is not God, Spirit.

[W. E. Brown in the *Fresno* (Cal.) *Republican.*]

Our critic begins by declaring of Christian Science, "There is in it nothing good that was not first in the church." Inasmuch as Christian Science is the religion of Jesus, it was necessarily first in the early Christian church, and secular history shows that for several centuries after the crucifixion the sick were healed and the dead raised by the understanding of the Master's teaching. Christian Science is not a new religion—it is primitive Christianity again operative among men, redeeming and saving the sick and sinning of earth, spiritually, morally, and physically. It is accomplishing these results in the same way and by the same method employed by Jesus, and expressed by him in that glorious promise, "Ye shall know the truth, and the truth shall make you free." This method is the very opposite of the use of suggestion, which our critic thinks is the cause of the cures in Christian Science. Neither Jesus nor his disciples used suggestion, hypnotism, or mesmerism in any form. Neither did they employ drugs or material remedies of any kind. On the contrary, they taught absolute dependence on spirituality as a remedy for all mortal discord, including death itself. This point is strikingly emphasized in the case of King Asa, who "in his disease sought not to the Lord, but to the physicians. And Asa slept with his fathers."

I do the very best I know how—the very best I can; and I mean to keep on doing so until the end. If the end brings me out all right, what is said against me won't amount to anything. If the end brings me out all wrong, ten angels swearing I was right would make no difference.

ABRAHAM LINCOLN.

Happiness is not what we are to look for. Our place is to be true to the best we know, to seek that and do that; and, if by "virtue is its own reward" be meant that the good man cares only to continue good, desiring nothing more, then it is a true and noble saying.—FROUDE.

THE LECTURES.

DETROIT, MICH.

On Sunday afternoon [Nov. 22] a public lecture on the teachings of Christian Science was delivered by one of the prominent lecturers of the organization, Francis J. Fluno, M.D., of Oakland, Cal. The Detroit Opera House, which seats twenty-three hundred, was crowded to the doors. More than that, about one thousand were turned away. There was, too, a striking uniformity in the audience which heard this lecture. It was an audience of nearly three thousand unusually well-dressed, thoughtful, intelligent men and women.

The conclusion is inevitable that Christian Science in some extraordinary way appeals to a vital, personal interest. Nearly all of us are more or less sick in mind or body or both. Christian Science, more confidently than any other sect, promises a cure. What more natural than that hundreds should be attracted to it?—*Detroit Journal.*

BUTTE, MONT.

Bicknell Young lectured here on Christian Science, Dec. 1. He was introduced by Mayor Joseph Corby, who said in part,—

I make bold to say, and without fear of successful contradiction, that none can deny that the logic contained in the teachings of Christian Science is of that uplifting character which makes the world better for its having existed. To the Founder of Christian Science, Mrs. Mary Baker Eddy, a debt of gratitude is due which cannot be expressed or measured in words. Had she done nothing more than to have given to the world her interpretations and conception of the teachings of the Bible, she would have done sufficient to entitle her to be immortalized. To my thinking, the beautiful lesson of self-reliance taught by Christian Science is a most wonderful incentive to make humanity better. What greater and more glowing thought could thrill a human being than this, that man is a manifestation of the one great Mind.—*Correspondence.*

SAN FRANCISCO, CAL.

An audience that filled New Club Hall to overflowing listened with rapt attention to an able exposition of Christian Science by Frank H. Leonard of Brooklyn, N. Y., on Monday evening [Dec. 7]. The lecture was given under the auspices of Second Church of Christ, Scientist, of this city. The lecturer was introduced by Peter V. Ross, a well-known local attorney, who said in part,—

Nineteen centuries ago Jesus of Nazareth preached a gospel which not only reformed the sinner but healed the sick. For three hundred years after his crucifixion his followers continued to combine healing with preaching, as he had commanded. Then for long centuries the practical works of Jesus were almost unknown to Christianity, until in recent years thousands have come to doubt whether Jesus ever performed the wonderful cures and the so-called miracles attributed to him. But within the past half century Christian Science has come to affirm that Jesus did heal the multitudes of all manner of diseases; that he made the lame to walk, the deaf to hear, the blind to see; that he did so in accordance with a law which he understood; that that law is available to-day, and can, at least in large measure, be understood and applied by every man, woman, and child to overcome sickness, evil, poverty, sorrow, and other untoward conditions.

Christian Science proves the truth of these assertions, and proves the truth of its own teachings, by healing every disease known to medical practice, whether organic or functional, and whether curable or incurable according to *materia medica.* It destroys evil, for the healing of disease is but the outward manifestation of the inner moral and spiritual awakening of the man.—*Mission Times.*

ERIE, PA.

There was a large audience at the Majestic Theater yesterday afternoon [Dec. 13] to hear the lecture on "Christian Science: Its Healing Ministry," by Bliss Knapp of Boston. The speaker was introduced by H. T. Leasure, secretary of the Erie Chamber of Commerce, who spoke in part as follows:—

As Christian Scientists we fully appreciate the fact that one is not made a Christian Scientist by merely listening to a lecture, but by the understanding and daily living of its teachings. Christian Science is to-day engaging the attention of thinking men and women all over the world, and why? Because of the marvelous work it is doing in healing all manner of diseases, and in regenerating and uplifting the lives of its adherents. The followers of Christian Science are sincere and earnest; they live their religion every day. Their happy, smiling faces evidence one of the tenets of their belief, that the great universe of love and peace and harmony is their heritage. Those who live Christian Science not only find this harmony of mind but they are helped physically as well. From their religion they get results, and unless a religion brings results there is something wrong with it.—*The Erie Herald.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"FREEDOM TO WORSHIP GOD."

A NUMBER of newspapers have commented upon the quandary in which a certain church in New Jersey found itself placed by reason of the application of one of its members for a letter of dismissal and recommendation to the local Christian Science church, and most of them have taken the very sensible view that the dismissal of the member was something to which he was entitled by right, and the question whether or not he should be recommended to the Christian Science church or any other church was of minor importance. Apropos of this, the Newark, N. J., *News* says, in part,—

The church is a voluntary association, and for that reason its jurisdiction may be renounced. In fact, the constitution of this church provides for this renunciation. Whenever an individual no longer accepts the doctrines of the church he is afforded the privilege of withdrawing from its communion. The fact that the church possesses the power of excommunication proves that the relation between the individual and the organization is terminable, and it would be obviously unjust if the relation could be terminated upon the initiative of one party to the contract and not to the other.

It is also the privilege of a member of the church to secure from the session a statement of the fact that he was a member in good and regular standing. If he were not such a member, it is the duty of the session to drop his name from the roll, and consequently, unless the church has been negligent in the performance of its duty, any person enrolled is entitled to a statement to that effect. There are two ways, then, by which this applicant may proceed. He may renounce the jurisdiction of the Presbyterian church and seek the fellowship of the Christian Scientists; or, he may secure from the session of the Hoagland Memorial church a statement of his standing in its membership, and present it in lieu of a letter of recommendation to his new friends. . . . That such a letter would prove unacceptable to the Christian Scientists is quite inconceivable. No church is under compulsion to recommend any one that it does not desire to recommend, but in the formality of receiving members into churches there is no need for such a recommendation. The fact that the individual has been, up to the time the letter was written, a member of the organization issuing it, bears its own recommendation, and to require an additional recommendation would be to insinuate that a member might be in good standing with that denomination and yet undeserving of a recommendation to membership in another church.

It is a regrettable fact that in the past, through misapprehension of the teachings of Christian Science, some churches have been led into a refusal to grant letters of dismissal, because of the known intention of the applicant to cast in his lot with the Christian Scientists, but we have heard very little about such cases recently. The great majority of the members of the Christian Science church today were formerly members of other churches, and most of them entered upon their new affiliations conscious of the loving kindness and good will of their former associates, expressed not only in the formal letter of dismissal and recommendation, but also in the hearty Godspeed of both pastor and fellow-members.

The plea that the Christian Science church is not evangelical is more and more recognized as a false and absurd ground on which to base a refusal to grant a letter carrying a recommendation to this church, for it is proving by its "fruits" that there is no other denomination more firmly founded upon the words and works of our Master, or more zealous in its promulgation of both the words and works of his gospel.

ARCHIBALD MCLELLAN.

WHAT DOES THE WORK?

THE crucial question for those who are sufficiently interested in Christian Science to investigate its teachings, naturally is, What does the work? With few exceptions, interest has been aroused by some notable case of healing, hence the inquiry; hence, too, the answer, that it is the truth which does the healing,—which makes free,—as Christ Jesus so long ago said it would. At this point it is well to remember that if the great Teacher had assigned some other basis to his healing work than the action of the truth, had he offered some one of the religio-philosophical theories of the time, he would doubtless have been listened to without the opposition and wrath expressed when he said, "Ye shall know the truth, and the truth shall make you free." Here was a direct implication that these theories were *not* the truth, and doubtless his questioners became quickly aware that if Jesus' teachings were accepted as the truth, all beliefs contrary to them would tumble to the ground like a child's house of cards.

Tremendous were the issues involved in Jesus' declaration of what constitutes the truth, but he resolutely maintained his position, offering the only logical deduction to his premise in the declaration, "If a man keep my saying, he shall never see death." In answer to this his opponents had only one argument,—the natural outcome of material belief,—they took up stones to cast at him; but he went on his way, pausing long enough, however, to give yet another evidence that his words were the truth, when he healed a man who had been blind from his birth.

When Mrs. Eddy made her great discovery she took her stand by the statement that the truth heals, and that nothing less can heal the sick or do the works of Christ Jesus. She also declared that the truth of being is spiritual, never material, and although she has greatly elaborated her early teaching she has never changed her position with respect to the truth, but like the Master she has maintained that though heaven and earth pass, the truth itself is changeless. With its usual inconsistency, the human mind, while claiming to seek the truth, turns away from it to something which it names "suggestion." It fails to see that if the suggestion were even based upon the truth, any good result should be attributed to the truth and not to a confessedly faulty human device. The difficulty is, however, that the human mind fails to distinguish between truth and error. It declares disease to be true, even while suggesting to a patient that he is healthy. As Mrs. Eddy has said, again and again, if disease were true we could not destroy it and should never attempt to do so. If it is not true, then the truth must destroy it and nothing less than the truth can do this. Jesus said, when urging the claims of Truth, "I speak that which I have seen with my Father: . . . But now ye seek to kill me, a man that hath told you the truth." He could never have seen either sin or disease with the Father, therefore they were not true.

O Christians of whatever name, let us pause a moment while we listen to the majestic words of the one whom we call our Lord and Master, as he stands before Pilate awaiting sentence: "For this cause came I into the world, that I should bear witness unto the truth. Every one that is of the truth heareth my voice." When called upon to heal the sick, let us be ready to prove that it is Truth and Truth alone which does the healing work, as did he, so that we may be counted among those of whom he said, "That they all may be one; . . . that the world may believe that thou hast sent me."

ANNIE M. KNOTT.

THE PROPHET-LIFE.

WHEN a man faces a life-problem, with an ethical purpose, and having found a key thereto, works out the difficulty to its end, he brings into relief the true meaning

Digitized by Google

of service for humanity. He enters the "holy place" of Christian ministry, begins to live the prophet-life, a life which not only declares the nature of light but which, torch in hand, seeks out every dark place in human experience, that there, too, a flame may be kindled which shall never be put out.

The significance of the prophetic word cannot be overstated. It speaks for the dawn, as did the voice of him who came "preaching in the wilderness of Judea." To open the heart to the divine illumination, so that intuition may lay hold upon eternal verities,—this means inspiration, and it is potential; but the practical demonstration of the truth of the spoken word, the living before men so that they may see our good works and glorify the Father which is in heaven,—this is realization; it is dynamic, and it is the Christian Science standard and ideal.

As the supreme exemplification of this prophet-life the Christian world instinctively recalls the story of the Nazarene, but human annals have not lacked the life-record of those who have proved worthy to follow in his steps and bear his name. The Stephens and the Winkelrieds of history have studded the firmament of the past with galaxies that can never fade, and their greatness finds its explanation in the simple fact that they were loyal enough to the ideal not only to speak for it but to stand for it in the crucial hour. They not only pointed the way, but they walked in it. A simple rose may voice the appeal of a beauty as vast and impelling as the divine manifestation, and a humble man may become the "minister plenipotentiary" of a truth so profound and so all-encompassing that the resources of the infinite are pledged to its maintenance. Herein lies the secret of great leadership and of immortal service.

The moment we come to realize this possible sovereignty of Truth in men, that moment the naturalness and the simplicity of all greatness is apprehended. We see that it is achieved for each one (and that its beneficence is thus assured for all), in so far as his ideal of truth, of freedom, of beauty, or of goodness is divine and he is genuinely and continuously loyal thereunto. Thus the "brotherhood across the centuries" of Socrates and St. Paul, of Aurelius and Mazzini, of Washington and Lincoln, with all their kind, appears. These, the great, have not all seen alike, and some of them have not been orthodox in the estimate of their times, but all have been in love with a light that is above the sun,—the light of Truth,—and in their fealty to it they have given place to Truth, and the wonders of Truth's overcoming have been wrought through and for men. "God with us" has again been interpreted in the prophet-life.

With respect to the great American whom all the world honors today, there was that unswerving, unpretentious devotion to the common sense of right, that dogged confidence in its adequacy to work things out, if men would but stand by it, which gave him the sobriquet of "Honest Abe," and which made him the nation's bulwark of righteousness in her trying hour. This stanch nobility is seen again in the unvarying adherence of our Leader to that apprehension of Christian truth which she has demonstrated to be true and saving, and which, as she has lived the prophet-life, has become a priceless inheritance for all mankind.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., Jan. 30, 1909.
Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Accept my sincere thanks for the beautiful set of your works which I received today. I shall prize them very highly and strive to put into practice more of these precious teachings which you have given to the world.

In parting with my husband to serve you for a term of three years, I do so willingly and cheerfully, knowing that to serve the Cause of Christian Science and its Leader is the highest service man can render unto God.

Hoping that I may have a further opportunity of proving my loyalty to you, I am

Lovingly yours,
LILLIAN S. DICKEY.

Chicago, Ill., Jan. 11, 1909.
Mrs. Mary Baker Eddy, Chestnut Hill,
Brookline, Mass.

Beloved Leader:—At the close of my term as First Reader of Second Church, my deep gratitude goes out first to you, the Discoverer and Founder of Christian Science, and I feel impelled to write a heartfelt "Thank you" for the great privilege and blessing given me in these three years of service to God and our Cause. Through the study of your writings I am daily learning how to battle more earnestly against sinning mortal sense and self, and all that I can ever hope to be I know I owe to you and Christian Science. May the Christ peace in infinite measure be ever yours.

Obediently and gratefully,
WALTER H. VANZWOLL.

San Jose, Cal., Jan. 13, 1909.
Mrs. Mary Baker Eddy, Chestnut Hill, Boston, Mass.

Beloved Leader:—After this evening's service, a special meeting of the readers of *The Christian Science Monitor* was called, and it was unanimously voted that this letter of earnest appreciation and love be sent to you from the church, to express the heartfelt thanks of the *Monitor* subscribers and their families in San Jose for the excellent daily paper which your wisdom and thoughtfulness have established. We have now been receiving the *Monitor* for over a month and have had opportunity to see how it wears, and our united verdict declares that it is an inestimable benefit and redemptive power in the home. Its editorials are most helpful and its reports non-sensational and reliable.

Your love for mankind is ever active, ever expressing itself in forms of genuine usefulness and uplifting. You touch the daily activities of life only to bless and brighten. You live the truth you teach, and follow so closely and clearly the divine Christ that our path is made easier and lighter. We do discern the inspiration of your life,—love for all mankind. You are ever laying down your life for humanity, and "greater love hath no man than this."

With loving gratitude,
Over one hundred subscribers to the *Monitor*.
JETTORA W. HYDE, *Clerk*.

Washington, D. C., Jan. 27, 1909.
Mrs. Mary Baker Eddy.

Dear Leader:—Thinking it might give you some pleasure to know how beautifully the great humanitarian, Clara Barton, spoke of you during the afternoon which I spent with her yesterday, I am writing to say that when we were talking of the rapid strides which we both recognized had been made by you in spiritualizing the thought of Christian Scientists, Miss Barton remarked, in speaking of the abolishment of the yearly meeting for communion, "I felt that she would have the courage to do that, long before she did it. She must have seen the nothingness of the material symbol, and has in this way led us to its spiritual

Digitized by Google

meaning and reality." "I am so glad," continued Miss Barton, "so glad that she has shown us where the modern Christmas was leading us,—that it was becoming a barter, —and I fully sympathize with all she had given us of her thoughts on this subject." She added, "I feel—I know —that she will have the courage, at the right time, to point out many other reforms." It is beautiful to see this dear woman, sitting at the feet of Truth, humbly asking to be fed.

Hoping this may add another jewel to your crown of rejoicing, Yours in sincerity and truth,

EUGENIE PAUL JEFFERSON.

Westgate, Louth, Lincs., England, Nov. 12, 1908.

Beloved Leader:—I want to thank you for the truer sense of consecration which the Lesson-Sermons are revealing to me. There is so much to be cast off still, but indeed I know, thanks to Christian Science, that the Father will glorify Himself. Only by loving can we thank Love, and I am grateful for the most wonderful part of the healing that I have experienced, that Christ is teaching me to give out love.

Your loyal student,

MRS. HELEN E. FOWLER.

[Telegram.]

Chicago, Ill., Jan. 22, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the ushers of First Church of Christ, Scientist, Chicago, in meeting assembled, extend to you our loving greetings. We feel it a great privilege to be allowed to assist in this work. We are grateful to Almighty God that we have our revered Leader. We know that it is through your unselfish and divinely inspired efforts that we have this beautiful church home, and our daily prayer is that we may at all times reflect so much of Life, Truth, and Love, that our acts may manifest your teaching. Lovingly yours,

THE USHERS' COMMITTEE.

Putney, S. W., London, England, Jan. 20, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—It was unanimously resolved at our first annual meeting, held last evening, to send you the enclosed letter. A permanent clerk not then having been appointed, it was further resolved that I should write a letter to accompany it. I have often wished to write to you, and knew the opportunity would come when the time was ripe. Only by a life of earnest effort to be worthy the name of Christian Scientist, can I hope to express my gratitude to you for showing me how to consecrate my life to God, good, who is the only Life. His blessing is ever with you. With love and gratitude,

Your student's student,

GRACE E. ADAMSON, *First Reader.*

Putney, London, England, Jan. 19, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the members of the Putney Christian Science Society, at our first annual meeting assembled, desire to send you our loving and loyal greetings, and to express our deep gratitude for all the blessings we have individually and collectively received through your teachings. Our aim as a society is best expressed in your words on page 155 of "Miscellaneous Writings," "Sacrifice self to bless one another, even as God has blessed you. Forget self in laboring for mankind; then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity." May we one and all follow you as you follow Christ, and prove ourselves worthy exponents of the Science of Christianity. We know that God's love is ever with you, to sustain and to guard you from all evil.

Your grateful followers,

THE MEMBERS,

Putney Christian Science Society.

East Orange, N. J., Jan. 27, 1909.

Beloved Leader:—I want to thank you for your article entitled "The Way of Wisdom." It has fed and strengthened me, and comes as a call of wisdom to "come out from among them [mortal beliefs], and be ye separate." Your loving words, whenever spoken, roll back the clouds and reveal more clearly the true idea. You have laid the spiritual foundation, and built upon it, so that "he that hath an ear, let him hear what the Spirit saith unto the churches." Through daily understanding and practice of what you have given me by the teaching of your writings, I am finding what you have said belongs to the Christian Scientist, "a life-lease of hope, home heaven" (*Christian Science Sentinel*, May 16, 1908).

Gratefully and lovingly yours,

GRACE MERWIN COLBY.

Decatur, Ill., Jan. 24, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dearly Beloved Leader:—First Church of Christ, Scientist, Decatur, Ill., sends you thoughts of loving gratitude for your labor for all mankind, through your discernment of an ever-present and operative law by which the truth is made practical to every one who depends upon it, and which reveals the kingdom of God as here and now available to mortal experience, in destroying sin, discord, disease, and death. We are today rejoicing in the occupancy, for the first time, of a new church home, remodeled and equipped with everything needed for larger work.

May we each one so live that our loyalty to you may be from a loyalty to divine Love, our Father-Mother God, and the Cause of Christian Science.

Lovingly and loyally,

First Church of Christ, Scientist,

EDGAR D. PLUMMER, *Clerk.*

Langley, Wash.

Mrs. Mary Baker Eddy.

Beloved Leader:—I wish to express my love and gratitude for what Christian Science has done for me. I was wandering in the valley and shadow of death, without God or hope in this world, when with one treatment of Christian Science I was healed of all my diseases, and awakened to a true sense of God as Life, Truth, and Love. Words cannot express my gratitude to you for the blessings which Christian Science has brought to me and to the whole world.

FRANCES J. HASLEY.

AMONG THE CHURCHES.

FAIRBANKS, ALASKA.

We are getting along quite nicely with the Science work. We have a neat log church and residence, and quite a large tract of ground; all improved and paid for. Our congregations range from forty to fifty on Sunday, and we feel that the Cause is advancing.—*Correspondence.*

CONCORD, N. H.

At the annual meeting of First Church of Christ, Scientist, held at the church last evening [Jan. 7], the following officers were elected: First Reader, Charles B. Jamieson, C.S.B.; Second Reader, Mary D. Rice; trustees, elected for three years, Prof. Hermann S. Hering, Paul R. Holden, and Almira E. Critchett. The annual reports showed the church to be in a sound and growing condition. A number of new applicants were elected to membership. The treasurer's report shows all bills paid and a substantial balance on hand.—*Concord Monitor.*

CHICAGO, ILL.

Important changes in the directorates of the several churches of Christ, Scientist, in Chicago were made last night [Jan. 8] at annual business meetings. Reports of the year's work in all the churches showed that an exceptionally satisfactory progress has been made. The average increase in membership has been about twenty per cent. It also was announced that there has been a large sale of Christian Science literature. Special interest was taken in the elections because of the selection of Readers. The rules of the church require that Readers be chosen every three years.—*Chicago Record-Herald.*

LONDON, ENGLAND.

It was my privilege to attend a Thanksgiving service on Dec. 31, at Second Church, Æolian Hall, New Bond street, London, W., and a most impressive service it was. The testimonies, given by men, women, and children in quick succession, flowed like a deep and rich stream of gratitude, thus eloquently demonstrating the healing power of divine Love. It was a mighty testimony of Christian Science, manifesting its wonderful and beneficent power, declaring what it is to those who unreservedly and honestly follow its teachings, the revelation of a religion at once practical and comforting; to me it was at the same time a moving and uplifting experience, one for which I am deeply thankful.—*Correspondence.*

MILWAUKEE, WIS.

While the finishing touches are being added to the new edifice of First Church of Christ, Scientist, Prospect avenue and Keene place, arrangements are being made for the dedicatory services, which will be held the latter part of February or early in March. The church will not be occupied by its large congregation, numbering between six and seven hundred members, till it is dedicated and the building is finished in every detail.

Perhaps there will never have been held simpler services, to dedicate a temple of worship, than those in contemplation by the members of First Church of Christ, Scientist. There will be little display of ceremony when this one hundred and twenty-five thousand dollar church building is dedicated to the services of the Christian Scientists of Milwaukee. But the history of the church will be interesting enough, both to the members of the church and to those outside of its roll of adherents. The society was launched in Milwaukee over twenty years ago, and since then has grown enormously in strength and members, until now the congregation is one of the wealthiest in the city, and numbers among its members people of business and social prominence.

The church, which is built of granite and concrete and is 100 x 120 feet in size, has been erected for the second time from the ruins of a structure no less magnificent than the present building. When the church was in the last stages of perfection last winter, it was burned Feb. 5. The damage done amounted to between fifty and sixty thousand dollars, covered by insurance. The fire was one of the most disastrous of last year, eating its way into what was declared to be a practically fireproof structure. The church has a seating capacity of nearly fourteen hundred persons. A magnificent pipe organ is now being installed in the edifice.—*Milwaukee Free Press.*

CANTON, O.

In evidence of the most encouraging growth of our Cause in this place we are happy to report that the sales of literature during the past six months amounted to $444.24, an increase of $206.65 over that of the first six months of 1908. Of the 816 visitors to the Reading Room 384 were non-members of the church. Copies of the *Christian Science Sentinel* and *Journal* have been placed each month in the workhouse and county infirmary, and were gladly received. An additional copy of Science and Health has been placed in the public library of Canton. The Reading Room having received permission to place any Christian Science literature it pleases in the reading-room of the Courtland Hotel, the leading hotel of the city, a copy of Science and Health, together with the *Monitor*, the *Sentinel*, and *Journal*, has already been placed on the tables. In our loan library, established in April, 1908, we have five copies of Science and Health and one copy of "Miscellaneous Writings." In the past six months Science and Health has been loaned thirty-five times and "Miscellaneous Writings" four times.—*Correspondence.*

WICHITA, KAN.

Second Church of Christ, Scientist, has been established in Wichita. The membership and congregation of First Church of Christ, Scientist, have increased so rapidly in the last four or five years that the church has been inadequate to accommodate the people. Wednesday night [Dec. 30] nearly forty members of First Church willingly withdrew from membership to organize Second Church of Christ, Scientist. Philharmony Hall at 217 North Lawrence avenue has been leased for a year, or until the church secures a permanent location and builds its own structure. The central location of the hall, its fine pipe organ, seating capacity, and acoustic properties make it an ideal place in which to hold services. The interest in this faith has become more wide-spread, the Christian Scientists being numbered among the prominent business men.

Wichita Beacon.

Happy day, when, all appetites controlled, all passions subdued, all matter subjugated, Mind—all-conquering Mind—shall live and move, the monarch of the world! Glorious consummation! Hail fall of fury! Reign of reason, all hail!—ABRAHAM LINCOLN.

TESTIMONIES OF HEALING.

Nine years ago the gladdest sunshine that ever shone into human consciousness entered my life, and it was the light of Truth that came with the reading of Mrs. Eddy's book, "Science and Health with Key to the Scriptures." The perusal of this book healed me of severe headaches, stomach trouble, and many other ailments. Whereas I used to be impatient, cross, and discontented, I became patient, loving, and contented. About four weeks after I began to study Christian Science, I passed through an experience which usually requires the attendance of a doctor and nurse; but I relied entirely on the understanding of the presence and power of divine Love which this book had given me, and through constant reading the truth proved to be surgeon, nurse, and doctor. I was not even near a Christian Science practitioner, and I came through the experience without a day's illness. For nine years the light of Love and Life has glorified my being, and during this time Christian Science has healed my children of colds and fevers and many other ailments, and has healed them quickly. In the winter of 1907, one little girl was said to have an attack of lung trouble, but with one hour of Christian Science treatment the symptoms had disappeared. In a few days she was perfectly well, so well that she went away with me and spent a month traveling, and though exposed to changes of temperature and of climate, she did not have even a cold. Twice my children have been in a house where the children of neighbors were suffering from contagion, but they remained perfectly well. During an epidemic yellow cards were on three sides of our house and many children were kept from school, but ours were not absent a day and we passed through the season in health and safety.

The study of Mrs. Eddy's books and the Christian Science literature has taught me to love God and to have faith in His promises, to love mankind and help to heal and uplift men, to be more patient and loving to others. I love Christian Science because it has given me a spiritual sense of God and His creation; thus bringing much joy and sweetness into my life, and I love Mrs. Eddy because she has made known to us the Comforter which Jesus promised should come. For this reason, I think Mrs. Eddy is the greatest woman the world has ever known, "great not like Cæsar," but great because she is good. I am grateful for my own healing and for that of my children, for the spiritual sense of life, and for the sweet assurance and proof that God is Love.

MRS. ANNIE C. BRIDGERS, Asheville, N. C.

Having read so many testimonies regarding Christian Science, and having had occasion to see the benefits derived from it by others, I have concluded that it is a duty I owe the world to make public what it has done for me, as I am certainly grateful for the healing I have received in Christian Science. The first and most wonderful demonstration was the curing of the drink habit, which I had contracted when I was about sixteen years old, and which led me to serve "Lord Bacchus" for something over thirty years. I tried all the noted (would-be) cures, spending hundreds of dollars for the same, but receiving nothing more than temporary relief. I was then induced by my mother (God bless her!) to take up Christian Science, and after having about ten days' treatment I was entirely cured. I have not had any desire for stimulants since, but, on the other hand, I thoroughly detest them, and have ever since I was healed.

Christian Science has also helped me in other ways. About ten years ago, when living in St. Louis, I had the misfortune to injure my leg severely. After it was well, so to speak, the joint was left stiff and in such a condition that I could not bend it, which caused me to limp at times. One morning as I was going down town I noticed that I was walking faster than usual. I looked down at my foot and found that it, too, had been healed, and that I could use that joint and leg just as well as I could the other. I also found that both limbs were the same length, although before taking Christian Science treatment the injured leg had been the shorter. Christian Science has helped me to have a better understanding in every way, and financially my future is brighter than it has been for many years.—DR. E. DE S. HARDEN, Joplin, Mo.

[Translated from the German.]

With grateful heart do I testify to the blessings which have come to me through Christian Science. Since early childhood I had suffered from an ailment which appeared nearly every year under a different form, in spite of all the remedies applied. As time went on I became very nervous and suffered from sleeplessness for years. In the spring of 1905 I was taken with a severe nervous trouble, and according to the opinions of the doctors I was in a state of complete physical and mental exhaustion. For five weeks all material remedies were tried, only to be proved useless, and the physicians suggested, as a last resort, that I go to a hydropathic sanitarium. I had, however, lost all hope of ever being healed, unless that healing came from a higher source, and it was from thence that it did come to me.

By divine providence I heard of a Christian Science practitioner, who explained to me in the most loving way man's relation to God and helped me to find the true way. After the first treatment I was convinced that divine Love is the best and only remedy for all disease, and after about a week's treatment I was able to go out. I quickly regained my strength, and am now a well and happy woman. In the two years since I have known Christian Science I have seen so many proofs of the omnipresence of divine Love, both in my own experience and that of others, that my gratitude increases daily for having found this blessed teaching. I think I can best show my gratitude to God, and to our Leader, by trying to live this inspiring truth and by endeavoring to help others.

AMANDA JOECKEL, Frankfurt a M., Germany.

I have had many wonderful proofs of the power of Truth over error. Some time ago I suffered extremely with a pain in my right side. The first day I did not pay much attention to it, but the next morning my condition was much worse. Just about that time I seemed to have a multiplicity of duties to perform, so that I did not take the time to read from Science and Health or even to declare the truth. The result was that very distressing conditions followed, and I was unable to help myself. By eleven o'clock I was suffering intensely, and called upon a practitioner for treatment. The pain seemed to affect my stomach and caused nausea. About three o'clock in the afternoon I began to feel easier, and that night I slept like a babe—it was such a restful sleep. The next day by keeping quiet I experienced no pain, but the practitioner gave me several more treatments, after which I was able to be about as usual. For the relief which came to me through this healing truth words cannot express my gratitude; but while I am very grateful for the physical healing, I find it insignificant as compared to the spiritual understanding which has come to me through my increased apprehension of God.

A Christian Scientist is daily reminded of the great light which has come to this age through the writings of Mrs.

Digitized by Google

Eddy, showing the way to follow in Christ's footsteps. Step by step, as we discern more of this light or knowledge of God, the veil of darkness is gradually lifted. Every good thought, deed, and action is a step toward perfection. It means a daily watching and praying for that Mind to be in us which was also in Christ Jesus, for only "the pure in heart" shall see God. Mrs. Eddy is showing us how to attain this higher thought through her writings—it is divine Love understood which is healing the sick and destroying sin, and that is why her teachings have been such a great revelation to mankind, for they have been the means of revealing God to them; and for this knowledge we owe her endless gratitude.

I deeply appreciate the privilege of knowing how to draw closer to God. In the old thought evil seemed as real as good, but the understanding of divine Principle is destroying these erroneous beliefs. In Christian Science we know that God is Life, Truth, and Love—that nothing but good fills all space. We all have had proofs of His ever-presence and that He is a present help in time of trouble. The world to-day is deeply indebted to our dear Leader for the priceless gift, "Science and Health with Key to the Scriptures," and her other writings, which have established a standard so high that it cannot fail to be appreciated and receive proper recognition among the thinking class of people.—Mrs. A. M. Vollert, Champaign, Ill.

My little girl, who had been ailing slightly for two or three days, took a cold bath, remaining in the water about an hour. At the time she seemed to be refreshed, but that night she had a high fever and was quite sick. Not being able to meet the attack, I went to a Christian Science practitioner in the morning, and told her what had been done, whereupon she decided to come and see the child, who was still very miserable. Treatment was then given, and by the following day the child was covered with an eruption. For one day her throat was very sore, and the eyes affected so that we kept the room darkened, but the next day she was sitting up, eating nicely, and the eyes were almost normal again. The case was reported to the board of health, but as the officer did not make his appearance for four days, his remark was that she had certainly had an eruptive fever but it was a very light case; and long before the quarantine was removed there was no sign of the disease left. Under material treatment we should probably have had a very sick child, but the truth is quick and sure, and this was realized so thoroughly that error simply fled as darkness before the light.

Our gratitude is unbounded to Mrs. Eddy for the noble work she has done and is doing, because it is the understanding of God, Truth, as revealed in Science and Health, that has made such a demonstration possible.

Mrs. Ada Gardiner, New York, N. Y.

It is with a very deep sense of gratitude that I write this testimony. After having had medical treatment for seven years, with two very good doctors, and getting worse all the time, a dear Christian Scientist advised me to give up material remedies and try Christian Science. In January, 1905, I decided to do this, but not until I had fought a battle with myself,—a battle between the truth and error. I feared that if I gave up the medicine I was taking for heart trouble I would surely die, because my condition seemed to be very serious, and I wished to be with my family a little longer. Truth finally conquered, and I asked my husband to go with me to the lady who had talked Christian Science to me, which he did very willingly. This lady, however, was not a practitioner, but she took me to one whom she knew. After the practitioner had talked with me and treated me for an hour or more, we went home, and I had not slept so well in years as I did that night. My healing was instantaneous, although I had four treatments for fear after that. Under *materia medica* I had been advised to take medicine every spring and fall, because my liver was in a serious condition. I was also told not to do hard work, because that would bring back the nervous spells to which I was subject, but since I have tried Christian Science I am free from all this bondage. Now I do all my own work and am happy and free.

Since coming into Christian Science I have found that God does not send sickness upon His children, but He heals them. I am indeed thankful to God, and to Mrs. Eddy for Science and Health and all our other literature. The Bible is a new book to me; it is worth its weight in gold. Although my bodily healing was wonderful to me, it is as nothing compared with the spiritual uplifting which has come through the study of the Bible and Science and Health. It is my aim to live the life that Christian Science points out to us, and Jesus said, "By their fruits ye shall know them."—Mrs. Agnes Kessler, Sandusky, O.

I had what physicians called gall-stones for a period covering fifteen years. The attacks occurred at longer and shorter intervals, until finally they came every few weeks. The pain was intense, and nothing gave relief but opiates, and I feared I would become addicted to their use. My neighbors, seeing my suffering and the futility of medical treatment, urged me to try Christian Science, and finally I gave my word that if not relieved by morning I would send for a Christian Science practitioner who lived in the neighborhood. When morning came I needed to make good my promise, for I was a very sick woman. I sent my husband for the practitioner, who came and gave me treatment. I was helped almost immediately, and was up and around in a day or two as usual. Under medical treatment I had always been two or three weeks getting over the effects of such an attack. I have never had but one return of the disease. I went immediately to my neighbor for help in Science, and this time the pain left me instantaneously. This happened about five years ago, and to me it seemed wonderful that the attack was overcome so quickly. I feel very thankful for the help received in Christian Science.—Mrs. J. W. Mason, Helena, Mont.

In coming home from school one day last March, my twelve-year-old daughter stumbled and fell, injuring her right arm severely. When she came home I noticed something unusual in her appearance, but there was company present and I did not wish to arouse any fear or anxiety. Later, on learning what had happened, I immediately denied sensation in matter, and after talking to her a few moments I sent her to a Christian Science friend with the request that she would treat her, as it seemed to be impossible for me to do anything for her just then on account of my own fear and the surrounding thought. When she came home about four o'clock she was feeling better, and suffered very little pain that evening. She slept soundly all night, but next morning her hand and arm presented an alarming appearance. She could not use her arm or hand, and carried it in a sling for several days, but suffered no pain except occasionally for a few minutes at a time. The injury was received Tuesday noon, and my friend continued to treat the child until Sunday evening, when she was called away from home. I then took up the case, and the child went to school Monday morning and did all her work, writing, etc., with the hand which had been injured. She continued to improve, and at the end of another week she could play the piano or do anything that she wished without

Digitized by Google

the slightest inconvenience. She read Science and Health a great deal during this time, and was as happy as a child could be, singing and skipping wherever she went.

To see a child pass through such an experience with so little pain and inconvenience was indeed a blessing. I am trying to live up to the teaching of Christian Science, and it has already brought me more peace and happiness than anything else I have ever experienced. I know that I am only beginning to catch a gleam of the "true Light, which lighteth every man that cometh into the world," but I am truly thankful to our Leader for having lived and labored that we might enjoy this greatest of all blessings. I am learning to know that, like the Master, "I can of mine own self do nothing," "but the Father that dwelleth in me, he doeth the works."

MRS. ELLA OLMSTED, Bertrand, Neb.

About two years ago my little girl, then three years old, was taken very ill. As we have relied entirely upon Christian Science in our home for ten years, we sent for a Christian Science practitioner, and as we wished to be law-abiding, she promptly notified the health board. When the doctor came, I stated the case and gave him the name of the practitioner, which seemed entirely satisfactory to him, and he placed a notice on the door. Immediately after this the violent symptoms abated, and the child improved very rapidly. According to the regulations, the child was kept in quarantine during eight days, though she was perfectly able, in four days, to go out. When the doctor came again at the end of the eight days, he remarked that the child looked unusually well, hardly as though she had had any illness.

BESSIE L. YOUNG, New York, N. Y.

I have long received freely the benefits of Christian Science without giving a word of gratitude, but I am indeed grateful, and continually more so as I understand better the meaning of the Word. I hardly know where to begin to count my blessings. Christian Science is a constant help to me, uplifting and strengthening me every hour, I may say. It has given me more endurance and has prevented either failure or a breakdown from overwork. It is enabling me to cast evils out of my thought and to be a more honest, earnest Christian. I may add that it has to a great extent helped me also to overcome resentment, fear, and misunderstanding.

LOUISE E. TEWKSBURY, Chicago, Ill.

I have no words to express my appreciation of Christian Science. I seemed to be a weakling from infancy, but I am now capable of doing almost any kind of work. One of my greatest fears was of attacks of fever. Whatever illness I had seemed to beset me in its severest form. I never had a treatment for overcoming these fevers, from which I had suffered all my life, but by working along the lines pointed out in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and overcoming my own fears and those of my family, I have mastered this trouble, and for five or six years have been entirely free of even a headache. I can endure the hottest sunshine with uncovered head, where once unconsciousness would come on in a few minutes if I was exposed to the sun's rays.

Only by trying always to be obedient to Truth, so far as I have an understanding of this Science, can I show my gratefulness for this wonderful light that has been shown us by our beloved Leader. I have been able to overcome many of the lesser ills of the flesh through a knowledge of this truth, but to me the most satisfactory thought is that each individual can work out his own problem, and by persistent effort advance to a higher realization of this great truth, proving for himself every step of his growth.

MRS. FRANCES S. MENDELL, Los Angeles, Cal.

The testimony given by my wife is absolutely true, and she has not told half of what she has overcome since accepting Christian Science. During all the time we have been in Christian Science I think she has had treatment from a practitioner but once, always preferring to work out her problems alone with God.

C. L. MENDELL, Los Angeles, Cal.

When Christian Science first came into my home, nineteen years ago, it found a miserable abode,—the entire family in sickness, sorrow, and poverty; but it has lifted us into health, happiness, and prosperity. I could fill volumes in telling what Truth has done for us, and still the half would not be told. Some of the diseases which Christian Science has driven out of my home were lung trouble, in the last stages; stomach and nervous trouble; a disease of the kidneys; an abnormal growth, etc. Nor could I name all the blessings we have received. My mother, an invalid from childhood, was restored to health by reading Science and Health. I was healed of an injury to the hip which but for Christian Science would have made me a cripple all my life. It has taken away our idols of materiality and given in exchange a God who is Love.

While the physical relief has been very great, yet it is as nothing when compared to the joy of the new life into which I have been born. Mortal lips can never tell all that this means to me. All I am or ever hope to be, I owe to Christian Science. Second only to the debt I owe to God, is the debt I owe Mrs. Eddy. Through years of toil and tireless love for all mankind,—friend and foe alike,—she has labored unselfishly for the good of all to waken a slumbering world, lost in the love of sin and self. God alone can reward her for her heroic sacrifices in bringing this truth to you and me. As the ranks of Christian Science move steadily forward, may the "God of all grace" give her peace.—FANNIE BUCK, Austin, Minn.

We are very grateful for what Christian Science has done for us during the last thirteen years. It has been our only help in a family of six. We came to Christian Science through the healing of our boy, in two days, of serious lung trouble, when he was but six months old. He and his brothers have been in perfect health ever since. We have had several ailments to meet during this time, however, and had a remarkable demonstration in the case of a severely injured ankle, a year and a half ago. When this occurred the boy was brought home, and we telephoned for help. He was somewhat restless the first night, but after that he got along very nicely. He was out every day, and in four weeks he went to Sunday School. During this time the practitioner came to see him but once. We feel very grateful to our beloved Leader, Mrs. Eddy, and we thank God that Christian Science was brought to our family.—MRS. N. C. RASMUSSEN, Chicago, Ill.

Having received so much help from Christian Science, it is with great pleasure that I give my testimony. In November, 1907, I was taken with very bad throat trouble, which lasted two weeks or more. I had magnetic treatment, but it did not relieve me at all. I had not slept for several nights, so we called in the city physician. He made an examination, and said he could do nothing for me until an abscess which was in my throat broke, and that this

Digitized by Google

would possibly take a week. He left me three different kinds of medicine, besides an opiate to take in case the pain grew so bad that I could not endure it. I was nearly starved for something to eat, and very weak.

I became so much worse that I stopped taking the medicine, having given up all hope of anything material helping me. We then sent for a Christian Science practitioner, and while he was sitting beside me I fell asleep and slept soundly for nearly a half hour. When I awoke I found I could talk. I sat up in bed without assistance, and called for a glass of milk. It was brought me, and I drank nearly all of it. The swelling and inflammation were nearly all gone from my throat, and in about one hour I arose from my bed, dressed myself, and ate a hearty supper with the family. The next day I was able to be around the house, and helped my mother with the work. My people were very much surprised and pleased, and my husband was more than pleased, he was thankful. Words can never explain how happy I was and how thankful to God, and to Mrs. Eddy, for all the good that Christian Science has done me.

MRS. ARNOLD W. MEYERS, New London, Wis.

About two years ago I was healed through Christian Science treatment of eye trouble and severe headaches. I had worn glasses for three years, hoping they would afford me some relief, but instead I grew worse. The headaches refused to yield to any form of treatment which had been tried, and when Christian Science was brought to my notice I was almost in despair. This condition was soon changed, however, for my healing was rapid. I soon put my glasses aside, and the headaches ceased. I am more grateful than words can express, not only for the physical healing, but for the understanding I have gained of God; and I am truly grateful to Mrs. Eddy, through whom the healing truth has come to this age.

MARY EVE CARPENTER, Wilmington, N. C.

When I came here in January, 1908, I was suffering from catarrhal and heart trouble. The people with whom I live are Christian Scientists, and I went to the Sunday service with them. A few weeks afterward I had a talk with a Christian Science practitioner, and then I commenced to take treatment. In a few months I was entirely healed. I am very thankful for what Christian Science has done for me. I have learned to love every one, and to look only for the good. I am very grateful to God, and to our dear Leader, Mrs. Eddy.

KATHERINE BEDLE, Bradley Beach, N. J.

I would like to express my gratitude for what Christian Science has done for me. About fifteen years ago I was afflicted with lameness, and not able to take a step without the aid of crutches. I was attended by different physicians for several months, also had a specialist, and my case was pronounced a serious form of paralytic trouble. I received no help from any of these doctors, but rather grew worse.

I was then advised by a friend who had been healed in Christian Science to try it, but like many others I kept putting it off until I found I had nothing else to look to. At length I consented to try it, although I had at that time very little faith in its efficacy. My healing was not instantaneous; on the contrary, it was rather a slow one. The practitioner visited me about three months, at the end of which time I was able to go from Jersey City to New York to attend services at a Christian Science church. I had laid aside one crutch, but still used the other to get about. On my return from church the other was laid aside. I had no further use for either of them. The practitioner called to see me about one month more (four months in all), and found that there was no need for further treatment. Since that time I have been in good health, for which I am very grateful to God, and also to Mrs. Eddy, who has given us this truth which not only heals us from sickness but uplifts us spiritually.

MRS. CHRISTINE HURST, Jersey City, N. J.

[The following is in verification of the above testimony. —EDITOR.]

The accompanying testimony is that of my mother, and her healing was complete and permanent. She is now sixty-six years old and in good health. I was a witness to this healing, and was also the one to whom the physicians said, "There is no help for her." We have had many proofs of Christian Science healing all through the family since that time, but this was the first.

MRS. GERTRUDE A. FRENCH, Jersey City, N. J.

I wish to express my gratitude to God for giving us Christian Science through Mrs. Eddy; and to her for sharing with us this wonderful knowledge, so that we too may learn this beautiful religion. If we trust in God we are always helped, but we cannot trust in God and believe in error; we must trust in God and distrust error, for error is nothing. Christian Science has helped me so much in my school work and at home. Two years ago, in disobeying my mother, I cut my finger terribly in the middle of the nail. My mother dressed the wound, and she then read to me for about an hour in our text-book, Science and Health. After that I worked for myself, and in two weeks' time I took my music lesson. I am very grateful for Christian Science. My wish is to trust in God more every day.—MARGARET E. BRAUN, Galena, Kan.

[Written for the *Sentinel*.]

"HE LEADETH ME."

ISABEL SHERRICK WARDWELL.

HE leadeth me—I love the words—
He does not chide nor drive;
And where He leads, this shepherd good,
To follow will I strive.

He leadeth me—O precious words—
Through all the care-filled day;
In pastures green, by flowing streams,
Along His chosen way.

He leadeth me—O joyful words—
Through every trying hour;
Though steep the path, my feet slip not,
Stayed by Love's gracious power.

He leadeth me—what strength'ning words—
Beside the brink of woe,
Until beyond the valley's cloud
I see the noontide glow.

He leadeth me—O sheltering words—
When enemies I fear;
In peace I feed upon the truth,
His voice I ever hear.

He leadeth me—O sweetest words—
My cup He fills with love
O'erflowing, and my head anoints
With blessings from above.

FROM OUR EXCHANGES.

[*British Congregationalist.*]

It is the misfortune and the penalty of a shallow spiritual experience that it cannot find, at its own heart, enough warmth to compensate it for the coldness of the world's sneers. It is the joy and the reward of a profounder spiritual experience that it can wrap itself in the robe it has itself woven when the chill winds of contempt are blowing. Live superficially, and the finger of scorn destroys your peace. Live deeply, sunk deep in those experiences wherein God speaks to the heart and the heart to God, and wherein God and the heart understand each other, and the finger of scorn has lost its power. A really profound spiritual experience is ever preparing its own shelter wherein in the time of trouble it may hide, makes man's contempt itself contemptible, and meets the scorn of the world with a higher and a holier scorn.

[*Christian Work and Evangelist.*]

The church is beginning to realize that there is a half of Christ's gospel which she has somewhat neglected in her superb enthusiasm for the establishment of right relations between the individual and God. She is beginning to feel that Christianity is also as vitally concerned with relationships of men to men; that Jesus gave laws for a society to be established on the earth; that he was concerned with justice and mercy being made the laws of state and city. In fact, the church is coming to see that half of Christianity is concerned with the practice among men of the law of love, and the redemption of society as well as of the man who is a part of it. With this growing conception of the gospel a new enthusiasm of humanity is taking possession of the church, and she is beginning to realize the neglected side of her Master's teaching.

[*Examiner.*]

To correct both the wrongs and the evils of the world is Christian duty, aye, is human duty regardless of Christian profession or possession. To cure them both at one stroke calls for the putting of the spirit of righteousness, love, and helpfulness into the hearts and minds of all the people. The revival and extension of practical Christianity, and this alone, will cure either or both. The great interest and need of the world is that the kingdom of God, the heavenly Father, may come here and now, so that His will shall be done in earth as it is in heaven. Working at this is the greatest and best business of the individual Christian, and of the churches, and of all combinations of men.

[*Churchman.*]

The application of the gospel to national and international life is no impossibility. The incarnation has a meaning for peoples and nations just as it has a meaning for the individual. The Christian churches need to realize in action that the incarnation has also a meaning for them.

[*Christian Register.*]

There is no place so mean that a soul cannot lift itself by thought and aspiration to a world of hope and promise, and enter upon that line of light and glory into communion with the purest and best.

[Rev. C. A. S. Dwight in *New York Observer.*]

No man can be wise with a wisdom for the times who, while holding fast that which is good, does not open his soul in aspiration toward that which is better.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50; six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

A number of new Pamphlets and Reprints have recently been published by the Society and these will be found listed in the advertising columns on the opposite page.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid. In the Greater Boston postal district the MONITOR will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The United States, before giving its consent to the transfer of the sovereignty of the Congo Free State to Belgium, asks information on the following principal demands: A specific assurance from Belgium that she will respect the Brussels act of 1890, of which the United States is a full signatory, and especially Article 2, providing for the humane treatment of the natives; the abolition of the labor tax; the restoration to the natives of land formerly held by them according to native communal customs; the institution of the freedom of trade guaranteed by the treaty of 1891 between the United States and the Congo; an agreement to submit to arbitration economic and commercial questions which shall prove especially difficult of settlement otherwise.

The Senate committee on the judiciary has reported adversely the bill of the National Civic Federation to amend the Sherman anti-trust law. This action makes it plain that there shall not be interjected into the anti-trust law provisions which would authorize leniency to be granted by the Interstate Commerce Commission and the Commissioner of the Bureau of Corporations in certain cases, including railroads and organized bodies such as farmers' associations and labor organizations.

A bill has been introduced in the Senate which provides for the construction, at a cost of $1,750,000, of a large structural material testing machine, similar to but more than forty times as large as that at the Watervliet arsenal, to be capable of giving and weighing loads of tension up to 11,000,000 pounds and loads of compression up to 22,000,000 pounds on specimens up to one hundred feet or more in length. The bill carries an appropriation of $200,000 for a building for the machine.

The unification of the transit system in Boston and vicinity was the subject-matter of a preliminary hearing recently before the legislative committee on metropolitan affairs. It was proposed to establish a permanent metropolitan public service commission, which should succeed the Boston transit commission, and that the cities and towns comprised in the metropolitan parks, water, and sewerage districts shall be known as the metropolitan public service district.

The Supreme Court of the United States has denied the application of the Consolidated Gas Company of New York for a rehearing. The case involved the validity of the 80-cent gas law and was recently decided against the company and in favor of the law. The company will be obliged to refund to its patrons rebates amounting to about $9,000,000.

The United States Supreme Court, in a recent decision at Washington, for the first time laid down the broad principle that an illegal combination in restraint of trade practically has no standing in court when it attempts to enforce contracts that are made in connection with such illegal agreements.

The President has signed a proclamation which adds more than 330,000 acres to the Cleveland National Forest in Southern California, and eliminates some land not considered suitable for national forest purposes. After these changes the forest has a present area of more than 1,573,000 acres.

An amendment to the sundry civil bill, appropriating $200,000 to enable the United States to participate in an international exhibition at Brussels in 1910, has been favorably reported to the Senate from the committee on foreign relations.

The Bureau of Corporations is investigating the United States Steel Corporation, the tobacco trust, the oil industry, lumber industry, International Harvester trust, and cotton exchanges.

President Diaz of Mexico has accepted the invitation of President Roosevelt to send delegates to attend an American conservation congress to be held later in Washington.

In round numbers the cruise of the battleship fleet, when it is finished at Hampton Roads on Feb. 22, will have cost the American people $20,000,000.

International.

Progress is being made in the work of the closer union convention, which has as its objective a union of the four British colonies in South Africa, the Transvaal, Cape Colony, Natal, and the Orange River State, the whole to form a great federation. A compromise has been reached on the question of the location of a capital of the federation. The Federal Parliament will meet at Cape Town, while Pretoria will become the administrative capital. The compromise as first suggested provided for making Bloemfontein the headquarters of the judiciary.

Under the new schedules of tariff duties proposed by France the maximum tariffs under which American products are imported into France have been increased on an average of twenty per cent, whereas the minimum rates under which the products of European countries are imported are increased only five per cent.

The Canadian Parliament, in recent sessions, discussed the proposal by President Roosevelt that the United States, Canada, and Mexico shall cooperate for the conservation of the natural resources of North America. The leaders of both parties expressed hearty approval of the plan.

During 1908 France imported foodstuffs to the value of £36,750,000; raw materials, £160,750,000; manufactured articles, £46,000,000. She exported foodstuffs to the value of £20,500,000; raw materials, £59,000,000; manufactured articles, £104,750,000.

A Mexican National Democratic party has been organized in Mexico City, upon the suggestion of President Diaz. A declaration of principles was adopted. This gives a strong opposition party.

The president of the Chamber of Commerce of Chihuahua, Mexico, is promoting the building of an extensive system of long distance telephone lines in that state.

The French government will probably pass a bill to oblige French navigation companies to install wireless apparatus on all their ships above a certain tonnage.

The Panama-United States treaty has been ratified by the Assembly and signed by President Obaldia.

The international opium conference, arranged by the United States, opened at Shanghai Feb. 1.

The value of the commodities purchased by Great Britain in France in 1907 was £36,040,000.

Industrial and Commercial.

A British publication states that a new syndicate has established a factory in London and is placing upon the market a new form of leather, for which it is claimed there is a big future, and which it thus describes: The leather is submitted to a tanning process of the chrome variety, which preserves it; rubber solution is then worked into the interstices, rendering the hide thoroughly waterproof. The elasticity of the rubber permits of perfect flexibility and extraordinary toughness of some of the skins, especially of rabbit, goat, and sheep skins. Tests have been made for motor tires, soles for boots and shoes, pump washers, machine belting, miners' boots, etc. This new material, it is thought, may also prove useful for motor and cycle tires, as it is almost impossible to puncture it, while it is said to be much more resilient and waterproof than ordinary leather.

With a capital of $500,000 the Gulf Coast Gas and Oil Company has been organized, with offices at Shreveport and Gibsland, La., to sink eight wells in Bossier, Webster, Bienville, and Jackson parishes, La. The new company intends to construct a pipe line to New Orleans and supply natural gas for eighty cents, against $1.15 now charged by the New Orleans Gas Light Company.

Eight thousand bales of Philippine hemp, valued at $25,000, have arrived by steamship from Manila at New Orleans, destined for the International Harvester Company at Chicago in the manufacture of binding twine. It is thought that the hemp can be used as a substitute for Mexican sisal, which heretofore has been used exclusively.

At the annual stockholders' meeting of the Detroit and Cleveland Navigation Company and the Detroit and Buffalo Steamship Company, the recently announced $4,000,000 merger of the two companies by the purchase of the latter by the former was ratified.

Application has been made for a charter for the Pittsburg Steel Products Company, which will become an independent and aggressive rival of the United States Steel Corporation.

On Jan. 20 idle cars in the United States and Canada amounted to 311,664, or 21,355 fewer than on Jan. 6.

General.

Five thousand cats have been shipped from Chicago to Japan to assist in ridding that country of its rats.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE EXCUSE-MAKING HABIT.

CLARENCE W. CHADWICK.

THE excuse-making habit is hoary with time. According to Biblical accounts Adam and Eve were the first to plead "extenuating circumstances." Adam began by excusing himself for hiding from the presence of the Lord, and Eve blamed a so-called talking serpent for her misdemeanor. Having partaken of the forbidden fruit of the tree of knowledge of good and evil, a sense of fear possessed them both, and this fear became the basis for their excuse-making. Had Adam and Eve understood the powerlessness of evil they could have protected themselves from the invasion of this mental enemy. So today, if humanity only knew enough of the Science of being, it could shut out this demoralizing tendency of human nature. As it is, mortals have almost unconsciously fallen into the habit of excuse-making.

This is true upon all planes of human existence, and nowhere more than in religion. The disinclination of mortals to comply with the demands of Truth and Love ought to convince all thinking people of something primarily wrong with human belief. So long as men and women believe the inconsistent theory that fallen mortals are God's children, the excuse-making habit will continue in full force. Not until Spirit is understood to be the sole creator of man and the universe, and man immortal and perfect, can fear be overcome. The supposition that mortality is the offspring of immortality can never usher in the reign of peace on earth and good will toward men, nor reveal that "perfect love" which "casteth out fear," because in the attempt to reconcile perfection and imperfection there will necessarily be the constant inclination to excuse every failure or mistake on the ground that God must be held responsible for it. What hope of happiness or success can be extended to the human race so long as they believe that God is the creator of evil, matter, and mortality!

The Discoverer and Founder of Christian Science in this age sounds the key-note of all moral and spiritual regeneration when she declares that "Love is the liberator" (Science and Health, p. 225). The realization of the truth of this scientific statement on the part of thousands of earnest, consecrated students of Christian Science is already accomplishing much toward arousing the world from its unchristian belief in the reality and divine sanction of evil. In the consuming fire of divine Love, fear, envy, malice, hatred, and sensuality lose their hold upon mankind, and the excuse-making habit is supplanted by the desire to know and to do the will of God. Those who love most will be the least inclined to excuse their own shortcomings. If the love of good is uppermost, as it ever must be in Christian Science, the inclination is not to shirk but to perform the duty that lies nearest the heart of man, namely, his obligations to God.

The Scientist should understand that he has but one master to serve,—Mind, not matter. An undivided faith put into daily practice leaves no room for bad habits of any kind. One who is learning to follow in the footsteps of the Master must constantly strive to correct and forsake his faults and not to excuse them. Blind faith or profession cannot bring about this practical putting off of "the old man;" it requires spiritual understanding. Christian Science is in our midst to show us how to possess this higher order of thinking. One of the most important of Jesus' commands to his followers was that they should follow this divine order in providing for even their temporal needs: but behold the tendency of countless thousands of earth's people to neglect this divine order and to make all manner of excuses for seeking first to provide in a so-called substantial manner for the material wants of mankind before becoming vitally interested in spiritual things.

"Powerful indeed is the empire of habit," some one has said. The truth of this statement is certainly exemplified in the exercise of the material wealth-accumulating proclivities of the human race to-day; but, thanks to God and to Christian Science, the tide of human thought is changing. In Christian Science the wedding feast of Love is spread for all mankind, and the call for them to partake has gone forth: "Come; for all things are now ready." As of old, the self-satisfied, those who are yielding unresistingly to the demands of the so-called physical senses, make all manner of excuses for not accepting the invitation to investigate Christian Science. Matter is claiming so much of their time that they say they cannot see their way clear to look into so intangible a subject as Christian Science. The writer once asked to be excused from writing a composition that had been duly assigned him, on the ground that he had not the time to devote to it. His professor did not consider the excuse as worthy of discussion. Knowing with the poet, that "procrastination is the thief of time," he simply said, "Go home and write your composition; you have all the time there is." The lesson has proved a helpful one since coming into Christian Science. We have all the time there is, and if we do not forget that all of it belongs to the service of one master, Mind, we shall always find time to do whatever may be rightfully required of us as faithful workers in God's vineyard.

He who is least given to making excuses is most likely to make his demonstration in Christian Science. He has learned that evil or error, no matter in what form manifested, cannot be ignored, concealed, or smoothed over, but that it must be dealt with scientifically and at once. A mistaken sense of God's forgiveness of sin has led many a poor mortal to dishonor himself and disobey God by excusing his faults instead of forsaking them. He soon learns in Christian Science that God never forgives a sin that is not forsaken and overcome. However plausible the excuse, it can never bring about reformation or regeneration. Franklin seemed to discern the futility of the excuse-making habit when he said, "I never knew a man who was good at making excuses, good at anything else." And Pope emphasized his concept of it in these words: "An excuse is worse and more terrible than a lie; for an excuse is a lie guarded." The least deviation from the basic law

Copyright, 1909, by Mary Baker Eddy

Digitized by Google

of mathematics is acknowledged to be a mistake, and an excuse will not correct it. Why should not this same rule hold good in morals and religion? A mistake is a mistake wherever made, and an excuse is not its antidote. The sooner the world finds this out, the sooner will it recognize man's God-given power and authority to "heal the sick," to prove the Science of being.

According to Bible teaching those who witness the demonstration of Christian healing are without excuse for not accepting the truth which makes such healing possible. What valid excuse can a mortal give for not wanting to serve God, good? But behold the stubborn inclination of mankind in general to hold to matter in spite of the demonstrations of Spirit which are daily witnessed in their midst! Ignorance, pride, and fear play a conspicuous part in the multiplicity of excuses that are offered for not wishing to surrender ways and means which are totally unauthorized by Jesus' teachings. These excuses prove conclusively that "the carnal mind is enmity against God." If the First Commandment were being lived up to by all mankind, according to Jesus' standard, the habit of excusing one's sins of omission and commission would soon be a thing of the past. This standard of Christian perfection has not yet been attained, however, and the god of medicine seems to have more devotees than has the living God "who healeth all thy diseases."

The true Christian knows that God, Spirit, is all-powerful, and he looks to God for help in every time of need. He has no inclination to resort to matter to cure disease after he finds out that all power resides in Mind, in good and not in evil; he could not possibly find an excuse for looking to matter for help when he knows that the help is not there. The student of Christian Science has made this discovery through Mrs. Eddy's teachings, and is profoundly grateful for this influx of spiritual enlightenment; but at the same time he has the utmost charity and consideration for those who have not yet partaken of the same blessing, even though they make the most shallow excuses for their continued devotion to the god of medicine. He realizes that his own devotion to the right way will have a silent but telling influence for good, and he rests in the thought that in due season "they shall all know me [God], from the least of them unto the greatest."

Christian Science strikes a death-blow to the excuse-making habit. The leaven of Truth is permeating every avenue of human activity where this demoralizing habit has held sway, and men and women everywhere are realizing most keenly their need of purer thought-models in order to maintain higher and more practical standards of excellence along all lines. Mistakes which were once made and excused on the part of employer and employe alike, both are now seeking to eliminate for their mutual good. Human selfishness is being laid bare, and strict business integrity being insisted upon. This awakening is greatly needed, and we cannot be too grateful for it. The future must be an era of honest Christian cooperation along all lines, wherein "the kingdom of God, and his righteousness" shall take precedence in thought, word, and deed, and the excuse-making habit be relegated to a dead past.

As Christian Scientists let us see to it that no excuse, however plausible it may seem, shall separate us from the true mental pathway of doing to others as we would be done by, thereby proving to humanity that "the kingdom of heaven is at hand." Our Leader is patiently waiting for us to go forward, and not to linger in any sense of human ease or self-satisfaction. The accomplishments of today are not the goal of Christianity, but only footsteps leading thereto. As Longfellow phrases it,—

Let us, then, be up and doing,
With a heart for any fate;
Still achieving, still pursuing,
Learn to labor and to wait.

"HOW SHALL WE ESCAPE?"

MARY E. BOVET.

MANY people, when they first begin the study of Christian Science, find themselves in discordant circumstances and in surroundings which do not seem conducive to the study and practice of Science, and yet each one has to learn that he is but dwelling in his own state of consciousness, and that the change of circumstances must come from within and not from without. This at first seems "an hard saying," and often it is not until people are prepared to accept it, and to forego their sense of self-pity, that they are at all able to lose their sense of inharmony.

We can learn much through studying the latter part of the 16th chapter of Acts, wherein we may see how Paul and Silas overcame adverse surroundings and circumstances. Their difficulties had arisen from their healing work, and the charge against them was of teaching "customs which are not lawful," *i.e.*, which violate the generally accepted beliefs of mortal mind. The multitude was against them; they were misjudged, were beaten and imprisoned and their feet thrust into stocks. Was not this to the full as terrible a plight as any of us are asked to face, and had they not as much right to yield to self-pity? But how did they meet this condition? By praying and singing praises, in such a way that the other prisoners heard them. No selfish prayer, no grumbling desire for freedom from surrounding conditions, whatever the cost to those about them, but a thankfulness which goes out to the consciousness of those around. It is this which will be found to shake to the very foundations our prisons, the "inharmonious beliefs" which "imprison themselves in what they create" (Science and Health, p. 251).

The effect of this prayer was instantaneous; as indeed a demonstration in Science always proves to be, so soon as all obstructing thought is removed. The doors were opened, their bands were loosed, even the keeper of the prison was awakened from his sleep. His first conception of the truth was that it meant destruction to him, whereas all was being transformed from the erroneous to the real, through the renewing of the mind, that it might be proved "what is that good, and acceptable, and perfect, will of God." The jailer had still his work to do, and nothing had been lost; and on realizing this he called for light and sought to find the way of salvation.

But what of Paul and Silas? Having made their demonstration of freedom, how did they use it? By quitting at once their surroundings? No, not till they had established the truth there. There was no longer any opposition to their departure, but it was not fitting that they should depart in darkness. So they tarried till the day had fully dawned, and in so doing they gave those around them the opportunity to make reparation, and all were together able to eat of the heavenly manna, with rejoicing. Neither, when the time came to do so, did the apostles depart as prisoners, or under any cloud, but all was done decently and in order, and in accord with law. It was the necessary consequence of abiding by law (the law of liberty) that they should go free, and it must be because of their true status, and not because of any concession on the part of those who had violated the apostles' rights as free-born citizens.

Thus may we learn a lesson as to how we may be freed from any and every kind of bondage, and freed according to the "perfect law of liberty" from what seems to imprison our feet in the stocks, so that it may be said of us also, "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!" This will not be accomplished merely by longing and wishing, or by feeling that it cannot be scientific for us to have this or that

Digitized by Google

to endure; rather will it be done by reversing the sense testimony, by first praying that we may have the Christ-mind, which will then enable us to sing praises to God right where we are, and with such good will and cheerfulness that our fellow-prisoners, who have not the comfort we possess, may hear and listen and may be loosed with us. Let us not forget that those whom we bind on earth are bound (that is, to human sense); and that those whom we loose on earth shall be loosed, and so enter with us into that heaven,—that freedom which is the joy of our Lord.

We may be sure that Paul and Silas, as they sang, were not so much concerned as to how they were to get out of the prison, as they were joyful in their knowledge of the omnipresence and omnipotence of God. They had learned the meaning of the psalmist's words, "If I make my bed in hell, behold, thou art there." They were not indulging in a sense of soreness or constraint, but were rejoicing in and declaring their persuasion, as Paul afterward expressed it, "that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

When we come to have this freedom of thought wherever we may be, we shall not be in a hurry to leave our surroundings till we are quite sure that we have finished all the work which it may be our privilege to do there, and thus we shall assuredly come to sing with the psalmist, "I will be glad and rejoice in thy mercy: for thou hast considered my trouble; . . . and hast not shut me up into the hand of the enemy: thou hast set my feet in a large room."

THE UNDIVIDED GARMENT.

ALTA P. HOWELL.

THE story is told of a man who had been cast away on an island inhabited by a barbarous race, that he pitied the natives, whose crude conditions expressed neither practical intelligence nor sense of beauty, and whose energies were wasted in the mere propagation of a mean existence. At first the inhabitants eyed him with wonder, for they had never seen his like before, and they were especially curious as to the (to them) peculiar garments in which he was attired. Noticing this interest on their part, he tried to tell them of his own country,—of its looms and furnaces, its comforts and opportunities, and of the king who governed there in wisdom and love. At last, grown suspicious of his motives, the natives slew him, and stripping off his clothing, subjected it to a close examination. Just what they expected to accomplish by this, or whether they thought the garments were endued with some magical virtue, is not quite clear; but at any rate, not being familiar with the use of the different garments, their attempts to don them brought both discomfort and ridicule. After vain attempts to put them on, upside down and inside out, the natives finally concluded, in their ignorance, that such garments were altogether inconvenient, and unsuited to any one save the wondrous stranger. That which they had acquired wrongfully brought them no benefit.

There was once a man who, clothed in the undivided garment of light, was sent to a world whose inhabitants were dwelling in the darkness of ignorance and sin. He pitied these people, and in his loving compassion told them of the wonderful home and loving Father he had left for their sakes,—blessings in which they should share if they would but obey his teachings. Not understanding him, the inhabitants slew that man also, and spread his robe before them. Naked, they understood not its use. Blind, they discerned not its beauty. The "Ancient of Days" had woven it in the loom of wisdom, and it was without seam, so that division was impossible without desecration. Its warp was truth, and each thread ran its undeviating course. The woof was love, winding in and out, back and forth, binding each portion in closest weave until all was perfect and instinct with beauty. Its name was "The Word of God," and no man might take from or add to it without marring it. Nevertheless, this garment was torn by cruel hands into shreds and divided among the spoilers. Rags from its truth were passed about, and handed down from father to son, as relics of a great wonder, until the soiled and desecrated scraps were in time scattered over the whole earth.

To acknowledge the Word of Truth with an "if" or a "but," or in any way to deny its universal applicability and potency, is to rend its completeness and deprive oneself of the joy of being clothed upon with righteousness as with a garment. Forty years ago a woman's quickened thought saw this. She felt the import of this Word in her heart, and with patient effort she gathered up its fragments, with tireless patience pieced them together again, and washed the finished product with her tears. When she saw its adjustability to the need of every age, she wrote down her sense of it and its redemptive uses in a wondrous book which all may read, and the healing truth thus discovered and expressed has become a blessing to all nations.

THE HOLY CITY.

LUMAN A. FIELD.

IN Science and Health we read that "the one important interpretation of Scripture is the spiritual" (p. 320), and the illumination of the Scriptures which results from the spiritual interpretation of even one word is of sufficient importance to repay us for hours of careful study, and the hidden treasures thus revealed are found to be of incalculable value to the earnest seeker after righteousness. Throughout the Bible there are many passages in which it is plain that the word city is used in a spiritual rather than a material sense,—such texts as, "He [God] hath prepared for them a city;" "For here we have no continuing city, but we seek one to come;" "I John saw the holy city, . . . that great city, . . . descending out of heaven from God;" and, "By faith Abraham, when he was called to go out into a place which he should after receive for an inheritance, obeyed; . . . for he looked for a city which hath foundations, whose builder and maker is God." These texts cannot be properly understood until we apply to the word city its spiritual meaning.

On pages 572 to 577 of Science and Health, Mrs. Eddy has given a very clear explanation of the "holy city," showing us that its true significance is "spiritual consciousness," —a consciousness possible here and now, and coming to us from the divine builder and maker. With this interpretation the passages quoted are not only very beautiful, but entirely reasonable, and Abraham's quest is seen to be such a practical one as fully to justify the great sacrifices involved in the search. "For he looked for a city [spiritual consciousness] which hath foundations, whose builder and maker is God." He looked for a pure, abiding, and peaceful state of being such as is created and preserved only by the divine Mind, and the assurance is that God "hath prepared for them [for such seekers] a city [spiritual consciousness]."

In the light of this spiritual interpretation, the description of the holy city given by John in Revelation glows with the beauty of inspiration, which is both purifying and healing. "He . . . shewed me that great city [spiritual consciousness], the holy Jerusalem, descending out of heaven from God, having the glory of God. . . . And the city had no need of the sun, neither of the moon, to shine in it: for the glory of God did lighten it, and the Lamb

Digitized by Google

is the light thereof. . . . And there shall in no wise enter into it [this spiritual consciousness] any thing that defileth, neither whatsoever worketh abomination, or maketh a lie." John further describes this "holy city" as having twelve gates, and "every several gate was of one pearl." Since the pearl is a symbol of purity, and Science and Health (p. 241) tells us that "the corner-stone of all spiritual building is purity," how significant is John's later statement: "Blessed are they that do his commandments, that they may have right to the tree of life, and may enter in through the gates [purity] into the city [spiritual consciousness]."

With this interpretation of city in mind, how appropriate is the hymn, "I'm a pilgrim, and I'm a stranger," in the Christian Science Hymnal, and which closes with the words,—

> There's the city to which I journey;
> My Redeemer, my Redeemer, is its light!
> There is no sorrow, nor any sighing,
> Nor any tears there, nor any dying.

Neither should we "tarry" in our journey, for just in proportion as we approach this "city of the living God, the heavenly Jerusalem," shall we find it to be indeed a "city of refuge" from all the ills of human belief, a "quiet habitation" wherein "the inhabitant shall not say, I am sick: the people that dwell therein shall be forgiven their iniquity." "Violence shall no more be heard . . . wasting nor destruction within thy borders; but thou shalt call thy walls Salvation, and thy gates Praise. . . . and the days of thy mourning shall be ended."

BREADTH.

WILLIAM HART SPENCER.

THE word "breadth," as descriptive of a mental attitude, is commonly accepted to mean that liberal and withal judicial state of mind which, through a larger view and more generous interpretation, is freed from the limitations imposed by bias. The majority of people, unwittingly or otherwise, are inclined to consider themselves in this category, as the element of pride indicates such a state of mind to be desirable, and self-flattery seems indigenous to the human family. It follows, therefore, that they designate those who agree with them as "broad-minded;" those who think differently are considered "narrow."

Pondering this phase of human nature, the question comes, What is "narrowness" or "breadth"? "Narrowness" has its place. It is proper and right, under certain conditions, to be narrow, and to allow our path to be circumscribed. The results desired should govern our mode of progress. The pureness of a mountain brook is due to the restraint imposed by its rocky banks, which restrict its activity to a forward movement only. Later on, it descends to the plain: the restraint is removed, and it flows out over the level. Lacking the restraint, it has indeed become "broad," but it has also become sluggish, and instead of a pure and sparkling stream it is now only a stagnant pool, with but little life and harboring corrupt growths. It has become "broad," but at the expense of its real life.

If we aim to do our life-work well, we are striving to uncover and overcome error, knowing that while we are working out our own salvation, it is, as the apostle tells us, "God which worketh in you," the prize set before us being that we may obtain to that Mind "which was also in Christ Jesus." In the endeavor to work out life's problem it is necessary to submit to guidance and control, if the current of our mentality is to run clear and sweet. Some of us in times past have been wafted hither and thither by every breath of doctrine; we thought we searched faithfully, but like Noah's dove we found no rest. We ran free for a while, but without definite guidance or control, and while to our thinking there surely was a reason for this thing of life itself, it was hidden; and in despondency we could only say, "Kismet!"

Now we have come to know that the seeming limitations —our limitations—were not God's, for a "little book" has indeed become the "Key" which has unlocked the door to many a treasure in the Scriptures, and best of all, shown us how, by appropriation and assimilation, to make these treasures ours, and we are convinced that what we have gained is only an earnest of the riches still to be unfolded, for we read in the Scriptures that "faith is the substance of things hoped for, the evidence of things not seen." Happily we now realize, in a measure, that we are governed by laws which are broad; broad as the divine Love of which they teach, and we are thankful that, in proportion as we submit ourselves to this guidance and control, they serve as a bulwark,—high banks on either side, directing and controlling our stream of life. And so, as we go forward in the "narrow path," we hear a voice saying, "This is the way, walk ye in it."

OVERFLOWING.

JOHN F. FORTH.

ONE of the most cherished recollections of the writer is that of listening to a sermon from the text, "If any man thirst, let him come unto me, and drink. . . . and out of his belly shall flow rivers of living water." In the course of the sermon the following incident was related by the preacher. When a young man he had attended a religious conference, where he heard many good things; but of these, only one remained with him, viz., a phrase used by a layman in a prayer asking for the inflowing of the grace of God. It was "Fill us, Lord! We cannot hold much, but we can overflow a good deal."

Who of all people have more right to overflow with gratitude than have Christian Scientists? Among them there are many who have been impelled to study this Science in consequence of the healing of a loved one who had been brought by years of suffering to the brink of the grave. Who that has felt the change from heartache to glad surprise, at the indisputable evidence of health restored, can fail to overflow with gratitude, and to do so at the right time and in the right place, namely, the Wednesday evening meetings, the opportunity wisely provided by our Leader, that the overflow may not run to waste, but that seekers after Truth may find the way of health and holiness. With gratitude to God, and a loving desire to help others prompting our words, we shall reflect that light which leads the weary wanderer home to a Father's love. As a familiar hymn says,—

> It needs the overflowing heart
> To give the lips full speech.

[Written for the *Sentinel*.]

"LORD, I BELIEVE."

GERTRUDE RING HOMANS.

"LORD, I believe; help thou mine unbelief"
In every enemy, sin, fear, and grief;
That monster shadow, death—he fights as chief!
"Lord, I believe; help thou mine unbelief!"

Truth's clarion brings Thy host to my relief,
Making each battle with the foe more brief.
In this fierce warfare grant me faith as fief;
"Lord, I believe; help thou mine unbelief."

SELECTED ARTICLES.

[From an Editorial in the *Observer*, Hoboken, N. J.]

Between denominational churches letters of dismissal from one congregation to another, or one denomination to another, are matters of frequent occurrence. Presbyterians, Methodists, Baptists, and other Protestant denominations grant these letters, without question, upon formal application. Why draw the line at the interchange between the older established churches? The Christian Science church is new, and its articles are not altogether in accord with those of some of the older churches. But, if a member of one of the older churches wants to affiliate with the new church, we believe he should be aided in his determination. That he makes application, openly and above board, for a letter of dismissal, shows his honesty of purpose.

Every church should be big enough, and broad enough, to receive or dismiss members upon demand. It will not be long before this will be done fully and freely, and the incoming or outgoing member will be honored for the faith within him which prompts the change. Churches are meant to be the means of man's spiritual and moral development; but no man can develop along these lines when held in bondage to a faith which fails to give him the absolute comfort he desires. A man should be allowed to worship God according to the dictates of his conscience, provided his methods do not morally pervert himself or those with whom he comes in contact. No one can accuse the Christian Science church of moral perversion of any one. As a matter of fact, it includes many of our most prominent men and women, and has proven itself an influence for good which cannot be overestimated.

[Charles K. Skinner in the *Evening Recorder*, Albion, Mich.]

A clergyman is credited with taking the following text: "For all the Athenians and strangers which were there spent their time in nothing else, but either to tell, or to hear some new thing;" and then likening Christian Scientists and others to these Athenians, because they agree on one thing, viz., the "healing of the body." Now, he may think this is right, but I wonder if Paul were to step into our brother's church, and then into the modest little rooms of the Christian Scientists, listen to the sermon aforesaid, and then to the services and heartfelt thanksgiving to God in the latter, which he would consider nearer to Christ's teaching. The burden of the Master's word was, "Love one another," "Judge not, that ye be not judged," "Go ye into all the world, and preach the gospel," "Heal the sick, . . . cast out devils [evils]." Will our brother tell us how near he thinks his reported sermon came to Christ's teachings? If it does not compare in some degree, it might be well to consider who it is that spends his time in telling "some new thing."

The critic is disturbed because a Christian Science lecturer used the words "and healing" in connection with another saying of Jesus, and would have his people think that it was gross error to believe that Jesus thought the healing of the body was requisite, whereas his greatest lessons of right thinking and living were from his healing works. To one he said, "Sin no more, lest a worse thing come unto thee." Never was the Master's condemnation of the sin of hypocrisy shown more clearly than in the case of the woman taken in adultery. Her accusers, waiting for the signal of condemnation to put her to death, saw their own guilt written in the sand by the fingers of their own selected judge. When the words were spoken, "Neither do I condemn thee: go, and sin no more," not an accuser was present.

One remarkable instance which shows that Jesus considered his works of healing important, was his reply to John's disciples: "Go and shew John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them. And blessed is he, whosoever shall not be offended in me." If our brother would acquire the habit of attending the Christian Science testimony meetings, he would learn that gratitude is expressed for the spiritual healing above all else. The fact that Paul had a fleshly infirmity until his death, does not prove that he did not attempt to get rid of it, for his own words are proof that he had made great effort in that direction. To be consistent, our critic should certainly refrain from any effort toward bodily comfort on his own part. Consistency should be seen not only in words, but in living.

Had the reverend doctor been as anxious to learn the truth—which Christian Science teaches—concerning redemption and regeneration from sin, and that being every whit whole means body as well as mind, he would cease criticizing the earnest work of those who are helping to reform the drunkard, reclaim the sinner, and comfort the sorrowing, in Christian Science.

[Editorial in the *Universalist Leader*.]

Suppose that the government should demand that not only beef and beans must be true to the label, but that all labels must tell the truth! What trouble there would be with some political and religious labels. It would require the invention of an automatic shifting-standard label to mark some conspicuous people! Religious labels used to stand for something; when a man pinned orthodoxy on his coat, as once many had the courage to do, it stood for what was inside the man, but now the label is pinned inside, instead of outside the coat, or tucked away securely in the innermost compartment of his pocket-book, or effectually hidden in the family Bible, and is used only as a sort of credential when required, and even then explained as the official and not an actual inventory of faith. Who can tell us what is "orthodox"? Or almost anything else doctrinal today? A dozen men holding officially the same label, hold really a dozen different views, yet all are in good standing and all are unquestionably sincere. But what does the label stand for? And is it really not quite as unethical, if not as illegal, to label the modern, up-to-date minister "orthodox," as to label oleomargarine "butter"?

[Editorial in the *Los Angeles* (Cal.) *Record*.]

In the city of Boston the initial step has been taken in a movement that promises to be of great interest to the makers and the readers of newspapers the world over. This step was the launching of a daily paper that is to be absolutely clean in every way, and to avoid all sensational exploitation of scandals and news of crime that might tend to degrade rather than uplift the world.

The name of the new paper is *The Christian Science Monitor*, and it is published by The Christian Science Publishing Society. Its mission is to publish the real news of the world in a clean, wholesome manner, devoid of the sensational methods employed by so many newspapers. There is no exploitation or illustration of vice and crime, but the aim of the editors is to issue a paper that will be welcomed in every home where purity and refinement are cherished ideals. The *Monitor* contains, in addition to the usual news feature, special departments which make it appeal to good men and women everywhere who are interested in the betterment of all human conditions and the moral and spiritual advancement of the race.

The *Monitor* is not being conducted by a staff of rabid reformers, who would revolutionize things in general at one fell swoop, but by some of the most able newspaper

Digitized by Google

men in the United States—men who have had their training on the best and biggest papers in the country, and who know how to make good newspapers. It has a staff of which any paper might well be proud. It covers local news fully, and it is obtaining its telegraph service from the United Press, the same press association that serves the *Record*.

Undoubtedly the newspapers of today publish much matter that, while it may not degrade those who read it, has slight tendency to uplift them. Scores—yes, probably hundreds of papers, would be glad to eliminate such matter, but the newspapers of today are published for pecuniary gain, and the average daily paper that would eliminate stories of crime, or minimize them to the last possible degree, would undoubtedly see its circulation dwindle, its advertising patronage fall off, and a big balance on the wrong side of the ledger.

Judging from a circulation standpoint, newspaper readers, the great mass of them at least, want embellished stories of crime and wrong-doing as well as political and national news and uplifting features. That the world might be a better world if such were not the case, cannot be denied, as such a condition has never prevailed and will not prevail until the readers of newspapers are educated to want to read stories that will be for their advancement mentally, morally, spiritually, intellectually, rather than lurid tales that fire their imaginations and arouse their passions. And education is expensive. Newspapers are run to make money, at least most of them are, and the result is that most of them are going to handle the goods, or stories, for which there is the greatest demand.

The Christian Science Monitor is unlike the ordinary paper, in that it . . . will not have to work long and hard to build up a circulation that will put it on a paying basis. Inasmuch as it is a paper that will be of interest all over the world, its circulation is not merely local, but will appeal to advertisers from the very start, and should be a profitable venture. It is well that this is so, for the *Monitor* is starting on a campaign that many newspaper-makers have dreamed of, and if it succeeds it will mean better newspapers throughout the world. Few editors like to print matter that lowers the tone of their papers, but sometimes they have to. If the *Monitor* so educates the people that such matter will not be in demand, it will do a good work, and every true newspaper man wishes that it may succeed in its endeavor.

[Frederick Dixon in the *Lee Journal*, Lee, England.]

The clerical critic represented Christian Science as "affected mostly by the well-to-do, idle, and luxurious living class, who overate, overdrank, and overslept themselves, and never doing any work, made themselves ill." Now, this is the strangest perversion of facts that can well be imagined. Even in the West End of London, where if anywhere it would be true, it may be said with perfect safety that ninety-five per cent of the Christian Science church members are hard workers at the ordinary avocations of life. Outside London, the main strength of the movement lies in the manufacturing cities and the great seaports, where it certainly cannot be said that the idle "most do congregate." It shows the recklessness of the critic's method that he should have permitted himself to make such a statement as this. Let any one go into the meetings in such places as Warrington and Rochdale, Liverpool and Hull, and he will find that there are "more things in heaven and earth" than are dreamed of in his philosophy.

Then the critic went on to describe Christian Science as pantheistic. Now pantheism is the doctrine which "identifies mind and matter, making them manifestations of one absolute being." This is the doctrine, as Huxley once showed, of the philosophic materialism and idealism of today. It was the logical result of the teaching of Bishop Berkeley in the eighteenth century, as it is the logical result of the teaching of Professor Ostwald, to whom Oxford recently awarded a gold medal, but it is the very antithesis of the teaching of Mrs. Eddy, who denies alike the reality of the phenomenon matter, and of the noumenon which Berkeley described as mind and Ostwald describes as energy. If, however, this critic accepts the infinity of God and the reality of matter, it will puzzle him to escape the net of pantheism. Neither is it very safe to describe Christian Science as blasphemous. There is in the Westminster Library a copy of Science and Health, the fly-leaf of which is endorsed in the handwriting of one of the Abbey's great deans, as presented by Arthur Stanley. Now no doubt Dean Stanley knew, quite as well as our critic, that the teaching of that book was not in conformity with the teaching of the Church of England, but I think he knew something else, which our critic is in danger of forgetting—that you cannot define Christianity in a dogma, and that the great apostle to the Gentiles knew what he was talking about when he wrote the thirteenth chapter of his first epistle to the Corinthians: "If I speak with the tongues of men and of angels, but have not love, I am become sounding brass, or a clanging cymbal. . . . But now abideth faith, hope, love, these three; and the greatest of these is love" (Rev. Ver.).

So far from Christian Science being blasphemous, it is attempting to show that, because Jesus was the way, the healing of what Whittier termed "the seamless dress" is as possible today as it was in his lifetime. It is because time does not alter truth that Mrs. Eddy has been able to show Christian Scientists that they may begin, however feebly, to follow Jesus, not only in the conquest of sin and sorrow, but of disease and pain; and Christian Scientists will go on steadily and patiently striving to walk the way he trod, never attacking those from whom they differ, but seeking for understanding with which to demonstrate the truth of their theology, confident that Christ Jesus was the way, and that they can follow him.

[Herbert M. Beck in the *Arkansas Gazette*, Little Rock, Ark.]

The critic declares that "the therapeutic benefits which sometimes result from this treatment do not establish the correctness of the theories or doctrines promulgated by that cult." Well, it certainly does not prove the incorrectness of those "theories or doctrines." In Mark 16 : 20, it is said the Lord proved his "word with signs following." When one offers me bread and says, "Eat of it, it stayed my hunger and will stay yours," and I eat of it, and my hunger is stayed, I expect to be justified in saying the bread did it. In the work of Christian Science, bodily healing is, to be sure, but a part; an incidental and small part, but an essential part. Christian Science is making God, in His loving and omnipotent character, known now to man; and is making man, in his character as perfect image and likeness of God, known to himself.

The power to heal in Christian Science is not a peculiar power possessed by Mrs. Eddy, as the words of our critic would seem to imply, any more than the power to add, subtract, and multiply is peculiar to her, except for this, that she alone has had the spiritual grace to behold its wonders and the marvelous courage and singleness of purpose to fight single-handed a battle for the race.

THE LECTURES.

DENVER, COL.

Christian Scientists of Denver and Colorado, with thousands of others thirsty for actual facts regarding the doctrine which in the short space of time since its promulgation has penetrated every corner of the globe, crowded the Auditorium last evening [Dec. 4], until there were fully nine thousand people assembled to hear Bicknell Young lecture on the teachings and benefits of Christian Science. The audience was the largest ever addressed by the noted speaker, and was the second largest ever gathered together to hear the doctrine of Christian Science explained. From many parts of the state came men and women, eager to hear the lecturer set forth the fundamental teachings of Christian Science. Mr. Young was introduced by the Hon. A. J. Spengel, and for an hour and a half held the close attention of his audience, enlivening his address with flashes of wit which met with applause. The speaker dwelt with the utmost reverence on the subject of Mrs. Eddy's strength, humility, and persistence in discovering and teaching Christian Science at a time, he said, when she incurred nothing but ridicule and hostility from the established forms of medicine and religion. He paid her the highest tribute as a unique and noble figure in the history of modern times, outliving all the contumely and resistance which evil always offers to good. In introducing the speaker Mr. Spengel said:—

As I look over this vast audience assembled here to-night, the involuntary question presents itself: What is the magnet which can thus lure from their homes and accustomed walks so great an audience of the best citizenship of Denver and of Colorado? I have no doubt but many and divers answers would and can be made to that query, but, when all is said and done,—when you have each answered the question to your own satisfaction,—does not the one great fact obtrude itself above all others, that the thinking world, the restless, longing, earnest men and women of this age, unwilling to rest their all upon blind faith alone, are eagerly, conscientiously, aye, prayerfully, seeking for more light?

Progress is the watchword of the hour! We felicitate ourselves that we are living in the most progressive age of the world's history. We have ceased to believe anything impossible. We decline to manifest surprise or wonder. Forces which have lain dormant for centuries are being discovered and utilized for man's betterment and his comfort.

If, then, an approving world spurs on to greater ambitions and greater achievements in lines material, by what logic should we deny or discourage those ardent thinkers who are devoting their talents and inspirations in that greater realm? that realm which means so much to you and to me—the realm spiritual! To the great credit of the United States, which led the way, and to the credit of the balance of the civilized world which followed in our wake, tolerance has become the chief attribute of the Christian world. Bigotry still flourishes in many places, and now as of old is blinded by custom and prejudice, but the great majority of the thinking world are ready and anxious to lend a listening ear.

Practically fifteen centuries elapsed between the birth of Christ and the discovery that the world was round; that it revolved on its axis and rotated around the sun. And yet neither the lapse of time nor the vigorous denunciations of the then new theory controverted a proven fact. Is this Science, of which we are to hear to-night, a proven fact? Thousands upon thousands of men and women throughout the civilized world will answer "Aye!" in one grand and thankful acclaim. Are we on the threshold of a new understanding and a new life? Many of us are prone to believe that we are. Great things have been achieved—greater are still to come.—*Denver Times.*

NEODESHA, KAN.

A large and interested audience at The Blakeslee last night [Dec. 17] listened to an address on Christian Science by the Hon. William G. Ewing of Chicago. He was introduced by C. B. Ratzlaff of the local church, who said in part,—

The subject of the lecture is one that is engrossing the thoughtful attention of millions of the human race, many of whom have been raised from sick and dying conditions and are now rejoicing in health and strength and in a fuller and a more satisfying knowledge of God, "whom to know aright," as our text-book teaches, "is Life eternal" (Science and Health, Pref., p. vii.). As Christian Scientists we have a reason for our faith; a reason which is not founded on the sand of human speculation but on the enduring rock of practical results, and it is the privilege of every man to know for himself whether Christian Science is of God.

Christian Science has healed the sick after all material remedies had failed and the physicians said there was no hope. It has broken the shackles of sin and made men free. It has given joy for sorrow, hope for despair; lifted heavy burdens and dispelled the gloom of the darkest night. What Christian Science has done for many thousands of its loyal and loving adherents it can do for all mankind; yea, even greater blessings are in store, for God's goodness is infinite and His love universal.—*Neodesha Sun.*

KINSTON, N. C.

Sunday afternoon [Jan. 3] Francis J. Fluno, M.D., of Oakland, Cal., delivered an address on Christian Science to a large and attentive audience in the court house. The lecturer was introduced by H. C. V. Peebles, who spoke in part as follows:—

We have assembled here this afternoon to listen to a lecture on Christian Science, a science as old as creation, coexistent with man. Jesus healed the sick, raised the dead, fed five thousand with five loaves of bread and two small fishes. Some will say that Jesus could perform these good deeds because he was God incarnate and of divine origin. You, my friends, created in the image and likeness of God, are also of divine origin. Go with me for a moment through the Old Testament. The advent into the world of Abraham, Elijah, and Elisha was in the same manner as yours and mine; they were men of the same nature and like passions as you and I. Nine centuries before Christ was born, Elisha through prayer caused the widow's cruse of oil not to cease flowing, and enabled her, by the sale of the oil, to pay a debt and to keep her two sons out of bondage to the creditor. Elisha also raised a child from the dead and restored him to his mother. Ten centuries before Christ we find Elijah, through prayer, raising the dead and performing other good and wonderful deeds, and about five thousand years before Christ we find that God heard Abraham's prayer and "healed Abimelech, and his wife, and his maid-servants." Divine healing was practised for about three centuries after Jesus was crucified, but as men became more material, spiritual healing was finally lost sight of.—*Daily Free Press.*

What miracle of weird transforming
Is this wild work of frost and light,
This glimpse of glory infinite.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"THE TONGUE OF THE CRAFTY."

FROM time to time there come to us from readers of the *Sentinel* letters which tell us that the cities in which the writers reside have been visited by itinerant impostors who, upon the strength of such plausible tales of destitution as are best suited to their purpose, have succeeded in victimizing Christian Scientists by borrowing money from them.

Some years ago we used to publish these letters in the *Sentinel,* or by giving descriptions of the impostors and their particular modes of enlisting sympathy endeavor to warn Christian Scientists against them; but finding again and again that these efforts to save our readers from being imposed upon were largely ineffectual, the conclusion was reached that space in our crowded columns was too valuable to be thus wasted, and that some other method must be adopted if such fraudulent practices were to be stopped.

After mature reflection we now feel justified in advising the readers of the *Sentinel* to lose no time in turning these swindlers over to the local police authorities. Perhaps this advice may seem harsh to some of our friends, but when it is remembered that at least two of these frauds—the man whose horse (which he never possessed) has been stolen, and the man who asks for his railroad fare to another city where employment is waiting for him (but which he never seeks)—have for at least a decade been getting their living by imposing upon tender-hearted Christian Scientists, there will be little sympathy with more lenient methods. Mawkish sentimentality in such cases would simply perpetuate the swindle by leaving the trickster free to victimize others.

Christian Scientists should be and are ever ready with open purse and kindly deed to help their less fortunate fellows in time of necessity, but they should be watchful against allowing themselves to be imposed upon by professional confidence men such as we have described. To give undiscriminatingly and without investigation is not only to waste money, but to do harm instead of good by encouraging the intentional swindler to continue in his evil-doing.

ARCHIBALD MCLELLAN.

DOING AND BEING.

THIS may well be named the altruistic age, for in no period of history perhaps has so much thought been given to the problem of relieving human need. World-wide effort is being made for the removal of unjust and untoward conditions,—the unfair and discouraging lot which has come to the many quite apart from any question of merit or choice, and which in human rule inevitably begets the shiftlessness, the viciousness, and the immorality which stand so insistently in the way of social betterment and progress.

With splendid heroism and self-forgetfulness men and women are going into the heart of the human wreckage of our great cities, or they are furnishing the means which will enable others to go, if perchance some may be rescued from the swirling tides of impulse and habit, and for all this they merit and receive only words of praise. Nevertheless all who have thought deeply of these things, and who have acquainted themselves with the lessons of history, cannot fail to see that if this endeavor were multiplied ten thousandfold it would still prove wholly inadequate apart from that ideal of life and that demonstration of truth which Christ Jesus presented to men.

Many of the needy were no doubt touched by his helpful giving and kindly deeds, but they were quickened and redeemed only as they perceived his nature and power, and laid hold of the marvel of truth which he brought them,—that they could become like him, be his followers, do his work. It was the appeal and inspiration of the life he lived, the truth he demonstrated, which lifted them above the hopeless plane of their old experience.

We all need to remind ourselves of this every day, that however kindly our purposes, however self-sacrificing our disposition, however earnest and persistent our labor, we can never do more than bring about a brief betterment of things by these means. To be "so busy in doing good as to forget the necessity of being good" is a lamentable mistake. In order to render real and lasting aid in the solution of the world's problem we must be like Christ Jesus, be lifted up into his realization of spiritual truth, his loyalty to the ideal, his purity of life and thought, his sincerity, humility, simplicity, and lovableness. Our great countryman Lincoln lacked many things upon which the world lays store, but he possessed that genuineness of character—a faith, a compassion, and a moral strength—which, together with his kindliness and good hope, enabled him to establish and sustain the spirit of the nation. In all this he was Christlike, and therefore is he loved and honored of all men.

As one has well said recently: "A background to life, . . . some worthy object of enthusiasm, . . . some spiritual force or ideal, elevated above the shabby scenes of temporary failure,—this is the deep, imperative need of the masses today. . . . No material comfort, increased intellectual alertness, or wider capacity of attainment, will occupy the place of this fundamental need. . . . The only test of progress . . . is the development and spread of some spiritual ideal which will raise into an atmosphere of effort and distinction the life of the ordinary man."

This constitutes a tremendously important aspect of the appeal which Christian Science is making to all would-be helpers of men,—its call to the Christ-life and the Christ-doing, the attainment of that individual responsiveness and serviceableness to Truth which enabled the Master to work the works of God, and this is precisely what the world needs above all else today,—royal, God-directed men. Christians are under direct orders "to be Christlike, to possess the Christ-spirit, to follow the Christ-example" (Science and Health, p. 138), and in so far as Christian Scientists are measuring up to this standard, in so far are they destined to be humanity's real helpers, the benefactors of all men, and in all the world.

JOHN B. WILLIS.

"RIGHTEOUS JUDGMENT."

IN our text-book we read that "to decide quickly as to the proper treatment of error—whether error is manifested in forms of sickness, sin, or death—is the first step toward destroying error" (Science and Health, p. 463). The study of Christian Science has a wonderful effect in quickening and clarifying the intellectual faculties, and enables us to decide rightly, if not at first "quickly," on every question which comes to us for judgment. In arriving at decisions we soon learn the absolute necessity for a spiritual basis of judgment, which of course involves the reversal of material evidence, whatever it be. If the question is one of sickness,—perchance hopeless illness from the material standpoint,—the Christian Scientist instinctively thinks

Digitized by Google

upon the angel's words to Mary at the early dawn of Christianity, "With God nothing shall be impossible." Nor is the decision based upon these words an unverifiable statement; on the contrary it is a happy coincidence of reason and revelation, for the Christian Scientist has learned that what is possible to God is possible to man as His image and likeness.

Christ Jesus had much to say respecting right judgment. Once he said, "Ye judge after the flesh; I judge no man. And yet if I judge, my judgment is true: for I am not alone, but I and the Father that sent me." No question can be rightly decided from the standpoint of the flesh, or matter, but we are never left alone, the Father is with us. When we see things from the spiritual standpoint, our judgment, like that of the Master, will be true, and we shall go on to prove the supremacy of good over evil, whatever be the phase of error which confronts us. To stand resolutely by the fact that God governs, and that evil has no authority to make one either sick or sinful, is a matter of tremendous importance to mankind. Sometimes this may be all that is required of us, but who can estimate the far-reaching effects of such a decision? To do less than this could never be right under any circumstances.

We are too apt to forget that an easy tolerance of mortal conditions does not constitute the righteous judgment which Jesus taught. There is nothing in the Gospels to show that he looked upon sick and sinful mortals as the divine ideas. Rather did he look away from these to the perfect, divine model, in order to do his healing work. Mrs. Eddy tells us that "Jesus beheld in Science the perfect man" (Science and Health, p. 476). "In Science," be it noted, not in the sinning mortal; but mortal man has no place when the spiritual man is scientifically discerned.

It sometimes happens that one is in doubt as to how to decide where others are involved, but under no circumstance should a false sense of charity hinder us from judging righteously. The writer once knew of a man who was a slave to intemperance. He had several sons, all of whom loathed this vice and were ardent advocates of temperance even while dearly loving their father. They judged righteously, and we can do the same in every case where error confronts us. If we see some error expressed by another, or some sacred duty neglected, we should be thoroughly aroused to our own opportunity to do right in this one thing and thus work out our own salvation, and possibly by so doing we shall help the one who needs to be helped. Such a course can never harm any one, and the effort to rise wholly above some error which we see expressed by another may teach us the much needed lesson that nothing less than pure spirituality can form correct judgments and overcome sin and disease. By learning to "decide quickly" and righteously we shall, in the words of Isaiah, "loose the bands of wickedness," "undo the heavy burdens," and "break every yoke."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

San Francisco, Cal., Jan. 14, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Teacher and Leader:—Thinking that you would be interested to know something of the work of the Committee on Publication for California during the past year, I enclose a copy of the annual report for 1908. I am glad to tell you that the editorial view, in this state, of you and your work for humanity, has greatly improved, and much interest in and favorable opinion of *The Christian Science Monitor*, which your wisdom has given to the world, is being expressed. The forming of two new Christian Science churches in this city within two months by members of First Church who withdrew for that purpose, is an indication of the harmonious unfolding of Christian Science in the city by the Golden Gate, and a preparation for further united action in church extension and building.

After nine years of continuous service as Committee on Publication for California, I have been called to the position of First Reader of First Church of Christ, Scientist, in San Francisco, Cal., and this service begins next Sunday. My earnest desire is that I may be found worthy to fulfil the sacred duties of this office, and be able to follow your example in reflecting divine Truth and Love.

With love and gratitude,

Your student,

FRANK W. GALE.

Cambridge, Mass., New Year's Eve, 1909.

Beloved Leader and Friend:—I would like to write the first letter of 1909 to you, hoping that it may carry to you some measure of the gratitude that is constantly renewed in my heart for what you are and for what Christian Science is. The bells are just ringing for the coming in of the new year, with its wonderful promise of good to the whole world, and our hearts join in the familiar lines which seem at this hour to be at once a prayer and a prophecy,—

Ring out the old, ring in the new,
. . . .
Ring out the false, ring in the true!

Ring in the valiant man and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be!

With the prayer that I may be found faithful, and with devout affection,

Your student,

DAISETTE D. S. MCKENZIE.

Asheville, N. C., Jan. 25, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—I hasten with joy to tell you of one significant instance of the leavening of divine Love, in Christian Science, for our dear Southland. Last evening the Christian Science Society of Asheville, N. C., called a meeting of its members for the purpose of deciding whether we should hold services in our church on Lincoln day. The decision was unanimous in favor of so doing, and every member present came of old southern families. We are glad to see time-worn prejudice disappear, and Christ, as presented in Christian Science, reign instead.

I want to thank you for a new unfoldment, to me, of the Scriptures, namely, about the three tabernacles mentioned in Matthew 17, where Peter, James, and John thought they saw three ways of building; but a voice which came out of the cloud said, "This is my beloved Son, in whom I am well pleased; hear ye him." Just so have you taught us that Christ, the offspring of Spirit, Love, is the only way. When the disciples arose from the baptism of the rebuke, they saw only one. Please accept my gratitude, and let me thank you for Love, as brought to light in Christian Science; it indeed "bathes all in beauty and light," and like the blessed sunlight "glances into the prison-cell, glides into the sick-chamber, brightens the flower, beautifies the landscape, blesses the earth" (Science and Health, p. 516). It is doing all of this for us, and more. In this beautiful land of the sky, where the mountain peaks seem to be kissing the heavens, even the seasons reflect the warmth and light of Love. Last fall luscious rosy strawberries ripened in the open garden of one of our neighbors.

With love to all your church,

MRS. ANNIE C. BRIDGERS.

Digitized by Google

Guthrie, Okla., Jan. 2, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Leader:—When we wrote you on Nov. 3 we knew there was a demand for more workers, but not until recently did we know there was such a universal, appealing cry from all over our land for conscientious, devoted workers in Christian Science. There are so very many hungry hearts seeking the rest and help that only the understanding of God, as taught in Christian Science, can give. There is not only the cry which Paul heard,—"Come over into Macedonia and help us,"—but so many places are sending out the same cry. How pure and clear in vision you are to write as you have in "Unity of Good," pages 11 and 12. We are daily striving to do our work so well that others who ask for help will be enabled to aid in this grand work. May divine Love give us more reapers, that the prayer of many be answered. When we first caught a glimpse of this beautiful, practical religion we wanted to see you personally, but long ago we gained a higher sense by striving to live and work as you would have us do. God is hourly protecting and blessing you in your work for all mankind.

Lovingly yours,
MRS. BERTHA TRABAND MYERS,
DANIEL M. MYERS.

Jackson, Mich., Dec. 13, 1908.

Mrs. Mary Baker Eddy.

Dearest Leader:—I wish to express my heartfelt gratitude for the *Monitor*. It came like a benediction to my heart. The very first copy was worth the price for the whole year. It was in 1885, when through the study of the twelfth edition of Science and Health the light of Truth penetrated my mental darkness; I began to love your inspired teachings, and was healed of chronic ailments that had baffled the skill of *materia medica*. Every day I appreciate more what Christian Science is accomplishing all over the world and for all mankind.

Yours in truth and love,
MRS. HELEN MCCOY FRITTON.

Kansas City, Mo., Jan. 27, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Revered Leader:—Your message, "Choose Ye," has been a constant reminder. "And why call ye me, Lord, Lord, and do not the things which I say?" This day have I chosen to lay down a false sense of business—be a law unto myself and so fulfil the law of God—and follow as nearly as possible, through the grace of God, your pure and undefiled example of healing the sick and raising the dead in sin. Jesus said, "And for their sakes I sanctify myself, that they also might be sanctified through the truth."

With the most tender gratitude and humility do I assume the privilege of writing this to you.

WILLIAM C. OFF.

London, England, Jan. 15, 1909.

Beloved Leader:—As one of the many who have been called "out of darkness into his marvelous light," I have long wished to express my heartfelt gratitude to you for all you have done to make plain to mortals the way of salvation, through Christian Science, and to reveal to all the exact meaning and import of Jesus' words and works. I am glad that I recognize more fully each day the great work you are doing for humanity, and your wonderful self-sacrifice, which helps me to understand Jesus' words, "For their sakes I sanctify myself, that they also might be sanctified through the truth. . . . that they all may be one; as thou, Father, art in me, and I in thee."

Christian Science came to me in a time of great need. I had been working as a nurse in a mission hospital, situated in one of the worst slums in a large city, and through accepting the false evidence of the material senses, which testified to the intense misery and suffering both within and around this hospital, my faith in God as a loving Father, which up till then had sustained me during many trials, had begun to falter, and I seemed to be drifting into a sea of doubt and despair, when through a dear relative I was led to look into Christian Science. Although at first strongly opposed to what I then conceived it to be, I was gradually led by divine Love into the light. Proof after proof was given me of the divine power to heal and help in every circumstance of daily life, until no shadow of doubt remained that Christian Science is indeed the truth which Jesus said should make us free. I am very grateful for the privilege of class instruction, which I had about four years ago from one of your faithful students in London; and also that I was enabled to attend the services in The Mother Church during Christmas week, two years ago, when I received a great spiritual uplifting, which has since then been a wonderful inspiration in my work. My daily desire is that I may manifest more of that Mind which was also in Christ, that I may be enabled to lead others out of the bondage of *materia medica* and all other false beliefs into the light and liberty of the children of God. Before closing this letter I should like to bear testimony to the patient and unselfish labor of many of the doctors and nurses with whom I was at one time associated in their efforts to relieve suffering humanity.

With deep love and gratitude to you,

Yours lovingly and reverently,
MARY C. MACOWAN.

San Francisco, Cal., Jan. 25, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—The members of Third Church of Christ, Scientist, in San Francisco, Cal., recently organized, send love and gratitude to you. We thank you for your life and for your leadership, which have made possible the wonderful growth of the Christian Science movement. With the loving cooperation of First Church, this church has been organized to meet the needs of our city and to make room for the growing attendance at First Church. We trust and pray that this branch of The Mother Church may go forward, in humility and love, to the fulfilment of its mission.

Sincerely and gratefully yours,
Third Church of Christ, Scientist, San Francisco, Cal.
MISS JENNY A. PAMPERIN, *Clerk*.

Americus, Ga., Jan. 28, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—May I write the simple words, I love you. My heart goes out to you in such wonder and gratitude as I realize the crystalline purity of Christian Science, and how marvelously you have avoided all the quicksands of the material consciousness. Our church here is rejoicing in the glory of this truth, in the purity of living healthiness of body and beauty of environment which it brings. I wish I could tell you of my love and gratitude, for I have been blessed beyond the power of words to express.

Yours faithfully,
MISS ANNIE MAY BELL.

AMONG THE CHURCHES.

BALTIMORE, MD.

First Church of Christ, Scientist, whose edifice is on the east side of Mount Royal avenue, south of Oliver street, has purchased the property adjoining the church, at the southeast corner of Oliver street and Mount Royal avenue. It is understood that a large addition to the present church building is contemplated or that a handsome new structure will be erected.—*Baltimore American.*

ROCHESTER, N. Y.

On Nov. 13, 1908, at a union meeting of First and Second Churches of Christ, Scientist, Rochester, N. Y., a resolution was adopted to the effect that it would be for the best interest and growth of the cause of Christian Science in this city that the two churches be united in one new First Church of Christ, Scientist. Dec. 15 this union was legally consummated and the new First Church held its first service in the church edifice, corner Alexander and Cobb streets, on Jan. 3, 1909.

Already this course has proved itself to be the result of Truth's leading. The brotherly love and adherence to Principle demonstrated in effecting this union have given a strong impetus to the work, and it is being felt and responded to by all. The increasing attendance at the services fills the edifice and there is every prospect of a demand for a larger church home in the near future.

M. A. SONTAG, *Clerk.*

DENVER, COL.

The membership of First Church of Christ, Scientist, in Denver has grown to such proportions that for many months it has been difficult to accommodate the ever-increasing numbers who desired to attend the regular services; the church edifice, with a seating capacity of nearly two thousand, being often taxed to its utmost capacity. Last Sunday [Jan. 10] sixty-nine new members were admitted to its already large membership. It was deemed wise by sixty-five members living in South Denver to withdraw, in order to organize a second church, and these were, at the regular annual meeting of First Church, held last Thursday night, given a vote of thanks for their zealous support of the Christian Science movement in this city, and their decision to form a second church was given the hearty approval of the church from which they withdrew. As yet no steps have been taken toward perfecting an organization, and when taken they will be in a very democratic manner, in accord with by-laws which direct that the members shall vote without nomination or recommendation as to any head or leader, as The Mother Church and all branch churches acknowledge Mrs. Eddy as Leader of the Christian Science movement.—*Denver Post.*

CHAMPAIGN, ILL.

Simplicity reduced to the extreme marked the dedication of the handsome edifice of First Church of Christ, Scientist, on Sunday [Jan. 10], when three services were held. At the morning service every seat was occupied and chairs were pressed into use. In the afternoon every regular seat was taken and every available space was filled with chairs, while many stood in cramped quarters. The evening attendance was also large. Not alone were Twin City people present, but many from surrounding cities and towns, Danville's contribution being fifteen. The seating capacity of the edifice is one hundred and fifty, and the members of the church had no idea that the attendance was to be so large. Each service was identical, with the exception that at the morning service a brief history of the church was read. At each service, also, silent communion was held, the members kneeling. Eight new members were admitted.

The first move toward organization in Champaign was made in November, 1901, when the hall over 111 West Church street was rented and Sunday services were held therein. In May of the next year members secured Illinois Hall for meetings. On May 9 of the same year was given the first of a series of five lectures on Christian Science by prominent workers in that organization. As a result of these lectures the interest in the work was greatly advanced and the church pushed forward. On July 16, 1902, the first steps toward a permanent organization were taken, and on Dec. 31, 1902, the society moved into the quarters which it has occupied up to the present time. In July, 1906, the building fund toward the present edifice was started. This soon grew, and the result is the present beautiful church.—*Champaign News.*

PORTLAND, ORE.

Work on Second Church of Christ, Scientist, goes on steadily, and the structure is to be ready for use within eighteen months. The new church is to cost $100,000, exclusive of the value of the half block upon which it is to stand, on the north side of Everett street, from Eighteenth to Nineteenth. The location is obliquely across from the new Trinity church, and is considered ideal for the purpose. The architecture of the new church will partake of that of the Parthenon, in Athens, with massive pillars surmounted by a huge dome. The auditorium will be on the second floor, and will seat about fifteen hundred persons. The ground plan is 80 x 154 feet. First Church is also preparing to build an expensive edifice on the East Side in the near future.—*Portland Telegram.*

TRENTON, N. J.

With simple exercises First Church of Christ, Scientist, of this city was dedicated Sunday [Dec. 13]. This church was organized Sept. 3, 1903. There were but three members at that time. The new building is on East State street, near Olden avenue.—*Trenton Times.*

THE NEW BIRTHDAY.

MARY WHEELER.

COMETH a day to the children of men—
Day of deliverance from longing and pain.

Out of the old thought, into the new;
Out of the seeming, into the true;
Out of the darkness, into the light;
Out of hate's weakness, into Love's might;
Out of the senses, on into Soul;
Out of the finite, into the whole;
Out of the death-dream of discord and fear,
Into the being of good-ever-here;
Out of the bondage of sin and the rod,
Into the freedom of sonship in God;
Out of mortality, into the Christ,
In selfless at-one-ment, by Spirit baptized!

Waiteth this birth in the bosom of Love—
Waiteth the sign of the Voice and the Dove.

TESTIMONIES OF HEALING.

In the month of May, 1907, I was taken with an attack of severe illness. I called in a neighboring physician, who diagnosed my case as one of poisoning. He prescribed for me, and I was relieved of my distress for a time, but the following day the trouble reappeared in an aggravated form. My previous history, from the medical standpoint, which I gave to the doctor, led him to treat me for rheumatic trouble. He gave me a drug to be taken every two hours, and later increased the dose. I, however, grew worse instead of better, and although the swelling of the joints was reduced, I could move around the room only with the greatest difficulty, the trouble having become dropsical and settled in my lower limbs and feet.

At the time I was taken ill I had received word that a case in which I was to appear as a witness had been started before the court in Montreal, and that I was liable to be called at any day. I was exceedingly anxious to take the trip, so I aided my physician in every way, both by my obedience to his instructions and by my mental attitude. I had full confidence in his knowledge and had every hope of being well at an early day. At the end of two weeks' time the call came, and I left for Montreal. Upon my arrival the next morning I went to the hotel, and was at once compelled to take to my room. I arranged with the attorneys that I should be the last witness called, and found that I had a day or two to wait. I continued to take the medicine which I had with me during the first day, but when evening came I found myself much worse. I then called in a doctor recommended by a friend, who, after making an examination, said that I certainly was the victim of too much medicine. He stated that he had seen only one other case as bad as mine. He immediately threw away the medicine I had with me and substituted another. I remained in my room for three days, and was then able to drive to the court house and give my testimony. That night I left for New York in a very bad condition, being able to get on the train only with assistance.

I reached home Friday morning, very much in doubt as to what I should do. My confidence in doctors had been shaken, and it seemed to me that I could gain no relief from that source. A friend then advised that I try Christian Science. I consented, and on the following Monday I went with him to a Christian Science practitioner. The first treatment gave me confidence, and the day after the second treatment I was able to play golf, although up to that time I had been able to walk only with difficulty. The following Saturday I again played golf. Christian Science was new to me, and I could not get over my sense of fear; consequently I had several setbacks during my treatment, which covered a period of a little over two weeks, at least one half of the treatments being absent. The very day before the last treatment, the disease reappeared, and I was apparently as bad as I ever had been. This was due to fear developed through my eating strawberries, which according to my belief had been the original cause of my illness. The last treatment, however, cured me instantaneously, and I have had no return whatever of the trouble.

I am deeply grateful to Christian Science, and to Mrs. Eddy, for the many benefits I have received, spiritually, mentally, and physically, through the application of this truth.—W. A. McCALL, New York, N. Y.

Of the many blessings which have come to me through the study of our text-book, Science and Health, I will relate an experience which I had when the light of Truth first began to dawn upon me and which proved to me the value of the Lesson-Sermons as an aid in the overcoming of sickness. With what feeble understanding I then had of Christian Science, I had tried all day to overcome a sense of illness which threatened to prostrate me, but apparently without success. I was making preparations to retire, but at the last moment concluded to read a little of the day's Lesson. For some time previous to this my eyes had been paining me, especially when reading, and I therefore hesitated about attempting to read when my whole body was seemingly racked with pain and I felt unable to sit up a moment longer. I read the first passage, however, though with much difficulty, and then decided to read another and yet another, but still felt no better. Nearing the end of the Lesson, I resolved to finish it, and became so absorbed in it that I wholly forgot about my physical condition, and when I reached the end I found to my astonishment that every ache and pain had vanished and that I was well! My eyes also were healed, and instead of rushing off to bed as I had intended doing, I remained up several hours and read with perfect ease, whereas for some time before I had been able to read only a few moments at a time and that with difficulty.

From girlhood I had not been considered strong, and until my healing through Christian Science I was seldom free from pain. I had been subject to severe attacks of throat trouble, when for several days I could scarcely swallow anything. After I had taught school a few months the trouble became permanent, and for several years I was never wholly free from it till after my healing in Christian Science. This took place seven years ago, and the few attacks I have had since that time were not painful and were quickly overcome through a realization of the truth. A cough with which I had been troubled for fourteen years was also overcome, and there has been no return of it. During this time I was prescribed for by physicians of different schools. Then I turned to hygiene, and also had some osteopathic treatment, besides trying numerous other material remedies, none of which had the least effect upon me. Losing finally all faith in *materia medica*, I was persuaded by a sister who had been healed, to try Christian Science treatment. My healing was slow, but my ailments disappeared one after another and for nearly five years I have attended daily to my household duties, doing the work for a family of five. During this time I have had many beautiful demonstrations in the overcoming of ailments incident to a family of small children, all of them being quickly overcome, and in many instances after one treatment.

While very grateful for the physical healing, I am even more grateful to God, and to Mrs. Eddy as the Discoverer and Founder of Christian Science, for the spiritual uplifting which has come to me through the study of the Bible together with our text-book and the other writings of our revered Leader.

MRS. ANNA S. ROBERTS, Mt. Vernon, Ill.

In May, 1904, I first turned to Christian Science. I had been ill for five and a half years with stomach and intestinal trouble. For more than four years of that time I was under the care of two physicians. I improved slowly, but was still suffering greatly. The chief difficulty was in finding food that would agree with me. After four years of medical treatment, I was able to eat a little solid food, and in the summer of 1903 I went North for a rest and change, but the fatigue of traveling and the necessary change of food seemed to cause a relapse, and after a month's absence I came home quite ill. I then called in another physician, and he diagnosed the trouble the same as the other two physicians had done. I was again placed on a liquid diet, and continued under his treatment and on the diet for eight months, but improved very little, and consequently grew more and more discouraged. I suf-

Digitized by Google

fered almost constantly, and was literally starving, for I grew afraid to take food at all.

On one of my discouraged days I told the doctor that I was tempted to try Christian Science. He informed me that it would not give me any relief, as I not only had a real disease, but one that was very difficult to cure. Acting on my suggestion that she try Christian Science, my sister had been wonderfully healed only a year before. She had been operated on four times in three years, but the trouble had returned, and she had been told that another operation could not be performed. Her sufferings were intense, and she knew the inefficacy of the knife in her case, so as a drowning man catches at anything within his reach, she grasped the idea of trying Christian Science. We knew nothing whatever about it, but in two months she was a well woman, and has never had a sign of the trouble since. Despite this proof of the efficacy of Christian Science, I still clung to *materia medica*. I wanted to be well, but not through Christian Science. I grew worse in the spring of 1904, and one Sunday afternoon, in desperation after a day of intense suffering, I hurriedly (for fear I should change my mind) made my way to the Christian Science practitioner by whom my sister had been treated. I was then willing to be well through any instrumentality, my only desire being a speedy cure. This, however, was denied me, for it was nine months before I could say, "I am well;" but now I am glad it was so, for it compelled me to study Christian Science in a way I probably would never have done had not my healing been slow.

I wish I could tell of the love and patience expressed by the Scientist through all those months of waiting. Had it been one whit less, my courage, would have failed. It was a hard fight, but the truth finally prevailed, and my gratitude knows no bounds. After four years I am still well, and can eat anything I desire. I have gained thirty-five pounds in four years. The friends who knew me before my healing are continually expressing their wonder at the great change in my appearance. Words fail to express the great help in daily living which I have received from the study of Christian Science.

ELEANORA ROBB, Baltimore, Md.

It is eighteen years since I first heard of Christian Science and began to study it, and I wish to express my gratitude for the many blessings which I have received, morally, spiritually, and financially,—gratitude to God, and to our dear Leader for the revelation of Truth as given in "Science and Health with Key to the Scriptures," which has enabled us to know God aright. For many years I had been seeking some explanation of the Scriptures which could be proven, and by which we could do the works that Jesus said we could do if we were his disciples. I had seen for some time that if we were to understand the Bible, it must be through spiritual sense, but the old theology could give me no rule whereby I could obtain this understanding. When I heard of Christian Science, and had seen the proof of its teaching in the healing of my father in two weeks, from a fever-sore which had baffled all material means, then I knew by the "signs following" that this was the understanding of God's Word for which I had been searching. I accepted Christian Science gladly, and I have never found it wanting when it is accepted and honestly applied.

The spiritual insight into the Scriptures, by which we may do the works that Jesus commanded us to do, was the greatest fact to me, for it was my desire to understand his teachings in a practical way. I was healed of weak eyes in a short time, and could read at any hour and as long as I wanted to, whereas before this I could scarcely read at all. I have also been enabled to prove the sayings of Jesus in the healing of blindness and drunkenness, and in many of the discords to which flesh is heir. I wish particularly to tell of a demonstration in dentistry. Some weeks ago, in having some bridge work done, it was necessary to cut off a tooth, but before this could be done the pulp of the tooth had to be removed. The dentist, having been a witness to what Christian Science could do in other instances, asked me if we could make the demonstration in Science. I told him that we could, for I had helped others similarly and knew what could be done in my own case. So I took up treatment as we are taught in Christian Science, and the next day he removed the pulp from the tooth without any pain to me.

Dentistry was the one thing I had greatly feared from my youth, and for this proof of the unreality of life in matter, and for many more blessings, I am thankful to God, and to our Leader, Mrs. Eddy.

JOSEPH W. THOMPSON, Grand Forks, N. Dak.

Some months ago I became interested in Christian Science because of relief that came to my wife from what was diagnosed by some of the leading physicians of this section of the country as a case of serious throat trouble. My study of "Science and Health with Key to the Scriptures" brought me some understanding, and I was able to relieve myself instantaneously from a stomach trouble of several years' standing. Great satisfaction and joy have also come with renewed health and peace.

A few weeks ago a gentleman of this place came to me in need of some repair work on his teeth. To do this it was necessary to remove the pulp from a vital cuspid tooth which was in a normal condition. We talked of the different methods of removing the pulp, and decided, as far as possible, to make a demonstration and do the work without medication. I proceeded in the usual way to open into the pulp canal. My position was such that I could observe any indications of sensation, but as none appeared I went on with the operation. As I reached for a barbed broach with which to remove the pulp, the thought came to me to hurry and have it over, but close on this impulse, like a flash there came the words of Scripture, "He that believeth shall not make haste," and I deliberately took out the pulp without occasioning the least evidence of pain. This to me was a beautiful and convincing proof of the truth of Christian Science.

S. A. SAUNDERSON, D.M.D., Grand Forks, N. Dak.

Three years ago last April I became interested in Christian Science, through seeing my aunt healed in one treatment of diseases of more than twenty years' standing. The next day after her visit to the practitioner, she asked me to take treatment for an ailment from which I had been suffering a long time. At first I hesitated, but in a few days made up my mind to try it. After the third treatment I removed the truss which I had worn for more than two years, and have never felt any inconvenience from doing so. The trouble was entirely removed, and I rejoice in my freedom.

Words cannot express my gratitude and love to our consecrated Leader, who is working, watching, and praying to set the whole world free from the bondage of sin and disease. I am also deeply grateful for our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for it has taught me how to read the Bible, and how to love my neighbor as myself.

MARY C. HEWLETT, Wilmington, N. C.

I wish to express my gratitude to God, and to Mrs. Eddy for all that Christian Science has done for me. Eight years ago I had the misfortune to injure my right leg severely, above the ankle. I was laid by for nineteen weeks, and about three weeks after I returned to work a small wound broke out on the leg. This healed up and

Digitized by Google

then another appeared, and this continued, another appearing as one would heal up, until a year ago last August, when the trouble became greatly aggravated. I must here state that I am a steam and hot water fitter by trade, so one can imagine what the conditions were under which I had to do my work. I had tried all sorts of remedies, and my club doctor told me more than once that he could do nothing more for me, and that I could not do better than I was doing.

I first heard of Christian Science through a relative, who had been healed of a very bad internal trouble, for which she had been under one or two operations, her husband being told that he must console himself the best way he could, as she would be an invalid for life. This relative advised me to try Christian Science, and the result was that after the first treatment or two I was considerably better in health, and my leg began to get well. In the space of two months the leg was completely healed, and no one but myself can understand how thankful I was to know that divine Love had accomplished in that short time what the medical profession had not been able to do in seven years.

I sincerely hope that my testimony will reach some sufferer and will be the means of bringing him to the understanding that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I wish to thank all those unselfish Scientists whose kindness has helped to bring me into the understanding that God is All-in-all.—G. J. KNIGHT, London, England.

[Translated from the German.]

With a heart full of gratitude I should like to give a testimony of healing, with the hope that it may prove helpful to others. For some time I had noticed that I could see nothing with my right eye. My husband, who is not a Christian Scientist, feared lest I should become blind, especially as one of my sisters is blind in one eye. He wished me to have my eye examined by one of the specialists here. This was done, and the oculist said he was sorry not to be able to give me any hope of the sight becoming normal again, but as the left eye was quite healthy, I could see enough with it for the rest of my life. I then took Christian Science treatment here in Frankfurt a|M., in perfect confidence that God would help me, and after two months the pain and unpleasant sensation in the eye left me, and my sight, thanks to God, is perfectly restored. For this great manifestation of the power of Truth, I owe a deep debt of gratitude to the giver of all good; and to our dear Leader, Mrs. Eddy, I owe my heartfelt thanks for this glorious truth which has been revealed to us. My earnest desire is to show my gratitude by a life of meekness and devotion to God, good.

FRAU LIESEL HESSLER, Frankfurt a|M., Germany.

I wish to express my gratitude for the many blessings received in Christian Science. About five years ago my right arm became almost useless from a nervous trouble. I could get no sleep or rest at night, the pain being so intense as to be almost unbearable. I was unable even to dress myself properly. While much interested in Christian Science, yet I doubted if this trouble could be healed by it, and so I tried all kinds of material remedies, but got worse instead of better. I finally asked for and received treatment in Christian Science. After the first treatment I slept at night without pain, and other ailments, which I had not even mentioned to the practitioner, disappeared before the arm was healed. The healing of the arm was not rapid (I say this because there may be others who get discouraged when the healing seems to be slow), but I have always been thankful that it was so, for during that time I got a better, clearer understanding of God than ever before, and our revered Leader says, "Emerge gently from matter into Spirit" (Science and Health, p. 485). I have had so many proofs of the power of God, that I can never cease to be grateful for the truth as revealed in Christian Science.—MRS. ANNIE MARSHALL, Duluth, Minn.

One of the many beautiful proofs of Truth's omnipresence which has been revealed to me was my cure from the supposed effects caused by coming in contact with a poison oak. One morning last spring I awoke to find my face in a very bad condition. My club sisters were quite worried about my illness, and although they knew that I was interested in Christian Science, they anxiously offered various remedies. I remained in my room during the day, reading Science and Health and trying to realize that there is only one power, and that is God, good. I seemed to suffer intensely all day and during the night, and the next morning my face was so much worse that I could take only liquid food. I telephoned by "long distance" for help, and a dear practitioner, knowing the fear of those surrounding me, invited me to her home. I immediately accepted the privilege, and putting on a heavy veil took the first train. She met me at the depot in the evening, and even as we walked to her home I commenced to feel a sense of relief. It was with reluctance that I consented to sit at dinner, but realizing that Love is everywhere, I made the effort. After dinner I had present treatment and rested very comfortably that night. Sunday morning I was able to eat breakfast with very little inconvenience, and spent the morning reading Science and Health and the *Journal*. During the evening we read together the Lesson-Sermon for the following Sunday.

What joy the next morning to find the swelling gone, and only a few scars remaining! I took the early train, and returned to my college work that afternoon. The girls were amazed to have me return so soon. One had remarked that it would take at least two weeks to cure me, but with Christian Science the demonstration had been made in two days. I am indeed grateful for this grand truth, and feel it to be all that is necessary in every emergency.—JERITA V. BLAIR, Vallejo, Cal.

I wish to acknowledge through the *Sentinel* the many blessings that have come to myself and family from the study of Science and Health, together with the Bible. For more than five years we have trusted to our heavenly Father to care for us, and every day we prove that He is an ever-present help. Our little girl was healed through Christian Science treatment of chronic bronchial trouble, after physicians had said that nothing could be done for her. One week's treatment healed me of a severe attack of kidney trouble.

The physical benefits have been many, but best of all is the spiritual uplift, the peace and rest that come from knowing something of God,—as we are taught in the writings of our beloved Leader, Mrs. Eddy.

MRS. EMMA SIGLER, Lincoln, Neb.

It now seems hardly possible to me that one can read the first chapter of the Bible, especially the 31st verse, "And God saw every thing that he had made, and, behold, it was very good," and continue in the belief of evil's reality. The scientific understanding will be given us as we study "Science and Health with Key to the Scriptures" by Mrs. Eddy. Several weeks ago I was suddenly at-

Digitized by Google

tacked with a sense of intense pain, and so great seemed my suffering that I could do very little to help myself. I asked a member of the family to 'phone to a Christian Science practitioner, and on her return she inquired if I would not like a hot-water bottle. At the time I could not in my pain explain to her that I did not care for it, but before it was ready the sense of suffering had been overcome and I was able to tell her that God needed no help. In half an hour I was sound asleep, and nothing more was experienced of this ailment.

This experience is only a little of the very great good I have received in Christian Science, and I am indeed most grateful to Mrs. Eddy, who has labored so unselfishly these many years to give us all the truth.

MRS. CHARLOTTE MOLTHOP VIERLING, Chicago, Ill.

I am deeply grateful for the many blessings which have come to me since I have learned the truth in Christian Science, especially for the relief experienced at the birth of my last baby. When my other children were born I had a sense of great fear and much suffering, but on the last occasion the fear was entirely removed and the birth was almost painless. For this and many other blessings I am thankful.—MRS. KATHRINE TODD, Lakeview, N. J.

It is with a thankful heart that I write this, hoping it may help some one else. I was healed of serious lung trouble nine years ago through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have always lived away from town, and for a long time had none of the Christian Science literature except my first copy of Science and Health, which has been my constant companion these past nine years, but now I have nearly all of the literature. I am also thankful for many other healings, and grateful that I have been able to help and heal others.—MRS. NANNIE J. CHESSER, Chico, Tex.

It is nearly three and a half years since I became interested in Christian Science, and I feel it is a duty for me to tell others what it has done for me. First of all, I was a semiinvalid most of the time for a number of years. The last nine months before coming into Christian Science I was in constant pain, and able to walk but very little. Since that time I have received a great deal of help for this trouble and can walk any distance with entire freedom from pain. In regard to the disease of which I was healed, one of the best surgeons in this country had said I could not be well without a very serious operation, but Christian Science annulled that unjust law. In our home there is no end to the good that Christian Science has brought to us. It has been our supply in all kinds of need. My little daughter has been carried through three attacks of contagious disease with very slight discomfort. She was also healed in less than twenty-four hours of a severe case of poisoning, her arm being very badly affected. I have had many quick proofs of what Christian Science can do in healing severe colds, burns, and minor troubles that come up. I would like to speak of two more proofs that to me seemed very beautiful. A member of the family complained of pain and soreness in his teeth and gums from no apparent cause. Almost instantly the pain was stopped through the realization of the truth that there is but one cause and one effect, and that good. The soreness also disappeared and nothing more was thought about it. In less than a week a piece of wooden toothpick nearly half an inch long came from the gum. The other case was a very sore finger, supposedly caused by a small piece of iron becoming imbedded in the flesh. The pain was stopped in one treatment, the swelling soon went away, and the finger was healed. A year before, the same kind of trouble had lasted for months and the finger-nail was lost.

These are but a few proofs of the efficacy of Christian Science in healing discordant conditions. Although I have not progressed as fast as I could wish in my journey "from sense to Soul" (Science and Health, p. 566), and still have many things to overcome, I am indeed grateful for this healing truth. As a family we owe more to Christian Science than I could tell, and we are grateful to God, and to Mrs. Eddy, who has shown us how to make the truth practical.—MRS. BLANCHE COATES, Camden, Me.

For ten years prior to turning to Christian Science I had suffered from severe nervous trouble, including three or four complete breakdowns, and found myself at last facing a blank wall of inability to keep up any longer with the duties of which no one could relieve me. I called on my physician, a conscientious and conservative man, and was told by him that it would be two years before I would be well, and that I must always keep within certain limits as to strength. After this discouraging verdict I turned to Christian Science for treatment, and in six weeks I was well! This was nearly three years ago, and there has been no return of the old troubles, although at times I have had to meet excessive demands upon my strength.

Before taking up the study of Christian Science I was so near-sighted that when, as occasionally happened on the street, I dropped my glasses, some passer-by was appealed to in order to find them. Two years ago I was able to lay aside glasses, and since that time my sight has steadily improved, until now the vision is for all practical purposes normal. I have had many other proofs of the power of Christian Science to heal, among them the healing of my little daughter of deafness caused by catarrhal trouble. I have also seen Christian Science applied successfully to business problems, have seen it meet emergencies most wonderfully, and I find it an unfailing guide in solving the problems of each day.

I desire to express my deep gratitude to God, and to our dear Leader, for having been so lovingly and patiently helped. Reviewing the many blessings which have come to me through Christian Science, and looking forward to the future, so rich in promise, I realize that the priceless gift which this wonderful truth has brought me is a greater desire for good, a stronger grasp on good, and the broader and more unselfish view of life which has inevitably followed.—ELIZABETH B. GITHENS, Chicago, Ill.

In February, 1907, I was attacked by a most unnatural condition, which affected me both mentally and physically. In my distress I often forgot to eat my meals, and my sleep at night was fitful. This condition continued for ten days, when I was visited by a friend, who reminded me of the admonition in Science and Health (p. 420), "If students do not readily heal themselves, they should early call an experienced Christian Scientist to aid them." I at once gave my case into a practitioner's hands, and began to improve immediately, the first relief being an appetite for food and twenty-four hours of natural sleep. In three days' time I was practically free, but treatment was continued for ten days, when the practitioner was dismissed. My heart is full of gratitude for this deliverance, for I was afraid that my earthly labors were nearing their end, and I think joyfully of the words of the psalmist, "Who is so great a God as our God?"

There were many names given to my illness by those around me, but to myself it was a serious case of fever. I feel a great joy that I am living in this age, when God, through the pure life and teaching of Mrs. Eddy, is leading the whole world to expect that "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

MRS. JENNIE W. HOLROYD, Helena, Mont.

FROM OUR EXCHANGES.

[*Christian Register.*]

We no longer estimate the years as they were counted by our Puritan fathers, as a probation period merely and a time for preparation for a future judgment. We are finding our judgment in every day and in every year. We think less and talk less of another life, but more of rounding out well the life that is. Immortality is still a philosophic question, it may become a scientific question, but it is discussed less in our churches, as having no more to do with religion than a noble life here and now. The question is not, Do you believe in a future existence? but, Have you a real faith in your present existence, in its worth and power and nobility? Do you weigh the years for their inherent values, and do you recognize the presence of God in the world of today as truly as in those years that are hidden in the far future?

[*Christian Work and Evangelist.*]

Christ lived in oneness with the Father, and prayed to Him for guidance and lived the Godlike life as revealed to him on the earth. As to what he did, he did always that which seemed right to him, as he let his conscience be illumined by God. He lived the love-life. He practised mercy and beneficence. He returned good for evil and forgave his enemies. He lived the sacrificial life and gave of his own life for others. He went about doing good. He loved the kingdom of God and toiled for it. He tried to remove injustice from the earth. He loved the poor and unfortunate. He set us an example, and asks us to live as he lived and do as he did. But he leaves us perfect liberty of conscience in determining what is right in the peculiar ethical conditions that sometimes confront us.

[*Universalist Leader.*]

What possible place can a man whose life was spent so far away from us in time and place and race and thought have in our modern experience? It is a vital question which we are asking, for upon the answer to it will depend the permanence of the influence of Jesus Christ in the history of the world. It is time in our religious and spiritual experience to put the emphasis where it belongs and to rest our case where alone it can hope for permanent support. The world is coming back to realism in its spiritual point of view.

[*Examiner.*]

Let the preacher open the Bible message to the people concerning the great salvation, and teach them the precious and comforting truths revealed in it for the guidance of life, and there will be no time nor occasion for fruitless discussion of unsettled and unsettling questions of critical scholarship. The great end of preaching is to win men to Christ and build them up in Christ.

[*Congregationalist and Christian World.*]

This, if any, is the immortal life which we are living day by day in our familiar surroundings and by the ordinary light of the sun. We shall never be more immortal, though we may be more conscious of our great endowments, than we are today.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

If we were able to see eternal truth as it really is, our consciousness of evil would disappear.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50; six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

Attention is called to the new Pamphlets, Reprints, and Music found listed in the advertising columns on the opposite page.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid. In the Greater Boston postal district the MONITOR will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Paper manufacturers and owners of timber lands conferred recently with Chief Forester Gifford Pinchot, with a view to the adoption of practical forestry methods. More than 3,000,000 acres of timber lands, out of an estimated 5,000,000 acres held by paper manufacturers, were represented at the conference, which was brought about largely through the efforts of the International Paper Company. The acreage represented comprised 1,617,000 in Maine, 275,000 in New Hampshire, 78,000 in Vermont, 887,000 in New York, 123,000 in Pennsylvania, 150,000 in West Virginia, and 25,000 in Michigan.

During the last ten years, says the *Advocate of Peace*, the total appropriations for the United States army have been eight hundred and nineteen million dollars, and for the navy, for the same period, eight hundred and ninety-seven million dollars, a total for army and navy of one billion, seven hundred and sixteen millions. The appropriations for the prior ten years were only five hundred and seven millions. The increase, therefore, of the last ten years over the previous ten was one billion, one hundred and nineteen millions.

The differences between the "associated" interests using American moving-picture films and the "independents" using imported films have been settled by a fifteen-million-dollar merger, which is to be known as the Motion Picture Patents Company. This company takes over all the patent rights of the Edison, Biograph, Armat, Jenkins, Pross, Vitagraph, and Campbell companies. These patents include everything pertaining to moving picture operation and projection, and films will probably be rented instead of sold.

President Roosevelt has returned the census bill to Congress with his veto, because it provided that the enumerators and other census employes should be appointed instead of chosen for fitness after a competitive examination. The bill was for this reason in conflict with his views on civil service reform. It is estimated that the inefficiency of many of the employes of the last census added an unnecessary expense of about two million dollars to the cost of the census and also affected its accuracy.

In Pennsylvania, by the end of 1907, 325 miles of "good roads" had been built or reconstructed, and 221 miles more were under contract. During 1908 the 221 miles were completed and nearly two hundred additional miles also built. The highway commissioner recommends that an appropriation be made each year of from $4,000,000 to $5,000,000, and that this sum be continued for ten years.

By a vote of 203 to 101 the House of Representatives has passed the bill which provides for the government of the Panama Canal Zone and the construction of the canal. There are now three judges of a supreme court of the Canal Zone. The report from the committee says there is no necessity for three judges, or for a supreme court there, if appeals be otherwise provided.

The taking of testimony in the trial of the action brought against the American Sugar Refining Company by the Government, alleging fraud in the weighing of shipments during the past six years, was begun last week before Judge Holt in the United States District Court at New York. The amount of customs duties in arrears sought to be recovered is $2,124,121.

Alleged timber frauds and thefts of gigantic proportions are said to have been unearthed by the Government timber inspectors in southeast Oklahoma, and are under investigation by a Federal grand jury. Several timber companies are said to have been cutting fine hardwood timber and pine on Indian land for years.

The retrial of the Standard Oil rebate cases begins before Judge Anderson, at Chicago, Feb. 23, and the suit for the dissolution of the Standard Oil Company will come up at St. Louis next month.

Wooded shores for the islands of Boston harbor, and the restoration of the early beauties of the port, are being urged before the Massachusetts committee on metropolitan affairs.

International.

The delegates of seven nations, including the United States and Japan, have presented their reports at the International Opium Commission at Shanghai, and China has presented her memorandum. The Chinese delegate in his introductory statement admitted that the information furnished regarding the area under poppy cultivation and the extent to which the Chinese are addicted to opium, was largely guesswork, owing to the absence of proper means for collecting statistics. The percentage of the uncounted population who consume opium is a matter of conjecture. The report estimates the total production of native opium in 1906 at 34,800 tons, and endeavors to establish that in 1908 the output was reduced to 21,860 tons. It places the total number of opium smokers at 13,455,699.

The Canadian Pacific Railway plans to open for settlement three million acres of reclaimed land in the Bow River district of Alberta. The land has been made habitable by the installation of a gigantic irrigation system. The company will open a new agency in London, with sub-agencies throughout the British Isles, for the purpose of inducing settlers to emigrate to this new land. Parties will be brought over monthly, beginning in March.

The number of moose killed legally in Nova Scotia during the recent open season amounted to 500, though it is believed that the total number killed during the year, legally and otherwise, would reach nearly seven hundred, and it is feared that if this rate is continued the American elk will soon become extinct in this province. There is no open season on deer or caribou in Nova Scotia until 1912.

The Japanese Mitsu Bishi firm, which purchased a piece of land of about five thousand acres at Toroku, in Formosa, early in 1908, is now constructing a paper mill there which will cost about $500,000 gold. Keichiku, a sort of bamboo, which grows extensively in the vicinity of Toroku, will be used in the manufacture of paper.

King Edward of England during the past week visited Emperor William at Berlin, and was given a hearty reception by the Emperor and the people. He is enjoying the distinction of being the first foreign monarch who ever has been the guest of the Berlin municipality.

A coin collection recently sold at Sotheby's, London, contained a rare tetradrachm, a silver coin of ancient Greece, which sold for $2,150. The competition was keen, and a number of other coins brought from $100 to $1,000.

Industrial and Commercial.

An English paper announces that a firm in Sheffield is now placing on the market a steel with from three to seven times the cutting power of existing high-speed steel, and which can be hardened in water, oil, or blast. This water-quenched steel, which will work for a considerable time on the hardest material, with the cutting edge of the tool at a bright red glow, was practically the outcome of litigation instituted by the Bethlehem Steel Company of America regarding the patent rights of the Sheffield firm's air-hardened steel. Experiments were made in Sheffield with a view to rendering the firm independent of the American process which was in litigation, and these experiments led to the present discovery. Mild steel, it is claimed, hardened by the new process, will do double and three times as much work as the present material, and hard steel will do six or seven times the work. Experiments have shown, it is said, that a tool made of the new steel could be worked on very hard material for a day and a half without regrinding, whereas tools made of old-process steel needed regrinding at least five times a day. The new steel is more expensive than that at present used, but will not necessitate drastic alterations in machinery.

The Cunard line steamer Mauretania, on her last eastern voyage, established a record for the long route, covering the distance, 2,934 miles, at an average speed of 25.20 knots. The day runs were 401, 605, 594, 567, 582, and 95 miles to Daunt's Rock. The passage was made in 4 days 20 hours and 27 minutes. The Mauretania has now beaten every record going east; average speed, the highest day's run, and the records for the long and short routes from New York to Queenstown.

A contract has been closed with bankers of The Hague, Holland, for the financing of the Port O'Connor, Rio Grande and Northern Railroad, which is to be built from Port O'Connor on the Gulf coast of Texas to San Antonio, with branch lines to Gonzales and Smithville. The proposed road will have a total length of two hundred and thirty-four miles.

Plans have been completed for the organization of a $2,500,000 coke company, with headquarters in Pittsburg. It will be known as the Republic Connellsville Coke Company, and will be formed by the merging of the Republic Coke Company and the River Coal Company.

The volume of traffic on the Great Lakes during the season of 1908, as measured by domestic shipments of merchandise from the various lake ports, was 60,518,024 net tons.

Organization of a new $2,500,000 steel company, to be known as the Inter-Ocean Steel Company, has been completed. The plant will be located at Chicago Heights.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LINCOLN DAY SERVICES.

It is gratifying to know that the Lincoln Day services awakened great interest and were largely attended throughout the country. The attendance at The Mother Church, approximating four thousand, filled the body of the house and generously overflowed into the first galleries. The entire service, including the impressive address by Samuel J. Elder, LL.D., which was published in full in the *Monitor,* was followed with rapt attention. In introducing the speaker Judge Smith, the First Reader, said,—

"The Christian Science movement is a crusade against slavery. It is a crusade against every form of mental bondage. Christian Scientists seek for themselves and for all mankind the liberty of the children of God. Therefore they delight to honor a President under whose guidance an important step was taken toward freedom. This service in honor of Abraham Lincoln will include an address by a distinguished citizen whom the members of this church will recognize as a friend."

The following brief extracts from Mr. Elder's address will give some intimation of its forcefulness.

"He was not a man 'to double purpose bent,' who stands in pause. He went straight to his object because he saw it plainly. It was said once of an unjust judge, 'You must not view him too severely. He must do twice as much as another, for he must ask himself, "What ought I to do?" and then, "Shall I do it?" '

"Lincoln had no double question-mark in his mind. What he 'ought' meant that he 'would,' and therein lay his hold upon the nation. It knew instinctively that he would do his duty without wavering or evasion.

" 'There was a sepulcher in the land and the dead were in it. The great stone of the constitution was rolled against it. The seal of public opinion was upon it. He broke the seal and rolled away the stone, and the dead came forth. This is the picture of the outcoming race and the man.'

"Napoleon shook Europe with his legions. He drained the life-blood of France and of Europe. . . . As his star was setting a child was born in the west. He was cradled in a cabin and swathed in poverty. He grew in stature and in the knowledge of righteousness. He sought not his own, but another's good. He was strong and brave, but tender as he was brave. He made simple truth and service to men his religion. He walked modestly before the people. He stood before kings. He freed a race and pointed it to its own redemption. He saved the Union of the states and secured the perpetual peace of the nation. He finished his course and kept his faith. He proved again the homely truth—

> 'Tis only noble to be good.
> Kind hearts are more than coronets,
> And simple faith than Norman blood."

In New York, Chicago, and many other cities, as we are informed, the services were very largely attended. In Third Church of Christ, Scientist, New York city, an address was delivered by Benj. Chapin, Esq., the well-known author and eminent authority on the life of Lincoln. Mr. Chapin related the following incident:—

"When he had finished the Emancipation Proclamation, and had finally decided to read it to the members of his cabinet, he called them together, and when he had finished the reading, Mr. Chase said, 'It seems to me, Mr. President, we ought to have in that document some recognition of the Almighty.' 'You are quite right, you are quite right. I wonder that I did not think of that, but I am not very good at such things. You write it and I will put it in.' So Mr. Chase wrote these words: 'And upon this act, sincerely believed to be an act of justice, I invoke the considerate judgment of mankind and the gracious favor of Almighty God.' Lincoln read it and said, 'That is very good,' and began to put it down at the end of the document."

At the gathering at First Church of Christ, Chicago, Judge Wm. G. Ewing spoke to an audience which crowded the church to its utmost, and we regret our inability to give more than the first and last paragraphs of his eloquent address. He said,—

"The people of America exalt themselves in the estimation of all civilization by honoring the memory of Abraham Lincoln, for even now, scarce half a century distant from the Titanic struggle in which his splendor dawned, there is more of honest merit in his mighty name than ever bore the burdens of a crown or through slaughter won a throne. Martin Luther waited nearly three centuries for the full recognition of his mighty achievement, and Shakespeare nearly a century longer for the universal acclaim of his splendid genius, and so with scores of others whose great names now belong to the rich heritage of the world. The rule through all history seems to be that it is time that sets all things even and gives to every man his own, but in the instance of the great Lincoln, an awakened sense of justice superseded time, and wrote his name high on the scroll of the immortals, even while the nation in tears followed him to the grave."

"In the presence of this great name I bend my heart to its knees. He was a man of but one idea, but that idea encompassed a whole race in bondage; it was as broad as the universe of God; it comprehended the spirit of universal liberty; it gilded with a fadeless splendor American manhood; it gave as a heritage to immortality that transcendent composite of greatness and goodness, of genius and gentleness, of sublimity and simplicity—Abraham Lincoln."

At Fourth Church the address was delivered by Col. Julian Kune, who fought under Kossuth and who was one of those invited to Lincoln's house in Springfield the night before he left for Washington to be inaugurated. He related the following interesting incident:—

"The second time I met Mr. Lincoln was during the presidential campaign of 1860, when he ran for President as the Republican standard-bearer. As it happened, I was an alternate to the Decatur state convention, which was held on May 9 and 10. It was at this convention where the pent-up enthusiasm for Mr. Lincoln as a presidential candi-

Digitized by Google

date culminated. While the delegates were deliberating and discussing the availability of the various favorite candidates, such as Wm. H. Seward, Simon Cameron, and others, John Hanks, a cousin of Mr. Lincoln, made his sudden appearance in the midst of the delegates, carrying on his shoulders two fence-rails with this inscription tacked to them: 'Two rails made by Abraham Lincoln and John Hanks in the Sangamon Bottom in the year 1830.' The effect of this strange episode was startling. The Illinois delegates, forgetful of their various favorite candidates, jumped to their feet and on to the chairs, cheering with earsplitting voices for 'Honest old Abe, the rail-splitter.' Others soon joined the cheering crowd, and the result was that Mr. Lincoln became the standard-bearer as far as the state of Illinois was concerned, and the delegates to the national convention were instructed to vote first and last for honest old Abe, the rail-splitter."

At Fifth Church Judge Richard S. Tuthill spoke on the life and example of Lincoln to a large audience.

In San Francisco a union meeting of the three Christian Science churches was held at First Church of Christ, Scientist, to which the local representatives of the Grand Army of the Republic, the Loyal Legion, and the Woman's Relief Corps were invited.

THE WILL OF GOD CONCERNING US.

WILLIS F. GROSS.

THROUGHOUT the ages mortals have been divided in their thought as to what constitutes the will of God concerning humanity. Many have inclined to the opinion that, either directly or indirectly, God must be responsible for things as they are. It is argued that, since God is omnipotent, He could have ordered things differently if He had wished them otherwise, and since He did not do so it must have been His will for them to be as they are. There are others who do not feel able to answer this line of argument, but they are nevertheless unwilling, or unable, to accept the thought of God as presented in this view of His government of man and the universe. To such as these the message of Christian Science is most acceptable. It answers all questions and satisfies the human yearning to know God, whom to know aright is life eternal.

Science and Health (p. 466) says: "The Science of Christianity comes with fan in hand to separate the chaff from the wheat. Science will declare God aright, and Christianity will demonstrate this declaration and its divine Principle, making mankind better physically, morally, and spiritually." Many have asked why it is that Christian healing is not taught and practised in the churches of today as it was in the days of Jesus and his disciples. They have been told that such works are no longer necessary. It is argued that the power to heal sickness and to cast out devils was bestowed upon the disciples to prove that Jesus was the long-looked-for Messiah, and since that fact was established beyond all doubt there is no longer any necessity for the exercise of this power. Assuming, then, that God's will is expressed in things as they are, it is asserted that inasmuch as the power to heal the sick disappeared from the church in a comparatively short time after Jesus and his disciples had finished their life-work, it could not have been God's will that Christian healing should remain as a permanent dispensation.

Christian Science shows the error of this position, and it also shows how this belief has robbed humanity of the blessing of health and a greater degree of moral and spiritual freedom. The disciples had power to heal the sick and reform the sinning, and these works proved that Jesus pointed out the way of salvation from sin and sickness, and that others as well as the Master could do these mighty works. But this power was not a personal gift, bestowed by Jesus upon his disciples regardless of any effort on their part other than a willingness to receive it. The power was divinely bestowed through Jesus' teachings and it was proportionate to the disciples' understanding of or realization of the truth of being. The exercise of the power demonstrated the truth of what they had been taught.

Salvation from sickness, as well as from sin, was at that time, and is now, a great need of humanity. It was the mission of Jesus to make plain the way of salvation from everything that is unlike infinite and eternal good. Not only the healing of sickness, but the destruction of sin proved the Messiahship of Christ, yet it is not suggested that moral healing is no longer necessary. We hear it said that it was the Saviour's mission to save men from sin, and thus to save them from the present and future consequences of sin. Was it not rather his mission to make men every whit whole, physically as well as morally? This was certainly the work that he did, and he commanded his disciples to do likewise. No doubt there are many who honestly believe that Jesus' teachings will save from sin all those who accept his word, and that Jesus gave his disciples power to heal sickness to prove that his teachings were true and that he made plain the way of salvation from sin; but that there is no immediate connection between the practice of his teachings and the healing of sickness. If this view of the Master's teachings and work is entertained, it will certainly explain one's inability to heal the sick.

Jesus told his disciples to return good for evil, to love their neighbors as themselves, and to pray for them that despitefully used them and persecuted them. Unless they had understood at least in part what he taught, it would not have been possible for them to keep his commandments. Such works as these, as well as those other works commonly called miracles, demonstrated the truth and power of his teachings. The Christian of today is expected to return good for evil and to love all mankind, foe as well as friend. Whence comes his power to do this? Is it not proportionate to his practical living faith in God? This faith, which ever finds expression in works, constitutes his Christianity—his Christlikeness. It is never said that a man's inclination and power to live according to the precepts of the Sermon on the Mount, is a gift especially bestowed upon him that he may prove to the world that he is a Christian. It is recognized that while these good works do bear witness to his Christianity, they are nevertheless the natural and spontaneous manifestation thereof. No further argument is necessary to prove that the more Christianity a man possesses, the better is he able to live in accordance with the Master's teachings.

When the eyes of mortals are opened to see that the power to heal sickness comes through a right apprehension of Truth, just as the power to be good and to do good comes in this way, they will know that it is their privilege to rely upon God to heal sickness without the aid of drugs or other material remedies. They will no longer believe that the most effectual method of healing sickness the world has ever known was intended merely for a favored few. They will see that life, health, and holiness are to be found in the practical application of the Master's teachings. It will be understood that the whole of the gospel, and not merely a part, can be preached and practised in this and every age.

THE SIGN OF DISCIPLESHIP.

MARY I. MESECHRE.

BUT twelve men are commonly named as the disciples of the Master, of whose calling and fellowship we are given some detailed account. It is recorded that he sent out those twelve, and "other seventy also," who, with the

Digitized by Google

addition of Joseph of Arimathea, known as "a disciple of Jesus, but secretly," and possibly of Nicodemus, who sought Jesus by night, and the two men, Joseph the Just and Matthias, between whom choice was made to fill the place forfeited by Judas, complete the list of those named in the sacred narrative as immediate followers of Jesus. By inference we may include part at least of the Pentecostal company, and of the five hundred brethren to whom the Master appeared. Even this is a somewhat insignificant following for that wondrous Teacher who spake as never man spake, and to whose students had been vouchsafed such signal instances of divine power as enabled them to emulate in some degree the example of their Master.

After the crucifixion and ascension of Jesus, we find plentiful evidence that this term was no longer limited to those who had been closely associated with him. In the book of Acts are numerous references to disciples among persons who manifestly were not followers of Jesus when he walked the hills and vales of Palestine. Notable among these is Saul, or Paul, as he is better known, whose bitter prejudice was so marked that even after his marvelous conversion, when he humbly essayed to join himself to the disciples, they were afraid to receive him, not believing him to be sincere, and whose probation, had it not been for the timely intervention of Barnabas, might have been indefinitely prolonged. We are told that the disciples were first called Christians in Antioch, and it is improbable that the band in that city was composed of those personally instructed by the Master.

Naturally, since the name disciple can no longer be restricted to the immediate followers of Jesus, and since we find the appellation in common use among those familiar with his teachings, we are led to inquire the reason for this usage, and for the bestowal of the title upon others than those first so designated. The answer is found in the Master's own words, as recorded in the 13th chapter of John's Gospel: "By this shall all men know that ye are my disciples, if ye have love one to another." In these few simple words we are shown the sign of discipleship, a sign so broad that it may rest upon all the world, and yet so exclusive that only those who faithfully comply with the condition imposed may wear it. "If ye have love one to another." "By this shall all men know . . . my disciples." It sounds very simple, does it not, and by no means difficult? It is a small matter to declare our love for all mankind, to repeat glibly, "I love everybody, and everybody loves me," to smile into the friendly faces we meet, and pass on with the comfortable assurance that we are at peace with all the world.

Jesus did not say, If ye speak love, but, "If ye have love." Is there not a marked difference? Is it enough to say we love? The apostle James declared that the possession of faith could be truly shown only by works. Can we honestly claim the possession of love, and yet not bring forth its fruits? Have we announced our discipleship and failed to produce its token? Love is active. Are we content with passivity? Do we cease our activity with the utterance of our words, or do we strive by every act to give true expression to those words? Have we abundance, and fail to seek out and relieve the need of some brother struggling under the load of poverty? Have we plenty, and neglect to share with some one whose sore heart cries for the help we fail to offer? Have we perchance but a single cruse, and fear to pour therefrom into the empty vessel of our neighbor? Have we a staff on which to lean, and yet fail to extend a helping hand to one who struggles faintly by our side? Do we feel beneath our feet the solid rock, and hesitate to reach out to one whose going is still in the mire of despond or the quicksand of sin? Do we light our lamp, and use it merely to enable us to avoid the pitfalls and snares that beset our way, instead of holding it aloft that it may also illumine the path of others? Do we stumble, and fail to speak a warning word to the one who follows?

Do we suffer wrong, and refrain from condemnation of the wrong-doer? Nay, more, do we rejoice in his progress, and allow no least desire for his downfall? Are we able to see injustice and pride, and all the kindred brood, seemingly given place above truth and humility, gentleness and kindness, and still hold fast to the eternal fact that God reigns and His judgment will be manifest? Do we give our best, in thought, word, and deed, to the service of our Master, and still give, though we find it mocked and rejected and ignored, remembering only that we "serve the Lord Christ"? Do we bear patiently the petty annoyances from those who ignorantly or wilfully misconstrue our motives, and maintain our equanimity, ruffled neither by passing breeze of criticism nor continued tempests of persecution? Are we humble when praised, meek when tormented, steadfast when tried, silent when misjudged? Have we the sign of discipleship? Do we have love?

Surely we cannot be too grateful that in this age one has been found whose life has manifested unmistakably the sign of discipleship, whose thought has been so clear, whose motive so pure, whose adherence to the standard of Christ so unwavering, that through her has been revealed the divine Principle which bases the life of every true disciple, that through her humble following of Christ we have again been encouraged and helped to vanquish all the foes which have beset us, all the difficulties hitherto presenting to us insurmountable barriers to the possession and expression of the love which constitutes the sign of discipleship. May none of us be content with a discipleship in name only, but may we earnestly strive to fulfil this beautiful prayer of our Leader: "Oh, may the love that is talked, be *felt!* and so *lived,* that when weighed in the scale of God we be not found wanting" (Miscellaneous Writings, p. 312).

THE POWER OF THE BIBLE.

WM. LLOYD.

Of what use is the Bible? This question is asked from a purely utilitarian standpoint, in the same way that one would ask, Of what use is a steam-engine? What can I do with it?

Let us suppose that a man, ignorant of mechanics, comes upon a steam-engine in perfect order, but without fire or water—technically called "dead." He has read of its power and of the wonderful things it has done, but all the engineers are dead and gone and he knows of no one who can make it work. Of what use is this steam-engine to him? None. As he stands there wondering, and wishing that he knew how it worked, along comes a woman and says, "I have studied long and hard, and have learned how this engine works: you put water in the boiler, fire in the grate, touch this lever and that, and it will work and do the work of a thousand horses." If the man is foolish, he may reply, "Pooh, you are a woman; what can a woman know of such things! All the engineers I ever read about were men." Then he continues to wonder and doubt, and for him the engine is still useless. If, on the other hand, he is wise, he does not stop to think whether it is a man or woman who speaks, but quickly replies, "I doubt if fire and water can move so ponderous a machine, but what you say is easily proved and is worth the trying." He quickly gets fire and water, follows closely the directions given, starts the engine, and, lo, he has a machine doing such work as he never thought possible. The engine to this man is henceforth a thing for daily use. Why? Because he had enough sense to investigate, even though he doubted.

So with the Bible and myself! Strictly brought up, made to be very familiar with it from cover to cover, with

Digitized by Google

an earnest desire in my early years to believe in it and to be a Christian, yet the older I grew the less use I had for it. It contained so many things I could not understand; so many things which seemed unjust and unreasonable, that it was to me as a "dead" book. Take, as a sample, the verse in St. John's Gospel: "Whose soever sins ye remit, they are remitted unto them; and whose soever sins ye retain, they are retained." What an awful and unjust power to give twelve men of passions like my own,—power to give to the people they liked eternal bliss, or to condemn people they disliked to eternal damnation. Did I want such a God? No; I did not. My engine was very "dead" indeed.

Then came the woman who could enlighten me, and one day the Christian Science text-book was put in my hand. I thank God I had sufficient sense to investigate. I have no recollection of even thinking that it was a woman who had written the book. At that time I cared nothing for the author—I cared only for the information. It was very simple. Just this, to begin with: God is All, has all-power, is altogether good, and is ever present; and I decided that the first time I was hurt or in pain, I would call silently on Him,—realize His allness, goodness, love, power, and presence; deny the possibility of any other power, and the consequent impossibility that man can be sick or in pain, because God has not sent it and we suffer only for sin. I did just this, and sure enough, to my great surprise, the pain did go away. That was twenty years ago, and as I have continued to study and receive instruction from those more advanced than I, the way has continued to grow clearer and the demonstrations more certain and wonderful; more wonderful, were it not that I have nearly ceased to wonder, save at God's continued love to those who stray so far from Him.

Take that same verse in St. John, and in the light of Christian Science what a simple, loving, common-sense statement was made by the great Teacher, not only to the twelve, but to all humanity for all time. He did not announce anything new, he did not confer any power; he simply stated a fact as any teacher would to his class—in substance just this: If A does B an injury, and if B resents it and waits his opportunity and injures A in return, A becomes more hateful and injures B again; and so it goes on, growing worse all the time, until perhaps it becomes a family feud—a hateful accumulation of wrong! A's original sin is indeed "retained." Suppose, however, that C injures D, and the next time they meet D greets C with a smile or a kind word, or does him a good turn. The inevitable sequence is that C goes home ashamed, and when opportunity serves he returns D's good action, with the result that C's sin, having been "remitted" by D, no longer exists; and this is to their mutual good.

My engine is becoming alive, but what can it do with steam up? Everything. I could fill a volume with what it has done for me and my family. For instance, to name what just one verse did for me. Some years ago my business called me one day each month to an office situated some ten thousand feet above sea-level in Cripple Creek, Col. Every time I went, I suffered agonies from the altitude. This continued to occur, until the time came when I had to stay there three days. Then I knew I had to seek help from where the only real help is, and I did what I should have done before. I took a verse—just one verse—from Paul's epistle to the Romans,—"Nor height, nor depth, nor any other creature, shall be able to separate us from the love of God,"—and for some days before the trip, morning and evening, I realized what this verse literally meant—what I already knew of God, how I was doing my duty, how His power and presence were just the same at ten thousand feet as at one thousand feet. It did not make a bit of difference to Him where I was; He loved me and was with me just as much in one place as the other, and there was no power but His in either place. I went. I stayed three days and two nights. I ate, I worked, I slept well. I never once had the least pain, and returned home a hearty, well man. Since then I have gone there several times and have never suffered.

Am I thankful that I have learned how the Bible works? I am. Am I grateful to the author of the "Key" that unlocked what was a profound mystery to me? I am, and thinking of my mother and of the many good, true, and pure women it has been my privilege to know, it seems eminently fitting that this last clear and final revelation should come through a woman. It is not at all extraordinary to me that God should choose as His messenger the woman who has, above all others, shown the possession of all that goes to make up noble womanhood. So it would be foolish to ask if a woman can explain the Bible, for the thing is done; a woman has explained the Bible so that it is living truth and works for each one of us. Her name is Mary Baker Eddy, and her explanation is very clearly set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures."

GIVING.

GERTRUDE S. MC CALMONT.

We read in our text-book (p. 79) that "giving does not impoverish us in the service of our Maker," and just at this time, when our hearts are full of joy in the thought that our Publishing Society has responded to the perpetual demand of Truth to "enlarge our borders," I am moved to relate a recent experience. It has been my privilege to contribute to the publishing house building fund through the medium of our church. A few days after making what I thought would be my last contribution to this fund, I received what seemed like a rather large dividend on a small investment made only about a month previous to this time. Being awakened to greater activity through reading the articles in our *Sentinel*, I saw that I need not wait for another "collection day" to come, but that I could avail myself of the invitation to contribute "both individually and collectively;" so I immediately sent this money to the treasurer of the building fund. Within a short time after returning from the post-office, an amount but a trifle less than that which I had sent was very unexpectedly given me by one who had no knowledge whatever of what I had done.

This is only one of many similar experiences which I have had from the blessing of "giving." Although my income is not large, if reckoned by dollars and cents, yet my wants have been most abundantly supplied, for is not God the very fount of supply? It has always been my habit to give all that I possibly could at the moment, keeping no account whatever, knowing that I would receive in the measure of my ability to accept. Christ Jesus said, "It is your Father's good pleasure to give you the kingdom," and this I have endeavored to make an abiding consciousness; thus the "motion of divine energy" has indeed been "unlabored" (Science and Health, p. 445).

NOTICE.

A number of pages have been added to *The Christian Science Journal* during the past few months and the weight of the magazine has thus been increased to the point where it now requires three cents (3c.) postage on single copies to all points in the United States, Canada, and Mexico, and five cents (5c.) to other countries.

This information is for those who wish to remail the *Journal*, and does not affect the subscription price.

SELECTED ARTICLES.

[Frederick Dixon in the *Richmond and Twickenham* (Eng.) *Times.*]

The letter of Mr. ——, in a recent issue, appears to contain a gently expressed indictment of Christian Science for not having changed the social system of centuries in a few years. As a matter of fact, Christian Scientists are not a rich people, and few of them are overburdened with capital. In London the great mass of them are hard workers at the ordinary avocations of this world. Outside London the chief strength of the movement lies in the manufacturing towns and the great seaports. Here, where the crash of machinery sounds in the factory-walled streets, and by the wharves, they are making their way because, workers themselves, they are showing the workers that there is a power in divine Love to save men not merely from sin and disease, but from despair and want and woe. . . .

I do not want to claim virtues for Christian Scientists above their neighbors, but I believe they are giving unostentatiously, and in true charity, as liberally as any body of people in the entire world. For centuries reformers of every description have striven by every means in their power to overcome the horrors generated by the economic systems of the world. They have been routed by two apparent facts, the savage selfishness of one moiety of humanity and the hopeless shiftlessness of the other. It has not much mattered whether the "Œil de Bœuf" or the Faubourgs were in power; whether philanthropists like Yao and Shun were wearing themselves out in an effort to feed their people, or reprobates like Chieh were deliberately letting them starve; the law of the survival of the fittest has exerted its seemingly inexorable mesmerism, whether in the victory of the Gothic hordes over a degenerate Latin race or in the imposition of the will of a Napoleon upon the hopes of a nation.

Today Christian Science has come to remind the world that Jesus of Nazareth, in the words of Mrs. Eddy, was not only "the best man," but "the most scientific man that ever trod the globe" (Science and Health, pp. 52, 313). The best, because he saw that the only way to reconcile the conflicting emotions and passions which we call man, to Truth was by a true understanding of the law of Love: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself." And the most scientific, because he taught the only real law of the survival of the fittest when he said, "Heaven and earth shall pass away, but my words shall not pass away." The fittest is not the few inches of humanity which constitute a successful tyrant; not an inexorable human law of supply and demand; it is not even the mountains and the sea. It is that which reflects God, the understanding of the Mind that was in Christ Jesus, of the Mind that fed the multitude by Galilee, the Mind that quelled the wind and calmed the sea, the Mind that cried in Bethany, "Lazarus, come forth."

It is this understanding of Life, it is this demonstration of Truth, it is this realization of Love, which slowly perhaps, but surely, is effecting its purpose, not by struggling helplessly with results, but by destroying their causes, for "the kingdom of God is within you."

[Rev. Irving C. Tomlinson in the *Metropolitan Magazine.*]

The Christian Scientist feels that the creator has provided a science which is as practical in solving his life-problems as the science of mathematics is practical to the mathematician in solving his problems. The science of mathematics has its fundamental law from which all is derived, upon which all depends, and which includes the all of mathematics. The Science of Mind has its Principle, the one originating Mind, one God; from whom man is derived, upon whom man depends, and who includes all that really exists.

Because the Christian Scientist regards man as the idea of Mind, just as the mathematician regards numbers as ideas of mentality, he holds that what is true philosophy in dealing with the problems of mathematics is true philosophy in dealing with the problems of mankind. In mathematics, certain problems present themselves and certain fixed and invariable rules prevail for their solution. The mathematician, in working out his problem, when he fails of the correct answer has an exact method of procedure. He finds the mistake and corrects the error through the right understanding of the truth. He knows the truth and the truth makes him free from the discord. The mistakes in the mathematical problem are made apparent by misplaced figures. For these mistakes the figures are not held responsible. To correct the mistakes, the human mind which made them must be corrected. Free mortal mind from mistakes and the problem will be free from mistakes.

What is true science in arithmetic, Christian Science holds to be true science in the human problem. The error is made apparent by an imperfect human figure. For this mistake the body should not be held responsible, for the body is but the instrument of the mind. Free human mind from its error, and the human body will be free from its disease. To remedy the error of disease, then, the Christian Scientist, like the mathematician, does not treat the figure, but rather he treats the mental condition that produced the disease. He regards disease as due to the non-recognition of Mind—divine Mind. To him sickness and sin are signs of mindlessness. Life and health are the signs of mindfulness. Christ Jesus, then, announced the fundamental fact in the Science of Mind when he declared, "Ye shall know the truth, and the truth shall make you free." As Christian Science has a scientific treatment for disease, it has also a scientific treatment for sin. In this Science of Mind, as darkness is the absence of light, so sin is the absence of good or God. As light is the reality and darkness its absence, so good is the reality and sin its absence. As darkness is not the child of light, but vanishes before the light, so sin is not the product of Mind but is destroyed by the advent of Mind.

[Frederic C. Hotchkiss in *New London* (Conn.) *Globe.*]

The statement that "the cure of man morally and physically is not Christian Science; it is Christianity," calls for explanation from a Christian Science point of view. To those who understand in a degree the teaching of Christian Science, it is Christianity applied. If Christianity does not "cure man morally and physically," it is not fulfilling its mission. If, on the other hand, man is "cured morally and physically," it must be brought about by a demonstrable understanding, which constitutes knowledge.

If the "knowledge of principles and causes; ascertained truths or facts," which is Webster's definition of the word "science," is applied to the law of cause and effect in Christianity, this application must be scientific, and therefore Christianly scientific. For man to be cured "morally and physically" through the application of Christianity it must be according to the operation of law, the law of cause and effect, which law must be demonstrable, and therefore explainable through the "knowledge of principles and causes; ascertained truths or facts." Jesus said: "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil," and he healed all manner of diseases and raised the dead because of his Christianity or scientific application of demonstrable law. He said to his disciples: "All power is given unto me in

Digitized by Google

heaven and in earth. Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost: teaching them to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world."

Jesus' teaching must have been scientific, and in harmony with the infinite law of cause and effect, to be understood and practised by all who are striving to learn of him. Christianity must be a practical and demonstrable application of the law which he came to fulfil, and not a mere worship of personality. The application of Science to Christianity is undeniably correct, and the "cure of man morally and physically" is due to demonstrable Christianity, or Christian Science.

[Grey Montgomery in *Pueblo* (Col.) *Chieftain*.]

Christian Science gives us a sure, scientific method and rule of healing sin and sickness, based upon divine Principle. It teaches entire and sole reliance upon God, infinite, divine, all-powerful, ever-operative Mind—ever-active spiritual Love—in every time of trouble. Its teaching that the human will or so-called mortal mind is responsible for all evil and erroneous conditions,—sin, disease, and death,—is in accord with the teachings of Jesus, who said that evil thoughts defile the man.

Christian Science teaches that there is only one Spirit, all-inclusive Mind, or God, and therefore it denies all belief in many spirits, as taught in spiritualism. It teaches that man can never be organically spiritual, but as he gains a better and higher understanding of God and gets rid of sin and false concepts he will gradually be freed from material limitations and finally reach the perfect image and likeness of God, Mind, Love, Spirit, good. Christian Science denies that there is any "occult power," for it assigns all power to God and teaches that man is subject alone to God, good, and possesses only that power bestowed by God, only the power to do good, and that this recognition of God's power takes away all power or desire to do evil or to influence or control any one by the use of the human mind.

[Capt. Geoffrey Wilkinson in *Kentish* (Eng.) *Mercury*.]

Your correspondent states that "prayer is doubtless necessary in healing the sick, but if he who prays does not act . . . on the outward means provided for him in times of sickness, then God will not hold such an individual guiltless if the sick person die." It is not quite clear from this why prayer is "necessary in healing the sick." If there is virtue in "the outward means," why should it be necessary to pray? If, on the other hand, there is no intrinsic virtue in the outward means, why use them at all? Again, our critic will not deny that people fail to recover in spite of the use of "outward means." If this is so, it must be assumed that, if God instituted these "outward means," then He is unwilling to provide adequate remedies for the use of His children —a rather severe indictment on the Deity. Now Christian Scientists have been brought up in the use of material means, and it is for the very reason that these have failed them that, in a large proportion of cases, they have turned to Christian Science as a last resort and found the health and harmony they had failed to find before. If others prefer to rely on "outward means" in cases where Christian Scientists would dispense with these, they have no desire to prevent them: but they do feel that they have found a speedier and more effective way—a way that is instantly available, at all times and in all places, both where outward means are at hand and where they are not. Faith, in the sense that Jesus used the word, is the understanding of spiritual law, the law of God who is Love, and this spiritual law, as the Master showed, annuls every physical so-called law. The realization of God's law is the enforcement of God's law. And this law is apprehended in proportion as men let that Mind be in them "which was also in Christ Jesus:" and just in proportion as men do this will they be able to overcome all physical limitations and dispense with "outward means."

[Frank W. Gale in *San Jose* (Cal.) *Mercury*.]

Christian Scientists have no feeling of hostility toward physicians, as such, for they recognize and appreciate the conscientious efforts of physicians in behalf of suffering humanity, although not believing in their material remedies or methods. The reason for this is simple. According to Christian Science, all men are brothers and should love one another; but when sickness or trouble overtakes them, Christian Scientists, following the teachings and practice of Christ Jesus, depend upon the spiritual power of God for healing, and the vast majority of such cases are healed. It is not claimed that there are no failures under Christian Science treatment; but most of those who fail to recover were previously pronounced incurable by medical practitioners, so there was no hope from material methods. On the other hand, thousands of cases which had been given up as hopeless by physicians have been healed through Christian Science, proving that diseases thought to be incurable from a material standpoint can be cured by a higher power.

Regarding diagnosis, the doctor says: "Without familiarity with intelligent diagnosis, how ludicrous seems the claim of its miraculous cures of cancer, heart disease, tuberculosis, diphtheria, smallpox, and other incurable and curable maladies." Instead of depending upon physical "signs and symptoms of disease" for his diagnosis, the Christian Scientist looks beyond them for the mental cause, and when this is removed the patient is healed, showing that the mental diagnosis was correct. Many cases of the diseases mentioned above, as diagnosed by reputable physicians, have been healed by Christian Science, which proves either that such diseases are curable through Christian Science, or that the doctors made a mistake in their diagnosis. If the former, Christian Science heals what has been considered incurable disease; if the latter, what shall we think of the boasted medical diagnosis? But in either case the patient who was hopelessly sick is now well through the ministrations of Christian Science, and is thanking God for his recovery.

[J. V. Dittemore in *Schenectady* (N. Y.) *Gazette*.]

No higher ideals are possible than those taught in Christian Science. One of the tenets of the Christian Science church indicates the standard demanded. It says: "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

Our critic is quite right in his assertion that "I am justified in feeling that any one who touches my nervous system through the medium of hypnotism is a criminal quite as much as if he were secretly to give me an injurious drug." This is exactly the teaching of Christian Science on this subject. Christian Science eschews hypnotism, and a Christian Scientist never attempts to manipulate secretly the mentality of others. In fact, no Christian Scientist would undertake to practise in a way which would involve any attempt at the despotic control of will-power.

[Rev. George B. Dean as reported in *Lowell* (Mass.) *Courier-Gazette.*]

Our civilization is at once blessed and cursed with some of our institutions. The ideal commonwealth will have no jails or prisons or asylums. These will have faded away. But today, these things are a necessity. Yet they are doomed, and the day is coming fast when they will be of the past. While not yet perfect, we are going on to perfection; and the enlightening influence of the church must be to pull down these institutions.

I would be sorry if I knew that the jail was about to be removed from the city and the police court pulled down; but if the teachings of the church were to control our commonwealth, these institutions would fade away like the leaves in autumn. If only men would live up to the teachings of the Bible, there would be a reformation so tremendous that everything in the past would be as nothing compared to it. The day is coming when these forces will so control the world that these institutions will be a thing of the past. The day is coming when the jail will be replaced by the church.

What are you doing for the discharged prisoner? There is many a case like that of Jean Valjean. What is the church doing? We are not worthy the name of the Master who came into the world to save the lost, unless we are trying to do something for the man who has been in jail. We as a church, and all the churches, ought to unite in this work.

[James Phelps in the *De Soto* (Wis.) *Argus.*]

Christian Science does not teach that the universe and man do not exist; but only that they are not what they seem to be to the unillumined consciousness. It teaches that they will be infinitely more beautiful and grand to us when truly comprehended. "It doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is."

Recent events show the awakening of the people to demand something more practical than mere theorizing. Christian Science has already healed hundreds and thousands of cases of organic and functional disease, a very large percentage of those cases having been pronounced incurable by physicians. Thousands of people, including clergymen, physicians, stanch church-members, and agnostics, are joining the ranks of Christian Science; because they are learning that it is a rational religion, which heals the sick, regenerates the sinner, and restores the hopeless and despairing to health and happiness.

[William E. Brown in the *Los Angeles* (Cal.) *News.*]

Christian Science is not, as is commonly supposed, a mere school of physical healing. It is a religion—the religion of Jesus Christ—and accomplishes its healing and redemptive work in the same manner as did the Master and his disciples. It heals physically by improving the spiritual and moral nature of the patient, the recovery from disease being the evidence of such improvement. Christian Scientists do not use a special Bible of their own, but draw inspiration from the spiritual wells of the same old Bible of our fathers. The Christian Science text-book, Science and Health, is used as a commentary, just as orthodox clergymen use their Bible helps.

In giving Christian Science to the world Mrs. Eddy does not claim to have founded a new religion. Through study, research, and demonstration she discovered that the teaching and healing methods of Jesus are just as efficacious today as they were in his time. The proof that Christian Science is primitive Christianity is found in the results obtained through its practice. Thousands have been redeemed from sin and disease, their lives corrected and purified to a greater degree than ever before; men and women are made better parents, neighbors, and citizens, but best of all, made sincere and earnest followers of Christ Jesus, striving daily to conform their lives to his standard.

It is sometimes said by the uninformed that Christian Science attempts to heal by ignoring sin and disease with the parrot-like utterance, "There is nothing the matter;" and, "You are well if you only think so." Such foolishness is very far from Christian Science practice.

[R. Stanhope Easterday in the *Warsaw* (Ind.) *Union.*]

Christian Scientists but reasonably contend that material existence, with all its consequent sin, sickness, and death, is but a misconception on the part of mortals of spiritual existence or of man's real being as the image and likeness of God, Spirit, basing their hope of immortality on the Scriptural assurance that, "when he shall appear, we shall be like him," because, forsooth, we shall then "see him as he is." For in the light of the truth of the gospel of Christ, we shall some day discern all things spiritually, not as now through a material medium, "darkly."

[Written for the *Sentinel.*]

"ADAM, WHERE ART THOU?"*

BEN. HAWORTH-BOOTH.

THE word of Spirit, wafted on the wind
Of Eden's evening bowers and sunset trees—
The eternal tone of Truth, that is behind
The dark discord of earth's inharmonies—
Trembling they heard it—and we hear it now,
Probing the darkness—"Adam, where art thou?"

"Adam, where art thou?" In the hush of night
I hear His question in my heart's recess:
Hast thou, like Esau, sold the son's birthright?
Art wandering yet in Sinai's wilderness?
Doth Egypt hold thee bound, thy knees to bow
Before her idols? "Adam, where art thou?"

Hast thou upon the altar of remorse
Done sacrifice, and meet repentance made?
Hast burned the beast entire? and is the force
Of foul desire in dark oblivion laid?
Hast crucified thyself and vowed the vow,
So thou canst answer to this, "Where art thou?"

Where is thy life? does Jack-o-lantern lead
Thy wanton feet, and lure thee on the fen?
Does earth enchant thee with her golden greed
To bind in bondage mean the sons of men?
Man made He in His likeness: is thy brow
Reflector of His beauty? "Where art thou?"

In Thee I live: I learn to loathe the mask
Of dark material consciousness and sin:
I long have set myself the tearworn task
To purge my dross and make me pure within:
Thou art my Life: to thy decrees I bow
In mute response to "Adam, where art thou?"

When I awake in Thee it shall suffice—
After Thy likeness seen upon the mount:
One, pointing us the path to Paradise,
Is with us always, at the open fount:
The morn is breaking on the mountain's brow
As echo softly whispers, "Where art thou?"

*Science and Health with Key to the Scriptures, page 307.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE GOLDEN RULE.

RECENTLY there has been considerable comment in the newspapers with reference to the case of a man prominent in medical circles, it having been alleged that during a critical illness certain Christian Scientists were treating him without solicitation or consent on his part or on the part of his family. One of the strangest things in connection with the case is that some of those who have defended this "obtrusive mental" practice, in the newspapers and otherwise, have called themselves Christian Scientists, notwithstanding they have failed to grasp the purport of what Mrs. Eddy has written on this subject. In her article, "Obtrusive Mental Healing" (Miscellaneous Writings, p. 282), she says,—

"The question will present itself: Shall people be treated mentally without their knowledge or consent? The direct rule for practice of Christian Science is the Golden Rule. 'As ye would that men should do to you, do ye.' Who of us would have our houses broken open or our locks picked? and much less would we have our minds tampered with."

The following letter from J. V. Dittemore, which appeared in the *New York Herald* of Feb. 5, again proves the usefulness of the committee on publication, who are ever on the alert to correct misapprehensions of Christian Science:—

The report that Dr. Bull has been given Christian Science treatment without his knowledge or consent, and the newspaper comments regarding the matter, seem to call for a definite statement of the position of Christian Science toward such obtrusive mental practice. A recent contributor to the *Herald* confuses Christian Science with "thought concentration" and also with prayers of petition and "secret appeals" to God, methods which presuppose Deity to be a changeable and vacillating being instead of unvarying, divine Principle, the coming into accord with which constitutes the answer as well as the prayer.

It is both the right and the duty of every one to declare impersonally the scientific facts of being, and to deny every erroneous belief which presents itself to their consciousness. This, however, is very different from the promiscuous and unsolicited mental interference occasionally encountered, which is not Christian Science and is as unjustifiable a breach of the Golden Rule as for an allopathic physician to intrude himself upon a patient who desires homeopathy.

Christian Scientists claim for themselves the right to be unmolested in the practice of their religion, and they could not consistently urge this claim if they themselves were to trespass upon the rights of those who do not agree with them and who as a rule do not desire their help.

ARCHIBALD MCLELLAN.

MELODY IN THE HEART.

FROM earliest times mankind have sought to express their deepest feelings and emotions by means of music. Thought ever seeks expression, and it is right that all true thought should be expressed not only in one way but in many ways. It goes without saying that we must *be* good before we can *do* good, before we can even think good. The "vile person" may be "called liberal," and "the churl said to be bountiful," to quote Isaiah, but this does not make it so in either case; and sooner or later this fact will be disclosed, because Truth's demands are both absolute and unceasing and they are forever calling us to account. Not even the deceptions of material sense can long resist God's eternal demand for perfection, which is felt in art, in science, and in religion, but most of all in our daily living. What is it that makes mortals so dissatisfied with so-called human life but the failure, on their own part as well as on the part of others, to come up to the demand, "Be ye therefore perfect."

In no other way, perhaps, has humanity better expressed its unsatisfied striving after love and truth and freedom than in music. The pity is that the splendid efforts to express perfection in music should stop there, that any should fail to see that the highest form of musical expression is but an echo of the truth and the beauty which are inseparable from man's being when spiritually understood. Well says our revered Leader: "Music is the rhythm of head and heart. Mortal mind is the harp of many strings, discoursing either discord or harmony according as the hand, which sweeps over it, is human or divine" (Science and Health, p. 213).

A Christian Scientist once received a call from a lady who was wont to argue for the reality of disease, although her belief in its reality afflicted herself grievously. She was, however, a musician, and on this occasion the Scientist was able to give her a most helpful lesson by simply pointing to a piano which was silently awaiting the touch of one who understood how to evoke melody from its keys. The critic said eagerly, "Do you mean that this is the same as one whose life is not touched by Christian Science?" The Scientist replied by repeating the lines just quoted from Science and Health, and by reminding her of many instances, within the knowledge of both, where the human instrument had been giving forth only tones of sorrow and suffering until the chords of hope and faith began to vibrate under the life-giving touch of divine Science. This argument could not be gainsaid, nor can it ever be. Today, as in the far past, when God comforts Zion, "joy and gladness shall be found therein, thanksgiving, and the voice of melody;" then, too, "sorrow and mourning shall flee away."

From Paul we can learn something about music which is worth remembering when perchance we may be stirred by some lofty strains that tell of an intense longing for freedom, or that hint at the beauty and grandeur of the realm of the real. He says, "Be filled with the Spirit; . . . singing and making melody in your heart to the Lord." That was what he did in the Philippian dungeon, when the song of the heart poured forth from the lips, and the wounds from the cruel scourge were forgotten in praises to God. Musicians spend years in the study needed to give adequate expression to some lofty theme, and shall those who know the truth do less? Should we not think it joy to gain at any cost the rare skill which heals pain and restores harmony, the tender touch upon the human instrument which calls forth the praises of God? To do this rightly we must have melody in our hearts. Having it, all those we meet will gain some sense of the freedom, the beauty, the power of Truth and Love, as revealed in Christian Science.

ANNIE M. KNOTT.

TRUTH A REVELATION.

RECENT references to the great American Commoner have directed attention to the interesting fact that his attendance at school did not sum up more than ten months, all told. Nevertheless, although his education was thus circumscribed, it is generally conceded that many of his writings and addresses would do credit to the highest scholarship, such masterpieces are they of lucid and impressive statement. His apprehension of essential truths was so clear, his perception of the just and right thing

Digitized by Google

so final, and usually so immediate, his embrace of vital issues so definite, that the query of the ancient sage can but be precipitated for every student of his life, "Whence then cometh wisdom? and where is the place of understanding?" How came he to acquire such a remarkable grasp of thought, such strength and beauty of expression?

The explanation is to be found in his mental attitude toward truth, his unhesitant and unwavering reliance upon it in every time of need. Christ Jesus affirmed that his wisdom was not his own, but of the Father; and this same consciousness that God was with them and for them explains the splendid daring and consummate ability of his uneducated disciples. Here too do we find the secret of Lincoln's greatness. While not a religionist in the creedal sense, he was profoundly Christian in the best sense, because he trusted with childlike simplicity in Truth, and thus supplied the conditions for the fulfilment of the prophetic assurance, "They shall all be taught of God."

The lesson thus brought home to us is very pertinent and practical, and it will be learned by us in the measure of our individual responsiveness to the prophetic call, "Come ye, and let us go up to the mountain of the Lord, . . . and he will teach us of his ways, and we will walk in his paths." Christian Science does not depreciate the value of education upon the present plane of belief. "Academics of the right sort are requisite," says our Leader; they "promote the growth of mortal mind out of itself" (Science and Health, p. 195). They supply mortal sense the requisite field and opportunity in which to prove its incapacity to solve human problems. Nevertheless it remains true that "mind is not necessarily dependent upon educational processes" (*Ibid.*, p. 89), and this for the reason that all truth is an immediate revelation, God manifest in human consciousness, and that it may be apprehended and utilized, as Christ Jesus proved in full and as Lincoln and many another have shown in part, though the avenues for gaining human knowledge be practically closed. This human learning has ever promised great things, and there are many who yet look to its advance for the redemption of the race, but Christian Science reaffirms the teaching of Christ Jesus that to know God "is life eternal," and that this knowing is not and cannot be fulfilled through intellectual development, but only through the increase of spiritual apprehension. It is an awakening to the native freedom and unlimited capacity of our true spiritual selfhood.

The folly of the thought that would ignore the necessity for earnest and continued effort to advance through the mastery of human beliefs is rebuked by St. Paul's counsel to the Thessalonians, "Prove all things; hold fast that which is good." It was rebuked by the zeal of the poor boy Lincoln as he mastered in the light of the cabin fire every book that he could borrow, and it is rebuked by our Leader in her ever-increasing provision of broadening and educative literature. To all, and especially to those who have had limited advantages for learning what others have gathered of truth, it is a source of rejoicing to discover in Christian Science that, regardless of human limitations, the infinite stores of knowledge and wisdom are ever accessible to him that is of a simple, truth-loving spirit.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Chicago, Ill., Feb. 10, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader and Dear Friend:—I take considerable pleasure in sending you, for perusal on the one hundredth anniversary of the natal day of the great Lincoln, the 12th inst., "The Perfect Tribute," a little book which you can read in twenty minutes, perhaps at the very hour when The Mother Church, and many branch Churches of Christ, Scientist; are observing Lincoln Day services, and which is sure to afford you much gratification. At First Church, here, your good friend, Judge Ewing, is to deliver a brief address. As a youth he enjoyed the enviable distinction of a personal acquaintance with Mr. Lincoln, and his address on this occasion therefore promises to be of unusual interest.

My brother, then a young railroad man, had the honor of running the engine which carried President Lincoln's special train to Gettysburg on the day that he delivered the wonderful address which furnishes the subject of "The Perfect Tribute," and I have heard first-hand what Mr. Lincoln said to the men who had the distinguished passenger in their charge, so you can understand why I am so interested in the book, aside from its historic and literary value.

When the train was ready to leave the station at Baltimore, Mr. Lincoln called the trainmen into his car and gave them very particular directions about running the train carefully, and at the end of the journey he personally thanked them for their faithfulness. My brother recalls a sentence he heard the President utter that day, which sounds so much like what I have many times heard from your lips that I will quote it from memory: "If I only knew the will of God, I would do it, regardless of all men."

Trusting that all is well with you, and with many kind remembrances from all of us to you and your household, I remain

Faithfully your student,
GEO. H. KINTER.

New York, N. Y., Feb. 1, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—At the close of my first year as committee on publication for the state of New York, I wish to tell you how deeply I appreciate the opportunities which have been afforded me for growth in the understanding of Christian Science. Since I was called to this work I have apprehended more fully the divine law behind your words, "One cannot suffer as the result of any labor of love, but grows stronger because of it" (Science and Health, p. 387). The leaven of Christian Science is at work in this great city as never before. May the husbandmen of the vineyard be found ready to "render him the fruits in their seasons."

I have tried to take home to myself every word of wisdom and every loving admonition you have given us during the year, for I know that our ability to be useful in the great Cause you are so wisely directing depends on the measure of our willingness to search our hearts and cast out all "self-will, self-justification, and self-love" (*Ibid.*, p. 242).

I enclose for your files copy of the annual report of the committee on publication.

Gratefully yours,
J. V. DITTEMORE.

New York, N. Y., Jan. 30, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Please accept my thanks for the helpful changes which have appeared recently in Science and Health. If we all would read, and particularly study and ponder, the truths in this book, our progress would not be so slow. The "maximum of good" has always been, but the recent change in Science and Health (p. 103, l. 15) shatters forever the supposition of its opposite. This reading has broken a long-continued sense of limitation.

With gratitude that I am privileged to work for the Cause, I am your student's student,
EDGAR M. WHITE.

Digitized by Google

Minneapolis, Minn., Feb. 4, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Beloved Leader:—Another year has counted off its milestones, and as we again assemble in annual meeting to view the fruits of Truth's harvest, our hearts go out to you in a psalm of gratitude for the direction and guidance of your inspiring life and example. As we view the fulness of the past year's fruitage, we count it our greatest joy to know that it is God's work, not ours, and that in His goodness it pleased Him to give to you that revelation of Truth which is ushering in the fulfilment of our Master's prayer, "Thy kingdom come. Thy will be done in earth, as it is in heaven." May unceasing loyalty to you, and obedience to the Principle you have made known to us, continue—in their fruits—to bring the assurance that we are worthy laborers in your vineyard.

Lovingly yours,
The Board of Directors,
Second Church of Christ, Scientist, Minneapolis, Minn.
EMMA A. THOMPSON, *Chairman.*
LOUISE W. CHAPMAN, *Clerk.*

Chicago, Ill., Feb. 9, 1909.

Dear Leader:—While reading in "Miscellaneous Writings" this morning, your letter to the Denver church, on page 152, such a great sense of love, humility, and gratitude came over me that I could not resist writing a line to you, dear Leader, for all you have done and are still doing for me and for all mankind. My daily prayer is that I may follow our Leader so long as she follows Christ. We have proved in our home that the reading of your book heals. Our youngest son was healed of a serious throat trouble in two hours and a half, and at the same time, in twenty-four hours, of deafness of five years' standing, and he was healed of double rupture in two months. I am so grateful for Science and Health, and all of your writings, for through them I have learned to know God and His infinite love to all.

Sincerely and lovingly,
MARY IDA FUNKE.

Boston, Mass., Feb. 5, 1909.

Beloved Leader:—For the revelation of Truth through you, and for your untiring work for mankind, we owe you unspeakable thanks, and I feel today I must write you a word of gratitude for one of your latest proofs of loving care for us in the change in "Rudimental Divine Science," page 13, where it now reads, "And if the *healer realizes* the truth, it will free his patient." These words have been unfolding in my consciousness since I first read them a few days ago, and bring renewed courage, certainty, and peace. Truly we are learning gradually through your teachings, that the kingdom of heaven must be within us. My husband joins me in loving gratitude.

Faithfully yours,
ANNETTE LLOYD.

Burns, Ore., Jan. 25, 1909.

Mrs. Mary Baker Eddy.

Dear Leader:—Many times I have written you, and then, not desiring to take your valuable time, I have destroyed the letter. I wish to thank you for the many blessings that have come to me through the study of your books, especially "Science and Health with Key to the Scriptures." It certainly has opened to me a storehouse of treasures. The Old Testament was a sealed book to me. I want to tell you that my eyes were healed the first evening I read your book. I forgot to put on my glasses in my haste to see what the book contained, and I have never put them on since. Christian Science has been our only physician for about ten years. I have three children, and two of them have never tasted medicine. The great Physician has never failed us, and we have had many demonstrations over sickness. I had one trouble that many doctors and two specialists failed even to relieve, but it has been healed through the reading of your book.

I can never find words to express my gratitude to you. You have made the way from earth to heaven so plain that "wayfaring men, though fools, shall not err therein." Your by-law against numbering the members gave me a broader sense of God's children. My desire is to profit by your instruction, and follow where you lead, for through your pure and devoted life you have gained much wisdom.

With much love,
MATTIE BRISCO.

Denver, Col., Feb. 3, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Leader:—We, the members of Second Church of Christ, Scientist, Denver, Col., after our first public service, desire to express to you our gratitude for your timely admonitions, as they come to us in their order, out of your storehouse of love for God and man; also to assure you of our love for and loyalty to the Cause which is so near and dear to your heart. We are ever mindful of our promise, as given in our church tenets, "To watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

Loyally yours,
Second Church of Christ, Scientist, Denver, Col.
LOUISE E. WALTERS, *Clerk.*
IDA C. GOODING, JULIA C. WOOD,
CHAS. G. CARLSON, JOSEPHINE CLAYTON,
ANTONIO ABERHOLTZ, *Board of Directors.*

Dublin, Ireland, Jan. 10, 1909.

Dear Mrs. Eddy:—We, as members of the Sunday School of First Church of Christ, Scientist, Dublin, Ireland, wish to express our gratitude to you for your teachings, in the understanding of which we are daily trying to grow. Many of us have been healed by the truth you have brought to the world, and we rejoice in the clearer understanding of the Bible which we are receiving. We are very grateful for the by-law which admits those up to the age of twenty into the Sunday School. We feel deeply our privilege of furnishing the Readers' rooms and of helping with the new hall to which our services have lately been transferred. Our greatest desire is to follow and put into practice your teaching.

Lovingly and gratefully,
Your children in the truth,
MARY R. KING, AGNES B. BAIRD,
MARJORIE HUTTON, ERIC GARDNER,
Committee for the Sunday School.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1909. Applications should be in the hands of the Clerk on or before May 12, 1909. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul streets, Boston.

THE LECTURES.

WASHINGTON, D. C.

The National Theater was filled yesterday afternoon [Dec. 13] with an audience which heard Bicknell Young of Chicago explain the teachings and operation of Christian Science in a forcible and scholarly effort. Mr. Young was introduced by H. Cornell Wilson, First Reader of the Christian Science church of this city, who said in his introduction:—

The purpose in this gathering is to hear presented so much of the teaching, practice, and salvation arrived at in Christian Science as will separate Christian Science in the minds of all present from every grotesque and abnormal concept which may heretofore have been entertained of it, and to enable the listener to consider Christian Science for what it really is, viz., purely the revival in these days of the spiritual methods and wonderful practices of Christ Jesus and his early disciples. Those lives into which Christian Science has entered, to become a factor, give proof in each instance of the availability of this scientific Christianity for the overcoming of all forms of sin and of physical diseases; also the individual's spiritual awakening and regeneration. If Christian Science will do for mankind what logical deduction declares it will and must do, you and I cannot afford, on our own account, nor in due consideration for the future of our race, to indulge this enervating mental influence termed prejudice.

The Washington Post.

EUREKA, CAL.

Frank H. Leonard lectured on Christian Science at the Ingomar Theater, Dec. 20, to a large and attentive audience. He was introduced by Mr. Wright of the High School, who said in part,—

Many of us gained our first ideas of Christian Science not from those who were in a position to inform us, but from sources hostile to the movement. Consequently the majority of us have sat in the seat of the scornful and have acknowledged the efficacy of Christian Science only as it has thrust itself into our homes and healed the sick by our own firesides. A most noteworthy feature of Christian Science is the ease and rapidity with which it makes adherents among the more intelligent portions of our population without any efforts on the part of the organization itself. The movement contains something within itself that is in accord with the spirit of the age. The age looks for results, immediate results. Tradition, dogma, and ceremony no longer satisfy or harmonize with man's new ideals. The dominant religion of the future will be one in which faith and reason will walk hand-in-hand, the one supplementing and supporting the other.—*Correspondence.*

KEOKUK, IA.

The Grand Opera House was nearly filled Sunday [Jan. 3], the large audience being attracted there to listen to Judge William G. Ewing of Chicago, who lectured on Christian Science. Mayor Strimback, who introduced the speaker, said.—

I am not a Christian Scientist myself, but I know some mighty nice people who are. And when I know that the speaker of the afternoon gave up a lucrative law practice after attaining the position of judge of the superior court of Cook county, Ill., I feel that I want to know something of this movement.—*Constitution-Democrat.*

LANCASTER, O.

There was quite a large attendance at the Christian Science exercises held in the City Hall Auditorium Sunday afternoon [Jan. 17]. E. E. Lorimer of Zanesville presided at the meeting, and introduced the speaker, Frank H. Leonard, saying in part,—

This gathering but voices again the great desire of the human heart for something, it knows not what—its longing for something it has not been able to find within itself—a desire as old as the race and which has found expression in every day and age of human experience and progress—the desire to know the truth. In fulfilment of the divine promise, "I will not leave you comfortless: I will come to you," the Christ who stilled the waves of Galilee speaks yet again to the troubled, restless waves of erring human consciousness,—how sweetly, how calmly, how triumphantly,—"Peace, be still," and struggling humanity, tired of its effort, weary of its sin and suffering, conscious of its failure, is learning at last that there is a divine remedy not only for its sin but for its suffering—the remedy which Christian Science presents to this age in its message of Truth and Love, and in which so many have found and are finding rest and peace.—*Lancaster Gazette.*

TESTIMONIES OF HEALING.

Gratitude for the many blessings Christian Science has brought to me impels me to offer a few words of testimony. About four years ago, at a time of bereavement, I turned from orthodox theology and *materia medica* to Christian Science, and it was indeed a happy change for me. It meant my turning away from the husks and nothingness of superstition to that inspiring book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which unlocks the Bible and reveals to us the kingdom of heaven at hand. The fourth evening after I began to read the "little book" I was instantaneously healed of the tobacco habit, which had held me in its grasp for thirteen years. As I continued to read, stomach trouble of seventeen years' standing disappeared, and with several treatments a skin disease of three years' duration was healed. Bowel trouble from which I had suffered for many years also vanished, but the physical benefits are small as compared with the spiritual enlightenment—the peace that comes to us when we learn in Christian Science that God, good, is the only power,—the only reality.

I wish I could command the words to express fittingly my appreciation for the Christian Science literature,—the *Sentinel*, *Journal*, and *Quarterly*. Many articles from our contributors apply to my own condition and help me very much. I am thankful to God, and grateful to Mrs. Eddy for her labor of love and matchless leadership.

W. W. ANDERSON, Sioux City, Ia.

In our text-book, Science and Health, Mrs. Eddy tells us that "Love is the liberator" (p. 225). The truth of these words I have demonstrated for myself, and it has been an invaluable lesson to me and a convincing proof of the divine Principle of healing as revealed in Christian Science. In October, 1907, an abnormal growth appeared on my body. It steadily grew larger and soon became extremely painful. This manifestation was something I had greatly dreaded ever since I can remember, and fear seemed to take complete possession of me. I could not bring myself to speak of my trouble to any one,—not even to the kind practitioner, who had never failed to help me in my greatest need. I thought the very mention of it would make it seem more real. In my extremity I was forced to take up the work for myself, and this proved to be God's opportunity to lead me into the light, though it was "with fear and trembling" that I undertook to work out my own salvation.

For six weeks I stood "porter at the door of thought" (Science and Health, p. 392), and prayed unceasingly in my earnest desire to become better morally and spiritually. During that time I was able to overcome bitterness, strife, and hatred, which had dominated me more or less all my life, and I learned not only to pity and forgive, but to pray for one whom I had hitherto regarded as my worst enemy. All these weeks I had been going to my seat immediately upon entering the church, at the Sunday morning service, leaving without conversation afterward. During the service I prayed earnestly to God to teach me how to "love much," and at the beautiful service on Thanksgiving morning, my prayer was answered. I was instantaneously healed. Divine Truth had made me free; Love had indeed liberated me! The false growth, the pain, and all traces of inflammation had disappeared. It had simply dissolved into its native nothingness. As Mrs. Eddy tells us in Science and Health (p. 266), Love had forced me to accept what would best promote my growth, and this healed me.—EVELYNE HILL, Cleveland, O.

It is about two years since the happy day when Christian Science was revealed to me as a means to insure a permanent, thorough, much desired reformation. I have frequently given my testimony at the Wednesday evening meetings, and knowing that others have been benefited thereby, I ask the privilege of giving it through the *Sentinel*, that I may increase my opportunities for doing good —"to Thine, for Thee" (Miscellaneous Writings, p. 397). I was addicted to the liquor habit for over twenty years. It grew on me from the occasional social glass to a constant craving and abnormal capacity to consume liquor. Having gone down the successive stages of this bondage, losing friends, situations, love of wife and child, I realized I must quit the habit, and tried hard for several years to do so. I tried medicine, will-power, and prayer, the best I knew, but my reformation was spasmodic and of short periods.

On August 1, 1906, a kind friend, who had been a Scientist several years, explained to me that this truth had cured hundreds of cases similar to mine and even worse, and by practically assisting me, showed me the way. Since then I have been entirely free from the desire to drink liquor. Although I had been a smoker for twenty-five years, I have quit smoking I did not ask the practitioner to treat me for this habit, and could not say exactly what time the desire to smoke left me, but it was during the first three or four days of treatment. I have also overcome the habit of untruthfulness. My wife and the little ones are becoming happier each day, and I can see that I am regaining the esteem of my friends; am holding a steady position with a good firm whose trust and esteem I think I may say I possess.

Through the change of life which Christian Science brought me, I have been able to move our lodging from undesirable tenements to a cozy cottage in a fine part of Kansas City, where many Scientists reside. At forty-four years of age I am enjoying the best of health, and greater strength and peace than I have ever known. For all this and much more I am grateful to God, and to Mrs. Eddy. I can now read with understanding and memorize many passages of the Bible, a book I had not read for twenty-five years, and this understanding has been obtained only through the study of that inspiring book, "Science and Health with Key to the Scriptures." If any one is personally or indirectly interested in escaping from the bondage of the whisky illusion, I will gladly answer any mail inquiry for details of my experience.

W. C. E. GINETTE, Kansas City, Mo.

I did not hear of Christian Science while looking for physical healing, but while searching for the truth. A clergyman once told me that I wanted to know too much; that I must wait for answers to my questions until I should have "shuffled off this mortal coil," and I was inclined to believe him, for there seemed to be no certainty in anything on this plane. Was it any wonder that, after my first attendance at a Christian Science testimony meeting, I should ask the Scientist to whom I first spoke, "Is physical healing your chief aim? If so, I think it is a very low standard, for if I were ill, I would far rather die." This was said in spite of a longing that I had had from a child to be able to relieve the sin and suffering in the world, a longing which at times made me wish to be a nurse, at other times a missionary; but I had come to the conclusion that in the chaotic state of things as they appeared to me, death offered one solution, if not the only one, to the puzzle.

The Scientist wisely explained to me that physical healing was only a small part of the teachings of Christian Science, adding that it was no wonder I should prefer to die if I believed that through death all my questions would be answered. It was then pointed out to me that "not

Digitized by Google

death, but the understanding of Life" (Science and Health, p. 485), would solve the problem of existence. That first service convinced me that all the speakers said was absolutely true to them—from their point of view; but whether it was the truth was another matter. I straightway began to investigate, and many were the questions with which I plied the Scientists to whom I talked. These questions were all patiently met, though sometimes I was told I could not grasp the answers to the deeper inquiries until I was farther advanced. This used to nettle me, for I argued that if I had intelligence enough to ask the questions, I had enough to grasp the answers. I did not then see, what I have since proved, that I was in the position of a child who is learning addition and yet asks that a long division sum be satisfactorily explained. Though I made small demonstrations from the first, my progress seemed slow, for I wanted to reason out every step of the way.

It must have been after some weeks or even months of study, that I went to the Reading Room one evening, feeling perfectly miserable at the prospect of my progress. I took up Mrs. Eddy's "Unity of Good" for the first time, and there I read (p. 5), "Every one should be encouraged not to accept any personal opinion on so great a matter, but to seek the divinity of this question of truth by following upward individual convictions, undisturbed by the frightened sense of any need of attempting to solve every life-problem in a day." The words fell on my consciousness like oil on the troubled waters,—they expressed just what I had been attempting,—and there and then I bought a copy of "Unity of Good" and took it home to study, with the result that I was very much comforted and encouraged. My attitude toward our dear Leader was for some time one of moderately grateful acknowledgment of her works. It was about eighteen months before I truly realized, in even a small degree, what she has accomplished and still is accomplishing for the world. I seemed one day to be surrounded by nothing but black darkness, unable to solve a problem at which I was working, and went to my teacher in my trouble. As she talked to me, I saw as never before that Christian Science is indeed Immanuel—"God with us"—and my heart opened out in gratitude to the one who was found selfless and pure enough to receive the message of Truth and Love. I felt as if a great burden had rolled from my consciousness, and I knew the demonstration had been made.

As before mentioned, I was not in great need of physical healing when Christian Science found me, but I was continually dosing myself with medicine. On the day I bought my first copy of Science and Health (now nearly five years ago) I decided to test it on that point. The result is that I have not tasted medicine of any kind from that day to this, and have enjoyed better health than ever before. I can never be grateful enough for knowing there is a divine Principle by which we can work to relieve the sin and suffering in the world; no longer feeling the helpless pity which can give only words of comfort, but by understanding what the will of the Lord is, we can know that our efforts are "based on divine Principle, demonstrated according to a divine given rule, and subjected to proof" (Science and Health, p. 341).

Miss Grace E. Adamson, London, England.

I had been a member of an orthodox church from early childhood, and tried to live a Christian life, but mainly because I was so afraid of punishment after death, for I could not honestly bring myself to love a God who, as I was taught to believe, was going to punish me by burning me forever if I disobeyed the least of His commandments. As I grew older I began to doubt the Bible and the Christ story, for I could not see where prayer was answered, and my daily prayer was for some sign to prove that the Bible was true. I noticed that good Christian people had sickness and trouble the same as the so-called wicked, and I finally came to the conclusion that the story of Jesus' life was only another Santa Claus story, the difference being to make children believe that if they were bad God would punish them and if they were good Santa Claus would bring them presents.

I had been in this state of mind for a good many years, when my husband was healed of severe paralytic trouble through Christian Science. I then felt that I had not only a sign, but a positive proof of the healing power of Christ. I began to study Christian Science, and through the application of its teachings I was healed of a bronchial trouble from which I had suffered every winter for fifteen years; also of chronic bowel trouble, and an acute attack of bladder trouble. I am very thankful to God for this healing, and also to Mrs. Eddy. The practitioner who helped us was always careful to make us fully understand that the healing in Christian Science is from God, and the very best demonstrations we have had have been the result of absent treatment.

Mrs. Isabell B. Snavely, Butte, Mont.

I send a few words to express my gratitude to God, and also to Mrs. Eddy for her interpretation of the Bible, by which we learn that God is always with us and a very present help at all times if we only trust Him. I was brought into Science through physical healing, about four years and a half ago. I had a paralytic attack, which affected my left side. Under medical treatment I was able to go to work, but I was very nervous, and had no feeling in my right hand, besides being affected in my head and other parts of the body. I had sleepless nights, and was continually taking drugs. At last these lost their seeming effect, and the doctor said it was his last resort.

I then tried Christian Science, just as a person might make an experiment in business. After the first treatment I slept better, but I still had my doubts, until at the same time I mentioned to the practitioner that I had a rupture. She then told me that God sees man as perfect, and said she would treat me for this trouble. This was during the heaviest season in business, and in two days the rupture ceased to trouble me and has never bothered me since. I then got interested, bought a copy of Science and Health, and commenced to read it and to attend church. After six weeks' treatment I regained the sense of feeling in my left hand, could run, and was as well as ever. About three months ago I had a second attack of the same old trouble. I could not speak plainly, and was taken home in a hack and put in bed. The same practitioner was called by "phone," and in twenty-four hours I was back in the store, waiting on trade, as though there had been nothing wrong. The treatment was absent.

This is only a part of the many good things that have come to me through knowing even a little of the truth. My prayer is that I may grow in grace, and live a nobler, purer, and better life. We cannot give enough thanks to God and to the dear ones through whom God works.

Elmer Snavely, Butte, Mont.

Four years ago, when I was a wreck mentally and physically, I became interested in Christian Science through the influence of a dear sister. Before coming to Christian Science I wanted to end my life, and thought I was visiting my people for the last time. After the first treatment I began to see things in a different light, and I wanted to live. I did not tell the Christian Science practitioner what I thought ailed me, but the awful fear of the disease left me after my first treatment. I have taken no medicine since that time. I have been healed of various

Digitized by Google

ailments at different times, and many troubles have left me without treatment from any one. Last fall, while still in Chicago, I was healed in a month of a catarrhal trouble which I had had for nearly two years, and which made breathing very difficult.

I have been benefited by Christian Science in ways too numerous to mention. It has indeed brought happiness to me, and for all this I am most grateful. It is needless to say that I love Mrs. Eddy most reverently; indeed I could not do otherwise.—M. H. ALLEN, Los Angeles, Cal.

It is nearly six years since I began to apply Christian Science. During this time I have never appealed to Christian Science for help of any kind without receiving benefit. A case of chronic throat trouble was treated and overcome about three years ago, also an attack of stomach trouble, lasting over a week. A serious cold, with threatened lung trouble, was successfully met with Christian Science treatment, although I went about my usual work and was repeatedly exposed to the weather. Colds of any sort are rare with me now, whereas they used to be of frequent occurrence.

It has been my experience that much of benefit and blessing is to be derived from daily study of the Bible and Science and Health. God appears in a truer light,—as ever-present and all-powerful. The help and encouragement extended to me by Christian Scientists are greatly appreciated. In several instances it has been clearly and lovingly shown me how to help myself; that is, how to appeal directly to divine Mind for help. For this better understanding of God I am most thankful. The beautiful example of Mrs. Eddy's life and consecration to God's work is an open book to all.

MABEL L. SANFORD, Utica, N. Y.

Three years ago I was healed in Christian Science, and it is with gratitude to God, and to our dear Leader, that I offer my testimony to its healing power. After suffering nearly all my life with stomach and bowel trouble, and having gone through two operations for female trouble, the last one leaving me in a very nervous condition, I was asked by a dear friend, a Christian Scientist, to throw away my medicines and come to Christian Science and be healed. I shall never forget the feeling that came over me as those words were spoken—it was to me as the voice of Truth, in the words of Isaiah, "Ho, every one that thirsteth, come ye to the waters." A copy of Science and Health was loaned me and I began to take treatment.

In having help for a condition which had long been annoying me, the error was uncovered as impatience and hate. I was led to ask myself, Am I reflecting toward this one (who was not a Scientist) the love, the patience, forbearance, and kindness which had been shown me through all the past years of my suffering? No. I then worked and rose above this sin, and each experience has given me a deeper sense of love, for which I am truly thankful, for only as we reflect divine Love can we be free. The spiritual uplifting which I have gained, together with the constant study of the Bible and Science and Health, has also enabled me to help others.

For all these blessings I am striving to learn and to live love, thus showing my gratitude to God, and to all who have helped me to find the healing truth.

MRS. LILLIAN M. EDENBURN, Bloomington, Ill.

When I was nine years old I fell from a swing and injured my spine. I suffered severely for several days, then gradually grew better. There seemed to be no ill effects from the accident until five years later, when severe headaches would come on whenever I exerted myself considerably. Then I began to have severe pain in the lower part of my back, and also suffered from extreme nervousness. Being of an energetic disposition, I managed for many years to lead an active life, although I spent many valuable days in bed. The pain and soreness in my back gradually increased in extent, until I suffered intensely, while the headaches became more violent and frequent. I lived with medicine bottles in easy reach, and from one to four porous plasters always applied. Having a very happy home and everything to live for, I yet had periods of depression and frequently felt that unless I could be well I did not care to live.

After spending the summer of 1894 away from home in absolute rest and quiet, and having tried several new remedies, I found myself in September of that year no better. I lived in constant dread lest I might acquire the drug habit, having seen its evil effects on a member of my family. At this time I heard of Christian Science through the healing of a friend. I knew absolutely nothing of it, and thought it only a new method of healing disease, but after discovering that it had nothing in common with spiritualism or mesmerism, I decided to give it a trial. I wanted to be strong and well, and I went prepared to be obedient to its rules, as I had always been to my physicians and to rules of hygiene. I expected very little, but as my practitioner advised me to procure a copy of Science and Health I did so. I also obeyed her instructions as to coming to her office for treatment, although I felt too weak to take the long street-car trip. As a result I was completely and permanently healed of my troubles of many years' standing in eight treatments. I did not, however, feel the need at this time of accepting Christian Science, and seemed to get very little understanding of it. I had, as I thought, all I needed, a loving husband and child, a good home and congenial friends, so for ten years I continued to "pray and repent, sin and be sorry" (Science and Health, p. 19), going for treatment to the practitioner for any illness, reading Science and Health occasionally, and once or twice consulting a physician. Then a great sorrow came to me, the foundations of my material happiness slipped from under me, and I was also attacked with a distressing skin disease. Now that I was afflicted, I turned to God, and in His loving-kindness "he brought me up also out of an horrible pit, out of the miry clay, and set my feet upon a rock, and established my goings." Since that time, four years ago, I have united with the local Christian Science church, also with The Mother Church in Boston, and have been able to prove by my work that this is indeed the healing gospel of Christ Jesus.

I am very thankful to God for all the blessings that have come to me in my study of Christian Science. I am also very grateful to our Leader, Mrs. Eddy, for the pure and unselfed love which has enabled her to bear the good tidings of present salvation to this age, and for having been helped onward, by precept and example, in my journey out of darkness into light.

MRS. ANNA SPINNING, Memphis, Tenn.

We came into Christian Science about fourteen years ago through the healing of my mother, who had been an invalid for three years. I had been a delicate child all my life, never able to attend school through an entire term. After my mother was healed, I, too, was healed, by the reading of Science and Health, of a disease for which I had been treated by two physicians for over four years without the desired result. Since then we have never used material remedies, and I have been sick but very little. I finished my school work, began teaching, and taught for six consecutive years without losing a day on account of illness.

Digitized by Google

There have been so many demonstrations of the all-sufficiency of divine Love that I hardly know which to give. One morning, while teaching (I had just begun work), I fainted, and after I became conscious I began to declare the truth. Although my face seemed to be badly bruised, the blood was stanched, and I was at work again in a few minutes. I spent the time at recess in reading and declaring the allness of God. When I first began to teach school I met with much antagonism to Christian Science. I had retained my membership in an orthodox church, but that first year I had so much antagonistic thought to meet that I decided to obey the command, "Come ye out from among them." I had very little afterward to meet, and Love met that for me. Some time ago a stomach trouble appeared, but was destroyed under Christian Science treatment. I have been able to meet almost all these ailments for myself, and also been enabled to help others. Among the many ailments which have been overcome in Science in my mother's family, are rheumatic trouble, fever, etc., but in all of these divine Love met our every need.

For these many blessings I am indeed thankful, but even more so for the spiritual understanding which enables me to overcome bad temper, an irritable disposition, to do good to those who persecute me, and forgive those who speak evil of me. I am also thankful for the understanding of the allness of God, the supremacy of Spirit. This knowledge of God makes us happy in each day's blessings, and though sometimes error seems to rage, or have power, we can close our thought to it and realize God's omnipresence and omnipotence. As we do this, error's manifestations vanish into their native nothingness, leaving nothing but God, good. I give praise to God for His wonderful power and love, and to our beloved Leader for the spiritual life and Christlike character which enabled her to be the one through whom God might give us Science and Health, which is indeed a "Key to the Scriptures." I pray daily that I may prove my gratitude by walking in the footsteps of Truth and Love.

MRS. MAUDE E. MURPHY, Hacoda, Ala.

I should like to add my testimony as a token of gratitude for what Christian Science has done for me. My healing has been so gradual and yet so constant, that when I compare my thought of today with what it was seven years ago I have great reason for gratitude. When reading the testimonies in the *Sentinel* and *Journal* I find accounts of the healing of many ailments from which I had suffered, but from which I am now free. The one thing that I most appreciate is to know something definite about God and His law, how it is that He heals us. To know that His creation is perfect and always was, and that it is only erring mortal sense which sees it otherwise, is indeed most gratifying. One of my earliest desires was really to know that my prayer had been answered. Later in life I hungered and thirsted to know something of the real meaning of "perfect" as it is used in the Bible. I had had several healings through faith, but it was by study and the understanding received through Christian Science that I was enabled to retain them.

One severe illness of which I have been healed was rheumatic trouble. It came on very suddenly, and after retiring I found that I could not sleep. I grew more and more restless as the night wore on, and by the next morning I felt very very ill indeed. My husband, who is also a Scientist, declared the truth so constantly for me throughout the night, that he was healed of a cough that had been troubling him for quite a while. When morning came he called a practitioner to help me, as he had to go to business, and by ten o'clock that day I was able to go downstairs. The next day I was up and around, but the following day, while I felt much better, I could not walk, as the trouble all seemed to center in one foot. At the expiration of two weeks all swelling, soreness, and inflammation had disappeared and I was able to walk up and down stairs and everywhere. I remember that when I was a young girl an older sister had a similar attack. She was treated by *materia medica* and it was three months before she could walk.

I feel very grateful for the spiritual understanding I am gaining daily from the study of the Bible, and of Science and Health by Mrs. Eddy.

NETTIE KLINE BUGBEE, Cincinnati, O.

I wish to say that I called upon Christian Science for help and was healed by it. For six years I was in pain most of the time, only able to do my work by lying down a great many times during the day. I had tried medical treatment until I was satisfied it did me no good whatever. I could not go anywhere and enjoy myself as others did, because I was expecting every minute that I would have an attack which would mean the hospital. A relative then told me of a lady who had been healed of a trouble similar to mine through Christian Science, and I thought, If she could get help, why cannot I? I did not say anything about it, but decided to write to a practitioner, and I am glad that I did, for I was entirely healed at the end of three weeks.

I never knew what it was to have good health before I came into Christian Science. I was healed in February, 1907, and have been perfectly well ever since, with the exception of trifling ailments which were overcome in a short time. May I say that it is my desire to strive, watch, and pray, that I may be able to apply this Science to my every-day practical needs. I have indeed reason to be very thankful to God, and to Mrs. Eddy, for this truth.

MRS. MAUDE PEAKES, Milo, Me.

Two years ago this summer I was suffering from acute mental trouble, depression caused by grief for the passing away of my husband and mother, also loss of money, and numerous failures in the attempt to earn a living for myself and little daughter. I was declared incurable by one specialist on mental diseases. I was treated in Christian Science for several weeks (while at a sanitarium), and am now happier, and enjoy better health than ever before in all my mortal existence. I am sending this testimony to the power of Truth to make us free, hoping thereby that some weary wanderer, "athirst in the desert" (Science and Health, p. 570), as I was, may find some ray of comfort. My feelings at this time are best expressed in Mrs. Eddy's own words,—

> O make me glad for every scalding tear,
> For hope deferred, ingratitude, disdain!
> . . . . .
> No ill,—since God is good, and loss is gain.
> *Miscellaneous Writings*, p. 389.

MRS. FRANCES C. FRASER, Chicago, Ill.

I have great pleasure in being able to express my deep thankfulness to God, and to Mrs. Eddy, for the teaching of Christian Science. It is now over two years since I first heard of it, and during that time all the rheumatic and stomach trouble from which I used to suffer has disappeared. But what I am most thankful for is the great help which this truth is to me in overcoming daily worries. Circumstances that at one time would have caused me great anxiety, I am now able to overcome, knowing that "evil is not power" (Science and Health, p. 192).

MRS. LOIS C. BURBIDGE, London, England.

CORRECTION.

In the Jan. 30 issue of the *Sentinel* the testimony signed B. F. Honnel should have read B. F. Hormel.—EDITOR.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

In the days that are coming and in the changes that are pending religion has a mighty role if its advocates are great enough to play their part like men: To direct the energies of social radicalism toward the eternal interests of men. To illumine the battle-field where ancient wrong is worsted with the light of eternal truth. To teach the victor that his prostrate foe is still a man with claims on him. To make men understand that in all their dreams of progress they are but the children of One who loveth righteousness. To convince the populace that in the end their business is to do His will. To fix in the consciousness of this mighty host of emigrants traveling toward the new world that when there it will require magnificent self-control to build the City of God.

[*Congregationalist and Christian World.*]

If the measure of religious devotion is "burnt offerings of rams, the blood of bullocks or of lambs," "new moon and Sabbath, the calling of assemblies," then it must be admitted that Christianity is declining. But if such revival is desired as that which the Hebrew prophet sought—"Cease to do evil, learn to do well, seek justice, relieve the oppressed, judge the fatherless, plead for the widow"—then the signs of the time give much reason for encouragement. The true measure of devotion in religion in our time, as in patriotism, is the service rendered to bring in the reign of righteousness and peace and good will among men.

[*Christian Work and Evangelist.*]

The church will not move the world again; become its great compelling influence; make men stop and listen to it; win the world's admiration and respect, until it dare become as bold again as was its Founder and preach a gospel so astounding and lofty and idealistic that the world will see something new and rich and strange in it, and live a life that becomes separated from even the world's good life by its supernatural beauty. The church will never win the world by offering it only the world's thought and ideals and ethics. It must be brave enough to believe its own divine gospel and order its life by its own great faith.

[Prof. Francis G. Peabody in *Boston Transcript.*]

The awakening of the social conscience has been so abrupt and startling, and the reaction from an individualized and self-centered religion so marked and compelling, that the church as a religious shrine may be easily supplanted by the church as a social laboratory; and the practice of the presence of God may be forgotten in the practice of the service of man. The tremendous force of the social renaissance sweeps Christian teachers into restatements of Christian doctrine, which identify a social program with the essentials of a Christian faith.

[*Examiner.*]

There are three things that, whatever else he may forget, the preacher of the gospel should always bear in mind: First, that he has a message of life from God to men; second, that he is speaking to those who need the message; and third, that He who commissioned him to speak will require an accounting at his hands.

[*Christian Register.*]

Spiritual power is flowing through the channels of religion and the thoughts of men concerning religion and righteousness, which make all the organized achievements which we call our victories seem poor and mean compared with the possibilities that lie before even this generation.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50; six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

Attention is called to the new Pamphlets, Reprints, and Music found listed in the advertising columns on the opposite page.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid. In the Greater Boston postal district the MONITOR will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The *Advocate of Peace* in giving thirty reasons why our navy should not be increased says: "Because our three foreign wars since 1781, which lasted only six years, cost in life, all told, in battle, nothing comparable with our reckless slaughter by accidents every year in time of peace. The $60,000,000 increase of the navy asked for last year, if spent in fighting disease, ignorance, waste, and wickedness at home, probably could save as much life and property as all our foreign and civil wars have cost. In five years we have lost alone by fire, largely preventable, $1,200,000,000. In four years we have killed by accidents, largely preventable, eighty thousand more than were killed on both sides in the four years of civil war."

A protocol has been signed with the Venezuelan government for the settlement of the disputes between that country and the United States. The New York and Bermudez Asphalt Company has settled the claim against it by a cash indemnity of $60,000 and an agreement to pay an annual minimum revenue of $20,000. An American newspaper man, who had been expelled by President Castro, is awarded $3,000. The claims of the United States and Venezuela Company, otherwise known as the Critchfield Concession; of the Orinoco Steamship Company, and of the Orinoco Corporation, are to be submitted to The Hague tribunal for arbitration.

The American Red Cross Society, through Ambassador Griscom, has presented to Queen Helena of Italy $250,000 for the foundation of an orphanage to care for one hundred children who lost their parents in the Calabrian earthquake. The International Committee has decided to set aside $2,500,000 to found ten orphanages, each accommodating one hundred children, thus providing for one thousand children who are in dire need. The United States is the only country, so far, which through the gift of the Red Cross has undertaken to pay for the establishment of one of these institutions.

Lincoln centenary exercises were held generally throughout the Philippine Islands in the schools. Exercises were held at the Lyceum Club in Paris by some two hundred resident Americans. The national flag was raised upon the federal, state, and municipal buildings in Brazil. For the first time in the history of the Birmingham (Ala.) public schools Lincoln's birthday was celebrated in the high school.

The Waters-Pierce Oil Company of Missouri has filed in the Supreme Court an acceptance of the terms imposed upon the company by the recent ouster order of the court. The fine of $50,000 was paid. The ouster decree provided that the company must show to the court that it had severed all connection with the Standard Oil Company.

The first National Tariff Commission Convention, which just met at Indianapolis, Ind., advocates the appointment of a permanent tariff commission. Forty-two states were represented by delegates, who in turn represented various bodies desirous of a revision of the tariff on a scientific basis.

In Hawaii there are 154 public schools with an enrolment of 18,504 children, employing 476 teachers; and 51 private schools with an enrolment of 4,881, employing 218 teachers. Attendance is compulsory, and no private school is accredited unless English is the language of instruction.

The House has passed a bill empowering the Interstate Commerce Commission to determine a uniform system of equipment for railroad cars and compelling the railroad companies to equip their cars in accordance with the commission's determination.

About two hundred independent moving picture exhibitors met recently in New York to perfect plans for the campaign which the New York association is to wage against the so-called moving picture trust.

An attempt is being made by the younger members of the Senate to force the appointment of more of their numbers to the different Senate committees.

A bill has been introduced in Congress to provide for the raising of the battle-ship Maine, now lying at the bottom of the harbor of Havana.

International.

The tonnage entering and clearing at London in 1907 was 19,750,346 tons. The trade for the port of Liverpool for the same year reached a total of 16,605,398 tons. The value of the trade at the port of London for 1907 was $2,430,000,000; the total for New York city for the same year being $1,703,164,423. For many years London has spent comparatively little money upon the improvement of its port facilities, although Liverpool has spent $25,000,000, Plymouth $12,500,000, and Southampton $10,000,000. Hamburg, moreover, has laid out $75,000,000 in recent years, and Antwerp contemplates an expenditure of $35,000,000 on new docks and facilities. Parliament has just passed the port of London bill, which has set up a new port authority, consisting of twenty-eight members; and it is likely that vast improvements, which have long been contemplated, will now be undertaken.

Once more, after an interval of six years, the English railroads have achieved the remarkable record of carrying on their operations for a whole twelvemonth without the loss of a single life. The last period in which this was achieved was the year 1901. In 1902, six lives were lost; in 1903, twenty-five; in 1904, six; in 1905, thirty-nine; in 1906, fifty-eight, and in 1907 eighteen. As a matter of fact, there has been no loss of life for fifteen months past. The relatively large number of fatalities in 1906 was mainly the result of three disasters, which were found upon investigation to be due entirely to the failure of the human element, all the mechanical arrangements on train and track being found perfect.

The Mexican government has just granted a concession for the construction and operation of a railroad between the Pacific ports of Acapulco and Salina Cruz. This road will be about two hundred and fifty miles long. It will connect with the National Tehuantepec line at Salina Cruz. As a guaranty that the company will carry out the terms of the concession it is required to make a deposit of $100,000 with the government, which sum will be forfeited if it fails to build the road in accordance with the agreement entered.

At the International Naval Conference in London it has been decided that cotton shall be placed upon the list of absolute non-contraband articles. After prolonged discussion over what should constitute contraband, the conference agreed to draw up three lists, viz.: Absolute contraband, which, with a few modifications, is the same as that adopted by the Peace Conference at The Hague; absolute non-contraband, and conditional contraband.

The Irish land owners' convention in session at Dublin recently attacked virulently Chief Secretary for Ireland Birrell's proposed land bill and adopted a resolution urging its rejection by Parliament.

Industrial and Commercial.

The fifth tunnel to be driven below the Hudson river between Jersey City and Manhattan was completed on Jan. 27 of this year. This is the east-bound of the twin tubes which are being built between Jersey City and the Hudson Terminal at Cortlandt and Church streets, Manhattan. If the expectations of the company are fulfilled, the westbound tube will be opened in about three months' time, and the completed tunnel will be at the service of the public early next July.

A torch burning oxygen and acetylene, radiating a heat of 6,300 degrees, said to be the most intense known to science, has just been invented by a Cleveland man. By means of this torch it is possible, it is declared, to weld aluminum, heretofore regarded as an impossibility. The torch makes a flame that will cut through two inches of solid steel in less than a minute, and pierce a twelve-inch piece of the hardest steel in less than ten minutes.

The property of the Cochran Coal Company, consisting of twelve thousand five hundred acres of coal of the Pittsburg or nine-foot vein, has been sold to the Standard Oil Company for $250 per acre. The property lies to the west of the Monongahela river, extending back from it about twelve miles.

The island of Oahu, on which Honolulu is situated, has two railroads, one of which is 71 miles in length. For the year ending June 30, 1908, passengers to the number of 446,318 and freight amounting to 389,448 tons were handled.

Trade of the United States with the Republic of Panama in the last five years amounted to about $60,000,000. Of this total, $6,000,000, speaking in round terms, represented the value of the imports from Panama.

The Connecticut River Company announces that its plans to build a dam across the Connecticut river between Windsor Locks and Enfield call for the utilization of ten thousand horse-power now going to waste.

A new city, like Gary, Ind., is to be built by the United States Steel Corporation around a $14,500,000 plant to be erected this spring at a point on the St. Louis river within three miles of Superior, Wis.

On Feb. 3 there were 301,571 idle freight cars on American railroads.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"BEHOLD, GOD IS MY SALVATION."

REV. WILLIAM P. MC KENZIE.

THE true conception of God as given in Christian Science brings to the troubled mind of men a great peace. Needy yet unsatisfied, hungering for truth yet uncertain and perplexed, the seeker is at last found by that which he so long had sought. The truth about God comes nigh to him when he is healed, and thereafter he cannot be made to believe that God is other than Saviour. The strength of the Almighty he knows to be a "saving strength." Once he feared omnipotence as being ever present to condemn; now he loves to think that God is omniactive as the source of man's "saving health." He gains the enlightened spiritual understanding whereby to discern the truth of being, and can say, "The Lord will command his lovingkindness in the daytime, and in the night his song shall be with me, and my prayer unto the God of my life."

The salvation which comes to us from God is really an understanding of our safety. Since by His very nature and being God is saving power, or causation which produces good always in effect, and since man is the expression of being, in likeness to God, he is not exposed to peril or risk, nor can he really be affected by danger or harm. The man ignorant or darkened regarding causation may believe in panic and death. He may even regard God as the originator of discord and distress. He may conceive of Deity as being a perpetually displeased taskmaster, and may try to please God by self-inflicted penance. The more he builds up human misconceptions about God the more does he feel his position to be unsafe, and himself to be unsaved. Whereas, the clearer his conception of what God really is, the more certain is he of salvation,—not only of his own safety and wholeness but of the health and safety of men.

The salvation of man depends, then, upon what God is. It was the mission and service of Christ Jesus to reveal to man, by his life, by his teachings, by his works of healing and restoration, the eternal fact that God is Saviour and friend to man. Abraham conceived the relationship of man to God aright when he was "the friend of God;" but he foresaw the time of clearer revelation. When that life which was "the light of men" appeared, we find Jesus saying to the Jews, "Your father Abraham rejoiced to see my day: and he saw it, and was glad." The Master made it clear that God is friend to mankind, and available as helper in sickness. This is the great truth emphasized in Christian Science, that in the Almighty we have "a just God and a Saviour." One of the first results of acceptance of this truth that God is a saving and redeeming activity is what may be called a change in the nature of a man. He ceases to be active in condemning others, and becomes active in doing good with a view to saving others. He used to declare that others were separated from good, and worthy of punishment; now he tries to have all men know that they have always had access to the fountain of good, and that God is that unfailing source of healing and salvation.

"BLESSED ARE THEY THAT MOURN."

ELIZABETH EARL JONES.

THE second beatitude reads, "Blessed are they that mourn: for they shall be comforted." Once when a sense of sadness knocked loudly at the door, there came also the query, What could Jesus have thought was "blessed" about mourning? The answer quickly unfolded, as answers do when we reason things out with God, for need and supply, spiritually understood, cannot be separated,—they are forever the two that are one. It was then seen that the blessed thing about mourning is this, it is itself a dawning conviction of the utter insufficiency of things finite, and this conviction causes one to look higher, to seek satisfaction in the permanent facts of being, thus finding in the infinite ocean of Truth and Love all for which we sought in vain in the material realm. The spiritual facts of being richly supply comfort, peace, permanence, home, and, above all, an all-satisfying companionship with God.

The promise to those that mourn is that "they shall be comforted." What is the essential comforter in their case? Is it not a consciousness that the all-sufficiency of the infinite overrules the insufficiency of the finite? Then blessed indeed are they who are turning from empty dreams to drink deep of the living waters which ever pour from the omnipresent Comforter. It is needless to add that the temptation to grieve was quickly healed and that a higher sense of joy filled the empty corner of mortal mind. In these moments of sweet communion with God, these quiet times of reasoning together, one receives such tender enlightenment and such helpful, practical instruction that in rapture we exclaim with the apostle Paul, "O the depth of the riches both of the wisdom and knowledge of God! how unsearchable are his judgments, and his ways past finding out!"

Divine Mind is perpetually instructing His idea,—the child of divinity,—but mortals are generally so busy running to and fro in a material sense of life and its activities that they are tempted to neglect the privilege of reasoning with God concerning the duties of each day; hence the occasion for sorrow. In "Science and Health with Key to the Scriptures" our dear Leader has blazed the way to self-knowledge and a demonstrable understanding of divine Love, so vast and absorbing that we understand the import of Jesus' parable of the man who found a treasure hid in a field, and when he had found it, he went and sold all that he had and bought that field. Multitudes are now hearing the clarion call of Truth in Christian Science and responding to it, as it calls humanity out of its sorrow, sin, sickness, and death into "the glorious liberty of the children of God."

In Science and Health (p. 481) we read, "Man is tributary to God, Spirit, and to nothing else." As the rivers are tributary to the ocean, flowing from near and far to empty all their activities into the great mother of waters, which in turn sends back the waters, purified and rarefied, through the heavens, replenishing and renewing the rivers with showers of abundance and refreshment, so also are

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

we tributary to God, Spirit; not to matter, to self, or to mortal man. Hitherto our time, activities, thoughts, and desires were oftentimes flowing toward things which do not profit, sapping our strength, health, joy, and courage, and cheating our hopes, therefore we mourned; but in Christian Science we are learning where our activities and affections belong, and are allowing all that we are and hope to be to flow naturally toward God through "the wide channels of The Mother Church" (Manual, p. 45); thereby daily reaping for ourselves and others rich and abundant harvests of blessings, renewing, rejuvenating, comforting.

TRUE CHARITY.

REV. JAMES J. ROME.

OCCASIONALLY reference is publicly made to Christian Science as a religion in which there is no provision made for charitable work, nor any organized effort put forth to care for the needy and distressed. The congregations of the Christian Science churches are said to be made up of only the rich and well-to-do, while all the charitable work is supposed to be left for other churches and organizations. These conceptions and misstatements are strangely out of keeping with the liberal contributions taken up in the Christian Science churches for such public calamities as the San Francisco earthquake, the Chelsea fire, the Russian famine, and more recently the earthquake in Italy. The fact is that no one will more readily respond to an appeal for help to relieve the need of those in distress than a true Christian Scientist, but special organization for charitable work is not deemed necessary, for if the Church of Christ is not in itself a charitable institution, what is it?

While Christian Scientists are not indifferent to the present needs of those in distress, they strive to follow the injunction of the great Master, "Let not thy left hand know what thy right hand doeth." There is no one who has shown more true generosity than the Discoverer and Founder of Christian Science, and many have had reason to call her blessed for help rendered in the hour of need. There are, however, certain conditions, usually classed under the head of charitable work, which are dealt with in a very different manner by Christian Scientists than they would be by other organizations. This was forcibly brought to my notice some time ago in the following manner.

In my attendance at the services in The Mother Church I had formed the acquaintance of two gentlemen who were always very genteel both in appearance and address. They were typical of that class which go to make up the Christian Science "rich congregations." In conversation with a friend I referred to one of these gentlemen. "Yes," my friend remarked, "Christian Science has done a great deal for him." I asked for an explanation. "Why," was the reply, "he had gone to ruin with drink; his business was wrecked and his family were suffering when he was led to Christian Science. He was healed, and is now doing well." A little later I happened to refer to the other gentleman. The remark made was, "Yes, he is getting along better now." "Please tell me about him," I said. The story was that he had been sick for years and had spent all he had on doctors and medicines. When he turned to Christian Science he did not have a decent suit of clothes in which to attend church services. Nevertheless he came to church, and took treatment from a practitioner. He was soon healed, and thereby enabled to make a respectable living for himself and family.

Here were two fair examples of charitable work. These two men might have been brought to the attention of a charitable society, a member of which might have visited their families for five or six years and given ten dollars a month toward their support. Such action would have been considered a grand charitable work. So it might, but how does it compare with the help which was rendered through Christian Science? Which would be of the greatest benefit to the men and their families? Indeed, which is the truer charity?

Christian Science is distinct in its administrations to those in need of help, in that it finds subjects for charity instead of looking for objects of charity; it helps a man out of his difficulty instead of merely helping him to bear it. Mrs. Eddy says, in the Preface to her "Miscellaneous Writings," "A certain apothegm of a Talmudical philosopher suits my sense of doing good. It reads thus: 'The noblest charity is to prevent a man from accepting charity; and the best alms are to show and to enable a man to dispense with alms.'"

THE FRAGRANCE OF CHARACTER.

MARGARET C. CAMERON.

IN Isaiah we read, "The wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as the rose." A pretty legend tells us that after our Saviour had left the tomb on the resurrection morning, flowers sprang up in the path behind him. This legend may be fanciful, but it contains the germ of a truth, and if read aright it has a useful lesson for us. The flowers found in Christ Jesus' path after he left the world were fragrant with his holy influence, from which sprang faith, hope, charity, and all other Christian virtues; flowers, indeed, with a far richer perfume than those of the garden and field, sweet as they are.

The flowers that grace our character and render others happy will be ever treasured, and a garden of fair blossoms is discerned afar. If we follow in Christ's footsteps by healing the sick and the sinning, we help to redeem the waste places of the earth. Our dear Leader speaks of a rose as "the smile of God" (Science and Health, p. 175), and the sweet flowers that have blossomed along her path are sending out their fragrance all over the world, and beautifying the paths of all God's children with their messages of love and purity; the virtues that grace her path are also springing up in the lives of all who follow her teachings. As she sets us an example of how to love God with all our heart and our neighbor as ourselves, so should we bring the fragrance of the truth taught in Christian Science, to cheer some lonely heart.

We cannot live for ourselves alone, even if we would, for every one with whom we come in contact, no matter for how short a time, must be either the better or the worse for the meeting. This is a serious question which we as Christian Scientists should ask ourselves: What flowers are springing up in the path that we are leaving behind us? The opportunity is ours to bring out the sweet flowers of love, gentleness, patience, courtesy, sympathy, charity, and meekness, that we may brighten therewith the way of the children of men.

SYMPATHY.

C. A. CARR.

SYMPATHY is a quality whose character, in the ordinary sense of the word, has been considerably changed through Christian Science, but this change enables one to sympathize in a more practical manner than was ever for a moment contemplated before scientific Christianity explicated its fuller meaning. It has so often been said that Christian Scientists lack sympathy, that it is well to bear in mind, when thus accused, what the view-point of the critic is and to meet him with love and forbearance. From the standpoint of those yet unacquainted with the higher teachings of Mrs. Eddy, it may appear, and undoubtedly does on

Digitized by Google

occasions, that Christian Scientists do not sympathize with people in illness or adversity to the extent they used to; but if this is the thought engendered, it is only born of ignorance, for in the truest sense sympathy of a deeper nature than any heretofore expressed is felt by the Scientist.

In analyzing this sentiment it is found that Christian Scientists, while endeavoring to reflect divine Principle, do not express sympathy in the same way they once did, because they recognize disease as a form of error to be destroyed, not sympathized with, and it is this that often gives rise to misapprehensions as to their attitude. They strive to separate error from their thought of the individual, and while they do not sympathize with the error, they feel great compassion for those who are struggling in the slough of despond. To others who have not yet learned how to look at error impersonally, there remains an acute resentment at the apparently unsympathetic method of treating sickness as an enemy instead of as a friend. Mrs. Eddy writes, "Sympathy with error should disappear" (Science and Health, p. 211), and in carrying out this injunction the more helpful and ideal way of being in accord with and possessing a knowledge of the real man comes into consciousness, while symptoms of discord are disregarded as unworthy of being submitted to.

The Christian Scientist is learning what it means to hold oneself or others in bondage to wrong thoughts, and if in the endeavor to release others one's own attitude is misconstrued, the way will become plainer in time, for sooner or later all must come into the knowledge of the truth. The prophet Jeremiah expresses this lament, "Oh that my head were waters, and mine eyes a fountain of tears, that I might weep day and night for the slain of the daughter of my people!" but this sort of sympathy must give way to the higher thought. Isaiah saw farther when he wrote, "And the ransomed of the Lord . . . shall obtain joy and gladness, and sorrow and sighing shall flee away." With John's clear thought we read; "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." One may well inquire whether it is better to make a reality of sickness and sorrow by commiserating with it, or to know its unreality by denying its existence, even at the cost of being temporarily misunderstood.

There is no record that our Master sympathized with either sickness or sin by condoning it, although he showed great compassion; rather do we glean from the Gospels that while he cheered the sorrowful, he rebuked erroneous thoughts and proved them to be mortal delusions. Nevertheless the ordinary sufferer in sin, sickness, or adversity today loves the anachronistic method of sympathy; he loves also to have the sympathy of friends in what he is doing, whether, mayhap, it is drinking to excess, wrongdoing of any kind, or to have the company of another person stretched on a bed of sickness beside him. It is so reassuring to satisfy oneself, when doing wrong, with the thought that others are doing the same; but two wrongs never made a right, and it is all important to understand the truth of being. The Hindoo widow, until stopped by British law, showed sympathy for the death of her husband by casting herself on his funeral pyre. The anarchist shows his sympathy for mankind by murdering the innocent. A mother thinks she is sympathetic when she pets her child who has hurt itself and affirms how bad the injury is. Many other instances of what sympathy is considered to be might be quoted, but the real law is ever paramount and has only to be discerned. Every phase of human belief apes the real, but as Mrs. Eddy says, "a lie has only one chance of successful deception,—to be accounted true" (Unity of Good, p. 17).

To demonstrate true sympathy, purification of thought is necessary, error must be given no power, and the real status of man discerned; then sin, sickness, and all evil feel Truth's condemnation and fade into nothingness. Christian Scientists are practical sympathizers in every sense; they are not content by any means to sympathize only in words, but they also try to express it in deeds by succoring humanity. They have begun to realize more clearly that "faith without works is dead," and although they may not sympathize ostentatiously, still all are doing their best according to their understanding, and in proportion to their understanding they are enabled to show practical sympathy and glorify the Father which is in heaven.

THE MANUAL OF THE MOTHER CHURCH.

LAURA C. TUCKER.

AMONG the many priceless gifts bestowed upon mankind by divine Love, through the understanding and demonstration of Truth by our revered Leader, Mrs. Eddy, is the Manual of The Mother Church, and its value as a utilitarian agency for the scientific conduct and administration of the affairs of the organization of whose government it is the impersonal administrator, is above estimate. The Manual clearly defines the relationship which the branch churches bear to The Mother Church, and it reveals to the faithful student the spiritual benefits derived from the demonstration of orderly procedure. More than this, the statements of the Manual have a deeper significance, the import of which has as yet but faintly dawned upon the consciousness of the writer. Nevertheless her glimpse of the truth contained in this book has so illumined consciousness as in a measure to reveal the great import of its word, and the spiritual and practical value of its demonstration. This realization places the Manual (in the estimation of the writer) next in importance to the Christian Science text-book, "Science and Health with Key to the Scriptures," in the demonstration of the divine Principle of Christian Science.

To thought which is unaccustomed to the stern though loving demands of spiritual law, and which is of itself lawless, the requirements of the Manual may at first appear to be mandatory or even dictatorial, but to the consciousness imbued with a spirit of loving obedience to spiritual law and the divine will its honest and persistent study unfolds an ever-increasing sense of divine love and protection, a realization that obedience to divine law involves absolute immunity from evil and a consciousness of the eternal presence and power of divine Principle, Love. Strict adherence, on the part of Christian Scientists, to the rules and by-laws of The Mother Church would ensure perfect law and order in our churches, our homes, our business, as well as in our individual consciousness, a condition which would necessarily close the door of human consciousness to sickness, sin, and death. The obedience to divine Principle enjoined by our Manual would heal every malignant claim of envy and jealousy and destroy the possibility of their expression in the lives of Christian Scientists.

The perfect law and order which our Manual sets forth, becomes, in proportion to its demonstration, the rule of life for each one who obeys the law, and under this ruling there can be no fear of losing one's own individual place or possessions, while it is made clear that one cannot, in the understanding of Christian Science, fill the place of another. The joy of working to realize one's own spiritual individuality, one's own identity in Mind, leaves no room for envy or jealousy. Furthermore, divine justice, which is the spiritual signification of law, coupled with mercy, is

Digitized by Google

made manifest in the consciousness and experience of the student, in proportion to his apprehension of the justice of our Leader's demands and the mercifulness of their requisition. This apprehension will include the spiritual understanding of the intent and scope of these demands.

The comprehensiveness of these rules and by-laws, their ability to meet every human need when spiritually discerned and understood, make them indeed an agency of divine healing to those who assimilate their truth, and who in humility and obedience to the love which provided them penetrate beneath the letter of the rules and regulations and learn through self-abnegation the secret of self-control and self-government which they enfold. The uniform and universal demonstration of self-government through obedience to spiritual law will solve every problem of the "church militant" and hasten the appearing of the "church triumphant."

The Manual teaches the law of divine economy. This law admits of no waste or depletion. It restores order where disorder seemed to reign. It reduces confusion to nothingness, and in its place reveals health, harmony, peace, and prosperity, as manifestations of divine law and the rightful inheritance of the true man, made in God's image and likeness. Our Leader writes, in a letter to the Field, dated Sept. 7, 1903: "This church is impartial, its rules apply not to one member only, but to one and all equally. Of this I am sure, that each rule and by-law in this Manual will increase the spirituality of him who obeys it, invigorate his capacity to heal the sick, to comfort such as mourn, and to awaken the sinner" (*Sentinel*, Sept. 12, 1903).

"FOLLOW ME."

LOUISE DELISLE RADZINSKI.

In St. Luke's Gospel we read that to one who had been listening to him Jesus said, "Follow me. But he said, Lord, suffer me first to go and bury my father. Jesus said unto him, Let the dead bury their dead: but go thou and preach the kingdom of God." This seems a hard saying to a grieving son, and unless he were very open to the sense of life as Jesus taught it, he must have felt that his duty as a son was neither recognized nor respected. To Jesus, who knew only his heavenly Father, God, who recognized none but the divine fatherhood, the senseless husk of mortality was nothing; it could not check in the way of life any one who had entered therein; hence his command, "Let the dead bury their dead: but go thou and preach the kingdom of God."

To bury means to judge as having no life, therefore to put out of sight, to dismiss from consciousness, and this helps us to understand our Lord's saying. The formalists who with their lifeless rituals and ceremonies had starved and stifled the man called dead, could bury him, their victim; life, action in the service of God, in the declaration of His supremacy, in the announcement of His kingdom as present, was not to be obstructed in its progress. The dead, those who dwelt in the unspiritual forms of creed and ceremony, were to bury their dead; and the living, those who accepted the new teaching of life, were to go on in the way of Life unhampered by false beliefs.

No one who has been lifted out of the pit of erroneous belief and custom into the free atmosphere of Christian Science can fail to appreciate the fact that every step onward and upward in the way of Life eternal is marked by the lifeless husk of some habit or affection or sin dropped in the way of obedience to the call, "Follow me." Forms of thought that had seemed very dear, very beautiful to human sense, lose their attractiveness and appeal under the search-light of Truth, and drop away from us, dead.

The call, "Follow me," allows no pause for the indulgence of human weakness; it is to go forward. To preach or teach life, we must live. We must show how beautiful and good life is, as Love makes it; not a struggle, not a warfare, but a blessed harmony; for, as erroneous beliefs and fears fall away from us, making room for the inflowing perceptions of good, the temptations of material existence cease to allure, they fall to the ground as do the autumn leaves, making room for the buds that are soon to unfold in all the richness and beauty of the spring's new dress. The song of thanksgiving will arise from all obedient hearts that follow this call of Life, for, behold, as they move onward, they find there are no dead to bury, that all is Life.

[Written for the *Sentinel*.]

THE MASTER'S WORK.

J. W. DEANE.

My Master's work would not be done
  Should my hand slack, or fail my feet
Love's calls to heed, His errands run;
  Or should I halt with message sweet
To lingering hearts and souls downcast,
  Their wounds to stanch, their ills to mend,
Nor drop Love's blessings sure and fast
  And be to them who need a friend.

Before me lay those luring ways
  That pleasant seemed, by bowers girt,
And following on, lo many days,
  My bruised limbs were yet more hurt
By thorns concealed and nettled leaves,
  By flints o'ergrown where waved the grass,—
Through deadly fens, where poison weaves
  And bones are strewn, I sought to pass.

Upon that way, when burned my heart
  Because no joy or pleasure stayed,
Through blinded eyes my tears would start
  And sometimes I was sore afraid;
And once, when spent and downed by fear,
  When quaked my soul at lightest word,
Somehow my vision grew full clear,
  And lo the Master spoke! I heard.

No strange voice rang with new command,
  I'd heard it oft but would not heed;
And then he took me by the hand
  And back to Love and joy did lead;
I felt the imprint of the nails
  That through it pierced, when high he hung,
When malefactors hushed their wails—
  But, oh, the sweetness from his tongue!

He did not chide, no frown he wore,
  I sank to worship on my knees—
He bade me stand. There fell the door
  That shut my soul: Do unto these—
And then I saw the sick world's need—
  As I have done! Aye, in my name
Do greater works! When I would plead,
  The Christ had vanished as he came.

I'll heed thee, Lord. With all my might
  I'll speed thy tasks, I'll spread thy cure.
No day too long; though bleak the night,
  I'll follow swift, my feet secure,
For thou didst full commission me
  Thy work to further. For reward,
My blessed portion it shall be,
  Again thy smile, thy touch, dear Lord.

SELECTED ARTICLES.

[*Freeport* (Ill.) *Weekly Journal.*]

Instead of attacking the Christian Science church, Rev. W. H. Beynon, pastor of the First Baptist church, Sunday night [Jan. 17] asked for a calm consideration of what this movement means which has grown to such great proportions within a few years. His subject was "The Function of Christian Science in Modern Society." The text, Mark 9 : 39, 40, follows: "But Jesus said, Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part." Mr. Beynon then said in part:—

By the quotation of Scripture any notion of the human mind can be supported. Scripture proof-texts may be likened to the citations of authorities and precedents by a lawyer of mediocre ability. One can get all sorts of decisions and authorities in support of one's contention. But the ablest lawyer goes back of the statute-book into the fundamental principles of society and of law for his evidence and argument. Supreme court decisions always purport to be based on the foundation principles of society and of social law, not merely on the statute-book and precedents of former judges and generations.

The case of Christian Science is before the bar of modern society. Public opinion has been various on the subject. With few exceptions the rule has been to criticize and condemn it. The opposition has manifested itself in every degree of mildness and bitterness. It has assumed Christian Science to be wrong, and itself right. It has conceded a few fundamental things to Christian Science, but retained for itself greater glory either as a bequest of ancestry or as an unused inherent power within itself.

In his education, man has been schooled in every mode of instruction from the savage mother's knee to the scientific method of modern universities. But he has learned only to intensify the mother's teaching and make more proficient the methods of the schools. In his industrial ascent he has climbed the steps from serfdom to free labor. Yet he finds himself ruled by the iron hand of environment, necessity, and rapidly developing systems that are not without their hardships. He has freedom, but is not free. In his moral and religious experience man has ascended from the depth of brutes and the ignorance of the savage to the sublime heights of a rational being. He has risen from the personification and deification of natural phenomena to the personification of ideas and principles. Thus with every swing of the pendulum, the practice, custom, thought, and ideal of man have changed from lower to higher, crude to cultured.

Among the more recent movements developed in human experience is a religio-medico movement, called Christian Science. This movement has been variously regarded. The diagnosis taken by any critic reveals immediately the school of his training. The remedy offered for its treatment marks the type of mind of the "physician." With that fact fully recognized, but willing to be put on record in company with a vast number of others, and perhaps all in this presence, we hazard our opinion, allowing you to make the classification. Christian Science has been summoned before the bar of public tribunal more, perhaps, than any recent movement. It has been indicted and acquitted, not convicted and sentenced. The talent on the prosecution has been the most brilliant of lay and clerical genius, but throughout the trial the prisoner at the bar has displayed wonderful genius, complacency, patience, persistency, and faith. The witnesses for the prosecution have evinced fear and dread and deep anxiety for public good. Those for the defense have presented actual facts of permanent good to an ever-increasing number of people.

Let us review the case. We profess to give each side a "square deal." If we fail, let it be charged to inability, rather than to motive. Christian Science is charged with a false philosophy. The opposition claims that Christian Science regards God as "Principle." One advocate quotes the following as the definition of God by Christian Science: "God is divine Principle, supreme, incorporeal being, Mind, Spirit, Soul, Truth, Love." The critic then goes on to say: "At the head of this confusing list of alleged synonyms Mrs. Eddy puts Principle, as being the most thoroughly depersonalized term, and hence best suited for her purpose." The critic again continues, in a Socratic method, and shows how all these terms are interpreted "as synonyms of unconscious 'Principle.'"

May we ask this and all other evangelical critics if their evangelical conception of God is absolutely correct and unchangeable? Is it not true that our conception of God has changed from time to time and from age to age? Is it not true that even today evangelicals differ in their ideas and definitions of God? Has not God been clothed in anthropomorphism, transcendentalism, and immanence? Is there not today a confusing doctrine of an "ethical monism" taught by one of the leading theologians of our country? And concerning this doctrine of "ethical monism," our critic of Christian Science says: "It showed how great is the present reaction from a mechanical and external theology, and how even the thinkers who have stood stoutly for the reality of the soul, of sin, and of redemption, are now passionately demanding some unifying conception of the world-order." And he then adds the following comment: "Dr. Strong is abundantly able to safeguard his monism." His comment on Christian Science is interesting, as he continues to say: "Mrs. Eddy goes straight over into the camp of those who deny personality to God." From which we may infer that he is of the opinion that even Dr. Strong gets over into the camp too, only he goes around by an unobserved path, not "straight over."

Thus we get a confession from a leading Baptist preacher and president, of a difference of opinion in our own ranks, and also a charge against Christian Science of a misconception of God. May we ask our brother if he has the absolutely correct knowledge and definition of God. Is it not true that leading teachers of theology and philosophers of religion are seeking for a common concept for a "Principle of Unity" to represent God? Even though evangelical theologians were to arrive at a unanimous conception, could they give a guarantee that their conclusion would make man's conception of God unchangeable and constant? Our conclusion on this point of attack on the philosophy of God is that those who are at variance with one another have no right to stigmatize another's conception of God as being wrong. Even to charge a false philosophy to the one is to assume for one's self a correct philosophy. "Why beholdest thou the mote in thy brother's eye, but considerest not the beam that is in thine own eye."

Evangelical critics attack Christian Science also on the score of a false conception of matter. Now to charge one with a false conception of matter is to assume that the critics have a correct conception. Or one might beg the question by offering his conception as being the most nearly correct conception of matter. Not only do evangelical philosophers teach the unreality of matter, but physicists teach its "invisibility." That is as far as physicists can go. They are material scientists. Their atomic theory has been proven a theory. Ask them to describe an atom, say of oxygen, and you will have them guessing. Permit me to give you a simple lesson on the invisibility and the unreality of matter. We all agree that color is matter. Then suppose you hold in your hand a stereoscope with a yellow glass on the one side, and a blue one on the other. You look through the stereoscope and what color do you see? It is neither yellow nor blue, but green. Now where is

Digitized by Google

the green? It is not in the space beyond the glass, nor between the glass and your eye. Is it in your eye? Where there? On the retina, in the optic nerve, or in the brain? As a matter of fact, the green spot exists to the vision, but you cannot locate it. What now becomes of your theory of matter? As a matter of truth, there is a diversity of opinion in the ranks of the critics as to the philosophy of matter. Why then should Christian Science be attacked on its theory?

In like manner we would discount the attack of evangelical theologians on Christian Science in every point touching philosophy. For the world in part or in whole has not yet arrived at a conclusive theory or philosophy in respect to the things held by the one side and discredited by the other. Suffice it to say that in every phase it were well to prove absolutely the wrongness of the one and the rightness of the other. Other critics attack Christian Science on its method. There is a "grave" mercenary charge against it. Round and round and round the endless cycle of evangelical churches has been sounded the mercenary method of Christian Science. We cannot take up these charges in detail. Suffice it to say that, whatever the charge against the financial dealing may be, the critics should ask if the financial system of their individual churches may be above question. Ask the merchants of the city what they think of bazaars, concerts, and their kin for money-making. Ask the members of the church as to how they are "held up" when they enter the house of God for worship. Investigate and find how difficult it is to secure a just or equitable pledge from each and every member of the church for the support of the organization. Find out how many of the members of any church really help in the support of the church and its various missions. Find out how cheerfully the money, whenever or whatever it may be, is given. These are legitimate and proper questions to ask of the critics of Christian Science.

There is another interesting side to the financial question. It is the relative good derived from each party, due to its own finances, if you please. Let us take the opposition first. The pet financial doctrine of the churches is tithing and free-will offering. The doctrine of tithing is that the more you give to the Lord the more you will receive from Him. That is to say, give more money and you will get more money. It is an enticing financial proposition, the object being more money for self. There is also added, more happiness, comfort, peace of mind and assurance of soul, more of everything except health, and for that one must go to the doctors and pay them for it. We can answer this charge in taking up another charge against Christian Science. It is that of the results which follow in the wake of the Science. They say, "Death follows in its wake." "Cases that might be saved, die." "It is a crime against society and common sense." These are a few of the sayings familiar to all. It is a fact that some of their cases may not be above suspicion. But have all the cases treated in the manner advocated by the opposition been above suspicion? Before making any more statements concerning the opposition of Christian Science, permit us to make plain our attitude toward the medical practice. In all the foregoing we have tried only to set forth the inconsistency of condemnatory criticism of Christian Science. Their views are not our views. As to the practice of medicine, we believe in it most firmly.

A few of the admissions of the opposition are of value. While some features are condemned, certain facts are honored. Some of the points are the following: "In fact one of the greatest reasons for its spread has been given: 'It cures.'" Another is: "It is doubtful if Mrs. Eddy would have a dozen followers in the entire world were her theories not buttressed by cures wrought." Again, Christian Science converts because it cures. All the other factors in its growth put together are insignificant when compared with this. It is safe to say that ninety per cent of all Christian Scientists are such because they have had personal knowledge of cures wrought by Science healers." Others of note may be found anywhere in the criticisms of a fair-minded theologian.

Christian Science teaches a religious faith in God and Christ—the latter notwithstanding some critics. What more profound faith can one see than when a poor decrepit individual in danger of premature invalidism puts all her trust in God and her Saviour Jesus the Christ. This is heroism of the first degree, exemplifying the conviction of the psalmist of more than two thousand years ago: "It is better to trust in the Lord than to put confidence in man." There is no greater example of faith in God in all the world than is to be found within the ranks of those sometimes unworthily criticized. This fact remains, that the Christian churches that have preached "faith in God" do not practise it as strenuously. Some one has said that what can be gotten from Christian Science through faith can be had within the church. That is true. But it is also true that the church does not make a specialty of it, and seldom has it on display. It is stored away for special occasions in revival seasons. It can be had to order, but a special order must be placed to bring it forth. The church of today can give the world what it needs, if it will. But it is like trying to move a mountain by faith to attempt to awaken the present church to a like work for man and God on the score of faith.

Christian Science teaches one more thing. It is that of consecrated life, service, and temple to God without human mortgages. Their every house of worship is sufficiently sacred to dedicate it actually free of debt. No human tentacles on their profession. There should be none on ours. Christian Science as a social movement has a place in modern life. An organization that has awakened so much thought and criticism and imitation and correction in the living of others outside its own ranks certainly has a noteworthy place among the social factors of this age. The type of men and women they produce does not become dependent. Some indeed question their veracity. Well, all I have to say is that we all "live in glass houses." But while there may be exceptions, still the rule is that another can well place his trust in the kind of individual they produce. Then, as an organization that helps to make mankind better, this one has a large place in the world's activities.

Perhaps sufficient has been said to show that they are not against Christ. If not against him, then, according to his own words, they are for him, and worthy of our confidence and association. While there may be differences between this body of Christians and the evangelical bodies, yet there is no more fundamentally than there is between those bodies among themselves. The differences between the evangelical bodies are more numerous than at first thought. All know that there is a difference between the Baptists and the Presbyterians. For the Baptist will not receive a Presbyterian into its fellowship without the Presbyterian first becoming immersed. Yet the Baptist will not say that the Presbyterian is against Christ because he does not follow the "example" of the Lord in baptism by immersion. The same is true of all the other bodies of Christians that are not of the same "faith and order." But none today will say that all the others who do not believe just as it does are against Jesus the Christ. They preach a varying gospel about him, but all are in the fold, and within the kingdom of heaven. Neither does one denomination any more criticize another. We have become congenial in our differences. Why not with the Christian Scientists, a body that has made us ashamed of our lack of faith in God in times of sickness and distress?

Unity, and peace, and love, and faith, and consecration,

Digitized by Google

and kindness, should indeed be our watchword toward one another, let our theological differences be what they may. Theology will never get us health or heaven, but simple trust in God and man will. "For he that is not against us is on our part." Let us not be against each other.

[William Royle in the *Cheshire Echo*, Stockport, Eng.]

A Christian Scientist takes for his guide the teaching and works of Jesus, the Founder of Christianity. Not the divided garment only of preaching the gospel, but the restoration of the conjoint duty equally incumbent upon his followers to "heal the sick." What is the true test of fellowship laid down by the Master? "He that believeth on me, the works that I do shall he do also." No greater proof, then, can be given of the right of any one to call himself a Christian than these works which are "the signs following." Christian Science is accomplishing the healing work daily in every country where it is established, and its beneficiaries are gratefully testifying not only to its physical healing and the immunity it gives them from successive sickness, but also that it has healed them morally, mentally, and spiritually. Surely that system of religion which reunites the long-lost art of spiritual healing established by Christ Jesus has none the less claim to be called Christian than any branch of the Christian church which divorces the Christ commands and contents itself with only preaching the gospel. And further, these cases of healing in Christian Science are not merely nervous ailments or functional disorders, but so-called incurable organic diseases which in numerous instances brought the patients to the verge of despair because the highest medical skill and devoted nursing had failed to help them and to meet their need. Let any one who is skeptical attend the Christian Science testimony meetings for proof.

The claim that Christian Science is really scientific has an absolute foundation, since it is based upon God as divine Principle, and that this divine Principle is absolute, the one and only Mind governing man and the universe. The unerring certainty of the works done by Christ Jesus was due to a perfect understanding of the divine Principle through which alone Jesus declared he was able to do what are commonly called miracles, but which the Founder of Christianity looked upon as the natural expression of divine law. The lapse of spiritual healing for centuries, and the teaching of the churches that the healing work of Jesus and his immediate followers was miraculous, were no doubt responsible for the superstition of the dark ages and the agnosticism and skeptical indifference of today. What can eliminate this skepticism and unbelief in the reality and power of Spirit but the conviction that there is a science in life and religion as well as in the intelligence which has formed and governs the universe?

Mankind are groping with more or less patience to find proofs for the promises with which the Scriptures abound, and Christian Science offers a practical solution by demonstrating that Christianity is an absolute Science when correctly interpreted and rightly applied, and in proportion to their understanding its adherents are realizing its proofs as convincingly as the student of the science of numbers. No amount of criticism can stem the onward march of Christian Science nor rob it of its just claim to be both Christian and scientific. Human nature, with all its follies and weaknesses, is not altogether blindly averse to salvation from sickness, sorrow, poverty, or care, and Christian Science is reaching such as these in all parts of the world, not intermittently, but constantly, and the gratitude of those wrested from the brink of the grave or from a lost hope of recovery, is making the best of all missionaries in the Cause of true Christianity—the witnessing to the immanence and availability of the Christ, Truth, and the underlying science of the prayer of assurance, "Father, I thank thee that thou hast heard me. And I know that thou hearest me always."

[Royal D. Stearns in the *Edgar* (Neb.) *Sun*.]

Christian Scientists readily agree that there is only one infinite Mind, God; still they insist that finite man can grasp or understand this infinite Mind, God, only in a small measure, in his present state of consciousness, and in consequence is not in complete alinement with His laws; hence the opportunity for the existence and influence of false beliefs which sometimes generate discords in mortal man, which are manifested in what we call sickness.

If mortals had the understanding of that infinite Mind which Christ Jesus had while on earth, the understanding that enabled him to heal the sick, the lame, the halt, and the blind, the source of these disturbing factors would easily be recognized and banished from human experience. The life and practice of Christ Jesus indicated very clearly that he did not consider physical disease as normal and legitimate, but the result of sin. Jesus said to the impotent man whom he had healed, "Behold, thou art made whole: sin no more, lest a worse thing come unto thee." To believe that God produced sickness would result in the imputation that God possessed and could wield evil power, whereas we are told in the Scriptures that God is "of purer eyes than to behold evil, and canst not look on iniquity." Evil then cannot possibly have a place in His consciousness. That would represent a "kingdom divided against itself," and could not stand, "for to be carnally minded is death; but to be spiritually minded is life and peace." If God is Spirit, and God is All, as the Scriptures teach, then God has no cognizance of false material beliefs.

Christian Scientists believe that the controlling feature of real Christianity is the supremacy of spiritual power, and that the result of the works and teaching of Jesus demonstrates beyond question that mortals must gain dominion over the flesh, which "profiteth nothing," through the Spirit, divine Mind, which giveth life.

[William E. Brown in *Madera* (Cal.) *Tribune*.]

While Christian Science teaches the unreality of sickness and poverty, it does so in the sense that they are not of God, therefore unreal or abnormal conditions which may be destroyed through the understanding and application of God and His laws. In the mean time, and during the process of the destruction of these unnatural conditions, Christian Science does not ignore the wants of the needy, but always extends a helping hand until the individual reaches a point where he becomes a self-supporting and self-respecting member of the community.

The true idea of charity is that expressed by a Talmudical philosopher: "The noblest charity is to prevent a man from accepting charity; and the best alms are to show and to enable a man to dispense with alms." Christian Scientists, from the Leader down to its youngest students, recognize and alleviate human suffering of all kinds.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1909. Applications should be in the hands of the Clerk on or before May 12, 1909. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul streets, Boston.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE TRUE TEST.

No one will question that there is abundant evidence of the numerical growth of the Christian Science denomination, as attested by the steady increase in the number of branch churches organized, and also in the larger congregations which assemble in these churches at the Sunday and Wednesday services. Something more, however, than this material evidence is required in proof that Christian Scientists are making the best use of their opportunities.

A question which naturally presents itself, when one views such a congregation as that of The Mother Church or some of the larger branch churches, is this: How many of these people are actively demonstrating the divine Principle of Christian healing, and how many, aside from those who have come here to learn how this healing, saving truth performs its wondrous mission, are simply onlookers who believe in Christian Science yet make no attempt to help either themselves or others through the practical application of its teachings? This is a pertinent and practical question, for the real growth of Christian Science lies not in the mere accession of members of the church, but in the development and growth of that class of individuals characterized by Mrs. Eddy as right thinkers. Of such she says: "The right thinker works; . . . No hand that feels not his help, no heart his comfort" (Message to The Mother Church, June, 1900, pp. 20, 21).

To be a follower of the teachings set forth in our text-book, "Science and Health with Key to the Scriptures," means something more than to be numbered as one of a congregation of Christian Scientists. To be a true Christian Scientist is not to have found a "royal road" to heaven, for there is no "royal road," but it is to be a doer of those beneficent works which Jesus said his followers should do. It is to have rightly started on the path our Master trod, the path which, if we are but faithful and obedient to his commands, will lead us "into all truth."

The endeavor of our churches should not be directed so much to the addition of a great number of members, as it should be to a sustained effort for an increase in godliness,—an increase of those who are willing and ready to do the works of the Father.

ARCHIBALD MCLELLAN.

"HAVING AUTHORITY."

THE word "authority" often stands for the influence of a rank, character, or opinion which for given reasons is honored. More generally, however, it stands for the right and privilege of dominating opinions and exercising command, and as such it has been submitted to in all times, with little question or even thought respecting its legitimacy, the bias of education or the impulses of fear generally sufficing to render the masses contentedly subservient to an existing rule.

Nothing is more pitifully apparent to the student of history than this fact of the dominion, in long periods and over large areas, of falsity and wrong, and especially in the fields of theology and medicine. Even today, if asked for the grounds of their faith, large bodies of Christian believers would refer not to demonstrated spiritual truths, but to the decrees of councils and hierarchies, the doctrines of the fathers, the creeds of men! Even more striking, if possible, is the fact that in matters pertaining to the cause and cure of disease, the great majority of even the well-meaning and intelligent delegate to logically ludicrous beliefs and surmises the government of their own lives and the lives of those they hold most dear. Especially has the fear of legions of asserted forces and powers that have no right to be, and that in truth are not, been enthroned and suffered to rule with a rod of iron until, in illustration of Paul's statement, "To whom ye yield yourselves servants to obey, his servants ye are," the world is filled with the degradation and sorrows of an unspeakable enslavement to bacteria and drugs, and especially to fear.

In rebuke of all these things Christ Jesus clearly taught, that authority is to be recognized as pertaining not to material things and theories, but to spiritual realizations. He insisted ever that his words were the expression of divine Truth, and therefore effective. Though he was of the seed of David and an acknowledged prophet, he did not ask for allegiance on these grounds, but only because of the presence and power of Truth made manifest in his doings. He asserted his authority only after having ascended the mount of realization, after having acquired a demonstrable knowledge of Truth, and to such as received his words, such as apprehended the truth he declared, he gave "power and authority over all devils, and to cure diseases."

This teaching, that Truth and Truth alone has authority, and that demonstrability is the one test of all theories and propositions, comes into the midst of the accumulations of mortal belief like a besom of destruction, and its revolutionary and reconstructive significance as expressed in Christian Science is no less marked today than it was when Christ Jesus spoke to the "astonished" people "as one having authority." His fervor and finality of statement are entirely explicable when we remember that, as the result of unnumbered demonstrations of the verity of his understanding, he had become conscious of his at-one-ment with Truth, and Christian Science teaches that by precisely the same course of procedure the confidence of the Christian believer, the authority of his understanding, is to be established today. Says our Leader, "I won my way to absolute conclusions through divine revelation, reason, and demonstration" (Science and Health, p. 109).

Think what it would mean if all professed Christians were to recognize and act upon the eternal fact that all authority and power in heaven and earth belong to Truth alone; if they protested against every other claim of authority and in their daily words and ways acknowledged their subjection, and gave their fealty to that only which is true and beautiful and good! They would all be Christian Scientists then, and the "new heaven" and "new earth" of the apocalyptic vision would appear.

JOHN B. WILLIS.

TRUTH NOT SELF THE STANDARD.

As Christian Scientists we cannot too often remind ourselves of the high and holy standard set for us in the teachings of our text-book,—viz., the perfect idea of perfect Mind. The habit of measuring ourselves or others by a mortal concept as to what man should be, tends to self-satisfaction on the one hand or to self-condemnation on the other. Those who indulge in self-satisfaction are apt to measure themselves and their achievements by a low standard, by some one or some work which they consider far below their own attainments, and they are apt to be rudely awakened from their pleasing dream when they discover that their work does not even come up to the popular demand. Many go through the years of mortal experience

Digitized by Google

wondering why they are not more successful, when Mr. So-and-so, who is no better in any way, is forging to the front.

This attitude really explains the whole situation—the failure to make satisfactory progress. The grumbler—and he is more numerous than he should be—lets thought range only in the narrow limits of personal sense. He sees others through the lens of material belief, and decides that he is at least as good as they are—which may or may not be true. In any case this would be of no consequence, as an imperfect mortal never constitutes a standard by which a correct judgment can be formed. As the risen Master said to Peter, at that wonderful breakfast on the seashore, "What is that to thee? follow thou me."

The one who accepts no other standard than the Christly one of perfection will always be humble as he measures his thoughts, words, and deeds by it; but he will not be cast down, for with this standard ever before him he will make some progress each day, take a step in advance for which he will thank God and take courage. He will cease (if he has ever indulged it) the pernicious habit of measuring himself by others, and thus he will rise above the enervating vice of satisfaction with imperfect efforts and attainments in any of his activities.

All service is holy if consecrated to a high ideal, but there comes ofttimes a temptation to offer on this altar that which is far from perfect,—the halting and lame endeavor,—and Truth asks, as of old, "Should I accept this of your hand?" There is really no excuse for poor work on the part of the Christian Scientist, for he knows what it means to express in his work the divine intelligence, our Father in heaven, who is perfection itself. It goes without saying that no work can be really well done until man is understood as a spiritual being. The spiritual man can do no poor work.

In the article "Pond and Purpose," our revered Leader tells in a wonderful way what changes come to those who respond to the mighty influence of Truth. She says, "It develops individual capacity, increases the intellectual activities, and so quickens moral sensibility that the great demands of spiritual sense are recognized" (Miscellaneous Writings, p. 204); and on page 206 she adds, "Idleness is the foe of progress." When we constantly look away from the poor mortal concept toward God's perfect idea, the true activity, which has its rise in spirituality, forever impels us onward and upward, toward the realization of the perfect in all things, and self drops out of sight, for self has nothing to do with the divine ideal. Instead of self-satisfaction there is the joy of working toward this lofty ideal in everything, and this is what gives greatness to character and calls forth the commendation, "Well done, . . . enter thou into the joy of thy lord."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Empire, Canal Zone, Jan. 30, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass. .

Dear Leader:—The Science work on the Isthmus has been most interesting, and the love that has been understood and reflected has proven that quality, not quantity, meets every need in the right way. Our Readers commenced the work by holding services in their home, where for two Sundays they were the only attendants. Then some good healing was accomplished and we added to the fold. In a short time seven were attending regularly, and truly seven proved to be a complete number, for every problem has been met without urging or effort on the part of any one. Love has taught us the bliss of giving and broadened our understanding in many ways, enabling us to be of assistance to each other; for in trouble or discouragement none of us but will promptly call upon the others for help as needed, and never is it withheld. This has cemented our fellowship in the bonds of love from the Atlantic to the Pacific, for our members meet half-way of the Isthmus at Gorgona, coming from their homes at different points from ocean to ocean,—a mere matter of railroad fare not being considered when the good to be obtained from the service is remembered.

The courageous consecration to the Cause shown by the First Reader, who started the work, together with her humbleness of accomplishment, is deserving of mention and has our gratitude. For quite a time she was the only practitioner, and the healing work done has been wonderful. We have seen consumption in one of its worst forms entirely disappear, being replaced with a manifestation of perfect health; two apparently hopeless cases of yellow fever were cured, at the time the Isthmus was thus troubled; one case of blindness dissolved in the sunlight of Truth, and the beauties of the world were brought to the patient's vision; a crushed foot was restored; all forms of stomach trouble relieved and dissipated; malarial fevers overcome; business problems met and mastered; others have been shown a God whom they can accept, because they are beginning to understand the Bible and what He really is. The sanitary department of the Isthmian Canal commission has done a wonderful work in cleaning up the Isthmus and combating disease. The Christian Scientists here, on their part, have never lost an opportunity to cleanse the mental conditions and purify the thought of those with whom they have come in contact, so that this work has made a practical health resort out of a former pest-hole.

Our Readers read for us three years, and the fact that their work had been well done was demonstrated in the ease of selection of their successors and the continued harmonious conduct of the work. While we were inclined to regret that they could not continue the work which they had so well organized, still our desire to be obedient to our Leader, whose wisdom has been so well shown in very many ways, caused us to see the right and to do it. During the three years of our organization, our workers have learned to work out their own problems through their understanding of Christian Science, thus proving their activity in the truth. We now have about thirty-five interested sufficiently to attend the services, and an average attendance of between twenty-five and thirty. Three students assist each other in that which comes to them to do and the work is harmonious and is progressing.

Our gratitude to you, dear Leader, is a constant incentive to prove by our daily life that Science and Health contains the "Key" which will unlock the Scriptures and show mankind how to overcome all forms of error, and "to do and to think and to act rightly;" first striving to remove the beam from our own eye, however, before attempting to extract the mote from that of our brother.

With love,

ROBERTA WOOD, *Clerk.*

New York, N. Y., Feb. 14, 1909.

Beloved Teacher:—Thank you for your message, received this morning. It came in a beautiful, refreshing, gentle sense of spiritual love, like the benediction of a summer shower upon the thirsty flowers, which causes them to lift up their heads in praise and shine with joy and gratitude! My prayer is that I may reflect in like manner the qualities and graces of the divine Spirit, the Spirit that shines through you, through your words and works, and through the works and words of him who "spake as never man spake;" and that I may be found worthy of your teaching and to be called your student. As always, with gratitude, Your faithful and loving student,

ANNE DODGE.

New York, N. Y., Feb. 13, 1909.

Dear Mrs. Eddy:—I have been invited to contribute an article on Christian Science to the second edition of the University Alliance, as you will see by the enclosed letter and accompanying circular. The only thing I have on hand is the lecture I delivered for The Mother Church, and which appeared in *The Christian Science Journal* for December. I have another lecture in course of preparation, though not sufficiently completed for such a purpose; but this appeals to me as being another opportunity to place Christian Science before the public.

My dear, loving friend, I am more grateful for Christian Science every day, and that means I am more grateful to you. If the opponents of Christian Science only knew how deeply it is embedded in the hearts of good people, they would know it was impossible to oppose its living power. Within a week one family drove eight miles in the face of a severe wind, with the mercury considerably below zero, just to hear a lecture on Christian Science. Last November I lectured in Oregon where people drove in from fifteen to twenty-five miles to hear the lecture, and returned home the same night. The earnestness of these people is an inspiration to us all, and nothing can stop the onward march of God's Word with these people for witnesses.

Thanking you, I am

Lovingly your student,

BLISS KNAPP.

St. Petersburg, Russia, Jan. 25—Feb. 7, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—We feel sure that you, and indeed all who are watching the progress of Christian Science throughout the world, will share in our joy and welcome the news that the imperial Russian ministerial department for foreign religions has granted us permission to hold Christian Science services in St. Petersburg, in a hired hall, and that this morning we held the service (in German) for the first time in this new hall. It became plain some time ago that the time had come to apply for the necessary permission. Here human thought whispered that we should meet with insurmountable difficulties, but Truth overcame every obstacle, and at length permission was granted on condition that we obtain the use of a hall that would satisfy the demands of the police authorities. It was seemingly a hard problem to find a place that would satisfy these demands and at the same time be in harmony with our beloved service, but we knew that in divine Love there was a place for us. At last the pastor of one of the foreign communities showed his genuine Christian love and toleration by consenting to rent us a hall in his own schools, which affords us accommodation enough for considerable growth.

The thoughts of all present at our service today went out in gratitude to you for the healing and saving truth which through your teachings is being brought to many hungry hearts in this country, and that they are being satisfied with the truer understanding of God which you have given to the world.

Gratefully and lovingly yours,

LILLIE WALLICH,
HORACE WALLICH.

Parsons, Kan., Feb. 9, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—When thinking of your stupendous work, the thought so often comes, If I only might be worthy of helping her! A careful study of page 207 of "Miscellaneous Writings" has made the way plain. You say, "In hope and faith, where heart meets heart reciprocally blest, drink with me the living waters of the spirit of my life-purpose." The longing which we all have to prove our gratitude is satisfied when we know we too have a holy purpose. Then we may drink with you the spirit of your life-purpose, because we too are striving "to impress humanity with the genuine recognition of practical, operative Christian Science."

We see and acknowledge the good done by those about us who seem to see more clearly, and we quietly, humbly strive to bring forth more fruit,—the riper, sweeter kind. We want the flower to be pure white, as it stands so regally on its stem. Let me thank you for teaching me how to be patient in this school of daily endeavor, how to see my brother-man as he is. Our appreciation of your work is greater as we go higher.

Again I thank you for all you are to me, in every walk of life.

Most earnestly,

MRS. LILLIE V. BOARDMAN.

New York, N. Y., Jan. 31, 1909.

Dear Mrs. Eddy:—I cannot refrain from expressing my admiration for and appreciation of our new *Christian Science Monitor.* I have always wished to be a "citizen of the world," but it has often seemed a difficult if not an impossible task to get what I wished from the daily paper. Now I rise from a perusal of the *Monitor* refreshed and invigorated, as from a mental bath. My horizon is enlarged and my sympathies broadened by contact with the best thought and effort of the world, my own problems become small in comparison with world problems, and I am able to do better work as a Scientist because of a more intelligent understanding of the needs of humanity. Thank you, dear Leader, for the far-seeing wisdom that, in your gift to us of *The Christian Science Monitor,* rebukes the narrowness of thought which can only hinder instead of strengthen our devotion to our dear Cause.

Gratefully yours,

FLORENCE E. BURTIS.

Dallas, Tex., Jan. 29, 1909.

Beloved Leader:—In gratitude to God, and to you, I want to thank you for "Science and Health with Key to the Scriptures," and for the light and joy it has brought into my life. God did surely direct that message. I wish also to thank you for *The Christian Science Journal,* the *Sentinel,* the *Monitor,* for the Manual, "Miscellaneous Writings," and for the inspiring words contained in all your writings; also for the beautiful example you have given and are giving of unselfishness, of wisdom, of your untiring and continuous efforts toward the universal salvation of mankind. It gives me the greatest pleasure to express this gratitude and joy which your labor of love has unfolded in my life. For this and for all I again and again thank you. My earnest prayer is that I may be worthily accounted your follower in truth and love.

Lovingly yours,

MARY L. H. SCRUGGS.

Cheyenne, Wyo., Jan. 28, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill,
Brookline, Mass.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Cheyenne, rejoice to send you the welcome news of our demonstration over separation. The former First and Second Churches of Christ, Scientist, have been disorganized, and we are now united in a new organization founded in accordance with your teachings.

With loving reverence,

First Church of Christ, Scientist, of Cheyenne, Wyo.
MYRA R. TOBIN, *Clerk.*

THE LECTURES.

CANTON, ILL.

Rev. William P. McKenzie lectured here on Christian Science, Dec. 14. He was introduced by Floyd F. Putman, assistant state attorney, who said in part,—

Probably there are today no people more misunderstood than the Christian Scientists, and it is in order that this misconception may be removed from the minds of the public that these lectures are given. Christian Science stands for a great deal more than is the prevailing opinion. It stands for love, for truth, for universal brotherhood, for the oneness and omnipotence of God. It is the Science of Christ and the exponent of his divine teachings. It is a religion of optimism; it teaches peace and joy, health and kindness. It is a religion of tolerance, and quarrels with no man because of his belief: it only seeks to lead men to see the truth, to realize the futility of doubt and fear, and to inspire mankind with love and hope, with confidence in the unlimited beneficence of the divine purpose.—*Correspondence.*

EVANSVILLE, IND.

To an audience that filled the entire lower floor of the Grand last night [Jan. 12] Frank H. Leonard gave a most logical and convincing lecture on Christian Science, holding the attention of a most appreciative gathering until the close of his discourse. The speaker of the evening was introduced by Miss Mary E. Collson, First Reader of the local church, who said in part,—

Christian Science teaches that man is rightly guided and rightly governed only when he is guided and governed by God alone. But Christian Science is very commonly misunderstood, and it is right that these misunderstandings be corrected. It is right that the truth be proclaimed. Oftentimes their prejudice arises from obviously erroneous conceptions of the teachings of Christian Science, and sinning, sorrowing, suffering mortals have been prevented from realizing the infinite possibilities of the freedom of a child of God which Christian Science teaches. It is our duty and privilege to make every reasonable effort to remove these obstacles from the pathway of those needing the blessing and bounty which Christian Science has in store for them; hence this lecture.—*Evansville Courier.*

ST. JOSEPH, MO.

Prof. Hermann S. Hering of Concord, N. H., lectured at the Tootle Theater Sunday afternoon [Jan. 17] under the auspices of Second Church of Christ, Scientist, before an audience that completely exhausted the capacity of the house. Professor Hering was introduced by S. S. Brown, who said in part,—

I have not yet attained to Christian Science. I am, like many of you, simply one of the innumerable multitude who are groping in the dim light of human intelligence for the truth which makes men free. I have enjoyed the inestimable privilege of a Christian training in a Christian country, where we see at every turn in the road of our lives the finger of faith pointing toward the cross as our only spiritual refuge, but the vision has looked far off to me, and obscured by the dust of ages. Like John the Baptist, I have doubted, and like him have questioned, "Art thou he that should come?" and have waited eagerly for the answer that he received—"The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." Instead I have been told that these are miracles, and that the day of miracles is past. When I have insisted on the very words of the Teacher, that these signs shall go with them that believe, the religion I have known has been dumb. Is it unnatural that under such circumstances I should doubt—that I should wonder whether or not these beautiful stories of Christian healing are myths?

Women have been highly favored in the Christian religion. It teaches us that the Son of God was born of a woman. It was the cry of a woman that brought him weeping to the tomb of Lazarus, where at his call the dead came forth, shaking the grave-clothes from his limbs as the eagle shakes the snow from his wings. It was a woman who anointed Jesus for his burial. It was a woman to whom the angel announced: "He is risen!" A woman's eye first beheld the risen Lord, and it was a woman who first preached the good tidings of the resurrection. And now a woman has announced to us that these signs which once accompanied them that believed were not miracles in the sense that they disregarded any fixed law, but the natural and perfectly scientific results of Christian faith shown by Christian works. She brings a cloud of witnesses to prove it—clean, healthy, happy people. Messengers tell the good tidings in every corner of the earth, and one of these I introduce to you this evening.

St. Joseph News-Press.

WORCESTER, MASS.

Nearly one thousand people were present at the lecture on Christian Science delivered in Mechanics Hall yesterday [Jan. 24] by Miss Mary Brookins. Burt Leroy Knowles introduced Miss Brookins and said:—

Everybody on earth who is trying to do anything worth while, is engaged in making or promoting holiness, happiness, and health, and thereby preventing or alleviating sin, sorrow, and suffering. Those who are trying to march consistently and faithfully under the clean standard of Christian Science are sure that they have been furnished a spiritual equipment for this work of life, of which they never dared to dream before knowing it. There are many here this afternoon who have been inspired to more exalted Christian effort. There are many others who have been made joyous and happy, whereas they had been in the depths of grief and sorrow. And there are many others who have had life and health restored to them when all hope had been given up and they had been told that they must die. These results have been wrought by Christian Science.

The spirit of interested investigation has largely superseded the old ghost of unreasoning criticism, and the people want to hear more about this great Science. I am confident that you will hear much of interest and profit regarding it here today.—*Worcester Telegram.*

LECTURES AT OTHER PLACES.

Oakland, Cal.—Judge Septimus J. Hanna, Dec. 13 and 14.

TESTIMONIES OF HEALING.

This testimony is written in gratitude to God for the help received from Him through Christian Science. When our boy was born, nearly two years ago, my wife had as serious a time as it is possible for any one to have and still live. On the third day she had a total collapse. Our family physician called another to aid him, and both worked for forty-five minutes before she was again conscious. Our regular physician did not leave my house for five days, believing she was likely to pass away at any minute, and he advised sending for her mother at Salt Lake City, though he said he did not think my wife would live until her mother's arrival. My mother-in-law, although a Christian Scientist for a number of years, had followed the profession of nurse for ten years, and on account of my feelings against Christian Science she called in another old physician whom she knew and had confidence in, but his opinion was also unfavorable. She then asked me if I would consent to Christian Science treatment as a last resort, as three physicians had said it would be a miracle if my wife recovered. I consented, and have every reason to be thankful that I did so.

During the time the Christian Science practitioner was treating my wife, all the symptoms of general poisoning, which were very alarming, showed on her body. My mother-in-law had nursed a similar case under a physician's care, and when a certain symptom, which appeared in my wife's case, developed, the patient died within five hours. The practitioner spent most of the time, nearly night and day, at our home for about two weeks, and with God's help she was able to overcome the disease. At the end of five weeks after the baby's birth my wife was able to go with her mother to Salt Lake City, although she was very weak. When her recovery was an assured fact several physicians told me that she would have heart trouble, but although we are living in a very high altitude there is no sign of it, and she is enjoying perfect health.

Another instance when Christian Science helped us was about seven months ago, when my wife suddenly developed all the symptoms of acute lung trouble. She called the practitioner over the telephone, and within twelve hours was entirely well; whereas, if she had relied upon material means the disease would have run its customary course of nine days, and if she recovered she would have been weak for a long time afterward. About the same time, our baby was cutting several teeth, and one afternoon, without any warning, he had an alarming attack of illness. My wife called the Christian Science practitioner by telephone, and the child immediately came out of the fit. The practitioner came to the house and stayed until I came home from the office in the evening. About two o'clock the next morning, while sleeping with me, the baby had another attack. My wife tried to get the practitioner on the telephone, but there were several seconds' delay in getting the connection. I tried every way I knew to bring the baby back to consciousness, but could not do it, and I thought he was dead. As soon, however, as my wife could explain the conditions to the practitioner, the baby regained consciousness, and since then he has had no further sickness.—W. A. CASH (dentist), Wisdom, Mont.

[The testimony which follows is a confirmatory statement by the mother of the lady referred to in the case given above.—EDITOR.]

I desire to tell through the pages of the *Christian Science Sentinel* of one of the most wonderful cases of healing I have ever witnessed during my many years of nursing. This healing was by the application of that truth to which Jesus referred when he said, "Ye shall know the truth, and the truth shall make you free." This truth was demonstrated most beautifully in the healing of my daughter, as told by her husband. Man's extremity, as usual, was God's opportunity, and it was not until the final decision (that death was inevitably near), after a consultation of physicians, that God was given an opportunity.

My daughter was at that time living in Butte, Mont., and I in Salt Lake, Utah, when I received the telegram bearing this distressing message. On my arrival in Butte, and learning the absolute hopelessness, from the medical standpoint, of my daughter's recovery, I finally succeeded in getting my son-in-law's consent to have Christian Science treatment; for he felt he was taking no risk, as she was then past all material help. When the physicians were dismissed and informed that we were going to have a Christian Science practitioner take the case, one of them said that my daughter could not live two hours if we stopped injecting the powerful stimulants which they had been giving her every half hour, as that was all that was keeping up the heart action; but instead of growing weaker, she grew perceptibly stronger from the very moment the truth was applied. In six hours she asked for something to eat, and was given what she requested (ices). At first she swallowed with difficulty, but by the following day this trouble was overcome, and the third day the organs which had apparently become paralyzed took up their natural activity. The baby's natural nourishment was also supplied. In four weeks my daughter was able to return with me to Salt Lake, and during her six-weeks visit with me indulged in roller skating without any bad effects.

That such blessings are possible today through the understanding of God as taught us by the study of Christian Science, is surely reason enough that we should praise God, from whom such blessings flow. Nor can we cease to love our beloved Leader, who points the way to these blessings which are for all. I well realize that my daughter lives through the result of Mrs. Eddy's untiring work in teaching her adherents the way to prove their understanding and faith in God, by works following. May God's richest blessings illumine the pathway of the author of "Science and Health with Key to the Scriptures," even as this book has illumined mine and that of the many thousands who could bear similar testimony. This light is shining for all, though the darkness of material sense comprehends it not.

MRS. JENNIE CHAMBERLAIN, Los Angeles, Cal.

I feel today a sense of gratitude to God for Christian Science and its literature; for Christian Science because through its blessed ministry I was healed from a severe paralytic attack and led from death unto life, and for the literature because it strengthens and cheers me and keeps me in touch with those who are traveling the same road. Through the study of that priceless work by Mrs. Eddy, "Science and Health with Key to the Scriptures," the Bible has been illuminated to me, its hidden things brought to light. The Bible was always a precious book to me, but it is now much more. Christian Science has been of practical value to me, for it comes into and governs my daily life. For instance, one day I was very much distressed and perplexed, not knowing how to meet a trial I had to face, when suddenly I came upon these words by Mrs. Eddy, "You have simply to preserve a scientific, positive sense of unity with your divine source, and daily demonstrate this" (Pulpit and Press, p. 4). What a load of care rolled away! How I thanked God for the help of her true words.

While healing from the passions—anger, hatred, malice, lust, etc.—is the greater, and more needful work, and one in which I have found Science to be all-powerful and sufficient, yet it is the bodily ills that usually first demand

Digitized by Google

attention, and there, too, Science is never-failing. I have known of the healing of fevers of various types, the injuries resulting from serious accidents, etc., and many maladies that were nameless have faded into their native nothingness, through the understanding of Truth which Jesus taught, and which has been discovered and explained to us by Mrs. Eddy. It is the only true healing, for it is of God. To have a permanent cure, however, we must remember Jesus' words to the man in the temple: "Behold, thou art made whole: sin no more, lest a worse thing come unto thee."—L. IRENE D. KING, La Grande, Ore.

It was some ten years ago that I first heard of Christian Science. I was at Keswick, attending the world-renowned convention, and while calling on a lady who was an invalid, she showed me a card of the Christian Science services in London and said she had been asked to attend, and that she had been told that if she kept her thought pure her sickness would or could be cured. I warned her against going. A year or two later a master of a college brought up the subject of Christian Science as being something of my belief. Indignantly I replied, "No, indeed! That is from beneath. I believe in the one Holy Spirit," little knowing then what I was saying. I have since had to return, and tell him how wrong I had been in judging what I knew nothing about.

Some time after this my sister was in distress about our brother and his wife having come into Science, and she said I was the one to go and "put them right." The way opened for me to pay them a visit in Southampton, and in fear and trembling I went, but instead of being met with something evil, I was instantly arrested by a power for good, and I saw that the face which used to look restless and troubled now bore the marks of the Spirit, —of gentleness and love and light. Our conversation at once began on the one subject, and for three days we talked of nothing else. We did not even go out, and we sat up well into the morning hours. On the first evening I was handed a Bible and asked to read the first and second chapters of Genesis. On coming to verse 27 of the first chapter the words appeared to stand out forcibly, also the last verse, and the first verse of the second chapter: "Thus the heavens and the earth were finished." The word "finished" took hold of me, but on coming to verse 5, where it said, "There was not a man to till the ground," I remarked aloud, "How strange, and yet man had been made." On coming to verse 7, "The Lord God formed man of the dust of the ground," I let the Bible drop as though struck, and said, "Oh, what does this mean? There are two creations! God's man can't be made of dust!" The next night I asked for Science and Health, and took it to my room. Waking in the night, I just cried to God that if this book were error, not to let me touch it. Immediately the words came, "Ye shall know the truth, and the truth shall make you free." I turned on the light and began to read from that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the chapter on Genesis, and I read for four hours, feeling quite rested and refreshed.

In the morning my brother, on coming into my room, said in an astonished way, "What's up?" and I said, "It is the truth." He called my sister to notice, and said I looked ten years younger. Well, this was how the light dawned on my soul, and it was the fulfilling of Paul's words, given me only a night or two before: "Accepted in the beloved:" and, "Translated . . . into the kingdom of his dear Son;" or, as it reads in the Greek, "the Son of his love." This, then, is the day-dawn, the arising of the "morning star" in our hearts, revealing the new creation. Paul said, "If any man be in Christ, he is a new creature: old things are passed away: behold, all things are become new." With this comes the renewing of the mind, bringing transformation of the body,—health instead of sickness, joy instead of sadness, thoughts of peace and not of evil.

How grateful are we who have spent long years in sickness and in the hands of the surgeon, and how glad to leave the old for the new and literally to forget "the things which are behind." Do not "our hearts burn within us" as we think of her who so willingly consecrated her earthly life to the Master's service that the whole creation might be delivered "from the bondage of corruption," and that the new birth, "the redemption of the body," might be ushered in? To her belongs the benediction, "Rejoice, and be exceeding glad: for great is your reward in heaven." To God be the glory and honor and praise.

MRS. MARION C. C. RUST, Eastbourne, England.

At my first reading of Science and Health, in my enthusiasm over its wonderful truths, I underlined the first chapters thus, "Bravo, Mrs. Eddy!" Shortly after this my preparation for a medical college was discontinued and I asked for Christian Science treatment. In but a few days I was relieved of a catarrhal trouble, and later there followed the unconscious healing of a stomach and bowel trouble. Besides this came my spiritual regeneration, which was no less than marvelous; I was made holier, happier, and more active. I soon became a student of Christian Science, and the result of my ardent discipleship was blessed in the privilege of witnessing the disappearance of many diseases in the case of others. From day to day gratitude took on a higher meaning, but at this time it appears to me, clearer than ever, that in order to demonstrate the Christ more fully I must forsake all worldliness and "grow in grace," as St. Peter tells us.

My devotion to our beloved Leader, and to the Principle she was spiritually qualified to discover, is inexpressible. I am also thankful for all the activities which she has established, and which were instrumental in leading me to this Science. I trust that many in Russia, my native land, may come to know of the healing power of Truth.

MOSES FABRICANT, New York, N. Y.

In studying the teachings of Christian Science, as set forth in "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was instantaneously healed of a disease of the stomach for which I could not use medicine. Improved eyesight is another result, and I can now say that I have perfect vision. A mental malady also departed at Love's bidding, and a severe case of heart disease, which it seemed would soon deliver me over to the grim reaper, has given place to freedom, by constantly knowing that the midnight hour is the bridal hour, as we read in the Gospels, and I was then and there wedded to a higher sense of Truth and Life, no more to be separated from God by a belief in disease. I now know that I am at home in the Father's house of many mansions, where nothing that defileth or maketh a lie can come nigh me.

MRS. EUDORA E. ROBERTSON, Omaha, Neb.

For some time it has been quite apparent to me that I must not withhold my testimony any longer, for in that way, too, I should show my gratitude to God, and to Mrs. Eddy, for having been brought by degrees to see God's all-power over disease and sin. Christian Science healed me of headaches, which had been pronounced incurable by the doctors. Their verdict was that I had been born with them and would have to die with them, but thanks be to God, I am living in the time when Mrs. Eddy shows us the way to prove God's omnipotence.

Digitized by Google

Christian Science also healed our little girl's face of a bad case of poisoning. I have seen God's power manifested through Christian Science to such a degree that I can trust Him for all things, both temporal and spiritual.

MRS. SUE STEBBINS, Austin, Minn.

When I came into Christian Science, over a year ago, it was after all material means had failed me, and when, utterly discouraged, I had decided to submit to the inevitable—as it seemed to me at that time—and cease striving. Even though I knew of Christian Science, and how much it had done for others, and though I had that priceless book, "Science and Health with Key to the Scriptures," by Mrs. Eddy, in my possession, I did not make any effort to grasp the truth. I had gone somewhat into "mental science," and it left me drifting about on error's sea, as helpless as a boat without a helmsman. Need I say that the physical ills had not been helped, and the mental state had been darkened until it seemed to me as if all were chaos.

Most truly, however, did the "kindly light" lead me on, though I knew it not and could not see its brightness shining into my darkened thought. Finally, at the earnest solicitation of relatives who were Christian Scientists, I decided at last to try the treatment. Words are powerless to express the gratitude I feel for the blessings that have come to me in all ways. I was healed of bronchial and throat trouble of two years' duration, of severe headaches, and of chronic stomach trouble which had reduced me to a state of extreme weakness through rigid diet until I was slowly and systematically starving. My fear of food was so great that I preferred to do without it rather than suffer from eating it, but this trouble was most wonderfully overcome in less than a week, and I found myself eating everything that was set before me, without a thought of fear, and one by one each physical ill has been reduced to its native nothingness.

With this healing came a great spiritual uplifting, and my heart sings one continuous song of thanksgiving to God for "his wonderful works to the children of men." Each day brings forth some sweet proof of ever-present love, and many problems are being solved through the application of Christian Science. My heart goes out in love and gratitude to our dear Leader, Mrs. Eddy, who has labored so patiently and lovingly to bring this great truth to the world. She has restored to us the teachings of our beloved Master, thereby blessing all mankind. To her I owe an endless debt of gratitude for the way in which she has so wonderfully illumined the Scriptures and made the truth so clear to me that in its light I have learned to know God aright.

MRS. BELLE W. AMBOS, Chicago, Ill.

From childhood I had felt an earnest desire to live so as to realize God's promises in every-day life. The time came when I was the only one of the family who was not a church-member, and after months of deliberation I came to the conclusion that if I would be obedient to their teaching I might realize the truth for myself, although I never could see how others had gained the needful "change of heart." I entered upon Christian work in all sincerity and earnestness of purpose, only to find it void of the very thing which I craved most, and which all humanity most needs, that is, to know that God is with us, here and now—an ever-present help, and not "a God afar off," to be known only after death. This experience caused me to lose interest, until one trouble after another brought me to the light.

Christian Science has indeed lighted my way for nine years. I was very slow to grasp the teachings of our beloved Leader, Mrs. Eddy, but through the faithful work of a very dear relative I slowly but surely received the truth into my consciousness, and I rise each morning with thankfulness to God, to Mrs. Eddy, and to the dear friends who worked so patiently and lovingly for me, and each day brings new proof of God's care. Almost every ailment that could present itself has been met and overcome by this truth. In cases of severe accidents, headaches dating from my childhood, at the birth of two strong, robust children who have never known a material remedy, Christian Science has been the only dependence. Poverty is being overcome by the assurance that in God is our abiding-place. The greatest blessing is the change from a gloomy, sensitive nature to one of hope, cheerfulness, and strength to live and to love. The *Sentinel, Journal,* and Hymnal are my daily helps, and the Bible is always at hand. I owe to Christian Science my life, and all that I am or have.—MAUDE CLARK, Council Bluffs, Ia.

Through the understanding of Truth which I have gained in Christian Science, and especially through a sense of the liberating power of divine Love, I have been able to realize the absolute unreality of many phases of mortal mind, so called. Last winter I was under a severe attack of rheumatic trouble, but was completely healed by Christian Science in three treatments. I am indeed grateful for "Science and Health with Key to the Scriptures," by our beloved Leader, Mrs. Eddy, for this book has unfolded to me the Scriptures and enabled me to begin to know God aright.

MRS. JOSEPHINE A. EVARTS, Branford, Conn.

I esteem it a privilege as well as a duty to offer grateful acknowledgment of the many blessings that have come to me through the application of the teachings of Christian Science. My attention was originally drawn to it through a healing of stomach and bowel trouble that I witnessed in my family, and which was accomplished in a comparatively short time, although the difficulties had been of many years' standing. This healing occurred almost six years ago, and since then I have seen many proofs of divine power in the removal of numerous physical disorders within my own home, among which were chronic bowel trouble, extending over a long period; imperfect eyes restored to their normal condition,—the permanent removal of eye-glasses being thus made possible; blood-poisoning (two cases); chronic catarrhal trouble, which had not yielded to three separate courses of medical treatment and operations; severe headaches, which under *materia medica* lasted several days,—all these and other ailments have yielded almost instantly. The ill effects of accidents have in several instances been entirely removed; on one occasion my mother fell down half a flight of stairs with no serious consequences.

Christian Science has proven itself more than a remedial agent in curing disease (or mere physical discord); its study furnishes us with a knowledge of God as infinite Mind, divine Principle, the only intelligence which forever guides and governs us aright. It is this understanding which enables us to overcome sin, not only in the grosser forms, but anger, greed, passion, malice, criticism, censure, resentment, hate, etc. Mrs. Eddy says, "Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin" (Rudimental Divine Science, p. 2).

I have also found Christian Science of inestimable value in my business experience. Through the application of its teachings it has been possible to battle successfully with problems which without it would have been regarded as

Digitized by Google

insurmountable. It means much to have an ever-present help to contend against such arguments as fear, discouragement, limitation, competition, greed, discord, selfishness, self-will, etc. Christian Science has appealed to me because it is fundamentally practical; it is not a vague theological theory, but a practical, operative, scientific rule of right thinking and acting, which properly applied guides one with "no variableness, neither shadow of turning." I am glad to acknowledge the spiritual uplifting, and the peace which surpasses human understanding, that I have experienced through the study of Christian Science, as contained in its text-book, "Science and Health with Key to the Scriptures." I am deeply grateful to God, and to Mrs. Eddy for the revelation of Truth to this age.

HENRY M. NEWMARK, Los Angeles, Cal.

Would that I could find words sufficiently expressive of the gratitude I feel for the benefits received through Christian Science. For twenty-three years I was in ill health, and for ten years of that time an invalid, suffering from severe nervous and rheumatic trouble, involving the throat and tongue, besides other ills almost too numerous to mention. One can well see that such a condition was not conducive to happiness, and I was not happy, but was fast reaching a state bordering on melancholy, haunted constantly with the thought that my remaining years would be spent in an asylum. Many physicians attended me, both at home and in other cities, but their remedies gave me no relief. Two of the physicians were members of my own family, and I was given the most constant and loving care, but they, too, failed to help me.

It has now been more than three years since I was healed by Christian Science, and from that time until now I have not used any material remedies. I became a member of an orthodox church in early years, but was fast growing away from its teachings. I read the Bible daily, but failed to comprehend it. I had heard of Christian Science, but spoke of it only in derision. Through long suffering and many tribulations I was, however, made willing to accept the help which Christian Science had to offer, and in a moment of desperation I asked for treatment. Truly "man's extremity is God's opportunity," for I was healed in one treatment; and I knew it, because all things seemed new, and that peace which the apostle tells us "passeth all understanding," permeated my whole being. Since my healing the Bible has become clearer and dearer to me, and I am grateful for our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for from the reading of this inspiring book my confidence and trust in God have been increased. My heart is overflowing with gratitude for this pure and noble woman, who has labored so unselfishly for the past forty years to make plain to the world this wondrous healing truth.—IDA SPRINGER, Wilmington, N. C.

It is with a heart full of gratitude that I send these lines. When I first heard of Christian Science I was a discontented and hopeless sufferer, but, thanks to God, and to His Christ, and withal to our Leader, who has shown us the way, I have been lifted out of these conditions, and today, as I look back over the past fifteen years, they have been indeed worth living. In that time I have used no material remedies, with the exception that when I first began to work for myself I used to drink lemonade for biliousness, but I soon found that I must give up all false gods. I have been healed of headaches, from which I had suffered for many years, until I had wished that I might die and be rid of them. I was also healed of trouble with my feet, which had been frosted when I was five years old, so that I could not wear an ordinary shoe without great suffering. I have also been healed of many other ailments, but to me the overcoming of fault-finding is the greatest healing of all. I found fault with almost everything, but I thank God for the almost complete overcoming of this habit. I find each day that the tendency is growing less, and the sense of fear has been almost entirely obliterated, although I used to be afraid of almost everything.

For the release from all this bondage I am indeed thankful to God, and also to our dear Leader, Mrs. Eddy. I am now at work in the Master's vineyard, and have had many beautiful demonstrations over almost every kind of disease. In all these years I have proved beyond a doubt that God does supply all our needs, if we go to Him in the right way, and my prayer is that I may so live this truth each day that I may prove it to my brother man.

MRS. LOUISA J. WHEAT, Kansas City, Mo.

It is about six years since I was healed of what the doctors called a severe eruption. My condition was such that apparently there was no hope for me, but my healing was so remarkable that I have hesitated to send in a testimony, as many to whom I have told my experience were incredulous. When my third child was about a month old, a terrible eruption appeared, which in a short time had covered my whole body, even my eyes being badly affected. I tried every possible material remedy, but got constantly worse, and became so discouraged that I scarcely cared to live. My husband then went to his grandmother, who is a Christian Scientist, and together they went to a practitioner, twelve miles distant, for help. I was almost indifferent, for I had little faith in this method, and about two weeks after treatment was begun I seemingly became much worse than I had ever been (this I have since learned was what Mrs. Eddy calls chemicalization), and for two weeks my condition was terrible. Why I clung to the treatment is a mystery to me, but about this time I discovered that the eruption was beginning to heal, a process which involved my entire body and required nearly a year for its completion, but I am now entirely free.

Words cannot express my thanks to God that through Mrs. Eddy's inspired book, "Science and Health with Key to the Scriptures," the physical healing has been wrought, but I am most thankful for the spiritual uplift, and the knowledge of "God with us" as manifested in the government of my home and its influence upon my children.—MRS. JENNIE COTTRELL, Albert Lea, Minn.

About six years ago I had my first treatment in Christian Science. Since then my children and I have relied entirely upon the truth for all of our needs. I was healed of neuralgic trouble from which I had suffered for many years. When my oldest boy was seven months old, I was told by a doctor that he had lung trouble, and I could not raise him. When I came into Christian Science he was still suffering from this disease, but he has been entirely healed through the power of Truth. The most severe test came to me about two and a half years ago, when I noticed my baby, two weeks old, was not at all symmetrical. One shoulder seemed to be a great deal higher than the other. At the time the baby was ill and under Christian Science treatment. As he seemed too sick to be disturbed, I did not undress him for two or three days, but when I did, I saw that the shoulder had become normal. Since this wonderful healing took place, my baby has been healed of many other ailments, among them a dreaded spinal disease, which appeared when he was a year old. More than once my courage seemed to fail, and I began to think that my baby would never be really well; but I would not give up my trust in God, who had delivered me in so many other ways, and today the child is perfectly well.

Words cannot express my gratitude to God, and to Mrs. Eddy for showing us how to demonstrate this saving truth.—HELEN E. THOMAS, Jersey City, N. J.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

If Christians dared believe their own Christianity and talked with God, then there would come again to the church its lost God-consciousness. Jesus had such a consciousness of God that God and he were one. But his chief promise to the church was this same sense of God. The church became afraid of it and lost it. . . . It would come to the church again, dared it pray and believe such a sense of the divine presence in the world—in life, in experience, in one's own heart—that it fairly flooded all creation; the realest, nearest possession of mankind, God immanent in one's whole life, possessing all its being, one conscious of it above all else!

[*Universalist Leader.*]

The wise man, the man of faith, love, and good will, —the man who has been on the mount of vision and spent seasons of communion with the greatest Man of the ages, the divinest Man of history,—is not, never has been, a complainer, but a willing worker for God and the family of earth that belongs to God. Sacrifices are not unknown to such an one, but the well of refreshment within never fails to supply living water from "the fountain of life," and the frequently renewed drafts thus available invigorate the spirit and make life one continuous season of sunshine and delight.

[*British Congregationalist.*]

It is very much to be desired that the churches should make it more of a matter of conscience to study the application of Christian ethics to the needs and conditions of this present world. Unless we are to be reduced to the admission that the Christian ideal and Christian morals are only suited to some Utopia or cloud-cuckoo-land, we must be prepared to give practical expression to them in our own lives and in the corporate life of Christian communities. Exposition of Christian ethics is all very well; but exposition without application is entirely futile.

[*Churchman.*]

The year 1909 opens an outlook unequaled in history—even a generation ago inconceivable. Nations are thinking in terms of world peace. They are being constrained to think in terms of world relationships. The standard of brotherhood is being erected everywhere. Its wide and growing recognition menaces every institution or form of society founded on individual or corporate selfishness. It marks the progress of the kingdom of Christ on earth It is the fruit of the one brotherhood in Christ which is the great social fact of the Incarnation.

[Prof. G. A. Coe as quoted in the *Standard.*]

The appeal to the subconscious is having its day, but it is doomed to failure. We shall never decipher the meaning of life and of this our world by going down into the subcellar of the mind and peering into the shadows, but only by ascending to the upper stories of individual consciousness and gazing toward the empyrean.

[*Examiner.*]

Let us not limit the power or the grace of the infinite God, who wills, not indeed to force men to accept His mercy, but to grant them opportunity for repentance even to "the last syllable of recorded time."

[*Examiner.*]

To know Christ means more than the acceptance of a theological dogma. It means good thinking and good doing in their relation both to ourselves and to our fellowmen.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50; six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

Attention is called to the new Pamphlets, Reprints, and Music found listed in the advertising columns on the opposite page.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid. In the Greater Boston postal district the MONITOR will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.50.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A bill has been introduced in the Senate which provides for a system of old-age annuities designed to take the place of the demand for old-age pensions for Government employes, but extending to all classes. Under it, the Government would undertake to receive deposits and to allow three per cent compound interest thereon. If a person at the age of twenty years deposited twenty-five cents per week, at the age of sixty years such person would be allowed an annuity of $129.91. It is also provided that a person of any age may deposit a lump sum equal to the amount that would have cumulated had such a person become a depositor at the age of twenty, and receive the annuity at the close of the sixty-year period. The minimum annuity is fixed at $50 and the maximum at $1,200 for any one person.

The keel has already been laid at the yards of the Tebo Yacht Basin Company in Brooklyn of the auxiliary steamer Carnegie, which the Carnegie Institute is fitting out for investigation of the magnetic phenomena of the earth. She has been specially designed so as to contain practically not a pound of steel or iron which would tend to deflect her compasses. What is not built of wood will be made of Victor Vanadium bronze. The particular problems for which the Carnegie is to be used are connected with the variations of the compass in different localities. The magnetic North Pole itself is supposed by scientists to waver, and it is held to be of the greatest importance to mariners to ascertain as soon as possible the laws which govern these deflections of the needle from the north.

A report transmitted to President Roosevelt by Herbert Knox Smith, commissioner of corporations, presents some highly interesting history of the organization of the "tobacco combination." Commissioner Smith says that it "deals with the history, from the standpoint of its organization, of the great tobacco combination. Starting in 1890 as the American Tobacco Company, a manufacturer of cigarettes, with a capital of $25,000,000, the combination has now a net capitalization (excluding intercompany holdings) of $316,346,821. It has absorbed about two hundred and fifty separate concerns and now controls substantially four-fifths of the output of each important kind of tobacco manufactures in the United States, with the exception of cigars."

The Senate has rejected the amendment to the naval bill which cut down the authorized cost of the two new battle-ships from $6,000,000 to $4,500,000 each, and their tonnage from 26,000 to 21,000. If the cost of one ship were to be represented in one dollar bills, it would take a person one hundred days to count it, if he counted at the rate of a hundred dollars a minute for ten hours a day. If the bills were placed end to end, they would reach over seven hundred miles, and if spread out flat on the ground would cover more than twenty acres.

President Roosevelt, impressed with the necessity of conservation of the natural resources of the world, has directed Secretary of State Bacon, at the suggestion of the North American Conservation Conference in session at Washington, to extend a formal invitation to foreign Powers to participate in an international conference to deal with this important problem to be held at The Hague next September. All of the forty-five nations represented at The Hague Peace Conference will be invited to participate.

The amendment to the diplomatic bill appropriating $400,000 for the site and erection of a building for the use of the United States Embassy in Paris has been rejected by the Senate. The point was made in the debate that under present conditions only millionaires could be appointed to ambassadorships, and that a permanent home for the Embassy should be provided so that poorer men might be eligible to appointment.

The vessels of the battle-ship fleet which returned Feb. 22 to Hampton Roads, after circumnavigating the globe, covered approximately forty-five thousand miles. There has not been a single mishap from the day they started serious enough to interfere with the itinerary as arranged. In fact no misadventure has befallen the vessels to cause them to lose a day anywhere or to break even temporarily the sailing formation.

Secretary of State Bacon and Count von Bernstorff, German ambassador, have signed an agreement on patents between the two countries. It is understood that the negotiations leading to the agreement contemplated a provision making it unnecessary for inventors of one country in order to protect their patent rights in the other to erect factories in which to manufacture their inventions.

The keel of the battle-ship Utah, a sister ship of the Florida, now being constructed at the Brooklyn Navy Yard, was laid last week in the yard of the New York Shipbuilding Company, Camden, N. J. The new battle-ship is to have a displacement of 21,387 tons and will have a speed of twenty-one knots an hour. She will cost, without armor or armament, $3,946,000.

The House committee bill for emergency and the maintenance of waterways improvements carries a total appropriation of $0,971,625 and provides for a national waterways commission of five senators and seven members of the House, to investigate and recommend to Congress legislation for waterways improvements.

The verdict of the United States Circuit Court for the southern district of New York, imposing a fine of $108,000 upon the New York Central Railroad Company on the charge of granting rebates to the American Sugar Company, has been affirmed by the Supreme Court of the United States.

The further probing of the municipal scandal in Pittsburg may result in bringing before the next grand jury indictments against 88 members of the council, which includes all but six members of that body.

No further action, it is said, will be taken at present in behalf of the joint resolution authorizing the city of San Francisco to use the Hetch Hetchy Valley for reservoir purposes.

Rufus Thayer, recently appointed judge of the United States Court of Shanghai in succession to L. R. Wilfley, was given a hearty welcome on his arrival at Shanghai.

The present estimated cost for constructing the Panama Canal is $360,000,000. The cost as first estimated by engineers in 1900 was less than half that amount.

International.

A very important report on the British poor laws and the industrial and social conditions which have led to unemployment and the production of men and women who cannot be employed has just been made by the royal commission, which has been studying these conditions for the past three years. The increasing extravagance in dress, the craving for amusement, and the subordination of the serious side of life to frivolity, are declared to be habits that are responsible for much pauperism and distress. If reform in these directions is to be effective, the example, says the report, must come from above. The evidence given tends to show that city-bred populations degenerate. A great majority of the unemployed are city bred. The proposals are drastically revolutionary, and if adopted will completely alter social conditions in some directions. The commission is the first great royal commission to have women members.

Every branch of the timber industry is represented in a new organization formed at Victoria under the title of the British Columbia Lumber Logging and Forestry Association, which absorbs the British Columbia Chamber of Commerce and Forestry. The organization's chief objects are promotion of mutual interests, obtaining legislation for all branches, including the recent request for a law giving permanency of title to the present twenty-one-year timber licenses, and the conservation of the forests of British Columbia, which have the largest quantity of marketable timber in the world.

Tuan Fang, the head of the Chinese delegation to the international opium commission at Shanghai, in an interview expressed the earnest hope that the United States, Great Britain, and the other Powers would help China to rid herself of the great evil. "If the importation of foreign opium is prevented by joint international action," he declared, "I will hold myself personally responsible for the stopping of the sale of the drug. I have already practically stamped out the poppy in the three provinces over which I rule."

The international naval conference, which has been in session in London since last December, has practically reached an agreement on all subjects discussed, and at a recent meeting a reporter-general was appointed and a committee of reduction selected.

Industrial and Commercial.

A reduction in the duty on news print paper from $6 a ton to $2 a ton; the placing of ground wood on the free list; and the establishment of a duty of one-twelfth cent per pound on mechanically ground wood pulp, are the unanimous recommendations of the select committee on pulp and paper investigation which made its report to the House last week.

During the past twenty years two billion dollars' worth of coffee, tea, and cacao have been imported into the United States

General.

A copy of the first edition of Walton's "Compleat Angler," 1653, brought $3,900 at an auction sale in New York recently.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE POWER OF AN ENDLESS LIFE."

BLANCHE HERSEY HOGUE.

In the epistle to the Hebrews attention is called to the priesthood of Melchisedec, who is "by interpretation King of righteousness," and who is said to be "without father, without mother, without descent, having neither beginning of days, nor end of life." The writer further declares, that "after the similitude of Melchisedec there ariseth another priest, who is made, not after the law of a carnal commandment, but after the power of an endless life." Whatever difference of opinion theologians may have had concerning these references to Melchisedec, Christendom has very generally united in believing that they refer to the Christ-mind, as exemplified fully in the life of Jesus of Nazareth.

Where the formerly accepted theology leaves this question, Christian Science finds it, and carries it on to the understanding and demonstration of the Christ-mind in the life of the individual disciple in every age. If the Mind of Christ manifests that true priesthood which is made "after the power of an endless life," it follows that the disciple who reflects even but faintly this Mind which Paul bade all to have, must be in that small measure holding on high the real priesthood and embodying "the power of an endless life." Since the advent of the perfect priesthood set forth in the life and work of Christ Jesus, Christian followers have been largely concerned with the question of who shall be their priest, and accordingly persons have been ordained to priesthood, when the vital question concerning what qualities of thought make for priesthood, and how greatly these can sanctify every human heart, should absorb Christian attention. Not a group of priests and a group of laymen in a community, but the ever-multiplying group of Christlike thoughts which can dwell in the hearts of men, makes the sum of the church of Christ on earth; and to the individual who is building in his own consciousness true priesthood, true service, there is unfolded here and now some understanding of the power of an endless life.

Only the infinite can be endless. Whatever holds within itself the taint of the finite, harbors that which must some time fail. Only the immortal can be eternal, for mortality, as the very word implies, is continually hastening on to its own doom. Whatever a man knows of Truth is eternal, and this alone outlives, endlessly, the finite and the mortal. It is apparent that matter, apart from thought, is not animated, and in and of itself is not doing any living. It is then a natural conclusion that thought is conscious of living and matter is not conscious of living, that the experience of living, therefore, is a question of consciousness, and that the consciousness of existence, the thinking itself, is life. Furthermore, there is logically, and upon Scriptural authority, but one kind of thinking which makes for life, for reason reveals, and Paul declares, that "the wages of sin is death." Jesus himself made the declaration, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." John says, "He that hath the Son hath life; and he that hath not the Son of God hath not life." Unquestionably mortal thinking, or as Paul terms it, the carnal mind, must go down in the mortality of its own making, while immortal thinking, the activity of the true idea of God, man, and the universe, manifest in the Mind of Christ, in him "that hath the Son," must lay hold of "the power of an endless life."

Jesus himself allowed the brute force of malicious mortal mind to spend its full animus upon him in his crucifixion, but he proved by his resurrection therefrom that the continuity of his unbroken spiritual life remained untouched and rose triumphant over every attempted thrust of the human experience. Throughout his entire earth-life Jesus was laying aside the concept of life in matter, ridding his thoughts of any temptation to believe that life exists apart from spiritual good, and accumulating in his thinking such understanding of "the power of an endless life" that the life of which he was conscious was to him endless, and neither the climax of malice nor the supposed natural laws of matter were able to carry out their usual course in his experience. Every attempted phase of evil, disarmed and turned back upon itself, fell powerless before him, for knowing God, he knew and lived eternal Life. Knowing God, the endless life of divine Mind apart from matter became his unassailable inheritance, and translated him, Love-crowned, into the kingdom of peace.

Mrs. Eddy states in "Science and Health with Key to the Scriptures" (p. 468), that "man is not material; he is spiritual." Popular belief has it that man is material now, but will be spiritual after dying; that man is mortal now, but will be immortal after he has finished being mortal. Christian Science maintains that whatever of man is going to be spiritual is spiritual now, that whatever about him that is to be immortal is immortal now, and that this spiritual and immortal element is the real man and is discoverable today. If immortality does not begin and does not end, then it knows no lapse and no interval, and the immortality of man is a present possession, only awaiting discovery to be enjoyed in some measure here and now. Christian Science calls man to find his immortal selfhood today, and to begin to think and live as possessing such divine inheritance.

Theologians have always contended that within the mortal's consciousness there is a "divine spark" which is of God and can never be effaced. That which is thus faintly discerned, Christian Science brings to light as the real man, the immortal, the likeness and image of God, not "in" the mortal, but existing apart from mortality and all its claims. Through Christian Science, which unfolds the truth of being, thought can ascend to such a spiritual outlook that man is seen to be immortal now, and materiality is recognized as a false statement about immortal man. All that claims man to be born, matured, and ended in matter, is

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

apart from the "endless life" of the real man, and is to be disposed of as a counterfeit of the man whom God has made. To this end Christian Science has entered the world, and to this end its followers are consecrating their efforts, albeit they are still in the infancy of their practice and their proof.

When individual thought first awakens to the present immortality of God's man, and the task is begun of exchanging human concepts for the spiritual manhood which really exists wherever the material senses seem aware of a mortal, it is seen that the *modus operandi* of this work is purely mental. The disabled and disabling arguments of materiality are to be laid aside for the spiritual knowledge of all that is true about God, man, and the universe. If the thoughts of the carnal mind build for discord and death, and the thoughts which pattern after Christlike thinking make for "the power of an endless life," with all its enfolded harmony and wholeness, then necessarily the exchange of the one for the other means escape from the one to the other, and blessed results must follow every effort to discard wrong thinking and abide in right thinking, to stand for Truth and against error.

It should be noted that Paul declares not only "an endless life," but the "power" of an endless life, to belong to that which is "after the similitude of Melchisedec." This power is not of human invention, not of matter, not of self; rather is it the power of righteousness, the understanding faith in God which, in the words of the epistle to the Hebrews, "subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword." Wherever spiritualized thought obtains, the power of an endless life is to that degree manifest, and protects human experience in the measure of its manifestation. A little obedience to spiritual demands brings a little blessing, greater obedience broadens the boundaries of blessing, still more faithful obedience provides still more abundantly the increasing understanding which loosens the hold of the oppressor, and as the unfolding of thought to things spiritual goes on, the power of an endless life gradually possesses the life of the Christian Scientist, to the subduing of the discordant conditions of mortality.

Not at a single bound is this attained, but little by little that which is without beginning of years or end of days is unfolded to the heaven-seeker, and he learns that true priesthood, true service to God and his fellow-man, provides his one and only way of escape from the false sense of a disintegrating material life-process. As thought is lifted from matter to Spirit, from mortal believing to Christlike thinking, from the ways of self to the priesthood of unselfed service, the unbroken consciousness of Life, which is "without father, without mother, without descent," is seen to be humanity's inheritance. Not by dying nor through death, but by better living and through the death of evil, is this endless life to be obtained, and Mrs. Eddy's revelation to this century has made so clear Christ Jesus' life-work that all who will may find their way. For the Master, that wondrous one who shed the light of heaven's shining where'er he walked, the sense of life which ends in death was ended before the death of it could rule him, and this through the spiritual elevation of thought which daily disarmed the sense of both life and death in matter of all its supposed power.

All worship to the Father who so abundantly saves and redeems and makes possible this ascending way! All homage to the Son who so splendidly achieved His perfect will! and irresistibly is mankind constrained to add to this its gratitude to the heroic woman in this age who has discerned this action of "an endless life" in her Master's experiences, and discerning, has begun the demonstration of the power thereof in her own life and for others, "with signs following"!

PROTECTION AND JUSTICE.

WM. S. GILBREATH.

RECENTLY, in an old book, I came across an article called the "Journeys of the Children of Israel," in which the writer tries to show that at least a part of the Scriptures was written allegorically; and in illustrating this he refers to the following passages: "Thou shalt not muzzle the ox when he treadeth out the corn;" which is alleged by the apostle Paul in his first epistle to the Corinthians to prove that such as "preach the gospel should live of the gospel;" and that the Spirit of God intended this figurative sense in this precept, besides the literal, is manifested by the verse which follows this passage, where it is said that for our sakes the gospel was written. That a figurative sense was chiefly there intended, appears evident by the verses cited, which teach justice toward all that labor for us, especially in the doctrine of the gospel, and this by the emblem of an ox treading out the corn. The apostle has brought out here so well that a laborer is worthy of his hire, that in this connection it may be well to quote the passages referred to: "For it is written in the law of Moses, Thou shalt not muzzle the mouth of the ox that treadeth out the corn. Doth God take care for oxen? Or saith he it altogether for our sakes? For our sakes, no doubt, this is written; that he that ploweth should plow in hope; and that he that threshеth in hope should be partaker of his hope. Even so hath the Lord ordained that they which preach the gospel should live of the gospel."

I also find that the Universal Dictionary gives this definition of preach, "To give earnest advice, especially on religious or moral subjects." We are all more or less preachers in this sense, and we are certainly like the ox: therefore all the more entitled to our worthy reward. In the 2d chapter of Ruth I find these good words: "The Lord recompense thy work, and a full reward be given thee of the Lord God of Israel, under whose wings thou art come to trust." We trust in the Lord God of Israel, knowing that He led our fathers, and this trust is in one sense a prayer, for we as Christian Scientists know our prayers to be a continual affirmation of God's goodness; therefore we can affirm continually that He will recompense our work. As an element of justice seems to enter into the case, we must remember that the Bible is continually declaring God's justice and judgment, as for instance, "Ye shall not respect persons in judgment; but ye shall hear the small as well as the great: ye shall not be afraid of the face of man; for the judgment is God's: and the cause that is too hard for you, bring it unto me, and I will hear it." The psalmist, too, tells us, "Justice and judgment are the habitation of thy throne: mercy and truth shall go before thy face." Again, in Zechariah, we read, "These are the things that ye shall do; Speak ye every man the truth to his neighbor; execute the judgment of truth and peace in your gates: and let none of you imagine evil in your hearts against his neighbor; and love no false oath: for all these are things that I hate, saith the Lord." On this point we have also the word of Christ Jesus, when he said, "I can of mine own self do nothing: as I hear, I judge: and my judgment is just; because I seek not mine own will, but the will of the Father which hath sent me."

For a long time I could not understand the allegory (or trial) beginning on page 430 of Science and Health, but now I see in it so much that it would take more than this pen to tell of it. It shows me, above all, the working of mortal mind in our own consciousness. Who of us that has not time and again fought out this trial, perhaps not on the plane of a "coated tongue," but with other things possibly more subtle. Even the very thought of a desire to muzzle the ox, as it were, and deprive us of our hire, is the same old trial,—this same old coated tongue,—and I

Digitized by Google

love to read the passage, "Our statute is spiritual, our Government is divine. 'Shall not the Judge of all the earth do right?'" (Science and Health, p. 442). No wonder, as Mrs. Eddy goes on to say, that "the Jury of Spiritual Senses agreed at once upon a verdict." They could not help but agree, and the "Not guilty" comes even as "when angels visit us, we do not hear the rustle of wings, nor feel the feathery touch of the breast of a dove; but we know their presence by the love they create in our hearts" (Miscellaneous Writings, p. 306). Speaking of our toil, the apostle James says, "Be patient therefore, brethren, unto the coming of the Lord. Behold, the husbandman waiteth for the precious fruit of the earth, and hath long patience for it, until he receive the early and latter rain. Be ye also patient; stablish your hearts: for the coming of the Lord draweth nigh."

SONSHIP.

VIOLET KER SEYMER.

SINCE God is Mind, and is Spirit, it is clear that this Mind's image and likeness is not corporeal. God and man are mentally alike, not unlike, and as sickness, sin, and death are totally unlike God, so they are equally unlike man. Life, Truth, and Love beget only beings who are living, truthful, and loving, and so God is only visible where goodness, kindness, truthfulness, etc., are to be found. Glimpses of Mind's image or offspring are to be seen in every little manifestation of those qualities which, in their perfect expression, constitute the divine Being we call our Father.

Spiritual man is the expression of limitless good; he is the pure stream flowing from the pure fount, and possesses "not a single quality underived from Deity" (Science and Health, p. 475). The realization of this sonship comes to human beings through their patient elimination of all that falls below the standard of the divine Principle, Love. One may say, But is it not presumptuous even to aspire so high? This is, however, nothing but an evil suggestion, seeking to limit a legitimate expansion toward the divine ideal, for Jesus did not hesitate to say, "Be ye therefore perfect, even as your Father which is in heaven is perfect." The Wayshower was then addressing human beings for the purpose of explaining to them the sinless yet attainable reality of man's true being. And what is that "Father" but the universal, impartial divine Mind, the only creator? Jesus could truly say, "I and my Father are one," for his thoughts were one in quality with Life and Truth and Love. He reasoned from spiritual premises, and it is as if he had said, I and the divine Mind are one.

Hence it is that we mental pilgrims can claim this relationship only so far and so fast as we improve the groundwork of our thought, modeling it upon that of the parent Mind, and adding thought to thought in proof of our sonship. A good thought originates in God, and when such a thought steals gently, like a shaft of light, into human consciousness, then conscious sonship has begun, and will continue until all belief in an evil or fleshly origin has been eliminated. Paul says, "As many as are led by the Spirit of God, they are the sons of God." On the other hand, mortal mind falsely claims to be a universal cause, and when its thoughts of fear and sin and perplexity come thronging toward us, we must disown them and "call no man [our] father upon the earth," but quickly turn to the one Mind whose ministering thoughts are always close at hand.

When speaking to the carnally minded, Jesus said, "Ye are of your father the devil." Mortal mind may suggest that it is not possible to express divine calmness, strength, and love in this seeming medley of human affairs, yet Jesus accomplished this, thanks to his perpetual dependence upon the Father, Mind. He claimed no monopoly of God, but clearly said, "I ascend unto my Father, and your Father;" thus extending to others the responsibilities and the blessings of sonship.

EMERGENCE.

RUTH G. ROYAL.

How many of us have seen a butterfly burst from its chrysalis—enter upon its new stage of existence, nearly as helpless as a new-born babe? With none but the All-loving to help and protect it in its weakness, the vitality and determination it exhibits are quite wonderful, considering the apparent lack of nourishment provided to foster such strength.

While strolling with a friend one afternoon, in a canyon in southern California, we found a bush of beautiful wild flowers. My friend had broken off a branch, when she was startled by something which was hanging to one of the leaves. She hastily tore off the leaf and threw it away, and my curiosity being thus excited, I stooped to examine the queer-looking object, finding it a strange affair indeed. Firmly fastened to the leaf was a sac of a delicate blue, striped with black and brown and touches of purest yellow, and about as large as the end of one's little finger from tip to joint. I thought it might be a cocoon, though I had never before seen any except those spun of a silky substance, and safely tucked away in the corners of fences, barns, and such places. As I carried this one home with me, I marveled no less at its beauty than at the perfect trust with which this child of nature had wrapped itself up in preparation for the miracle—there on the public highway, its future confided to so frail a thing as a leaf!

I had laid the cocoon in a fern on my writing-table that I might watch it daily, and as the leaf slowly withered I thought, "Surely that within will die." But one morning, five days later, while at the table, my attention was attracted to the little object, and lo, the lidlike back of the cocoon had been torn open, and the butterfly was struggling feebly to free itself! It was of a wonderful velvety blackness, its legs and feelers crimson, tipped with gold. Straight toward me it crawled, wabbling unsteadily as its closely rolled wings partially unfurled and drooped in weakness. I saw now that they were gorgeously traced in red and white with faint suggestions of gold at the edges. "Poor little thing," thought I; "you poor little thing!" But the new-born creature kept on bravely in its course toward me, waving its feelers as though it cried, "Behold, through faith I have come!" Ere long it stopped for a needed and well deserved rest, and its next move was somewhat amusing, for it began to kick vigorously at its wings. Finally it succeeded in freeing them their full length, thus disclosing the under side, which was of crimson, marked in black and white. I chanced to glance at the deserted shell, and my wonder increased as I saw how much so little had contained. Picking it up, I found it was of sheerest tissue and very simple—but how strong to contain so important a treasure!

Touched with perhaps unwarranted pity, I helped the butterfly to a frond of the fern, where it clung, wings downward, evidently gasping for breath. There it seemingly first discovered its tiny spirallike proboscis, and spent much time in coiling and uncoiling it! By this time it had attained considerable size, but seemed unable or unwilling to move farther, so I left it till it should be strong enough to fly. All that day it hung there, and toward evening I carried it to the garden, where I hoped it would feel more at home. Next morning I sought the place where it had been hidden and found it still there, but even as I watched it, basking in the sunlight, the delicate wings, fanning slowly back and forth, gathered strength; having

Digitized by Google

tried them, timidly at first, and found them strong and true, it spread them as in ecstasy, and flew away!

Who, having seen so much, could refuse to believe? Is it not promised that we, too, shall awake,—that we shall emerge from the dream of life in matter; cease, as Mrs. Eddy says (Science and Health, p. 262), "our feeble flutterings—our efforts to find life and truth in matter—and rise above the testimony of the material senses, above the mortal to the immortal idea of God."

ANSWERED PRAYER.

GRACE C. BOAKE.

WE hear many testimonies as to the value of the Lesson-Sermons, in that they acquaint one with the truth and beauty of the Scriptures; and that Mrs. Eddy's book, Science and Health, is indeed a "Key to the Scriptures," every Scientist will affirm. Before we had this guide to help us to interpret spiritually the Old and New Testaments, many verses seemed contradictory, one to the other, while other passages were apparently without any meaning whatsoever. It is of this latter class that I would speak, as having recently experienced the understanding of Truth and a knowledge of how to free oneself from a bondage to unnecessary conditions.

In the old thought some have prayed with the hope that God would grant their request, and have endeavored to be resigned if their prayer remained unanswered. Others, who had been brought up as Christians, ceased to pray as they grew older and became conscious of a world of suffering humanity, but there was a constant striving to protect themselves against an unnamable fear of adversity, sickness, and even death. They believed that God governs the universe in a way not comprehensible to us in this world, and that it was of no avail to implore this Supreme Being to change any of His decrees so long as "fate" had planned that such things should exist here and some other results should be effected in another place; therefore these people either became bitter and cynical, or were resigned to the inevitable. Such belief is not, however, in conformity with the teachings of Jesus, who said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," and who also assured his disciples, "Your Father knoweth what things ye have need of, before ye ask him." The whole trouble lies in the fact that mortal, material man does not know what his needs are, and not until he can say, "Not my will, but thine, be done," will he be freed from worry and anxiety, and realize the peace which "passeth all understanding."

The writer recently went through an experience which was mentally very painful. I desired things to come my way—at times it seemed as if I would be willing to suffer any consequences rather than give up a cherished plan. Right here was proven the practicability of Christian Science teaching, which shows how Christ, Truth, is ever present to enlighten the eyes of the living. As I read this verse in Psalms: "And he gave them their request; but sent leanness into their soul," a light seeemed to dawn upon my darkened vision, and I realized the meaning of the passage, "If therefore thine eye be single, thy whole body shall be full of light." I saw that when we shut out the spiritual sense, we may acquire those material possessions which we are so anxious to have; but, "What shall it profit a man, if he shall gain the whole world, and lose his own soul [spiritual sense]," or impoverish it?

By looking back upon our own lives we can each see where the human will has interfered with growth and development along every line. We can also look, if need be, to those around us, and we shall not only become more charitable, but we shall see where the human will as a seeming force does constantly retard the individual progress. I have learned to say with Paul: "Now no chastening for the present seemeth to be joyous, but grievous: nevertheless afterward it yieldeth the peaceable fruit of righteousness unto them which are exercised thereby." If we are truly in earnest, if we are seeking to have the Mind of Christ, our daily prayer, "Thy will be done in earth, as it is in heaven," will be realized in the demonstration of divine Love overcoming sin and sickness in our own lives as well as in the lives of those with whom we come in contact.

THE GRACE OF GOD.

MARY JEAN MILLER.

A NEW understanding of the word "grace" came recently, when calling upon a friend who has been reading Science and Health and studying the Lesson-Sermons but a short time. He said, "What is the meaning of grace? I do not find it in the Glossary." Questioning him as to his belief regarding it, he smiled and answered, "It is unmerited favor." Much light was thrown upon the true meaning by referring to the Century Dictionary, which defines it as "power to yield obedience to the divine laws." Instantly came the words of our beautiful prayer in the Church Manual (p. 41): "'Thy kingdom come;' let the reign of divine Truth, Life, and Love be established in me, and rule out of me all sin; and may Thy Word enrich the affections of all mankind, and govern them!"

Flood-tides of love and gratitude filled consciousness as the beauty and the wholeness of the truth of Christian Science, as brought to us by Mrs. Eddy, was realized in this new and spiritual rendering of a very old term. The memory of many benedictions at the close of church services then came up for recognition, the most familiar being, "The grace of our Lord Jesus Christ be with you all." A new interpretation of Jesus, the Wayshower, was also revealed, for did not Jesus yield obedience to divine law, healing all kinds of disease and gaining the victory over the last enemy, death? Paul wrote to the Ephesians, "For by grace are ye saved through faith; and that not of yourselves: it is the gift of God." Then this gift is merited favor, because man is God's likeness, expressing power as well as reflecting understanding.

Obedience is also a natural result, truly the object of yielding. Thompson's chain reference Bible has among other topics under the word "grace," "Of Christ (Christ's grace), Luke ii. 40," which reads: "And the child grew, and waxed strong in spirit, filled with wisdom: and the grace of God was upon him." Spiritual strength and wisdom are normal states of consciousness for the sons and daughters of God, and there is nothing irksome in being "faithful over a few things," for obedience "is the offspring of Love" (Miscellaneous Writings, p. 117).

We have some training in the love of friends, as if only to prove to us that without love we cannot live. All our intimacies are but broken lights of the love of God. They are methods of preparation for the great communion. In so far even that our earthly friendships are helps to life, it is because they are shot through with the spiritual, and they prepare us by their very deficiencies for something more permanent. There have been implanted in man an instinct, and a need, which make him discontented, till he find content in God. If at any time we are forced to cease from man, "whose breath is in his nostrils," it is that we may reach out to the infinite Father, unchanging, "the same yesterday, and to day, and for ever." This is the clamant, imperious need of man.—HUGH BLACK.

SELECTED ARTICLES.

[H. D. E. in *N. Y. Herald.*]

INCLUDES MRS. EDDY.

You have asked for answers to your question, "Who are the ten greatest living Americans?" While your question expressly excepts those in political life, it does not expressly except women, though you seem to assume that the ten greatest living Americans are "mere male men." Herein I differ with you. My list is as follows:—

Mary Baker Eddy.
Julia Ward Howe.
Thomas A. Edison.
Alexander Graham Bell.
Wright brothers.
Booker T. Washington.
Samuel Clemens (Mark Twain).
William De Baron Jenney.
John D. Rockefeller.
Andrew Carnegie.

I have selected these names for their distinguished greatness, for some great and good achievement, the memory of which will outlast the performance and gather luster with the years. It is an almost invidious selection among American people, whose average greatness is so remarkable.

I place Mary Baker Eddy first in the list, for her accomplishment seems nothing short of miraculous. She threw down the gauge to the three sciences most inveterate in dogma and intrenched for centuries in the convictions of the human race, declaring to the physicist and materialist that there is no such thing as matter; declaring to the medical scientist that as sin and ignorance are the source of disease, so divine Principle, or Truth, fixed starlike in the understanding, is the one sufficient cure for both sin and sickness, and declaring to the theologian that his various "schemes" of salvation, founded upon the letter and not the spirit of the Scriptures, dishonor every reasonable concept of the Deity. And through the ridicule, denunciation, and even persecution which she thereby encountered, she lives to behold her teachings accepted by hundreds of thousands in America, England, Germany, and France, while many of her ideas have been adopted by those whom she combated, henceforth to mold and modify their doctrines and curricula.

[From *The Christian Science Monitor.*]

The supreme court of the state of New Jersey last evening [Feb. 23] reversed the decision of the lower court, in the case of Mr. and Mrs. Edward M. Watson of Moorestown, N. J., who were convicted of voluntary manslaughter in connection with the demise of their seven-year-old son Granville, in May, 1907. The prosecution, basing its charge upon the fact that the parents did not provide a doctor of medicine, gives the present decision particular significance in relation to the rights of parents to decide as to what course of treatment they wish to prescribe in case of illness. The Watsons are Christian Scientists.

In the opinion of the court the conviction could not be sustained under the statute.

[William Royle in *S. Anne's Express,* England.]

The true test of Christ fellowship or following must be in the measure of obedience to the Master's commands: "Preach the gospel," "Heal the sick." For centuries it has been the practice of Christian ministers and workers to content themselves with offering the gospel's salvation to the sinner, leaving the sick to seek deliverance through any and every means except the spiritual. Christian Scientists seek to reunify their Master's injunction by healing the sick as well as by preaching the gospel to the sinner, and, without trespassing upon the rights or convictions of others, they claim, in all humility, to have found the way to overcome not only sin, but sickness and disease, sorrow and woe, as well. "These signs shall follow them that believe," and the beneficiaries of Christian Science are gratefully testifying to the freedom they have enjoyed since they found healing and subsequent immunity from sickness and disease. Many of these erstwhile sufferers came in despair to Christian Science as a last resort, when human skill and material means had failed, and not even a shadow of hope remained, apart from the help divine.

Christian Science teaches that in Christ, Truth, we have a full salvation from sickness as well as from sin, and that the promise, "The works that I do shall he do also," is as capable of proof now as at any time since the declaration was made, if the conditions underlying it are understood and fulfilled. If there is only one God, and God is Mind, scientifically there can be but one Mind, and on this basis of reasoning Christian Scientists recognize the divine Mind as the only Mind or intelligence there is or can be. Following this teaching as the fundamental basis of their religion, Christian Scientists are proving daily, in proportion to their understanding, that God never intended mankind to suffer from sickness or to undergo any of the ills which the flesh is commonly said to be heir to, and that the only suffering to which one is under bondage is his own sin, and to this only so long as he finds pleasure in committing sin.

Contrary to our critic's opinion, Christian Science is reaching the poor as well as the rich; the ignorant as well as the educated; since Christ, Truth, is no respecter of persons. It is quite a new theory, and surely peculiar to our critics, that suffering is a condition of make-believe to the educated and the rich, while the poor in this world's possessions and learning alone find a reality in suffering. All mankind without exception is seeking a surcease from its burden of sickness, sorrow, and woe, and when they really understand through Christian Science that God is an immanent, ever-present God of love, who is as available and as ready now to heal all their diseases as He was in the days of primitive Christianity, they will welcome the teaching of Christian Science, and number themselves with those who are now realizing with gratitude the truth of the promise, "Lo, I am with you alway, even unto the end of the world."

[Albert E. Miller in the *Evening Bulletin,* Philadelphia, Pa.]

Your report of a recent meeting states that one of the speakers asserted that Christian Science urges the supreme power of the human will. This statement uncorrected would leave your readers to believe that Christian Science employs hypnotism. This ground of misstatement has been covered many times before, but there still seem to be a few who profess to believe that Christian Scientists do not understand their own teaching. Lest this opinion continue to prevail, even among a few, let me state most positively that Christian Science is not hypnotism or mesmerism; neither is it in any way allied to or dependent upon human will. On the contrary, it is the relinquishment of the human will and the acceptance of the divine which enables the Christian Scientist to work out his salvation—not "with fear and trembling," but, as a later translator has given it, "in the midst of fear and trembling." The understanding of God, and of man's relationship to Him, constitutes the basis and foundation of all Christian Science effort and endeavor. The effect of this effort is to establish health and holiness on a permanent basis by understanding the divine origin of man, and

Digitized by Google

the protection against evil which this divine relationship affords. The Christian Scientist does not plead with a reluctant or unwilling God to bestow health and success upon him, for his understanding shows him that God maintains man in His image and likeness, and that from the divine standpoint man has immunity against evil if he will but assert this immunity.

[George Shaw Cook in the *Peoria* (Ill.) *Journal*.]

The success of Christian Science in the healing of physical disease seems, as our critic says, to be the feature which is very frequently emphasized in discussions of the subject, probably for the reason that this is the phase of Christian Science which at first most strongly appeals to the average investigator. However, while this successful healing of "all manner of disease" is a matter of intense interest to those who have heretofore been engaged in a desperate and unsuccessful warfare with sickness, nevertheless it is a fact that one cannot be long acquainted with Christian Science without discovering that its chief work is that of moral regeneration. Indeed, one could not possibly be healed in Christian Science without becoming, in some degree at least, less sinful. In this connection it is interesting to note that the clergyman makes the mistake of supposing that Christian Science teaches that sin is "best conquered as it is ignored." No one who is correctly informed on this subject would suppose for one moment that Christian Scientists believe that they can get rid of sin by ignoring it or by simply calling it a delusion. Christian Science woos the sinner from his sin by convincing him that he need not fear sin and cannot love it because it is not of God. It shows him that God does not create sin, and that He does not permit its existence. It teaches him that sin and evil are entirely contrary to the will of God and that they have nothing to do with God's man. Thus it induces the sinner to abandon his belief in the reality, power, and pleasure of sin, and enables him to win forgiveness by forsaking sin. For this reason it will be seen that it is a mistake to suppose that in teaching the unreality of sin Christian Science encourages the indulgence of sin. On the contrary, it awakens the sinner to the absolute necessity of gaining a love for goodness that will enable him to abandon not only the flagrant forms of immorality and vice, but also the more subtle phases of evil.

[Bishop Palmerston Anderson as reported in the *Chicago Tribune*.]

The relation between health and religion is becoming more and more apparent each day. That the untouched power of God holds sway over the physical as well as the spiritual welfare of mankind there can be no doubt. The old idea taught by the New Testament, that God's influence rules the physical as well as the spiritual part of man, bears stronger proof every hour. I do not think that any of the gentlemen of the medical profession can accuse me of quackery when I make this assertion.

[Frederick Dixon in the *Medical Press*, England.]

There is in the Westminster Library a copy of Science and Health, the fly-leaf of which is endorsed, in the handwriting of one of the Abbey's great deans, as presented by Arthur Stanley. Now no doubt Dean Stanley knew, quite as well as our critic, that the teaching of that book was not in conformity with the teaching of the Church of England, but I think he knew something else, which our critic is in danger of forgetting—that you cannot define Christianity in a dogma, and that the great apostle to the Gentiles knew what he was talking about when he wrote the thirteenth chapter of the First Epistle to the Corinthians (Rev. Ver.): "If I speak with the tongues of men and of angels, but have not love, I am become sounding brass, or a clanging cymbal. . . . But now abideth faith, hope, love, these three; and the greatest of these is love." If our critic believes that God is conscious of all the sufferings of humanity, ought he not to pray, and teach the patient to pray, to God to remove this suffering, for, as James writes, "the prayer of faith shall save the sick," and ought he not to discountenance the ministrations (I am writing this absolutely without a thought of offense) of every doctor who is not a Christian? On his own showing, what could be more blasphemous than to call in an agnostic to destroy a disease of which God was conscious, and which He had not been prayed to destroy, or having been prayed to destroy had permitted to remain!

As for the doctor's objection to the term science, it is frankly amazing. The word science has a specific meaning, which can be discovered by consulting a dictionary, and the use of it in the term Christian Science is absolutely justified by every philologic law. He first begs the question by assuming that disease is purely material in its origin, and so brushes aside the entire structure of idealism, as it exists quite apart from Christian Science; and then he assumes a theory of Christian Science treatment which, honestly, is quite ludicrous in its perversion of what that treatment is. There is nothing in the whole teaching of Christian Science which can be tortured into a justification of the statement "that pain and anguish can be done away with by belief in certain dogmas or creeds, and by performance of certain rites prescribed by their special ritual;" the last of these statements, indeed, is the product of undiluted imagination. Nor has any Christian Scientist ever suggested that poison could be expelled from the system by religious emotion. What they have insisted on is that when Christian Science comes in emotion disappears.

So far from Christian Scientists being blasphemous, they are attempting to show that, because Jesus was the way, the healing of what Whittier termed "the seamless dress" is as possible today as it was in his lifetime. . . . It is because time does not alter truth that Christian Science, which is the effort to demonstrate truth practically, is scientific. The doctor may infer, as others have, that science is confined to the elucidation of secondary causes, and that primary causes are in "the realm of the unknowable," but the inference will never get beyond just what it is, a simple begging of the question. Christian Scientists will go on steadily and patiently, never attacking those from whom they differ, but seeking for understanding with which to demonstrate the truth of their theology, confident that Jesus was the way and that they can follow him.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1909. Applications should be in the hands of the Clerk on or before May 12, 1909. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul streets, Boston.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE LECTURES.

LITTLE ROCK, ARK.

Hon. Clarence A. Buskirk of St. Louis delivered a lecture to a large and attentive audience at the Majestic Theater Sunday afternoon, Jan. 17, under the auspices of First Church of Christ, Scientist, of this city. Judge Buskirk was introduced by the Hon. J. E. Williams, who spoke in part as follows:—

From the lips of one of the disciples himself we have the word that "God, who at sundry times and in divers manners spake in times past unto the fathers by the prophets, hath in these last days spoken unto us by his Son." Has the voice ceased to speak? Are there no new truths, or have we exhausted the old ones? These are questions of the most profound importance, and when one comes into our midst, no matter from whence, with a message of love, peace, and good will to men, of healing for the sick and relief for distress, to lift the burden from the hearts of any who are gloomy and despondent over this sin-cursed world,—it is not only with an attentive ear, but with a glad heart that we receive his message, happy to carry away with us any lesson of truth or of usefulness that will aid us in our own lives or in the manifold duties we owe to our fellows.—*Arkansas Democrat.*

FORT WAYNE, IND.

The auditorium of the Elks' Temple was filled last evening [Jan. 19] by an audience of Christian Scientists and truth-seekers, who listened with profound attention to the lecture by Frank H. Leonard of Brooklyn, N. Y. The lecturer was introduced by Judge Owen N. Heaton, who said in part.—

I assume that some of you, like myself, are not Christian Scientists; at least, that you do not belong to any organized society which bears that name. But we are here tonight as invited guests, with a desire to know the truth and to avoid error. You and I are, or ought to be, interested in everything that helps the human family and that helps ourselves. We know that that which helps the individual man helps all. A few years ago some people may have said that Christian Science was a short-lived fad; but Christian Science is alive today, with influence and great power, and it is for us to acknowledge that its influence is uplifting and wholesome.—*Fort Wayne News.*

AUGUSTA, GA.

Before a well filled house yesterday afternoon [Jan. 24] Mrs. Livingston Mims at the Grand Opera House explained the theory and practice of Christian Science. She was introduced by the Hon. W. H. Fleming, who said,—

In the judgment-hall at Jerusalem Christ Jesus was about to be condemned to death, and Pilate said unto him, "What is truth?" That was a strange question for a judge to ask of a prisoner at the bar. Sir Francis Bacon in one of his most famous essays tells us that Pilate was jesting and would not stay for an answer. The Bible record shows that Jesus made no reply—except that of dignified silence, which is often the most effective reply. Of course, we know that on a previous occasion he had said, "I am the way, the truth, and the life,"—and doubtless that was sufficient. But sometimes in my musings I have been almost tempted to wish that he had given a direct answer to Pilate's question. What beauty of thought, what depths of wisdom it might have contained! How well it might have matched the Sermon on the Mount! But, whether Pilate was in jest or in earnest, his question, "What is truth?" is one that the human mind all down the centuries has been asking and striving to answer—reaching out, as it were, to grasp more firmly something not fully possessed, peering beyond the veil of the present into the dim twilight of the future, waiting and looking for the further breaking of the dawn and the fulness of knowledge that will come in God's appointed time.

This lady of our Southland, cultured, brilliant, self-poised, and sympathetic, is going to tell us this afternoon what she thinks of some phases of this great question of truth in its relation to human happiness in this life and in the life to come. Candor compels me to confess my personal inability to reach a clear mental conception of the doctrines of what is generally termed "Christian Science," as enunciated by Mrs. Eddy. I am unable fully to understand it, either as a new system of philosophy or as a distinct form of religion. But these things I do know: It speaks of love and not of hate. It holds out the hand to lift up and not to strike down. It seeks to assuage suffering and not to intensify pain. It turns the sunshine of happiness into the heart, and not the darkness of despair. It strives for the supremacy of mind over matter in human form. It preaches a cheerful optimism and makes man the likeness of God. The sweet and beautiful lives of many of its followers, well known to you and me, afford convincing proof that its claims are not without much foundation in fact.—*Augusta Chronicle.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"LET YOUR LIGHT SO SHINE."

A PECULIAR grievance held against Christian Science by some of its critics is that it "draws from the membership of other churches," a fair inference from such criticism being that both the person who with the courage of his convictions changes his religion, and the church which receives him, have thereby done something wrong. Whether this criticism was intended to mean that a person who has once identified himself with some particular denomination should forever afterward remain a member of it, even if he failed to find therein the spiritual uplift and peace which he does find elsewhere, has never been made clear, but this would seem to be the logical deduction from such a premise.

Fortunately this is not the view held by all those who speak with authority, for at least one of the principal Protestant churches has been put on record by one of its clergyman, who has recently made public statistics compiled from official resources. The figures show that in this country, during the year 1908, one hundred and twenty-five clergymen from other denominations united with the church of which the compiler is a member, the accessions from one denomination alone being thirty-five, from another twenty-eight, and so on down to one each from several of the smaller religious bodies. If it is right for these clergymen to be received into the church in question because of their change of religious belief, it certainly would be right for them to be received into any other church for the same reason, and in this regard the right of the laity cannot well be separated from that of their spiritual guides.

Christian Scientists have been accused of proselyting from other churches, but this charge is not true. They have simply lived as closely as they were able to the teachings of their religion, have corrected wherever possible the misstatements and misconceptions of Christian Science which have been prevalent, and have interfered with the religious beliefs of no one. If by so doing they have been letting their light so shine that others have been drawn to seek the truth which both saves from sin and heals from sickness, wherein lies the offense? Christian Scientists are, as a rule, fully alive to the fact that no person confers a favor upon the Christian Science church by uniting with it, but on the contrary whoever honestly espouses Christian Science becomes its beneficiary.

ARCHIBALD MCLELLAN.

A FAULTLESS COVENANT.

ALL through the Bible—both in the Old and the New Testament—we find frequent references to God's covenant with man, and this subject is tersely summed up in Malachi, where God says, "My covenant was with him of life and peace." This same thought is expressed in Deuteronomy, where the reason for obedience to divine authority is given as being "for our good always, that he might preserve us alive." This is a fine corrective to the popular belief that any divine requirement is for the purpose of maintaining God's authority, which would be wholly unnecessary. All of God's requirements are for man's good, and as they are understood and obeyed the result is "life and peace." We have in the Bible several references to a "new covenant," but a careful study of the text shows that the needed change was to take place only in the human sense of the covenant, "because," we read, "they continued not in my covenant." Then follows the promise, "This is the covenant that I will make with the house of Israel after those days, saith the Lord; I will put my laws into their mind, and write them in their hearts."

No one can deny that mortals have strayed very far from obedience to divine law, or fidelity to the divine covenant, and although they have suffered constantly for their wanderings, they have clung to error with a tenacity worthy of a better cause. When farthest from "life and peace" they have stubbornly contended for the supposed material laws which held them in bondage, insisting that these were God's laws and quite forgetting that God's laws, written on their hearts and their minds, must, according to promise, bring "life and peace," health and harmony. Paul expresses this clearly when he says, "For if ye live after the flesh, ye shall die: but if ye through the Spirit do mortify the deeds of the body, ye shall live."

In Christian Science we are brought face to face with the faultless covenant of Truth and Love, in which God's ever-operative laws of health and happiness, of purity and peace, are written upon human consciousness, transforming it from the first moment of our awakening to the demands of Truth. It is therefore of the utmost importance that we let go of the old mortal concepts of God and His law, which have failed to bring us either life or peace. If we see the need of great changes in our every-day affairs, and the folly of clinging to that which is confessedly imperfect, on the material plane, should we not also see and admit the greater necessity for a true concept of God and of man's relation to Him? The old concept has certainly proved inadequate to human need; it has not overcome sin, disease, or death, and why should we cling to it? Our revered Leader says, "We soil our garments with conservatism, and afterward we must wash them clean" (Science and Health, p. 452). It is surely wise to set about this cleansing process as soon as possible, if we would be numbered among those who have come "out of great tribulation, and have washed their robes, and made them white." If the old concepts had been "faultless," we should have needed no other; but they were not, and even as the old covenant was made to give place to the new,—the spiritual,—so we should gladly give up at every point that which is faulty. Thus, to use Mrs. Eddy's words (*Ibid.*, p. 428), "we shall sweep away the false and give place to the true."

ANNIE M. KNOTT.

THE RADIUS OF RIGHT THOUGHT.

ONE of the greatest offenses that a man can commit against his own best interest and the interest of his fellows is that of limiting in thought the range of freedom which Truth can bring. And here the Gentiles have not been the greatest sinners, for the reason that the demonstrations of him whom Christians call their Wayshower, and in whom they have professed to believe, unequivocally deny that there are any such limitations. The rebuke of the Master in this matter is brought to our attention today by the achievements of so-called physical science, the astonishing fact that the pulsating symbols of human thought are hurled out into the deserts of space as though a mighty voice were speaking from continent to continent, and received its answer from the islands and the ends of the earth. In a moment the accepted limitations of the centuries have been swept away, and a compass of freedom has been realized which would have staggered the most daring imagination of our forefathers.

Digitized by Google

Yet we may not forget that the ancient Greeks dreamed of Hermes, the messenger of the gods, the conveyer of sovereign thought, as having winged feet, while more than three thousand years before Marconi began to call across the seas the psalmist had said of the declarations of divine Truth, "Their line is gone out through all the earth, and their words to the end of the world." This present-tense prophecy found its first great fulfilment in the flight of those inspired words of Christ Jesus which brought life and immortality to light, and which moved to their centers the nations of the old world in the first century. It is being fulfilled again today, through "the prayer of the righteous" in Christian Science, as the healing of the sick beyond the range of human voice and touch speaks for that omnipresence of Spirit of which the psalmist wrote: "If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me." Men speak of a wireless, but not of an etherless telegraphy. Human thought has simply laid hold upon the belief of a more refined, all-pervading material medium, it has gotten away somewhat from the arm's-length sense of experience and capacity, it has accepted a more attenuated concept of truth. This concept is, however, not a whit the less material, and while every such gain may expand the possibilities of human advance, we do well to remember our Leader's words when she tells us that these things are of "no moment, unless they illustrate the ethics of Truth" (Retrospection and Introspection, p. 21).

In its teaching that man lives, moves, and has his being in God, Christian Science sweeps away every seeming barrier to the freedom and effectiveness of the divine idea. The realization of the all-inclusiveness of the embrace of divine Mind will remove all sense of hindrance to the freedom of our influence for good, and demonstrate the possibility of our healing ministry across the seas. It is this that must beget in us a new and quickening consciousness of the unmeasured privilege and responsibility to which every intelligent Christian Scientist is called. Today as one looks out upon present-world conditions, he is impelled to cry out as did St. Paul, "The whole creation groaneth and travaileth in pain together until now;" but however vast and imperative the human need, the power and compassion of divine Love are adequate thereto, and Christian living finds its supreme occasion in this, that it is the channel for the healing activities of Truth. To know that as we cleave only to that which is of God, and refuse to listen to the appeals of material sense, we may help all humanity, that the hand of faith may be stretched forth for the lifting up of all who are willing to "turn unto the Lord," be they near or far,—this is to find a new meaning in life, it is to begin to measure the radius of right thought.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Chelsea, London, S. W., England, Feb. 20, 1909.
Mrs. Mary Baker Eddy.

Beloved Leader:—May I take a moment of your time to say how very grateful I feel for the privilege that has been given me of serving the Cause in my new office as committee on publication for the counties in which London is situated. I know that only in so far as we are willing to "cherish nothing which hinders our highest selfhood" (Science and Health, p. 68) can we become worthy laborers for the Cause to which we owe so much, and only by doing more express the gratitude we feel to you, the Leader of the movement. My earnest prayer is that I may daily learn more love and wisdom, and so be able to give to others something of the blessings I have received from the study of the Scriptures in the light of your writings.

I would like to take this opportunity of telling you how much *The Christian Science Monitor* is appreciated here, and I fully realize that by giving it a wide circulation we are doing good that cannot at present be estimated, because through it such a vast number of men and women are being led to experience the regenerating and healing power of Christ, Truth, which you have again revealed to the world through Christian Science.

Yours lovingly,
ALGERNON HERVEY-BATHURST.

Brisbane, Australia, Jan. 14, 1909.
Mrs. Mary Baker Eddy, Boston, Mass., U.S.A.

Beloved Leader:—The Thanksgiving service held by this branch church on Christmas morning was so abundant in joyous expressions of gratitude for blessings received through Christian Science, that the members and congregation present resolved to convey to you their love and thankfulness for your priceless discovery, noble example, and selfless life-work for mankind. We rejoice in the better understanding we have of God, and our sincere desire is to know and serve Him better.

On behalf of
First Church of Christ, Scientist, Brisbane, Australia.
W. S. ILIFF, *Clerk.*

Atlanta, Ga., Feb. 16, 1909.

Beloved Leader and Teacher:—I love to send you good news. I have been very busy all fall and winter, lecturing in various parts of the country, and everywhere I find the same expression of deep and increasing interest. The "famine for the word of God" is evident, and Christian Science, that word, is "feeding the hungry and giving living waters to the thirsty" (Science and Health, p. 234).

I have just returned from dear beautiful Baltimore, having lectured there to the largest audience they have ever had. Rapt attention everywhere marks the Christian Science audiences. In Cleveland, O., a few weeks ago, there were five thousand present and hundreds turned away. The sad old earth is waking from its long lethargy, and the energizing Christ is rousing thought to grasp the eternal truth of being. We love you more and more every hour, as we see how your wisdom is a quick, ready, and loving check to all error. Is not this struggle between good and seeming evil like a game of chess? But good always wins, for Love is supreme.

Your faithful and devoted student,
SUE MIMS.

Punxsutawney, Pa., Feb. 18, 1909.
Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The members of First Church of Christ, Scientist, of Punxsutawney, Pa., recognizing your untiring efforts for the Cause of Truth, and the manifold blessings enjoyed by mankind through the revelation given by you to this age in the teachings of Christian Science, desire to thank you for the privilege of sharing these blessings. We are striving each day to reflect more of the Christ-life, and to follow faithfully where you lead.

Lovingly yours,
First Church of Christ, Scientist, Punxsutawney, Pa.
CECELIA E. WRIGHT, LEX N. MITCHELL,
CORA E. MEHRING, *Committee.*

Digitized by Google

Urbana, Ill., Feb. 14, 1909.

Dearly Beloved Leader:—This afternoon I lectured in the chapel of the University of Illinois, under the auspices of the Christian Science Society of this university. There was a large gathering of the students, faculty, and friends, who gave the lecture the closest attention. It is interesting to me that just ten years ago this spring I was invited to come to this university to organize the department of electrical engineering. As I had decided to devote myself entirely to Christian Science work, and had just resigned from the Johns Hopkins University, I promptly declined this invitation, and have never regretted it. I have found Christian Science the true Science, and have been happiest when engaged in its blessed work.

I am so grateful to you for this privilege of voicing the truth as one of your lecturers, especially as I hear of so much good resulting from this work. I well know it is only Christian Science that helps the hearers, and nothing of mine. All that I know or voice, that is good or true, has come to me through you and your teachings, for you have revealed the Science of being, which includes the infinite truth of all reality, than which there is naught else.

I have also been called to lecture for the Christian Science societies of Harvard University and the University of Michigan, Ann Arbor.

With deepest love and gratitude,

Your student,

HERMANN S. HERING.

Rock Springs, N. Dak., Feb. 11, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—It is with a grateful heart that I would try to express to you what your teachings have been to me. I was healed while reading your book, "Science and Health with Key to the Scriptures." It has given me health and strength, and best of all, a spiritual understanding whereby I have been able to help myself and others. It has also proven to me that "every trial of our faith in God makes us stronger" (Science and Health, p. 410). I am studying and trying to grasp more and more of this divine Principle, that I may be able to reflect so much of Life, Truth, and Love as to be worthy to be known as a Christian Scientist. Our Lesson-Sermons, and the *Journal* and *Sentinel*, are our beacon-lights on the way; for which I am thankful, as many times they have come when the need seemed great, leading us to Love, the source of all supply. Lovingly, your student's student,

S. JENNIE JUNE.

Davenport, Ia., Feb. 24, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Just a word of love and gratitude from one who has been a constant reader of your works for over twenty years, and of all the literature from the Christian Science Publishing Society for nineteen years. Last Communion Sunday ended my term of service as Second Reader. Many beautiful and helpful experiences came to me during my labor of love in our Master's vineyard. There was never a dread of the approaching service, nor absence on account of ill-health, and this could only have been possible by understanding how to demonstrate the truth taught in our text-book, Science and Health.

With loving gratitude, I remain,

MRS. SADIE L. EARLL.

Bangor, Me., Feb. 22, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—For a long time have I desired to express my love and gratitude to you for the many blessings I have received through the right understanding of God as taught in Christian Science. In the summer of 1898 I returned to Concord, N. H., my native city. I was sick physically and mentally. I obtained a copy of your book, "Science and Health with Key to the Scriptures," the reading and studying of which healed me both physically and mentally. It has been my great privilege to serve a term as Second Reader of First Church in Bangor. I am very thankful to you, dear Leader, for making it possible for me to serve God in this way in our beloved Cause. By my works I am striving to prove my loyalty to you, and what my understanding of God in Christian Science brings to man.

Yours in sincerity and truth,

MRS. SARAH A. DAVIS.

Valley City, N. Dak., Feb. 22, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—May I be permitted to say that which sheer gratitude prompts me to say? Some years ago I felt prejudiced against your wonderful book, Science and Health. Now I know that it was the inspiration of God to you. I cannot thank Him sufficiently for you and your work. Just this evening I came to the "open fount," asking guidance, through Science and Health, for my particular mental disquietude, and it has supplied me, as in many former cases, the exact cure for my disease. May the hand of God continue to bear you up, even as you are helping others.

Lovingly and respectfully,

MRS. F. B. WHARTON.

Reading, Pa., Feb. 26, 1909.

Beloved Leader:—Just a few words of gratitude in acknowledgment of what the understanding of Science and Health has done to the glory of God. The following of the precepts you teach in "Science and Health with Key to the Scriptures" has entirely destroyed a cancerous condition of the bowels which was pronounced incurable by *materia medica* in June, 1908. I was thoroughly examined in October, 1908, by the family physician, who pronounced me perfectly healed and cleansed. It was a glorious struggle for truth, as the destruction of the weeds of false sense, or false sensation, was the destruction of self-love, self-pity, self-justification, rebellion, resentment, false ambitions or all desire for worldly gains and worldly fame; also the destruction of the desire for liquor. I learned the nothingness of sensuality, and had a great lesson in true humility. My constant prayer and ambition is to know the only true God and His Son glorified. I am working for the written statements of the physicians, so that I can send this testimony with the proofs to the Publishing Society, that others may know that the knowledge of God as taught in Science and Health does heal organic as well as functional disease, and that it only requires a higher understanding and a purer love to do this.

As a loving and obedient follower of Truth and Love, and with a heart full of gratitude for what the knowledge of Truth has done for me and for what it is for all, I am

Lovingly yours,

ANNIE L. GEISSLER.

Toledo, O., Feb. 20, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Boston, Mass.

Dear Mrs. Eddy:—Each day shows me more clearly what a wise and loving Leader you are. The latest proof is the order of exercises for the Sunday School which appears in the last edition of the Manual. As a teacher in our Sunday School I am especially grateful, as it brings such a sense of unity to know that the exercises of the Sunday Schools of our denomination all over the land will now be identical. Lovingly and sincerely,

BESSIE B. CANNIFF.

AMONG THE CHURCHES.

ALAMEDA, CAL.

First Church of Christ, Scientist, now holding services in Woodmen Hall, owns an exceedingly valuable site at the southwest corner of Central avenue and Walnut street, and it is reported is planning to build in the near future. The plans call for an elaborate structure, which will be one of the finest churches in Alameda.—*Times-Star.*

OXFORD, ENGLAND.

You will be interested to hear that the work is going ahead in this old university town with great strides. Good healing is being accomplished and great interest is manifested. Even the learned doctors are looking into our Science. The Sunday services are well attended, the numbers having almost doubled in the last three months. Our publications are much appreciated.—*Correspondence.*

JOLIET, ILL.

It may be of interest to know that this church paid off its entire debt on Nov. 3, 1908, a balance of $1,928.50 being necessary to do so. Of this amount, $1,766.23 was raised in one collection, after having had a notice read from the desk three times, naming the date the collection was to be taken. This gives us a valuable piece of property, which for our purpose could not be duplicated for less than $12,000.—*Correspondence.*

NEWMAN, ILL.

The trustees of the Christian Science church of Newman have purchased a fine site at the corner of Broadway and Stevenson street, upon which to erect a new church edifice in the not distant future. The price paid for the property was fifteen hundred dollars. It is considered one of the most desirable locations in the city for a church building, and with every prospect of appreciation in value.

Danville (Ill.) *Commercial-News.*

VISALIA, CAL.

The Christian Science society of this city has purchased the lot east of the residence of Judge W. B. Wallace on West Acequia street and may erect thereon a chapel. The lot has a frontage of fifty-eight feet and is a very desirable location. In speaking of the matter recently one of the members of the Christian Science congregation stated that no plans had as yet been made regarding the structure, which matters were yet to be considered. While a chapel may be erected at present, it is understood that a larger building may be put up later on.—*Visalia Times.*

FOND DU LAC, WIS.

First Church of Christ, Scientist, is nicely ensconced in its new quarters on the second floor of the Trout Building on Main street. From the Reading Room at the front to the church auditorium at the rear there is an air of neatness and comfort that is inviting. The church is large and airy, and during the day is lighted by skylights, while electric lights make it bright and cheery in the evening.

The first public Christian Science service was held Sunday, Nov. 17, 1901. Previous to the public services little groups of earnest inquirers after truth met on different occasions and read the Lesson-Sermons. In May, 1903, the society moved into a hall that would seat about fifty people. In January, 1906, a building fund was established, besides which contributions were made to The Mother Church building fund, and also to that for the publishing house. For some time the society has been crowded for room, and found it necessary to have more commodious quarters. The present church hall will seat about one hundred people. During the past year there have been many more visitors at the Reading Room and more calls for the literature than before. Five copies of Science and Health have been placed in the public library. The *Journal* and *Sentinel* have been given for several years.

While the growth may seem slow, it has been steady and healthy, and the church is founded on self-sacrifice and healing, according to Jesus' teaching.

The Commonwealth.

LE ROY, KAN.

The members of First Church of Christ, Scientist, dedicated their church, located on North Main street, Sunday, Jan. 3. The first knowledge of the healing work done in this place through Christian Science was in 1887, when one of our number, who had been an invalid for several years and had failed to receive help from *materia medica*, was advised by a friend to try Christian Science treatment. The recovery was rapid, and in time others became interested and formed themselves into a band. The Christian Science text-book and other writings by Mrs. Eddy were sent for, and the little band of believers met in different homes once or twice a week and studied the Lesson-Sermons given in the *Quarterly*. Finally it was decided to organize a church, and in December, 1896, a number of the Christian Scientists met at the Fairview schoolhouse in Woodson county, this being the center of the district, and organized First Church of Christ, Scientist. Meetings were held in this place until April, 1899, when a change was made to Le Roy, Kan., where, until the present time, meetings have been held at different places in the town. Last year, at a special meeting, a building fund was started and we began to demonstrate the means. The demonstration was easily made. In August R. C. Wood presented us with a building. One of our members purchased two lots, and the building was soon moved upon them and remodeled into a very neat little church. The money needed to pay for the remodeling was raised without solicitation other than to state our needs.

We are indeed grateful to God, and to Mrs. Eddy for showing us the way. It is through her labor of love that it has been made possible for us to dedicate this church home. Through her works we have learned, as we never knew before, how to love our fellow-man and to follow Christ.—*Correspondence.*

I do not in my best moods think of death, but of life. I would live as though there were no such thing in the world as death for me or for others. I would live with my thoughts amid things that endure in work and duty and love, until death itself is consumed in life; the resurrection going on day by day, this mortal putting on immortality.

HORATIO STEBBINS.

A poor man saved by thee shall make thee rich;
A sick man helped by thee shall make thee strong;
Thou shalt thyself be served by every lease
Of service thou hast rendered.

MRS. BROWNING.

TESTIMONIES OF HEALING.

I came to Christian Science through the healing of a little child. I was at that time suffering from stomach trouble, and had been taking medicine daily for two years and a half. This child's mother was a dear friend, and when she asked me to attend a Wednesday evening meeting, I did so, and came home feeling perfectly sure I had found help. I sent for a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and commenced to study it with the Bible. I was healed of the stomach trouble, and of severe headaches, from which I had suffered since I was a little child. Other ailments which had caused me a great deal of suffering have also left me. Several months ago I had what seemed to be an eruptive fever. I was very sick for about four hours, when the pain and fever left me and I felt as well as ever. The eruption came out, but lasted only four days. I did not go to bed, but did my work as usual. I have never had a treatment from a practitioner, my help having all come from the study of the Bible and our text-book. My husband is also in Christian Science, and we belong to the church here, which we both feel to be a great privilege. We have received much help from the services, and find the Sunday and Wednesday evening meetings a great help to us, both physically and spiritually. The good work is growing fast. It is just eighteeen months since Christian Science came to our home, and the change has been wonderful to us. While we were happy, still we always felt there was something wanting, and we have found it in the peace and content and purer happiness which this truth is teaching us every day. I am very thankful to God for the blessings I have received, and my heart goes out in gratitude and love to Mrs. Eddy for giving to the world Christian Science.—Mrs. Ida E. Day, Boulder, Col.

I wish to add my testimony to the many given in the *Sentinel* and *Journal*, and tell something of what Christian Science has done and is doing for me. For eleven years I suffered from what the physicians called neuralgic trouble of the stomach. I was treated by seven different physicians and tried many kinds of remedies, but received no permanent benefit. The last physician we called said I had gall-stones, and that he could do nothing but give me morphine to ease the pain. As soon, however, as the effect of the drug was gone the pain returned. I had to stay in bed, and everything I ate seemed to cause intense suffering.

It was in this hour of darkness and discouragement that I told my husband I wanted to try Christian Science, of which I had heard through a kind neighbor, some time before, but had never read anything on the subject. My husband went to see a practitioner and asked for treatment for me, with the result that I arose that same day and began to work, and to eat anything I wanted. This healing occurred over nine years ago, and I have had perfect health ever since. With this healing came a wonderful mental uplift. It seemed as if I had been brought out of darkness into a glorious light. The practitioner sent me some Christian Science literature, which I read and reread, while I drank in its spiritual meaning. A few days after my first treatment I drove ten miles alone to see the practitioner, and she explained to me about God and His power and willingness to heal and protect His children, and many other beautiful things that I had never heard before, and for which I shall ever be grateful.

Later I bought Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and through the understanding gained from that wonderful book many ills have been met and destroyed. We have used no material remedies of any kind since my healing, nine years ago, in a family of seven. God has been our only physician! Words can never tell how much we have to be thankful for. A serious case of blood-poisoning was overcome through the power of God's Word, understood spiritually, in a few hours; besides many other ailments too numerous to mention. These all vanished before the power of God, good. The children almost always make their own demonstrations over the ills that come to them, with their knowledge of this truth.

Christian Science is surely the pearl of great price, which the world can neither give nor take away. I am indeed thankful for having been helped to know God aright. I thank God, and our dear faithful Leader, Mrs. Eddy, for her untiring labor of love for poor suffering humanity, and my greatest desire is to be worthy to be known as a loyal Christian Scientist.

Mrs. Lena Meyer, Lansing, Minn.

I came to Christian Science through my wife's healing, which seemed so wonderful that I wanted to know what had healed her, so I began to read the Christian Science text-book, Science and Health, by Mrs. Eddy. I did not think of being healed myself by reading this book, but I had not read long when the truth that it contains began to work, and it destroyed the appetite for tobacco, to which I had been a slave for fifteen years. I tried many times to stop the use of the weed, because it caused me to suffer, and I would stop for a time, only to crave it all the more. After reading this wonderful book, however, I lost all desire for tobacco, and many other bad habits,—such as the use of intoxicating liquor and the use of profane language. Christian Science also healed me of a severe backache which I had so long as I can remember.

For these and many other blessings I am truly thankful, but most of all for the spiritual uplifting,—to know that God is Love and that He sends nothing but good to His children. I am very grateful to our dear Leader for bringing the truth to this age.

Lewis Meyer, Lansing, Minn.

I have thought many times that I would like to express my thankfulness for Christian Science. It is about ten years since my husband and I came into Science, and no one but ourselves will ever know how great a blessing it has been to us. We have had many proofs of its healing power, and I hope that my testimony may lead some one who reads it to see if they can find any cases like their own that have been healed, for that is the way I did when I first came into Science. I never shall forget how fearful I was before my oldest boy was born. I used to read the *Sentinel* and *Journal* all through to see if there was one case like my own where Science had been used, and when I found one it relieved me a great deal, as we were strangers in the place and there were only one or two Scientists here at the time, which was nine years ago.

The Scientist that I expected would stay with me was called out of town on business, and that left us to depend on God and ourselves. My husband treated me, and I got along finely; I was sick only an hour, and although it was late in November and very cold I was up on the fourth day, and did my work every day after that. When my second boy came I had a Scientist with me. I was up the third day, and the following day got dinner for the family. When the baby was a week old, I took him to a Christian Science lecture, walking ten blocks to the opera house, and also walked home. Although the neighbors predicted all kinds of trouble would follow, none of it came. A month or so ago one of those same neighbors told me that ever since that time, now nearly seven years, she had thought there must be something good in Christian Sci-

Digitized by Google

ence, and she is now studying Science and Health and does not care who knows it.

Another grand demonstration was in a serious attack of fever. One of our children was seemingly very ill, and one night when she appeared to be very low and every one was watching her case, my husband and myself became fearful, so we called in a Christian Science practitioner, who remained with us all night. Our fear left us soon after her arrival, although the healing of the child came slowly. Neighbors condemned us severely for depending upon Christian Science, and said that we should be forced to have a doctor. We are very thankful to know that we had the help of the "great Physician," our Father-Mother God, who is always ready to help us if we look to Him. Words cannot express my thankfulness to God, and to Mrs. Eddy, for all the blessings we have received in Christian Science.—Mrs. E. S. Bishop, Billings, Mont.

Christian Science came to me at a time when I was in a troubled condition, mentally and physically, but as I look back now I can see the guiding hand of divine Love through it all. I thought I had ceased to pray, but my one desire was that we might be led to something or some place where health could be restored. A lady who had just been healed in Christian Science told me of her experience, and was so kindly persistent that I finally consented to attend one of the Wednesday evening meetings. I was much impressed with what I heard there, but perhaps more by the large number of people who were in attendance—something entirely different from the ordinary prayer-meeting. Three years previous to this I had been stricken with paralytic trouble, the entire left side being affected. I lay almost helpless for three months, but with kind care by the attending physician and my relatives, I recovered sufficiently in a few months to be able to do my housework. I was, however, a cripple and an almost constant sufferer. Three physicians, who were consulted about the case, said it would be necessary for me to undergo a delicate surgical operation as a precaution against another attack. My life was one of constant fear when we went to Oakland, Cal., where I hoped a change of climate would prove beneficial; if not, then the operation.

At this time we were told of Christian Science. At my request a quiet pleasant gentleman was sent to me, and after some conversation he asked me to put aside all material remedies. I hesitated, for I knew nothing about putting my trust in God. The Bible was a book that had been almost entirely discarded from our home several years before. I finally consented, but felt I was giving up a great deal. I little realized that I was putting off the "old man with his deeds," but after sleeping all night and awaking to find the bright summer sun shining in my room, I realized that I was free from pain. I woke, too, to the fact that the sunlight of Truth and Love was shining in my consciousness, and that it had awakened hope and peace. I had wakened to a new world—I had found the place where I could, as one of our beautiful hymns expresses it, "drop my burdens at His feet, and bear a song away."

After five weeks' treatment I could say I was a well woman. My limb had been straightened out and I could walk without pain or limping. My spine was straight and I could stand erect and free. How my heart overflowed with gratitude for my delivery from such cruel bondage. I was thankful that I had found an omnipresent God, who is always good and not capable of sending sickness to His children, and thankful to Mrs. Eddy for showing her love for mankind by sending this healing truth out to sick and discordant humanity, thus freeing mankind from error. The Bible was brought out and studied, and how different it all was as the "Key" unlocked its storehouse of treasures! I could not begin to enumerate the many blessings that an understanding of this truth has showered upon us.

In clearing out a room that had been occupied by a servant, a bottle of poison was come upon and put with other things to be carried out. I did not think of our thirteen-months-old baby, who was playing in the room, but presently I heard a cry, and looking around saw that he had opened the bottle of acid, as he still held it in his hand. I spoke to him quickly, declaring the truth. I then gave him a drink and washed his mouth with cold water, and in doing so saw that the tongue and lips were burned perfectly white, also the entire right hand and the tips of the fingers on the left. He ceased crying immediately, and soon began to play as usual. In an hour all signs of the burn had disappeared, except a small place in the palm of the hand, which had the appearance of having been burned with fire, but that was healed by the next day.

Thus day by day the heavenly manna is feeding and sustaining all who trust in the power of ever-present good. Divine Love, the source of all good, is the living fountain of Life, available to all, at which we can drink and gain life eternal.—Mrs. Lena L. Davis, Ashland, Ore.

It was about the first of August, 1907, that I came to San Bernardino, to have some dental work done, having been troubled with toothache. Notwithstanding that I had been greatly benefited by Christian Science treatment, more than two years before, and had at intervals read "Science and Health with Key to the Scriptures," I did not seem able to overcome this present trouble. The dentist found it necessary to destroy a nerve, and as the treatment was very severe, my suffering was intense. Finding I could get no rest, day or night, I decided to call on a Christian Science practitioner. In the mean time my face had become swollen, there were serious complications, and the jaw-bone was said to be affected. I began to take Christian Science treatment, but the trouble did not yield satisfactorily. My fear became so great that I remained at the home of the practitioner, to be under her immediate care. Relief came to some extent, but the fear of blood-poisoning then presented itself, and the pain again became very severe. It seemed to me that the whole body was becoming affected, and that all would soon be over. About this time the practitioner came into the room, and found me in what seemed to be a semiconscious state. She gave me treatment until I slept naturally, and when I awoke I felt perfectly harmonious. I went to a barber and got shaved, and attended church next day at Riverside. In a few days I had the dental work done, then returned to my home.

I have had no further trouble, and since this experience the truth has unfolded to me greatly, and given me great happiness and peace. I feel very thankful to God for His great love, and to Mrs. Eddy for showing us the way.

Enos M. Dent, Halleck, Cal.

I wish to acknowledge the great good which Christian Science has done in my family. My daughter and I were church-members, but in our trouble could not find the comfort that we longed and looked for. Since we came into Christian Science we have found the peace that passeth all understanding, for we know that God is Love, and that He is "a very present help in trouble." Last winter my little boy was taken with a very severe attack of bronchial trouble. I sent to a Christian Science practitioner for help, and she treated him absently, making only one call. In one week he went to church with us—well—and has had no more trouble. We are trying to live our thanks in deeds.

Mrs. Mary E. Murray, Bradley Beach, N. J.

Digitized by Google

I desire to express my heartfelt gratitude for all the blessings that Christian Science has brought into my life. I never knew life in the true, full sense of the word until after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. It transformed me from a sufferer with constant cough, heart trouble, and fainting-spells, to which I had been a slave for several years, into a well and happy woman. I had taken medicine for seven years, but received little or no help. For the last seven years many other demonstrations have been made through the study of the Bible and Science and Health, and I feel that I have in a measure become acquainted with God—have learned that He is infinite good, divine Love, and that He governs the universe harmoniously.

My heart goes out in gratitude to God, and to our dear Leader. I was sadly in need of the truth, and I pray that I may let my light "so shine" that others will see the good works and glorify our Father-Mother God.

MRS. MINA C. GIBSON, Chicago, Ill.

I have felt for some time that I ought to give expression to my gratitude for Christian Science. According to physical sense I was a great sufferer for many years from rheumatic, catarrhal, and bowel trouble, etc., and for the last ten years almost at death's door from a malignant ulcer. One of Chicago's most prominent specialists had so pronounced it, and said I could not live three years. I went to two sanitariums with like result, and came home to try to bear this trouble patiently and be ready for "the midnight call." I had heard vague rumors of friends in other places who had been helped in Christian Science, but knew not the how or why. Then a cousin in New York wrote that she saw in the *Journal* that there was a Christian Science practitioner here; and that another cousin had been healed of tubercular trouble by this means. This made me eager to try it, so in August, 1906, when every earthly hope was about gone, I called for help in Christian Science, and in a few days was out of pain. In three weeks I took a long trip to make a visit, and in less than three months I felt that I had been made over; I was strong and perfectly well. Since my healing I have done without medicine. In many instances I have helped others to gain the understanding of this truth. I do all my housework and much of the sewing, and have no fear of overworking, as of old, for I know that my wonderful strength is from God. I was always a Bible student, and a believer in spiritual conversion, and I think that all the churches have yet to learn to accept Christ's whole command—to heal as well as to preach.—ANGIE G. BROWN, Carthage, Mo.

I wish to express my deep gratitude for what Christian Science has done for me. I have been healed of the liquor and tobacco habits, of over thirty years' standing, and have also been able to lay aside my glasses, which I had worn for many years. I have been benefited through Christian Science, not only by the healing of these physical troubles, but the whole tenor of my life is changed by the overcoming of many bad traits of character, for which I am very thankful to God, and grateful to Mrs. Eddy, the noble woman who has taught us the true way to live.

J. H. BULKLEY, Wethersfield, Conn.

It gives me pleasure to tell about the healing I experienced in Science, a little more than two years ago. About two o'clock one afternoon, I became suddenly ill, with severe pain in the spine and chest; my arms pained me terribly and seemed numb and almost dead. I felt unable to treat myself, so I sent for a practitioner, and he arrived about three. About ten o'clock there was a kind of crisis, and then relief came. The practitioner had been working all this while, and when he went away at midnight there was only a little pain in my left arm, and I was able to overcome that. By two o'clock I was practically healed. To me this was a wonderful healing. Since then I have had to call for help in a severe attack of an eruption, and under Christian Science treatment I was cured in a few days.—LINA LAU, Fort Smith, Ark.

I cannot put off longer the duty and privilege of telling others what Christian Science has done for me and mine. In May, 1905, our oldest son, who was then fifteen, became very ill. He continued to grow worse for about six weeks, at the end of which time our family physician, together with a specialist, made an examination, and decided that there was an abnormal growth in the bowels, which prevented normal action. They advised an operation as the only possible chance of his recovery. We pleaded for some other method of relief, but they told us that there was none.

While the doctors were waiting for him to gain strength through dieting, before performing the operation, we were persuaded by a friend to try Christian Science for just one week. At the end of the week he was so much improved that we continued the treatment for two weeks more. At this point our physician, not knowing what we had been doing, declared it was dangerous to delay the operation any longer, but on examination he found that the tumor had disappeared. The doctor was very much surprised, and asked us to take the boy to a specialist. We did so, and he also said that the knife was not needed.

Since this experience we have all been helped in a great many ways. Our youngest son, who was then three years old, was hardly ever well. He seemed to be subject to bronchial attacks, which usually lasted for from two to three weeks. Our physician said to me: "You may try Christian Science for yourself, but when you use it for your baby in one of those attacks, you will have a funeral in your family." An attack came on a few weeks later, and was met and overcome in Christian Science in just twelve hours. The next time it stayed six hours, and that was the last one. Fever, colds, chronic bowel trouble, and much besides of both sin and disease, have been wiped out in our family. We have certainly proven that divine Love can and does "meet every human need" (Science and Health, p. 494), and we are endeavoring to live the life that will prove this absolute fact to others who need help as badly as we did.

MRS. EUNICE FRENCH, Kansas City, Mo.

It is with a thankful heart that I give my testimony to what I have received through Christian Science. It was about nine years ago that I first heard of it, when my baby sister was restored to us from what was said to be the last stage of a serious throat trouble. A doctor worked faithfully for her till all medical means were exhausted; then he told my mother that he had done all he could. It was after this that they called a Christian Science practitioner, and in a few days the little one was eating anything she wanted. A few years after this, my brother's little girl was taken with a severe head trouble, and he took her to a Christian Science practitioner, although the doctor told him when he left that he would not get beyond the first station with his child alive. He did, however, get to the practitioner, who worked faithfully for the little girl, who seemed to be very near to death when the treatment began. I think it was not more than two weeks until she was as well as ever.

Digitized by Google

It would seem, however, that we all need to be brought to Truth in some way, for even after this I did not take up the study of Christian Science, as I was well and did not think I needed to live as it teaches, but I now thank God from the depth of my heart that I was brought to accept it, even through suffering. I began to feel ill, and kept growing worse, until a doctor told my husband that I had a terrible trouble which should have immediate medical attention. I was taken to Hattiesburg for medical treatment, and I was there until I was very low indeed physically, and I was almost a mental wreck. One morning I told my sister, who was with me at the time, that I was going to have Christian Science treatment, and if it did not cure me I would just die. I began to take treatment, and thank God I was perfectly healed in three weeks. I have had to call for help only two or three times since.

I cannot express my love and gratitude to our dear Leader, for her life has given us so much good, and something that no one can take away from us. There is not a day in which Christian Science cannot be used in our "daily walk and conversation," and I can see the need of the healing work on every side. I shall be glad to answer any inquiries as to my healing.

MRS. GERTIE BOOTHE, Amite City, La.

I can no longer refrain from expressing in some measure, through our periodicals, my gratitude to God, and to our dear Leader, for what Christian Science has done for me. From childhood I had suffered from spinal disease, and later from dropsical and other troubles. About a year ago I became interested in Christian Science, and after three months' treatment these all disappeared, and I am now entirely well. Christian Science has proved to be an ever-present help, not only in overcoming physical ailments, but in my daily life. It has also overcome a great sense of fear. The apostle John says, "There is no fear in love: but perfect love casteth out fear: . . . He that feareth is not made perfect in love." Mrs. Eddy says concerning this text, "Here is a definite and inspired proclamation of Christian Science" (Science and Health, p. 410). All this has come to pass in one short year, and my earnest desire is to be more and more worthy to be called a child of God.

CORA A. SHAFER, Kokomo, Ind.

For a long time I have felt it my duty to express my gratitude for Christian Science and the many blessings it has brought to me and mine. Our beloved Leader tells us in the Manual that whenever God calls us to bear testimony to the power of Truth, or to defend the cause of Christ, we shall do it with love and without fear. I am indeed grateful for Christian Science, inasmuch as it has helped me in the overcoming of fear. Like many another, I did not turn to Christian Science for physical healing alone, but from a longing, earnest desire to know God, although since I began the study of Christian Science I have had many wonderful demonstrations over physical ills for myself and children.

One of the first cases of healing that came into my family was that of an eruptive disease of two years' standing, which was healed by Christian Science in four days, after three physicians had told me they could do nothing for the patient. A very bad case of eye trouble was healed in three days. My youngest child, a boy of three, was stricken with what seemed a very complicated case of bronchial trouble, besides a very aggravated form of a disease of childhood, and a rising in his head,—all at one time. I sent at once for a Christian Science practitioner, who before coming into Christian Science had been a practising physician for a number of years. It was several days before any noticeable change for the better took place, and many times I found it hard to overcome fear, but in less than three weeks the child was entirely well. These words from Science and Health (p. 248) stayed with me continually: "Immortal Mind feeds the body with supernal freshness and fairness, supplying it with beautiful images of thought and destroying the woes of sense which each day brings to a nearer tomb." My little daughter was also healed of severe headaches and stomach disorder with which she had been troubled since infancy.

I am also grateful for the *Sentinel*, which brings to us every week sweet messages of Truth and Love from all parts of the world. My heart is filled to overflowing with gratitude and love to God, and to our dearly beloved Leader, for the manifold blessings which have come to all of us through the revelation of this glorious truth to mankind.—MRS. D. T. BARADA, Boulder, Col.

It is indeed with a grateful heart that I give this testimony of my healing in Christian Science. I had suffered a number of years with what the doctors called an organic intestinal difficulty. Over six months ago I had a severe attack of this trouble, and with just one week of absent treatment I was entirely healed. I am now perfectly free from the trouble, and have gained considerably in weight since I was healed. For this, and for the healing of my wife, I am more than grateful. Christian Science has brought many blessings to our home. It proves that all things are possible with God, and I am deeply thankful to Him, and to Mrs. Eddy.—F. W. TRACY, Colton, Cal.

Christian Science has done so much for me that I hardly know which demonstration to tell about. I had an attack of mumps some time ago, that was almost instantaneously overcome. My mother telephoned to a Christian Science practitioner, who at once began to treat me. This was on Friday; on Sunday I was out all day, and I went back to school on Wednesday. I am also grateful for Christian Science because it has healed my mother so that she can be with us all the time, while before she had to stay at a sanitarium.—GLADYS RUBEY, Shawnee, Okla.

When Christian Science was presented to me, about eighteen years ago, I had been an invalid for several years, and was then unable to walk across the room or even to be up. One physician had pronounced my trouble a catarrhal condition of the stomach. Several others did not know. My healing in Christian Science was instantaneous. After reading the 91st Psalm I arose and dressed myself and felt that I was well. My thought was, "Praise God, from whom all blessings flow," and I am very grateful for all the benefits received from Christian Science. It was my privilege to hear our Leader, Mrs. Eddy, speak at her home a few years ago, and these words from her have ever remained with me, "Trust in Truth, and have no other trusts" (*Sentinel*, July 4, 1903).

MARY B. ADAMS, Lima, O.

I've yet to learn what ill it brings
To see the brighter side of things,—
To hug the sunnier side of streets,
To taste, and thank God for, life's sweets,
To light a good deed's little candle,
To hold tight by the human handle,
To smile,—one may not understand
Whereat,—to lend a helping hand.

HARRY COWELL.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

The world is getting too vast, too glorious, too universal, in view of God's infinite manifestation, to limit it to anything smaller than life itself. God's grace is too abounding to be confined to any one rite or sacrament or institution. The prophetical minds of every denomination are recognizing this. They are recognizing it so fast that these things which work for exclusiveness are receding in their mind, and the great, eternal facts of religion are assuming the commanding place.

[*Christian Register.*]

A vein of fanaticism and narrow judgment is almost sure to appear in those who would remove themselves by some sense of sanctity or peculiar consecration from the common life, would make the impossible effort of living outside of society as organized in its broad principles, in some little exclusive pinfold of their own. However estimable the motive, the danger of losing the sane and healthy view of things and putting some personal fad in the place of broad principles of action is imminent.

[Rev. John Hunter, D.D., in the *Christian Commonwealth.*]

The meaning of much of the religious unrest of the day, of the dissatisfaction which many serious and thoughtful people feel with the ecclesiastical administration of religion, is that the church's message and work do not go deep enough, and do not find them in the depths of their nature and experience. What men need is not entertaining but deepening. The church exists to hallow and deepen human life. We must not only be broad Christians but deep Christians. What we need is deepening.

[*Churchman.*]

Is the American church putting God's love for the world before everything and giving itself wholly to the saving of the world? Or is the church judging the world while seeking to save itself? Or, worse still, is it trying to save some human conception of that church which is in the world to do the work its Founder and Saviour came to initiate? Let us press the test, that there may be no possibility of misunderstanding.

[*British Congregationalist.*]

One of the reasons why the church of today seems to be so rapidly losing her hold of men is that she has no sure message to give in regard to many of the questions which profoundly affect their moral and material welfare. Hatred of the evil conditions under which many people have to live and enthusiasm for social reform are not yet the characteristic and unmistakable marks of a Christian.

[*Universalist Leader.*]

The world is ripe unto the harvest for those laborers who can lift before the imagination of the crudest masses of radical men the sweet reasonableness, the fine sympathy, the great love, the absolute devotion of the Man of Galilee. He who can translate those qualities out of the letter of ancient experience into the spirit of modern life and conduct will get a hearing from the heart of man.

[Rev. G. L. Clark in *Hartford* (Conn.) *Seminary Record.*]

Questions of the hour need discussion in the light of Christ and common sense: any other notion would imply that the gospel is a system of barren abstractions with no bearing on daily life.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50: six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1: six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel*.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

Attention is called to the new Pamphlets, Reprints, and Music found listed in the advertising columns on the opposite page.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid. In the Greater Boston postal district the MONITOR will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE. THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 29 pages.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.50.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

In restitution for the alleged seizure of the sloop Townsend on the high seas in October, 1798, by the French privateer Le Pelletier, Miss Jennie E. McFarland of Searsport, Me., has just been awarded the sum of $483.06, in an amendment to the claim bill recently passed by the United States Senate. Miss McFarland is administratrix of the estate of Ephraim McFarland, who with Joseph Cobb and William Campbell owned the vessel. The estates of the other two owners have also been paid claims aggregating $5,605.18. The Townsend sailed from Boothbay, then in the state of Massachusetts, on Aug. 28, 1798, with a cargo of lumber and fish, bound for the English island of Antigua. In October she was seized by the Le Pelletier as a prize of war. After more than one hundred years had elapsed, the Court of Claims, in a decision filed Feb. 18, 1908, decreed that the condemnation of the sloop was illegal.

Three thousand souvenir medals for the Taft inauguration were struck off at Philadelphia. Three of the number were of solid gold, and were given to President Taft, Vice-President Sherman, and Chairman Stellwagon of the inaugural committee. Fifty of the medals were silver and were distributed among the members of the cabinet and other statesmen. The remaining medals were of bronze. On one side of the medals are the busts in relief of President Taft and Vice-President Sherman, while on the other side are the names of the two men.

One reason given by the *Advocate of Peace* why the navy should not be enlarged, is because we are already spending over sixty-five per cent of the nation's revenue in payment for past war and in preparation for future war, and have less than one third of our national revenue left for judicial and executive departments, coast-guard, light-houses, quarantine, custom-houses, post-offices, census, waterways, forestry, consular and diplomatic service, and all other constructive work.

The campaign to unite and coordinate all efforts for the conservation of natural resources in the United States began on March 5, when the joint committee on cooperation, which was authorized by the governors' conference to "prepare a plan for united action by all organizations concerned with the conservation of natural resources," held its first session.

The steamship Florida, which rammed and sank the White Star liner Republic in a fog off Nantucket Island, has been sold by auction for $220,500. The sale is the result of the libel filed in the United States District Court in favor of the White Star Line, which claimed $2,000,000 damages from the Lloyd Italiano for the loss of its vessel.

Rear Admiral Charles S. Sperry, who conducted the American battle-ship fleet from San Francisco to Hampton Roads, has at his own request been relieved from duty as commander-in-chief of the Atlantic battle-ship fleet, and Rear Admiral Seaton Schroeder has been appointed in his place.

After the jury had been out for nearly fifty-three hours a verdict of guilty was returned against the Pittsburg councilmen who had been charged with conspiracy. Convictions on charges of bribery have already been found against two men in connection with the municipal scandal.

Seven members of the Senate committee on judiciary signed the report declaring that the absorption of the Tennessee Coal and Iron Company by the United States Steel Corporation, at the time of the late panic, was in violation of the Sherman anti-trust law.

The omnibus public building bill, authorizing $1,800,000 for rebuilding the custom-house at Boston, has passed the Senate.

Taxes to the amount of $1,620,500 were paid into the Connecticut state treasury last year by steam and electric railroads.

The Government receipts for the month of February were $46,671,709, and the expenditures $53,219,246.

International.

The International Opium Conference was in session at Shanghai, China, Feb. 24-26. A set of nine resolutions was adopted. They recognize the sincerity of China, the danger of the traffic and its tendency to increase, the need of investigating so-called opium remedies and the enforcement of existing prohibitive laws, the desirability of gradually checking opium smoking in the different countries and a comparison of the results of their efforts at regulation, individual and concerted governmental action in regulating the traffic in the Chinese concessions and foreign settlements, and the application of their pharmacy laws therein.

Cotton manufacturing, fostered by the government and backed by the banks, is now the most important single industry of modern Japan. Forty-nine cotton spinning companies in Japan are working eighty-five mills. All of these mills make yarn, and fourteen also manufacture cloth. The male Japanese mill laborers, who number 14,300, receive only about eighteen cents a day, and the women laborers, of whom there are 61,462, receive about eleven cents a day. China and Manchuria are the great fields for Japanese cotton sales.

The international quake committee at Rome has published a statement showing that up to Feb. 26 it had received $3,602,920, which was disbursed as follows: In the first work of relief, $656,000; to old persons and invalids, $300,000; to orphans, $400,000; to artisans and small tradesmen, $400,000; to homes of various kinds, $800,000; to refugees, etc., $200,000. This leaves about $937,000, which will be absorbed mostly in aiding poor students. The needs of the distressed population are still very great.

In the general debate in the Russian Douma on the 1909 budget the principal criticism was leveled against the disproportionate amount of the military appropriation, as compared with that for cultural purposes, the expensive conditions of the last loan and the absence of the strict economy which Russian finances demand. Of the budget estimates 43½ per cent was devoted to military purposes and 12½ per cent to education and agrarian reforms.

The French government's project to pension employes of the state railroad has been completed and presented to a parliamentary commission. It provides for the retiring on half-pay of engineers and firemen over fifty years of age who have been twenty-five years in the service, and it gives pensions to disabled men who have fifteen years of service to their credit. The average salary of engineers is $800 a year, and of firemen $500.

The reply of Belgium to the representations made by Great Britain concerning the Congo, which are similar to those set forth by the United States, is now complete. It accepts the necessity of suppressing labor taxes in the rubber region and the inauguration of other progressive reforms, but it maintains Belgium's original contention that the Powers have no right conditionally to recognize the annexation of the state.

The contract between the National Railways of Mexico, the Mexican government, and the St. Louis, Brownsville, and Mexico Railroad for the building of an international bridge across the Rio Grande at Matamoros to connect the two systems of railway has been formally signed. It is estimated that the bridge will cost more than $500,000.

Forty-five years ago, says Sir Robert Hart, who at that time was made inspector general of Chinese customs, the opium imported by China was forty-six per cent of the import trade. It now has fallen to seven per cent. These figures mean, of course, that general trade has grown and opium trade has diminished.

Industrial and Commercial.

The rights of way have been secured for the proposed Altoona, Hollidaysburg, and Bedford Springs Electric line, to be built at a cost of some $5,000,000. The line will be forty-nine miles long. It will go out of Altoona, pass through Hollidaysburg, and cross the Juniata river at East Freedom, passing through Roaring Springs, Martinsburg, Woodburg, Everett, and to Bedford.

Two thousand men are at work cutting ice on the Kennebec, Maine, for the American Ice Company. The orders are to cut every day in March until the required 800,000 tons are housed. It has been necessary to harvest ice here owing to the early breaking up of the Hudson river.

The Mauretania of the Cunard Line on her last eastward trip established a new record of four days, twenty hours, and two minutes, bettering her record by twenty-five minutes. Her best day's run was 607 miles, two miles more than her previous best record.

Statistics show that 59.3 per cent of the industrial power of New England is produced by steam, and that if the possibilities of water-power were fully and properly developed, the coal now used to develop steam-power could be reduced by ninety per cent.

General.

One of the interesting processes in connection with the manufacture of the big twelve-inch guns is involved in the operation of putting on the 34,000-pound steel jacket. This work is done at the Washington gun foundry. There are three vertical furnaces. In one of these the jacket is heated for thirty-six hours to some eight hundred degrees Fahrenheit. It is then lifted over and dropped on the gun. As there is only one twenty-fifth of an inch between the jacket and the gun, it will be seen what a delicate operation is required to put it on. When the mass cools the jacket fits skin tight.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE OTHER SIDE TO DISCOURAGEMENT.

SAMUEL GREENWOOD.

Most mortals are willing to work patiently and indefatigably for the accomplishment of their material plans,—for the possession of wealth, political power, social distinction, or any of the various prizes and baubles that attract mankind. But when it comes to the achievement of spiritual good, and the working out of their salvation from evil through their own individual effort, they are prone to fall into a sense of discouragement if satisfactory results are not quickly obtained. They fail to consider, in its relation to their present efforts, how long they had wandered in the wrong direction, or how willingly they had drifted with the current of human thought, else they would not be so impatient at the obstacles encountered in their return course. Too often, when one's whole strength is needed to cope with his difficulties, this thought of discouragement is allowed to paralyze one's endeavors, and to rob him of advantages which must sometime be regained before progress can be renewed.

Beginners in the study and practice of Christian Science need to remember that certain conditions are required of them before their new-found ideals can be fully realized. In Science, blind faith can never take the place of understanding; hence right results are not prematurely gained. Each student has a definite and individual work to do; but to sit down despairingly when one comes to the hard places only adds to its duration and difficulty. The adult mortal has not yet put away his "childish things," so he occasionally pouts when his desires are denied him. "I feel so discouraged," he says, "because I progress so slowly." Discouraged with what? Does he imply that the Almighty is unjust in His dealings, or that God is willingly withholding something which he ought to have? If he has striven so long and so faithfully and so patiently to serve God as he has to serve the world or to gain satisfaction from its allurements, he might have reasonable cause of complaint; but if he has not so striven, on what can he base his dejection?

There is a side to this question which belongs to God, and the sense of discouragement would be largely counteracted were we honestly to appreciate and consider this side as well as our own. Do we ever stop to think whether God has reason to be discouraged with us? Or do we forget how frequently we turn aside from the divine call, and how reluctantly we consent to God's demands? Do we take into account the fact that God does not grant mortals' desires without respect to their deserving? or, that one jot or one tittle of the law will not pass away until we have fulfilled it all? God says, "Thou shalt have no other gods before me." Are we striving to obey this? "Thou shalt love thy neighbor as thyself." Do we? Divine Love demands of man that he shall do no evil, talk no evil, think no evil. Do we gladly respond to this demand? How much of our affection, desire, thought, energy, means, time, do we give to God? How much do we withhold? The promise is not to the lukewarm nor to the laggard, but to him who shall seek with "all" his heart, to him who shall seek the kingdom of God "first." Have we a greater ambition than to know and live the truth? Do we prize aught more highly than the spiritual understanding of God which enabled Jesus to heal the sick and to raise the dead? Are our first thought and our greatest endeavor devoted to the gaining of that understanding? Do we love to indulge self better than to reflect Love? Is our own will more to us than the will of God? What can we honestly say to these questions?

If one's freedom is not being realized as quickly as we think it should, before giving way to discouragement it would be well to examine our position as it would appear from the other side. We do not seek God's kingdom first until we love it most. If one prizes his religion more than the things of the world, it will be shown by his devotion to it. One is not a Christian Scientist simply because he resorts to a practitioner when in trouble, or because he attends a Christian Science church. It is not how we judge ourselves, but how God judges us, that counts in this matter. We can justly claim to be Christian Scientists only in the degree that we fulfil the essential condition defined by Mrs. Eddy; namely, to "leave all for Christ" (Science and Health, p. 192). In other words, we need to be Christian Scientists in the spirit as well as in the letter.

How sincere can be our appreciation of the value of Christian Science and of its significance to mankind, or how deep can be our consecration to the Christ-ideal which it uplifts, if we are habitually late or irregular at our church services, while we are prompt and punctual in our business or social affairs; if we are careless or neglectful of the spiritual good which may be gained from the daily study of the Bible and Science and Health, while we never miss an opportunity to improve our worldly position nor neglect an advantage of material gain; if we have scant time for the reading of the periodicals and other Christian Science literature, and are often indifferent concerning the needs of the Cause, while we have both time and means for recreation, amusement, or other forms of self-gratification? What kingdom would we in such a case be seeking first?

It is certainly right and proper to be prompt and diligent in business, and there may be nothing wrong in a reasonable amount of recreation; but if these are placed first in importance, if they are allowed to supersede the demands of God, to overshadow one's spiritual needs, or to blind us through selfishness to the needs of our espoused Cause, it must be that we are seeking the kingdom of this world in preference to the kingdom of Christ. If one has need for discouragement over lack of spiritual growth under such conditions, it cannot be the one who is responsible for them. It is not honest to expect or desire something for nothing; then how can we, in honesty, ask health, prosperity, happiness of God, if we are not willing in return to comply with His requirements? David asked, "What shall I render unto the Lord for all his benefits

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

toward me?" Human sense must make sacrifices to gain the things of God. There is no easy road to freedom wherein the human self need not deny itself. Whatever is lacking on our part we can supply, but until then we are not in a position to receive. A Christian Science practitioner cannot substitute his work for ours; his obedience to God cannot take the place of yours or mine. Whatever God demands of us rests alone with us to give. If we are not now truthful or honest, we can become so. If we are not now loving, just, forgiving, upright, we can become so. Nothing but our own unwillingness can prevent us from doing our work. But if we are not willing to do these things, if we prefer to retain our wrong thoughts rather than to struggle for their overcoming, we have no right to raise the question of discouragement.

God does not withhold any good from man, but are not mortals continually withholding from God that which is His due? Is there not too often a profession of Christianity, when the Christlike character or conduct which alone merits it is withheld? If we cherish hatred, enmity, jealousy, anger in our hearts, if we are not dealing with others as we would have them deal with us, what commendation or reward can we expect from divine Love? Our Leader says, "God only waits for man's worthiness to enhance the means and measure of His grace" (Miscellaneous Writings, p. 154). When we measure our expectations of good by our worthiness to receive it, we shall not be doomed to disappointment; but while spiritual things are treated as secondary to convenience or pleasure, or are set aside before the pressure of business or society, God has little opportunity to supply our needs or to deliver us from our difficulties. With what measure we mete it shall be measured to us; then one's basis for discouragement must be that he is demanding of God what he is not willing to work for, or else he has a greater desire for the material rather than for the spiritual sense of good.

There is indeed a legitimate sense of discouragement, or dissatisfaction, that stimulates one to greater and more faithful effort. This kind recognizes the absolute, impersonal standard of Truth, and prevents the individual from being satisfied with less than his best work. But discouragement, as generally entertained, is little more than self-pity, a mesmeric sense that thinks only of the good desired, but is blind to the necessity of becoming fitted for it. Of this last let all Christian pilgrims beware, for it is a mental robber, a dishonest, disabling thought, the would-be spoiler of one's peace and courage. The smallest right effort is never unrewarded by God. Whatever is wrong in one's consciousness or experience can be remedied, if we are willing to work at our problem patiently, and to leave the times and the seasons to the unerring, infinite, all-loving wisdom of God.

DAWN.

REUBEN POGSON.

DAWN is that experience of the mortal consciousness when it begins to leave the night of gross materialism for the full noon of Truth's eternal day. Across the night sky of error some star of hope has led us on, kept us looking up and away from many of the grotesque forms that seem so solid in the darkness. We have stumbled, we have fallen, but out of our groans and mayhap our curses the desire and the cry for the unadulterated good has welled up; and though so tiny a star, it yet manifested the nature and character of the immutable good whom we know in Anglo-Saxon as God.

There is a stage when we need the sympathetic help of our fellows, the grip of a strong hand in the dark. It is that hour when the moon has ceased to give her borrowed light, when all the stars have disappeared, and darkness, gross darkness, encompasses the earth. It is when we discover that the light which is in us is darkness, and we are appalled at the greatness of that darkness. The reassurance that though this may be as the "valley of the shadow of death," nevertheless it is but a shadow which can be dissipated by the light of Life, helps to dissolve to some extent the seemingly adamantine substance of what is merely a state of negation. With the coming of light things begin to alter their shape; that which seemed a giant of evil with arms outspread to seize us, begins to take on the appearance of a tree. A whiteness is creeping into space, Truth is gently preparing us for the intense brightness of the spiritual universe. There are recorded instances in the Scriptures where the intense light of Truth has broken suddenly upon the unillumined minds of mortals, but this has not remained permanently, except as an experience to encourage the seers to press on through the reenveloping gloom to the unvarying, unchangeable light of Life and Love.

We look in a particular direction for the light to break. We feel sure that it is the east toward which we are looking, yet the light does not come. Then some one touches us on the arm and points in a different direction. Ah! Mutely we thank God that the light has come, even though it was not in the place and way anticipated. Many of those who come to Christian Science for the healing of some specific disease get disheartened by the slowness of the healing, and it frequently needs a friendly reminder to awaken the discouraged ones to see that the light is breaking on their moral, mental, and physical horizon in other directions.

> And not by eastern windows only,
> When the day dawns, comes in the light.
> In front the sun climbs slow, how slowly,
> But westward look, the land is bright!

The mortal consciousness, like the human hand, seems only capable of holding a certain quantity, and if of that quantity it wishes to hold a portion with greater tenacity, it automatically loosens its grip on the other portions and bestows the released power upon the particular object of its choice. So the patient under Christian Science treatment unconsciously loosens his mental grip on several ailments, but unfortunately he bestows the released power on the one for which he has come for healing. The result is that the truth applied by the practitioner naturally and easily dispels these loosely held errors from the consciousness of the patient, and he is sometimes unaware of these benefactions until some friend or occurrence recalls them to his memory. If he is wise, he thanks God that a fresh era has commenced for him, never to recede until all eras, all æons, are absorbed in the everlasting amen of spiritual being. Meanwhile be persistently plods on to the unknowing of the particular ailment for whose dispersal he came to Christian Science.

This recognition of the actual potentiality of Spirit, the glimpse into the fact that we do live and move and have our being in God, is the actual dawn, the new birth. This does not mean that the night was pregnant with the embryo of day. The constant reiteration that the day was hatched from the egg of night does not make that utterance a truism. Out of nothing, nothing comes; like begets like; day was begotten of that Light of which it has been said that it "lighteth every man that cometh into the world." The night of materialism is the seeming cloud of travail which claims to have hidden effectually the eternal light of Spirit. To the new student in Christian Science the fact of the coexistence of man with God is hardly discernible. With such seeming effectualness has this materialistic darkness hid the infinitude, the eternity of Life and Light, that the student exclaims, "But how is it that I do not remember that which Chrisian Science declares I have always been? I can remember nothing be-

Digitized by Google

fore my third or fourth year." The real man, whose coexistence with God Christian Science declares, never had a "third or fourth year," and never had a material fœtal existence. Christian Science does not teach the ascent of mortal man into immortality, the growth of the material molecule into mind. Christian Science teaches that the mortal man who tries to puzzle Christian Science students with questions regarding his origin and entity has no more entity than darkness. As the darkness shrinks into nothingness at the approach of light, so mortal man recedes to nonentity at the approach of the immortal man.

There will come a stage in our progress out of darkness when we shall regard all the fast vanishing ghosts of materialism as fearlessly and as lightly as the mother who, seated opposite her little daughter by the bright fireside on a winter afternoon, dismisses the fairy troop of her story and says, with assumed wonder in her loving eyes, "And it all happened in a night." So we, too, before the ultimate of perfection is reached, before the actual immensities of spiritual being are potentially ours, will see that mortal history, all periods, prehistoric and post-historic, the rise, decline, and fall of nations, the birth, growth, maturity, and decay of mortals,—"all happened in a night," the night when Adam dreamed. See! The sun! the sun! The day has dawned! The night has departed!

ENGINEERING PROBLEMS.

DAVENPORT BROMFIELD.

EVERY one is interested in the problems that confront the civil engineer, and no one problem is more interesting than that of highway or road construction. When a railroad company has decided to construct a road from one point to another, a competent engineer goes over the country and makes what is called a reconnaissance survey of the locality. After this has been done parties are placed in the field to survey or lay out upon the ground the best line upon which to construct the railroad.

Naturally the best line is that which is the least expensive in construction and the least expensive to maintain. The problem of the engineer, therefore, is to find the best route at the least expense to his employers. The best route is that which when constructed is the most direct and most nearly level in grade. A railroad built in a perfectly straight line and on a perfectly level grade would be an ideal road from the standpoint of the company operating it. In order to construct a road which will approach this ideal as nearly as possible, the engineer has to take levels all along the line of the proposed road, and prepare a profile map, one which shows exactly all the topography,—the valleys and mountains which he proposes to cross. After completing this profile, he studies out how much he can afford to fill up the valleys and cut down the mountains, in order to approach as nearly as possible to a perfectly straight and level line,—a task which calls for frequent reference to his text-book. He is also governed in this work by the amount of funds at his disposal, for one can readily see that a perfectly straight and level road could be constructed anywhere, if the funds were unlimited.

This work of the civil engineer is most interesting and fascinating, for while it involves the solution of many problems, the overcoming of innumerable obstacles, there is always the perfectly straight and level road in thought, the ideal road, to approach which is his constant endeavor. In this fact his work relates itself to that of the Christian Scientist. In the text-book of Christian Science, "Science and Health with Key to the Scriptures," Mrs. Eddy says (p. 61), "Every valley of sin must be exalted, and every mountain of selfishness be brought low, that the highway of our God may be prepared in Science." Every earnest student of Christian Science is as an engineer constructing a road. Through divine Love he has unlimited means to supply all his needs. He goes forth scientifically equipped with his text-book, makes his reconnaissance, takes his levels, maps out his course, raises the valleys and lowers the mountains, and if he is constantly guided in all his calculations by Principle, he will finally rejoice in a perfect road, as when Truth said, of old, "I will make all my mountains a way, and my highways shall be exalted."

THE VALUE OF PERSISTENCE.

REV. MARTIN SINDELL.

SOME years ago a distinguished clergyman was inspecting the machinery in a large manufacturing establishment. A heavy bar of iron, suspended horizontally from a beam some twenty feet above his head, attracted his attention, and he inquired of his guide as to what the bar was there for. Said the guide: "That bar is five feet long, and weighs five hundred pounds. If your eyes are sharp enough, you will detect a cork close to it, suspended by a thread. If the cork is pulled far out to one side, and allowed to bound against the bar,—you may not believe it, but that cork will make the bar swing to and fro in a wonderful manner." "I am like a doubting Thomas," replied the clergyman; "I must see it demonstrated before I can believe it." "Very well," the guide remarked, "my time is at your disposal, so I will show you what the little cork can do;" and soon the cork was bounding and rebounding against the heavy bar of iron. Five minutes went by, and there was no perceptible effect. The visitor began to smile. Ten minutes, and his smile grew broader. Fifteen minutes slipped away; then twenty; and still there was no movement of the bar. At the end of twenty-four minutes the clergyman exclaimed, "My doubts are verified! I did not think it could be done." "Just wait a minute or two," the guide replied; and sure enough, at the end of twenty-five minutes there was a slight tremor in the bar, and a moment later it began to move. Five minutes more, and it was swinging to and fro in a marvelous manner—all done by so slight a thing as the weight of a cork!

Jesus said to his disciples: "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you." He taught the possibility of removing mountains of error through the understanding and application of "a grain" of truth. The old saying that "a small drop of ink . . . makes thousands, perhaps millions, think," has its counterpart in the thought that a slight understanding of Truth will destroy much sin and sickness. That this is true has been demonstrated thousands of times since the discovery of Christian Science. It is not by material might, but by the gentle, unseen activity of Life, Truth, and Love that these "marvels" are wrought. When Elijah fled at the threat of Jezebel and hid in a cave, he received a command from the Lord to go forth upon the mountain, and there he witnessed what we would perhaps call a cyclone. This was followed by an earthquake, and later by a fire,—"but the Lord was not" in any of these; "and after the fire a still small voice." This was God's voice, the felt presence of the most High,—the All-powerful.

In Science and Health (p. 367) we read: "The infinite Truth of the Christ-cure has come to this age through a 'still, small voice,' through silent utterances and divine anointing which quicken and increase the beneficial effects of Christianity." The gentle way is the manner in which Christian Science heals. In some cases, he who realizes the truth for his patient may find it necessary to continue his work for days, weeks, or even months; but let him persist, as did the man until he finally succeeded in sway-

Digitized by Google

ing the iron bar, and success will surely come, for hath not God said, "So shall my word be that goeth forth out of my mouth: it shall not return unto me void." The work of destroying sin and disease goes steadily on, even though it be by means which seem as nothing to human sense; if, however, these means are allied to Truth, they will remove every mountain of error, and reveal the ceaseless action of God's law.

"A LITTLE CHILD SHALL LEAD THEM."

MARY BROOKINS.

IT was in a certain Christian Science Sunday School in a western town, and the room was decorated with a large bouquet of lilies. At the close of the session the superintendent asked the children if they had any sick relatives or friends. Among the pupils there was a little girl, a very little girl, who came from a non-Scientist family. Her people were not even attendants at the Christian Science church, and had scarcely any interest in the subject. The grandmother in this home was under medical care, and, humanly speaking, was in a desperate condition. Her physician had pronounced the trouble one which he regarded as practically incurable, and he had predicted that she could live but a short time. So, in answer to the superintendent's question, this little one replied, "Yes, my grandma is very sick, and my mamma thinks she isn't going to get well." "Then," said the superintendent, "you take her these lilies, and tell her if she isn't much better by next Sunday, we will send her a book."

The flowers were taken to that sick-room, and their message of spiritual love sank deeply into the waiting thought. That same afternoon a Christian Scientist was called in, and treatment began. In two weeks the healing work had been accomplished. This occurred several years ago, and today this same "grandma" is rejoicing in excellent health, and in the knowledge of what our beloved Leader has revealed to a needy world; namely, that true health consists in the consciousness of good, in acquaintance and communion with God. Last Thanksgiving day this lady acted as Second Reader in the Christian Science church of which she has for some time been a member, and with a deeply grateful heart she gave her testimony of healing.

No wonder we are inclined to celebrate a perpetual service of thanksgiving, in gratitude to God, who is infinite good, and in appreciation of the life and labors of the one through whose consecrated ministry we enjoy, not only a large measure of exemption from physical ills, but that which is of vastly more importance and value,—spiritual cleansing, enlightenment, and growth.

TRUTH'S CONVINCING POWER.

MARTHA SUTTON-THOMPSON.

WHEN stating to others the facts of divine Science, it is a great mistake to feel under personal obligations to convince our hearers immediately of the truth, beauty, and beneficence of what we are saying. Too often there is a tendency to do this, and if we seem to fail of our purpose, there follows a sense of having labored in vain, and the disappointment which ensues is discouraging to further work. We should remember, first of all, that whatever is seemingly accepted by others on account of any personal influence of our own has not become a conviction in the other's consciousness and will drop away in time. The seeming power of human will is mesmerism, and its effects are but temporary. Divine Science is the true status of Christianity, and if true Christliness reigns in the heart and beautifies the character with unselfed love, we shall feel what we say, and that is our mental part in the matter.

Truth is absolute good, and if the hearer is in conscious need of this good and is willing to accept it, his ears will be open to understand it, also its self-evident verity and promised blessing for him constitute its power of conviction; therefore the "word" should be spoken with the peaceful consciousness that it will convince, not by the will of man, but by the power of God.

We sometimes create for ourselves much unnecessary mental striving, disappointment, sense of failure and self-condemnation if we consider that we have accomplished nothing unless our hearers are evidently convinced by what we have said. Our part is to live and to give out that mental influence which characterized Christ Jesus. Doing this, we have accomplished all there is for us to do. Of course this giving out is to be not merely in words, but in deeds. In love and in wisdom we add to our words such help as our fellow-men need of us. The closeness of our walk with infinite good will endow us with insight to detect the real need, and delicacy and wisdom in deciding whether we are ready to minister to the need, as well as the best way to do this.

If we watch carefully our mental attitude, we shall soon discover that the human will is almost incessantly bent on making others accept our views and do as we think they should do; but to educate ourselves to live, to speak, and to do the "word," as unto God, leaving Truth to convince mankind and to do the reformative work, is to attain to that "peace of God, which passeth all understanding."

[Written for the *Sentinel*.]

THE BLESSINGS OF TODAY.

EVELYN SYLVESTER KNOWLES.

THE fields of corn are peaceful 'neath the burning August sun;
The languid rivers placid as their gentle course they run;
The loitering bees, the swallows drifting through the drowsy air,
Give not a hint of browning leaves nor winter's crystal glare!

But when the frost of autumn, with subtle, creeping chill,
Nips flower and leaf, exiles the bird, congeals the laughing rill,
We often quite forget that smiling summer once was nigh,
That sea and mountain, forest, fen, within her lap did lie.

And doth thy heart remember, 'neath the ruthless hand of care,
Erstwhile the velvet touch of love alone was lingering there?
And when thine eyes are misty with remorseful tears unshed,
Dost quite forget the light of joy that once was there instead?

The wise man turns his gaze aloft, 'tis true, and upward yearns,
Yet never once from out his path the lowly flower spurns;
E'en thus, when thou art reaching for some distant, glowing star,
Lose not thy foothold nor forget the blessings near that are.

The yesterdays are gone for aye, but all their good remains;
Each loving thought and kindly act the present hour retains.
Rejoice, while drinking in the perfume of today's sweet flowers—
Tomorrow's blossoms have not blown; today's alone are ours.

SELECTED ARTICLES.

[From an editorial in the *Detroit* (Mich.) *News Tribune*.]

One suggestion for the better observance of the Sabbath is that the parsons stick to their texts. The Sunday pulpit is becoming a mere sounding-board for all the turmoil and uncertainty of the outside world. Politics, suicides, exploded reputations, frantic attacks on another's creed, make the church anything but a place where one can go and assure oneself that at least the soul is substantial. In too many of the representative churches the man in the pulpit does not rise above the grade of a Sunday lecturer; he stands on no certainty, proclaims no unshakable faith in things unseen but felt. All of us know the world is ringing with battle-cries between right and wrong. All of us know that the old ideas are being recast and modernized. But when we go to church we want to get rid of the temporary and rest awhile in the permanent, "that those things which cannot be shaken may remain."

Most unprofitable of all the work of these Sunday platforms are the occasional attacks made on the simple but satisfying faith of lowly folk who do not desire a scientific analysis of sin, nor think it meet to use a scalpel on the doctrine of the trinity. They are content to believe that this earth swings in the hands of a power greater than we can think or name, and they have been taught that between themselves and that power there is a warm, personal bond which even gross wickedness cannot forever sever. In their tenderer moments of contrition, grief, or joy they take that power into their confidence in simple, reverent prayer, and in the hour of their emergency they call aloud to it for aid. The faith in itself is most beautiful to the mind, if one could adequately describe it; certainly it peoples the earth with faith and hope and friendliness for those who share it. When, therefore, a public teacher suffers himself to atack this faith, tear it down, almost trample on it, one is inclined to ask what good end is attained.

In every walk of life these simple prayers for health, for home, for wandering sons, for work, are just as real and just as beautiful to the great ear of the universe as those which deal with thankfulness for the power to think and to appreciate the beauties of literature and art. As a man grows, his prayer grows. We can trace the evolution of prayer in the Bible. The first prayers were for cattle and babes and lands and victories in tribal wars; next, as the moral sense awakened, men added to their temporal petitions expressions of remorse for sin and pleadings for strength to resist temptation—that was a higher prayer. Then came the time when man found himself at rare moments in such ecstasy of soul that he neither regretted nor begged in his prayer, but simply let his whole being flow out in wonder, adoration, and love to that something above him which seemed to be so near him —"closer than breathing; nearer than hands and feet." Some men are still at the first stage; a few have reached the latter one.

"Give us this day our daily bread." What lowlier, earthier petition ever went out from the lips of man? A mother's prayer for her child is vastly above that in the scale of spiritual evolution. A contrite confession is vastly above this simple appeal for bread. Yet he whose word is said to have been all-powerful, and who is said to have held direct and intimate intercourse with his Father, prayed thus: "Give us this day our daily bread;" "If it be possible, let this cup pass from me;" and the mothers in the streets of the cities asked that he place his hands on their children's heads and pray—for what? For all that is dear to a mother's heart—success, plenty, happiness, bread, house, friends.

Such prayers are not "irreligious performances." And a pretty good definition of prayer includes every sincere word of agony or joy that is wrung from the heart of mortal man and sent out into the universe in the hope that some one greater than ourselves will hear and understand.

[C. R. Munro in the *Hamilton* (Ont.) *Spectator*.]

In asserting that all diseases are of material origin, and therefore that the only way to heal them is by the use of material means, the critic entirely ignores the teaching and practice of Jesus, the greatest and most successful healer the world has ever known. Jesus used no material means for healing, and never taught his disciples to do so; nor did he advocate a study of the material body and of material remedies. He knew that man, made in God's own image, is a spiritual, not a material, being, and that his life depends not on matter, but on Spirit. He said: "The words that I speak unto you, they are spirit, and they are life." His marvelous success proved the rightness of his method of healing, and it is the same method that is being practised and taught in Christian Science, as revealed to the world by Mrs. Eddy. The healing and regenerating work being done by Christian Science today is ample evidence of the truth of Mrs. Eddy's teachings, and the healing of scores of cases of organic diseases of the most pronounced type, many of which had been given up by regular physicians as hopeless, shows that the Christ-truth has lost none of its efficiency, and that it is as powerful to heal today, when properly understood, as it was nineteen hundred years ago. Moreover, Jesus' success in healing proves that he healed according to Principle, which he understood and taught to his followers; and the success of Christian Science in healing all kinds of disease, including those mentioned by the critic, proves that the same divine Principle underlies the practice of Christian Science today.

[J. V. Dittemore in the *Batavia* (N.Y.) *News*.]

The Christian Science movement has steadily advanced, during the forty years of its existence, in the face of the most bitter opposition from the advocates of other systems of religion and healing, and this critic's attack is in no way unlike a thousand others which have marked the steady advance of this denomination. If Christian Science were as utterly absurd, unchristian, and ridiculous as our critic says it is, there would be no need of these disinterested and dispassionate efforts to save the unsuspecting public from its "destroying heresy." In the Science or demonstrable knowledge of Christianity, called Christian Science, opinion is entirely valueless unless supported by an understanding of the subject sufficient to prove its propositions, and a correct understanding of the subject can be gained only by reading its authorized literature, and not by heeding the mistaken criticisms of its antagonists.

Christian Scientists are quite willing to admit with our critic that a large percentage of sick people would get well without interference of either physician or Christian Scientists, and they also agree with him that "there are some forms of sickness that will not yield to faith," but they differentiate between faith and understanding. They do affirm, however, that there were no forms of sickness that did not yield to the spiritual understanding of Jesus, and they are humbly trying to obey his command in gaining a sufficient amount of the spirit which he possessed to enable them again to perform the works he performed, and to do it in the way he commanded, which they believe to be the only right way.

"The end of it all is," says the clergyman, "that the old world is going to jog on just about as it has." Not a very optimistic outlook from one who has enlisted to bring God's kingdom on earth. Christian Scientists must differ with him on this point, for they believe that the

Digitized by Google

world is rapidly getting better, and that there is a desire today as never before for a greater measure of righteousness in our political and religious life, as well as in the consciousness of the individual. They believe that the world is wearying of materiality and the hopeless belief that there is no adequate means of salvation and deliverance here and now from suffering, sorrow, and the world's injustice. They confidently believe that the time has come for the realization that the kingdom of heaven is within us—a present possibility to those who follow the Master's footsteps in word and in deed.

[W. C. Williams in *Baltimore American.*]

The personality of God in the largest, broadest sense is not denied by Christian Science, but person in the ordinary sense could not compass unlimited power everywhere at the same moment, as does an omnipotent, omnipresent God. Sin is very real to most of us, until we have proven its nothingness by overcoming it. It is unreal in the sense that it is temporal and not created by God, as God's creations are good only, as the Scriptures declare. Sin is unreal in the sense that nothing is real that God did not create, and all reality is eternal.

The word "atonement" is found only once in the New Testament, in Romans v. 11: "And not only so, but we also joy in God through our Lord Jesus Christ, by whom we have now received the atonement;" and this is given in the margin of the authorized edition of the Scriptures as "reconciliation." The same Greek word that is translated as "atonement" in the foregoing is given in 2 Corinthians v., in both the eighteenth and nineteenth verses, as "reconciliation." This reconciliation, this bringing God nearer to man and man nearer to the Father, by showing mankind that God is their ever-present help and protector, was Jesus' great work, which Christian Scientists not only do not deny, but emulate as far as possible in their teaching and practice.

[Frederick Dixon in the *Morning Post*, London, England.]

The letter signed "Explorer," printed in your issue of the 3d inst., is based surely on a curious misconception. Mrs. Eddy has stated quite distinctly on page 110 of Science and Health that "in following these leadings of scientific revelation, the Bible was my only text-book;" while she has again written, on page 46, that "Jesus was 'the way;' that is, he marked the way for all men." From one end of her writings to the other Christ Jesus is always the Master and the Saviour. Once when she was asked, "How do you know that there ever was such a man as Christ Jesus?" she replied, "I do not find my authority for Christian Science in history, but in revelation." Between the first and the nineteenth century thousands of scholars had read the Bible record without discovering the secret of the healing power demonstrated by Jesus. That healing was to be restored to the world not through scholarship but through revelation.

What, then, did it matter if an historical student could argue to a university that there was no conclusive evidence that Jesus ever existed. Hume had disposed of miracles in precisely the same way; and though a great churchman had retorted with that brilliant *tour de force*, "Historic Doubts Relative to Napoleon Bonaparte," he had probably not convinced a single doubter that the miracles were authentic. God not man, revelation not education, taught Mrs. Eddy to understand the inspired word of the Bible, and those wonderful last words of the Gospel of St. Matthew, "Lo, I am with you alway, even unto the end of the world." It mattered not to her if historians could prove to their satisfaction that the Galilean prophet never lived. The Christ which was before Abraham was with men alway to enable them to demonstrate the healing power of Truth. "To-day," she says on page ix. of the Preface of Science and Health, "though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ."

"Explorer" argues that Mrs. Eddy's reply proves Christian Science to be identical with theosophy. The writer of an article on the latter in one of our great dictionaries declares that the word is generally used with extreme indefiniteness, and this is obviously the case. Not long ago, however, I had a prolonged talk with one of the leading theosophists of Europe, who was under no misapprehension as to the two doctrines being the same. It may be argued that being a theosophist he did not know what theosophy was, just as it frequently is that any one understands Christian Science better than a Christian Scientist. At the same time it is not, I think, an extravagant assumption that those who are daily and hourly practising a definite teaching and devoting their lives to its demonstration are probably quite as good judges of what that teaching is as those who are not. For this reason alone the contention of Christian Scientists that Christian Science has nothing in common with theosophy is entitled to respect, and cannot intelligently be brushed aside.

[Gray Montgomery in the *Glenwood Springs* (Col.) *Post.*]

To gain a correct understanding of the teachings of Christian Science one must start with the premise that God is perfect, good, and all-inclusive. A vast number of honest and intelligent seekers have been convinced by their own healing of the truth of this Science, and they know that, properly understood, the Christian Science textbook is a true, clear, courageous, logical, and spiritual interpretation of the Bible and an exposition of the Science of God and His law.

Every so-called natural science, whether it be mathematics, physics, or chemistry, has its own terminology and a vocabulary peculiar to itself. This is also true of Christian Science, which uses metaphysical terms to express spiritual truths, terms which are not easily understood by the ordinary man of the material world. In order to read intelligently and understand the Christian Science textbook, one must understand the metaphysical meaning of the terms "real" and "unreal." Only the spiritual is permanent, eternal, and unchanged, therefore the word "real" is used to indicate only that which is spiritual. According to this usage Spirit is real, for Spirit is permanent, eternal, and unchangeable; while matter, which is changeable and transitory, is unreal. Health and harmony are of Spirit, hence are real; while disease and discord are not of Spirit, hence they are unreal.

[Frank W. Gale in the *Pacific Grove* (Cal.) *Review.*]

After enumerating many of the good works that Christian Science is accomplishing, our reverend critic says, "But the problem remains—How deal with Christian Science? What attitude shall the Christian ministry take?" As Christ Jesus declared of the one who should believe on him, "The works that I do shall he do also," and as Christian Science is doing the works, would it not be a reasonable way for the Christian ministry to deal with Christian Science to study it sufficiently really to understand its teachings, and to prove their understanding by doing the same healing works? If this were done, the problem would be

Digitized by Google

solved in a scientific manner. And I may say that many earnest Christian clergymen have adopted this course, and are now preaching the gospel and healing the sick and the sinful as their Master commanded his disciples to do. But if the Christian ministry is to do this healing work, it should be done in the way that Christ directed. Christ Jesus healed all manner of diseases "by the Spirit of God," and he taught his disciples to do likewise, and Christian Science is proving the efficacy of this method.

Again, our critic says, "Christian Science would rob us of the personality of God the Father," and then seems to prove the anthropomorphic conception of God as being "like an old man sitting at a desk in the skies, ruling the universe." It is just such a belief in an anthropomorphic God that Christian Science denies, and it is questionable if any enlightened Christian minister still entertains such a belief. Jesus said, "God is Spirit;" and the first Article of Religion of the Methodist Church says, "There is but one living and true God, everlasting, without body or parts, of infinite power, wisdom, and goodness." Do the Methodist clergy believe this? If so, they agree with Christian Science, for it teaches that God is infinite Spirit, Life, Truth, and Love, and is our Father. While declaring that God is divine Principle, in the sense that He is the "source or cause from which a thing proceeds; . . . a permanent or fundamental cause" (Standard Dictionary), Christian Science also teaches that God is the divine infinite person who is the Father of all and tenderly cares for His children.

In regard to sin, Christian Science teaches that it is a human experience which must be recognized as sinful and overcome through divine power. Christian Science does not tolerate sin, but teaches that it does not exist in Spirit, God, and therefore is not real and eternal; that it must be repented of and turned from before it is destroyed by Christ, Truth. The critic says, "The problem reduces itself to this: Is Christ the Saviour of the world? or is he the first Scientist? Take your choice." According to Christian Science, Christ, the Word of God, is the Saviour of the world; and as Christ Jesus had a perfect understanding of God and His spiritual law (which is true science) he is "the first Scientist." It is also evident that all Christians should be "Scientists," for the Master said of his disciples, "Ye shall know the truth, and the truth shall make you free."

[K. Stanhope Easterday in the *Anderson* (Ind.) *Herald.*]

In the course of the most masterful sermon ever preached, the greatest Teacher that ever lived left the following clear and unmistakable words with his hearers, words which have been preserved to us during the intervening ages, a fact which attests their truth and practicability: "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Now while I am unable to say just what construction our critic puts on these words, I am in a position to declare that Christian Scientists interpret them to mean that if the "kingdom of heaven," the fruits whereof are "righteousness, and peace, and joy in the Holy Ghost," can be proven to be "within you," *i.e.*, within the consciousness of every individual follower of the Master, then every follower must begin at once ("now is the day of salvation") a reasonable approximation to the desired end, else he will never achieve the goal. To claim, however, the ultimate before every preliminary step of overcoming has been faithfully taken, would be to brand one's self a "liar," and Christian Scientists do not presume so much, merely arguing that while they may not be better than others, nor even as good as they might, still they are better than they were.

To quote Scripture again, our Lord, when accused by the Pharisees of being engaged in "devilish" work, quietly cited his works, in the very words of our brother's own text, "If Satan also be divided against himself, how shall his kingdom stand? . . . But if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." If Christian Science does nothing worse than inspire people to "keep getting better and better" by holding up for emulation the divine nature, would it not be the better part of wisdom for our critics to cease speaking evil against it? Our Master urged, "Either make the tree good, and his fruit good; or else make the tree corrupt, and his fruit corrupt: for the tree is known by his fruit."

[H. Coulson Fairchild in the *Jersey City* (N. J.) *Journal.*]

Christian Science declares that matter is a false concept of the human mind, but further adds, that as this false concept is destroyed, the divine mind and its manifestation will appear. St. Paul says, "When that which is perfect is come, then that which is in part shall be done away." We need only to look about us to prove the truth of St. Paul's prophecy: what has become of the stage-coach now that the Twentieth Century flyer crosses the western plain? What becomes of the signal system when wireless telegraphy is used? Yet all will admit only "that which is in part" has come. Perhaps in the near future that which is shown in Christian Science to be the ideal concept of God and the universe will be more apparent to all; then it will be understood that Christian Science gives a perfect concept and repudiates that which denies perfection. Thus it becomes plain to your readers that Christian Science does not stand for the theory of the non-existence of all things, but rather for a declaration and realization of the appearance of all that is real and good.

Replying to the erroneous conclusion upon the part of our critic that Christian Scientists can go right on sinning and merely think there is no sin, by reason of the teaching in Christian Science that sin is not real but delusive, permit me to ask this question: Does our critic believe that a drunkard afflicted with delirium tremens would be warranted in continuing the drink habit on the ground that the delusions were unreal and therefore not sinful? All unreality is sin, and the so-called pleasures of sin always end in delusion. Christian Science teaches that the more one indulges in the belief of sin, the more frightful the delusions of sin become; hence the slightest violation of the moral law in thought or act would be recognized as a sinful delusion by one practising Christian Science; one could not be a Christian Scientist and go on sinning, declaring meanwhile that there is no sin.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1909. Applications should be in the hands of the Clerk on or before May 12, 1909. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul streets, Boston.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"ROTATION IN OFFICE."

San Francisco, Cal., Feb. 12, 1909.

Mrs. Mary Baker Eddy,
Brookline, Mass.

Dear Leader:—May we have permission to print, as a part of the preamble to our by-laws, the following extract from your article "Christian Science Board of Education" in the June *Journal* of 1904, page 184:—

"The Magna Charta of Christian Science means much, *multum in parvo,*—all-in-one and one-in-all. It stands for the inalienable, universal rights of men. Essentially democratic, its government is administered by the common consent of the governed, wherein and whereby man governed by his creator is self-governed. . The church is the mouthpiece of Christian Science,—its law and gospel are according to Christ Jesus; its rules are health, holiness, and immortality,—equal rights and privileges, equality of the sexes, rotation in office."

Lovingly,
Third Church of Christ, Scientist, San Francisco, Cal.
MISS JENNY A. PAMPERIN, *Clerk.*

MRS. EDDY'S REPLY.

Chestnut Hill, Mass., March 6, 1909.

Christian Science churches have my consent to publish the foregoing in their by-laws. By "rotation in office" I do not mean that minor officers who are filling their positions satisfactorily should be removed every three years, or be elevated to offices for which they are not qualified.

MARY BAKER EDDY.

PRACTICAL PROGRESS.

THERE has recently come to our notice, through a friend, a letter written by a prominent citizen of Spokane, Wash., in which he speaks as follows of a recent visit to Olympia, the state capital:—

"It will be of interest to our dear Leader to know that we find a large majority in the House and Senate who acknowledge that Christian Science is both Christian and scientific. Some are students, some have wives who are students, and very many have dear friends who have been healed. So it is; and the doctors recognize this, and they now admit the time has gone by when they can hope to pass in this state any legislation which is adverse to Christian Science."

So much for the attitude on the Pacific coast. From conservative New England come equally cheering reports, for in Vermont, New Hampshire, and Massachusetts proposed medical legislation which would be adverse to the practice of Christian Science has been defeated within the past few months; in fact, we know of no state in which anything has been accomplished this year by those who would, if they could, compel the afflicted to do as did King Asa, whose experience, when "in his disease he sought not to the Lord, but to the physicians," is so graphically sketched in the chronicles of the kings.

And this is not all that has been effected this year. Not only have the efforts of the medical profession to enact new laws of this character been fruitless, but in Missouri, where such a law was passed several years ago, and later was made even more stringent by an amendment, the courts have recently held that Christian Scientists are free to practise without molestation. The recent decision of the Supreme Court of New Jersey, which reversed the verdict of the trial court in the Watson case, has given a setback to those who are seeking to persecute Christian Scientists.

All these proceedings tend to show that public opinion is aroused to the point which should encourage Christian Scientists to go fearlessly on, even as their Master did, in their work of healing the sick and reforming the sinner, heeding not the derision and scorn of the unthinking and unbelieving, but ever watchful for those "millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert"—who, as our Leader tells us, "are waiting and watching for rest and drink." And she adds this wise counsel: "Give them a cup of cold water in Christ's name, and never fear the consequences" (Science and Health, p. 570).

ARCHIBALD MCLELLAN.

THE CLAMOR OF MATERIAL SENSE.

No Bible story is given a more dramatic setting than that of the fateful truth-test upon the summit of Mount Carmel, as told by the author of the book of Kings. In the center of an unbroken forest that looks down upon the western sea, and supported by a background of the assembled people, the majestic figure of the prophet of God stands forth, the embodiment of that lofty dignity which expresses the soul's consciousness of rectitude, and that restrained authority which bides its time but forgets not one tittle of Truth's demand. Over against him are the four hundred false prophets, who during the long hours from early morn "until the time of the offering of the evening sacrifice" continue their frenzied but ineffectual brawling before the altar of their god. When the clamor of these hosts of Baal has fully spent itself, Elijah calls for the wood and the sacrifice, and then, in answer to his simple but knowing appeal to God, the approving fire descends and consumes the offering with all that pertains thereto. The question of the supremacy of Israel's God is settled beyond all peradventure, and the swift destruction of the false prophets closes the scene.

This picture illustrates for Christian Scientists their oft-repeated struggles with material sense, against whose blatant voices, crying day and night betimes, there is such imperative need of a patient but unflinching stand, until their din has risen, if so be, to its flood ere the demonstration of the presence and power of God is made. In the experience of all who have given their allegiance to the spiritual ideal presented by Christ Jesus, this humanly tragic test comes ever and again. In the secret chamber of consciousness, when some long-indulged appetite is squarely faced; in the associations of social and business life, when ethical issues are clearly discerned,—in every field of human interest and activity the spiritually aspiring are sure to come upon their Peniel. Especially does the Christian Science practitioner at the bedside of the sick and dying hear the assertive clamoring of unnumbered Baal tongues speaking subtly in behalf of long-honored laws of nature and *materia medica,* of inherited predisposition and congenital weakness, of habit, instinct, impulse, incurability, etc.; and if these legions are unrecognized for what they are, if the truth is unrealized for what it can do, courage is sure to fail and defeat will ensue.

Elijah did not ignore the Baal-belief, but while its priests were howling themselves hoarse he was knowing its falsity, resting in Truth, with the calm of an imperturbable con-

Digitized by Google

fidence. Sequent events proved that, though patient with the problem, there was no consent on his part that error's claim was either legitimate or real, and his attitude in this was vital. If we have not followed him here, the defeats of our past are wholly explicable. There is nothing that tests the fiber of our faith more surely than the call, when we have "done all," to stand fearlessly and unmoved in the presence of the mob of material beliefs which are ready to rush into riot if we flinch so much as a hair's breadth.

The greatest, the saddest, and the most incongruous mistake is made by those of us who, while honestly resisting the claims of error as a whole, have half-knowingly consented to and coddled some one of its sleek minions. We have honestly tried to keep out the wolves, but have removed the bar to let in a mouse, and in the end we might as well have opened our door at once to the whole pack. Elijah did not err here, he made his mistake in thinking that he had to smite personality in order to complete his demonstration. Christian Scientists have learned a better way. Says our Leader, "Error, urged to its final limits, is self-destroyed" (Science and Health, p. 476).

JOHN B. WILLIS.

WHAT GOD GIVES.

IT sometimes happens that the beginner in Christian Science is puzzled by the apparent inconsistency of the statement that God knows all our needs and supplies them; and the declaration that God, being Spirit, cannot know materiality. It is very evident that Jesus tried to make clear the spiritual fact as to all needed supply, but it would seem that he was not generally understood, even by his own disciples, and now as then, great growth in spirituality is needed before we can comprehend spiritual realities. Paul was right in saying that "the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." Thus it is that mortals are blind to the blessings which are all around them, and even refuse to accept of the divine goodness unless they can be told that God sees as they see, and works somewhat as they work,—that is, materially.

Was not this the very condition of thought to which Jesus referred in the parable of the rich man, of whom he said, "Thou fool," and when he added, "So is he that layeth up treasure for himself, and is not rich toward God;" *i.e.*, fails to comprehend the spiritual source of all true supply. One who learns to look below the surface of present human conditions is forced to admit that at least half of the prevailing sickness and suffering, also premature death, is due to worry, to entire disregard of Christ Jesus' emphatic command, "Take no thought for your life, what ye shall eat; neither for the body, what ye shall put on." This command is disregarded because it is misunderstood, and if matter were the source of our supply the command would certainly be impracticable, as so many today believe. If, on the other hand, Spirit is the real, the only source of supply (and this is what Christian Science insists upon), is it not the very acme of foolishness either to look away from God, or to insist that He look away from the real to the unreal in order to help us.

This whole question of supply is wonderfully summed up in that oft-quoted 8th chapter of Romans, where Paul says, "He that spared not his own Son, . . . shall he not with him also freely give us all things?" In John's epistle we read, "He that hath the Son hath life; and he that hath not the Son of God hath not life." He who has not the true sense of sonship has nothing real, according to Christian Science. Should we not, then, address all our energies to the life-giving task of gaining and keeping the sense of sonship, for having this we have "all things,"—health and strength, quickened perceptions, unfolding capacities, infinite hopes, daily bread,—that which feeds "the famished affections" (Science and Health p. 17) and gives us the joy of dominion over self, sin, sense, and matter.

The Father knows His child and the child's need, but mortals, alas, do not know the Father, nor that man's sole need is to know Him. When they begin to see this vital truth they will not be idle, for our "elder brother" said, "My Father worketh hitherto, and I work." Then their work will count for something. It will be intelligent work, divinely directed. Whatever the hand or the thought findeth to do will then be done, not by human will-power, but by an understanding of the might of omnipotent Spirit. God has given us in this age, through the one nearest Himself, the Science of being, which reveals the Father and the Son. Having this Science, we have indeed all things, for we learn how to avail ourselves of Love's bounty and its infinite provisions for all our need.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Chicago, Ill., Feb. 3, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I thank you for having your smaller books bound in uniform bindings with the pocket edition of Science and Health. I am glad you have included "Pulpit and Press" with them, for this is not widely circulated and it is not generally known that it contains anything written by you, and yet the first article is your "Dedicatory Sermon," delivered to The Mother Church, Jan. 6, 1895. There are passages in this Message that have meant a great deal to me the past few years, and I have pointed them out to many others.

Today, in an office in the heart of this busy city where I was transacting some business, a student told me of what was a great overcoming, in giving up their house and what seemed to mean their home. I opened my bag, took out my new book, and read pages two to four of this Message. It handled the question better than any words I could have voiced, and brought the "peace, be still," to the troubled thought that your inspired words always do.

Most profoundly do I thank you, the Discoverer and Founder of that which means life to those who wish to be born again. Most lovingly yours,

MISS C. SEYMOUR

Louisville, Ky., Feb. 8, 1909.

Mrs. Mary B. Eddy, Brookline, Mass.

Dearly Loved Leader:—It is now nearly three years since I was quickly healed of tuberculosis. Other things have been very slow to disappear, but I am thankful for that very fact, because I have grown under this trial. I have often felt that I was not grateful enough for this blessed truth which your purity has given us, but as I continue to study and to pray, my gratitude to God, to Christ, and to you ever increases.

My little son, five years of age, has always manifested great love for you. This morning he looked at your picture in Science and Health, and begged to be taken to you. "What would you do?" said I. "Hug and kiss her," was his reply. "And what would you say?" I asked, and the answer came quickly, "Thank you, thank you, for Science and Health." It is this childlike simplicity which I desire as the greatest token of my gratitude to you, remembering Jesus' words, "Suffer the little children to come unto me, and forbid them not: for of such is the kingdom of God."

Lovingly,

GEORGIANA B. CRANE.

Digitized by Google

Boston, Mass., Feb. 13, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—For a long time I have felt the ardent wish to express to you my gratitude and loving appreciation for Christian Science and all it has given to me, and now I feel that before leaving this country I must send you these lines of loving greeting. It is the second time I have crossed the ocean, and I have had such beautiful weeks of rest and peace here in dear Boston, where Love led me to the house of one of your faithful students, and where I have seen and heard much of the workings and workers of Truth. This has been an uplifting and a helpful experience, making me clearer and stronger for future work.

I cannot tell you what Christian Science has been to me these eleven years since the light dawned first upon us in Germany; it has been indeed a help to the poor, a strength to the needy, a shadow and shelter in heat and storm, a rock to stand upon, under all conditions—Christ in us, the hope of glory. I know and daily realize more clearly the fact that Christian Science is a revelation and you are the revelator,—God's messenger,—for all our understanding of God as Life and Love has come through you, beloved Leader, and through your selfless labor for mankind. My thoughts go out to you in deepfelt love and gratitude for giving us this blessed truth. How could we ever love and live Christian Science without appreciating you? How can we ever be grateful enough? Only by following you as you follow Christ.

It is the desire, the aim of my life, to walk steadfastly in the light which through your purity and spirituality has been revealed to the world, and through faithfulness and activity to prove myself worthy of being a true Christian Scientist. It has become more and more clear to me, that we cannot have a satisfactory translation of our precious text-book in our time and with the present understanding, because Christian Science is a divine revelation, and on every new stage of progress and understanding we see more clearly how insufficient every translation is. Permit me to mention, however, that I have translated Science and Health for nearly six years for our first German services,—by sight, without writing the Lesson down,—and I often read the text-book in explaining Science to my patients in German. But for an authorized translation of your inspired thoughts into another language, we should need your high understanding and spirituality, or it would mean an adulterated Science.

God bless you, strengthen you, and keep you forever, dearest Mrs. Eddy, to show us further the right way and lead us steadfastly onward—heavenward. May the sun of Truth remove every cloud of error that would delay our progress, that we also in far-off Germany may be called children of the light, faithful, loyal Christian Scientists. Believe me, there are many true hearts over there which acknowledge gratefully that the *Herold* is getting more perfect from month to month, also the other German literature which your loving solicitude has provided for our field; hearts that love you, and are striving to live and work faithfully for Truth.

Ever yours, lovingly, gratefully, faithfully,

CLARA FRIEDRICH.

Albany, N. Y., Jan. 19, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Albany, N. Y., assembled in annual meeting, wish to send you this year our offering of gratitude and love, manifested in a united and harmonious body. We are striving to hold first in consciousness the great Cause of Christian Science, and to support this Cause by the growth and fidelity of our church. We are working for the purifying of the individual and for the selfless love which lifts the brother man and meets humanity's needs. Through obedience and meekness we know we shall attain unto that Mind "which was also in Christ Jesus."

We are ever mindful of your holy life and wonderful work in lifting mankind from their false sense of being into the consciousness of man's oneness with God, divine Love.

With deepest love and gratitude,

Your loyal followers,

First Church of Christ, Scientist, Albany, N. Y.

MARGARET RIGGS COX,
MARGARET DUNDEE GIBB,
Committee.

Minneapolis, Minn., Feb. 4, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—We, the members of Sixth Church of Christ, Scientist, Minneapolis, Minn., in our first annual meeting assembled, send to you, our Leader and guide, a brief message of greeting and gratitude.

Athough our church is one of the most recent branches of The Mother Church, yet it manifests all the evidences of that sturdiness and strength which is the hereditary quality derived from the mother Vine, planted and nurtured by you in God's strength and love. The few months since our organization have been plenteous with the fruits promised to those who are faithful to God, the Principle of Christian Science and His revelation to you. As our hearts well over with gratitude and joy for the past and present, we look forward with the anticipation of still greater blessings, as the reward for faithful obedience and loyalty and the earnest daily striving for "that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

Lovingly yours,

LILLETTE A. HEWITT, *President.*
WILLIAM E. BOGERT, *Clerk.*

Minneapolis, Minn., Feb. 4, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill,
Brookline, Mass.

Beloved Leader:—We, the members of Fifth Church of Christ, Scientist, Minneapolis, Minn., in our first annual meeting assembled, send to you our love and gratitude. We rejoice in the increased opportunities for doing good which the organization of this church has given us; and we realize that only as we follow your example, humbly and joyfully recognizing and demonstrating the supremacy of Spirit, shall we continue to grow and prosper. As you have told us in our wonderful text-book (p. 192), "The good you do and embody gives you the only power obtainable;" and good is Spirit.

Lovingly yours,

A. C. HICKMAN, *President.*
JANE BLISS POTTER, *Clerk.*

NOTICE.

The Publishing Society requests that Reading Rooms and individuals when ordering *Quarterlies* will specify whether the large or small size is desired. This is necessary in order to avoid wrong shipments and consequent delays.

Subscribers who may have received small sized *Quarterlies* which are too wide to fit *Quarterly* covers, can remedy the difficulty by slightly trimming the front edge of the first and last pages and clipping the corners. Hereafter, the *Quarterlies* will be cut to fit the covers.

THE LECTURES.

ST. LOUIS, MO.

Prof. Hermann S. Hering lectured on Christian Science at First Church of Christ, Scientist, Feb. 4. He was introduced by Judge Franklin Ferris, who said in part,—

The beliefs of the world change from time to time; they lose their hold, and somewhere in the restless surge of humanity there rises a cry for a new faith to which the soul can cling, and, lo, as if in answer to that cry, a new light dawns, a new faith appears, and fainting souls drink anew from the waters of life! I do not know whether Christian Science has declared the ultimate truth; perhaps now no man can say whether it has. I do not profess to understand its philosophy as yet; I do not know all that it has given to its followers, but some things I believe, some things I know,—things which "he that runs may read." I know that in many households where formerly sorrow and sickness found their sad abode, there is happiness and health. I know that within the space of one short life—yes, less than the span of a life—thousands and tens of thousands have accepted this belief, and in accepting it have found life and great joy. I know that in the cities, in the villages, in the hamlets, scattered over the country, may be found men and women to whom Christian Science is an ever-living well of happiness. I know that in our great cities faithful hands, inspired by loving hearts, have reared beautiful temples where those who share the common faith may come together to declare the truth they have found; and they are not mere blind bigots, but men of thought, education, and culture. There are among them successful men of business, in the learned professions, on the bench, and in the halls of legislation. And I think it only fair to say that, aside from this direct influence, Christian Science has given a powerful impulse to the study of the Spirit, as contrasted with mere matter. Some there are, I know,—many perhaps,—who scorn the name of Christian Science; but, obliged to accept its results, astounded at its results, seek to explain them upon other grounds.

To us who are mere onlookers, if we cannot understand its full meaning, if we cannot as yet yield to its power, we may respectfully listen to this new voice and hear what it has to bring, and rejoice with those who rejoice that they have found an abiding faith. It is this attitude in which I accept the privilege to come here tonight to introduce the lecturer of the evening.—*Correspondence.*

TEMPLE, TEX.

The Hon. Clarence A. Buskirk, who lectured here on Christian Science, Feb. 7, was introduced by Judge Span, who said in part,—

The universal desire, the one final goal, and the untiring purpose of all human endeavor, is to secure happiness,—to be content,—and in this quest we are all engaged. It matters not what our ambitions or our ideals are, whether wealth, power, position, distinction, success, they are but our conceptions of the means by which we hope to be made happy or happier. In this eternal pursuit of happiness, kept alive by the constant inward desire for something better, history and experience demonstrate that eventually men turn from the so-called pleasures of this world, from further seeking among material things, to religion. However, some of those who have turned to religion, hoping there to find contentment and a remedy for their ills, have not found it, for the reason that the true spirit of religion has too often been hidden and lost in the maze of philosophical abstractions and theological speculations; so that when men have asked for the bread of comfort, they have seemingly received nothing but the stone of cold theory and creed, and the promise of a postponed salvation, which often amounts to nothing more than a fire insurance policy against future burning, and offers no path out of the present condition of suffering, fear, and uncertainty.

The religion of Christian Science claims to have solved these problems, and I am not prepared to deny this claim. It seems to be the religion of love,—free from fear founded on the teachings of the Bible, built upon an absolute truth, a perfect faith, and an abiding trust in God. It seems to give to its followers a new interest in life, to fill them with sunshine and joy, to bring to them that peace of mind which borders on the marvelous and surpasses human understanding. Patience, gentleness, meekness, charity, and brotherly love seem to be their chief characteristics; to help to elevate, to encourage, seem to be their mission. I was once disposed to criticize the followers of this religion, but now I am more disposed toward investigation than criticism. I have found that those who were criticized were better, far better, than their critic, and that I was criticizing that which I did not understand—a very foolish thing to do.

I am not a Christian Scientist. However, I would like to be, and I hope some time to know in its fulness the meaning of their message; but this I do understand, and this I do know, that behind this great and growing religious movement, giving it freely their love, their labor, and their unqualified endorsement, are a vast number of men and women of intelligence, culture, character, and distinction, which fact in itself must challenge the attention of every thoughtful man and woman, and invite investigation of its merits. And may I, while passing, pay a just tribute to the Discoverer and Founder of this movement. Undoubtedly she is one of the world's greatest women, possessed of one of the grandest characters and one of the loveliest dispositions ever cultivated or possessed by humankind.

TESTIMONIES OF HEALING.

It is now over four years since I first heard of Christian Science. While visiting my parents I was handed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which had been left there by an uncle who was a Christian Scientist. On opening the book at the chapter on Prayer, I read these words, "The habitual struggle to be always good is unceasing prayer" (p. 4). This appealed to me, and soon after I sent to the publishing house for a copy of this inspired book for myself. During our first time of reading it together my wife was healed of a seemingly hopeless condition. She had lost much in weight, but she gained greatly during the time we were reading the book through—about three weeks. Our little daughter was healed of throat and bronchial trouble, and I was relieved of stomach trouble and headache. At this time I was a member of an orthodox church, being a member of the council and a trustee. When I told my pastor of our healing, he informed me that it was from the evil one; but I reasoned that Jesus, who came that he might "destroy the works of the devil," had healed the sick, and that he said a "corrupt tree" cannot bring forth "good fruit." The minister then asked if I really believed that God would reveal His truth to a woman, rather than to some Christian pastor or bishop, of whom there were so many. I answered that it was a woman who gave birth to Christ Jesus, and a woman who first beheld Jesus after his resurrection, and why should it be unreasonable that again a woman should be the one to bring to us the Comforter. I reminded him that the Scriptures tell us God is "no respecter of persons," and that Jesus once said, "I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes;" that when he selected his disciples he chose them from the ranks of the common people and not from the priests and Pharisees. The pastor then accepted my resignation, saying, "I am sure you feel that you are right."

From that time I have never doubted that Christian Science is a revelation of the truth to this age. We have had a number of demonstrations of the truth over error in our own family, and have found that it is a quick and sure help, as we have had quite a few cases of instantaneous healing. I have been able to interest others in this truth, having sent for six copies of Science and Health for beginners in the past three years. Before coming into Christian Science the Bible had been to me a closed book, as I never had proven a promise that was given us, and had to accept the explanation given by several pastors, that they were not for us. Now I know that Christ Jesus came to save the whole world from sin and sickness, and I have proven by results that God is all-power and all-presence; therefore there is no room for anything unlike God, good.

I cannot express in words my thanks to God, and to our Leader, Mrs. Eddy, for "Science and Health with Key to the Scriptures," but I am striving daily to be a true disciple, that I may be stronger in overcoming all manner of evil.—P. L. BAMBERGER, Van Wert, O.

About three years ago, when Christian Science first found me, I was a hopeless wreck. I had been under the care of doctors for the year previous, had undergone three operations, and at that time was preparing to return to the hospital for my fourth operation, with no hope of ever being well. A friend of my husband told him of some of the wonderful good which Christian Science was doing for those who would come and drink of the fountain of life, and he asked my husband to take me to a practitioner. After three weeks spent in trying to decide which to do, —return to the doctors and the knife, commit suicide and, as I then thought, "end it all," or try Christian Science,—I did, as all who are wise should do; I turned to God and was healed.

One of my troubles was called by the doctors a serious case of milk-leg. I had been ordered by one of the best specialists of New York city to wear a rubber stocking. This I had worn seven months, the doctors saying that I could never leave it off without losing the entire use of the limb. However, after three treatments in Christian Science, I removed the stocking, and have never worn it since. My other troubles were mostly internal, and of a serious nature, and the healing went on slowly for nearly four months, after which I was well. At one time I was healed of hemorrhages in one absent treatment. How we rejoiced, and how we have loved the Christian Science teachings ever since. Though the healing seemed slow, now I thank God for it, for during that time the spiritual uplifting was more to me than all the physical healing. The Bible is a new book to me, and since the spring of 1907 my progress in the way of Truth has been more rapid. Each day brings more and better proofs of the ever-presence of divine Love, and my joy can never be expressed in words, that each day I can help some one, even in the smallest degree, out of the bondage of sin or sickness.

To our revered Leader my heart goes out with love untold. I know that only a life lived in the truth she has so nobly brought to light again can ever repay her for the pure and earnest efforts she has put forth to bring all who are in darkness to see and love the Life that "maketh all things new." My prayer is to be worthy to bear the name of a Christian Scientist.

MRS. B. B. BRYAN, Wilmington, N. C.

I feel very grateful that I am able to bear my humble testimony for what Christian Science has done for me. It is a joy to understand the truth which indeed makes us free, and which has already brought salvation to me, not only from sin but also from sickness. I can but feel grateful to Mrs. Eddy for showing us how to put Jesus' teachings into practice. In April, 1907, I was walking down Victoria street, Manchester, when my attention was drawn to the Christian Science Reading Room. I went in, and among the literature marked for free distribution were several copies of the *Sentinel*. The contents of this weekly paper seemed so full of love and gratitude to our heavenly Father for the good received through Christian Science that I decided to visit the church in Victoria Park. There I was much impressed by the happy look and kind manner with which strangers were received, and I decided to go to the Reading Room and ask for a loan copy of the Christian Science text-book, that I might find out for myself and seek the teachings which gave this happiness. I studied the book prayerfully and soon realized the basis of this joy I was seeking, namely, the divine sonship of man and his likeness to God. This immediately became my ideal, and since then I have sought to bring it out in my daily life. With this new understanding I was enabled to discard the glasses I had worn for over twelve years. I have seen a distressing cough cured in my home in one treatment, also influenza and its accompanying discords healed in less than one week.

Beyond and above all this, I feel most deeply grateful for the spiritual uplifting which has come to me with this message of Christian Science, that God is Love, and that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

AUSTIN SHARE, Levenshulme, Manchester, England.

Digitized by Google

I did not seek Christian Science for physical healing, although I needed it badly. A year ago a trouble came to me which I knew no mortal could relieve. I had suffered from nervousness for a number of years, and at that time was on the verge of a breakdown, but after the first treatment in Christian Science I found the "peace of God, which passeth all understanding." Hope was renewed; I learned to know God and how to pray. I had worn glasses constantly for seven years, and one of our leading oculists told me that I would never be able to do without them. After two weeks' treatment in Science I laid aside my glasses, and have never felt the least inconvenience from leaving them off. I do not have headaches now, as I did before if I left the glasses off even for an hour. Formerly I had deep-seated colds which lasted for weeks. I was scarcely ever free from them, but in the past year I have had only two slight colds, which were quickly overcome with one treatment. I have been able to demonstrate the truth for myself in many ways. The Bible, which was formerly an unused book, has become a beloved companion through Mrs. Eddy's inspired book, Science and Health, which I have found to be truly the "Key to the Scriptures." I have been relieved of the nervousness, and am in better health generally than ever before.

Words seem inadequate to express the love and gratitude I feel to God, and to our beloved Leader. I am growing little by little in the understanding of this saving truth, and my constant desire is to know more, to live so that I may prove worthy of the blessings I receive daily.

MRS. IDA J. VALIANT, Los Angeles, Cal.

It is with a grateful heart that I write this testimony of the many blessings which Christian Science has brought me. In the summer of 1907 my seven-year-old son was taken sick. I called in a doctor, and the ailment was diagnosed as a well known fever. After treating the child for two weeks, the physician said that he had done all he could, and he was sure the boy could not live more than ten hours. In despair I called for Christian Science treatment, hoping that it might save his life, and I am happy to say that it did. A kind practitioner came to treat him, and in three weeks he was able to be up. After the first few treatments the fever broke and his appetite returned. The doctor, not receiving a message that the child was dead, came to see him, and said, "Why, this is strange! The boy has a fighting chance." I said, "Doctor, could you have been mistaken in your diagnosis?" His reply was, "No. If this is not typhoid fever, then I never saw a case of it in my life." During this illness another child manifested every symptom of the fever, but treatment in Christian Science was given, and after a week this child was well.

Since this experience I have seen a severe eruption healed instantly; every particle of pain destroyed in severely burnt hands, which were healed without leaving a scar; persons raised from beds where they had been given up to die by *materia medica*. But to me the most beautiful of all is the overcoming of that dreadful enemy called fear. I have learned in Christian Science that we should not fear anything but to offend God. I trust I may never forget the debt of love and gratitude I owe to God, and to our beloved Leader, Mrs. Eddy, who has taught this wondrous truth to mankind.

JOSEPHINE F. GARITEE, Baltimore, Md.

I feel that I should not delay any longer to tell of the good I have received from Christian Science. It is about ten years since we found this healing truth, and from that time we have relied on God for our healing. We have had many proofs of God's ever-presence and power. On one occasion, when I was working in a large factory, a heavy casting fell on my foot, and the man who lifted it said my foot must be severely injured, but I began to declare the truth and to repeat the scientific statement of being, holding firmly to the thought that God is Love. This was about ten in the morning, and I worked until noon. At noon the men gathered around me, all insisting that I had sustained a serious injury. About two o'clock I went home, and by that time I could not sit still or lie down. Our little girl, then six years old, came up, put her arms around my neck, and said, "Papa, God will heal you, won't He?" I will say that I wish I could have more childlike trust in God. I began to read the Bible and Science and Health, and in this way I gained relief. I then got the *Quarterly* and began to read and study the Lesson-Sermon. By the time I had finished the study of the Lesson I was healed, and the fourth day I went back to work. I can only say with the Psalmist, "O give thanks unto the Lord, for he is good: for his mercy endureth for ever."—SIMEON BAKER, Hastings, Neb.

It is now over two years since I was healed in Christian Science. At that time I was suffering from a growth on my right hand. A doctor advised electric treatments, but after trying them my hand seemed to get worse instead of better. Just at this time we heard of Christian Science, and with a good deal of persuasion from my husband I decided to try it. In a short time my hand was completely cured. I was also cured of severe headaches, from which I had been a sufferer for years.

I am thankful to God, and to Mrs. Eddy, for the benefits I have received through the knowing of the truth as it is in Christ Jesus. Through Christian Science I have been able to realize that life is no longer of but a few days, but that Life is eternal and that I have found the path by which I may go on, eternally on.

MRS. MARY WILSON, Oak Park, Ill.

I had a chronic stomach complaint for a number of years, and was attended by the best physicians available, but found no permanent cure. I was then advised by friends to try Christian Science, and I took treatment. In less than twelve hours the truth was revealed to me, as taught by Mrs. Eddy, and the pleasant experience of healing came to me. My recovery was complete, and health was regained very rapidly. This was six years ago, and I have enjoyed the very best of health since that time. I have much to thank Christian Science for every day of my life.

DEBORAH V. STRONG, Akron, Ind.

Many times I have desired to express my gratitude to Mrs. Eddy for a right understanding of God and His word contained in the Bible, as explained in her book, Science and Health. Before coming to Christian Science I employed the best doctors known and took their medicines, also using an inhaler for catarrhal trouble. I was under medical treatment constantly for eight years, and instead of getting better I was worse than I had ever been. My life seemed to be nothing but hopeless misery until I found healing through Christian Science. I need not say that I have never returned to medicine since, and I have the best of health. I find in Christian Science a much pleasanter way of living—in realizing, with the psalmist, that "God is our refuge and strength, a very present help in trouble."

MRS. FLORA E. HILLIARD, Kenosha, Wis.

With a heart overflowing with love and gratitude to God I give this testimony. In March, 1907, I was apparently dying, after having been operated on for a supposedly incurable disease. I was in the hospital for twenty-three

Digitized by Google

days, then I was sent home to die, the physicians said. My suffering was so intense that my husband went to the physicians to see if they could not do something to relieve me, and they said they would make another examination. This was done, and they showed my husband that two more malignant growths had come where the others had been removed. They also said that if they were to remove them, others would come, and that I could not stand another operation; all that could be done was to keep me easy with opiates until death claimed me. My family was watching over me, expecting me to die any hour. A dear friend then asked me to see a Christian Scientist who was visiting here. At first I said, "No: I have all the religion I need." I thought I had, for I had long been a church-member and my people had been praying for me. The second night it was thought I could not live until morning, and I told my friend that if I survived she could go for the Scientist.

In the morning the Scientist came. I began to improve immediately, and after I had been treated two weeks those two growths which the physicians had shown my husband, and told him they would be the cause of my death, sooner or later, passed away. After that my recovery was rapid, and today I am in perfect health. I am studying Science and Health every day and have learned to overcome many errors that cross my path. I know that I have found the fountain of Life from this new light thrown upon the Scriptures, and every day is a day of rejoicing for me. I hope this testimony will reach some who are in need of healing, and that they will throw away their prejudices and be healed, as I was.

I am indeed grateful to Mrs. Eddy for this revelation, and to my dear friends who were so loving and patient with me. My sincere desire is for more light.

MARTHA NORTON, Mesa, Ariz.

Something over two years ago I was taken with what seemed at the time to be a severe cold. I tried to treat the case myself for a week or ten days, with but little result. Finally I called a Christian Science practitioner, and after the first treatment the distressing cough ceased, but the trouble seemed to take another form and I was obliged to go to bed, on account of great distress in my right side, which was almost unbearable. This condition was met in one treatment, and with one more I was completely healed, and have had no return of any of these conditions. This is only one of many proofs which I have had of the healing power of Christian Science, and while I am thankful for the health and strength, having always been delicate and more or less under a physician's care, this is not to be compared to the spiritual redemption which has come to me through Christian Science. My heart goes out in gratitude to our dear Leader, Mrs. Eddy, who has brought to this age the glorious light of the Christ-healing.

MARY EVELYN WILSON, Franklin, Pa.

In August, 1904, a great sorrow came into my life, my dear husband being suddenly taken from me. When the rector of the church of which I was a member called to console me, I asked him in my wild grief who had done this thing, and he answered me that God had taken my husband, but that it was done for some wise purpose. I said that if God had done this cruel thing I hated Him, for He had no right to take my dear one from me; that I needed him and God did not. I really felt there was no God, but in spite of my wild words and thoughts I was unconsciously being led to Him. In December of that same year I was invited to spend Christmas with a sister in Brooklyn, N. Y., and unknown to me her son had come into Christian Science. He talked to me of his religion, and asked me to attend church with him. I went Christmas morning to Second Church of Christ, Scientist, in New York city, and from the moment I entered the church I knew I had found a God who is Love and not a God of hate, a God who heals all our sorrows and who is with us all the way, even unto the end of the world. I went back to my home with my heart singing for joy and gladness. The whole world looked different, for I had found the light. I joined The Mother Church the following June, and in the time since, God has never failed me.

For the entire year previous to this day on which I gained my first knowledge of Christian Science, I had suffered from severe attacks of what the attending physician called epileptic spasms. He could not account for them in any way, nor could he hold out any hope that they would be overcome; in fact he admitted that the medical fraternity had failed to find a remedy for this disease. After coming into Christian Science my health was everything that could be desired, and although I did not take treatment for this trouble, for some time I had no more attacks. The following spring I, with other members of our church, was deeply interested in preparing for the first Christian Science lecture to be given here. On the Wednesday previous to the date set for the lecture I was suddenly stricken unconscious. A member of my family who knew what my wishes would be on the subject, telephoned to a practitioner, who responded immediately. By afternoon I had been brought back to consciousness, but was still in a very weak and pitiable condition. My one thought was, that I must not miss the church service the following Sunday, nor the lecture on Monday night. My friends assured me that God was my strength and Life, and that I would not miss either. Needless to say I did attend both, happy and well and in my right mind. I did not know, until about a week later, what this attack had been called. I was spending the day with a friend, and while there a relative of hers, a physician, called to see her. The talk drifted around to Christian Science, and the doctor said that while it might be all right in simple cases, when it came to anything really serious he was sure one would have to call on a doctor. The lady then described my case to him, and asked what he would call such and such symptoms. He replied that without a doubt it was a paralytic attack. She told him of my experience, and how God had healed me, which simply amazed him.

I am very grateful for this knowledge that God is our Life and that He is Love. I know, too, as our dear Leader says, that "when we come to have more faith in the truth of being than we have in error, more faith in Spirit than in matter, more faith in living than in dying, more faith in God than in man, then no material suppositions can prevent us from healing the sick and destroying error" (Science and Health, p. 368). I am truly grateful to God for His goodness to me, and that one so good and true as our dear Leader was chosen to show us the way to Truth and Life.—ANNA HURD TAYLOR, Arlington Heights, Mass.

Two years ago, when I was in great need, both mentally and physically, and was earnestly praying for something better in life, Christian Science was brought to me. I had been for eleven years in bondage to fear, having had attacks of illness every little while for which the doctors could not account, besides having a trouble which often resulted in chills and fever. Nearly every means known to *materia medica* had been tried, but with no cure, and I had been treated many times at a sanitarium, where I would go through the "baking process," after which different kinds of electricity were applied to the parts supposed to be affected; but all this wrought no lasting benefit. I also suffered from nervous and bowel trouble, and many times life to me seemed only a miserable existence.

Now, thank God, all these burdens have been rolled away.

Digitized by Google

One by one they have disappeared, as I have studied the Bible with the aid of our dear text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and depended entirely on divine Love for every need. My heart goes out in love and thankfulness to God as never before for all the blessings received since taking up the study of Christian Science, for with this has come that spiritual understanding of the Word of God which regenerates and uplifts, and which brings the peace and joy and content that satisfy. Words cannot express my gratitude and love to our dear Leader, Mrs. Eddy, for her consecrated life and her wonderful work of love for the world. Her teachings have indeed made plain the truth which makes free, and I rejoice daily in the light that has come to me through understanding the allness of God and the nothingness of error.

MRS. L. H. SEARS, West Haven, Conn.

Words cannot express our gratitude to our beloved Leader, Mrs. Eddy, for her gift to the world of this healing truth, Christian Science, which was brought to our notice several years ago. Mother had been ill, and had been treated by medical doctors for over three years, but grew no better. She then turned to Christian Science, and was healed within three weeks. Since then we have had numerous other demonstrations of the power of Truth. My brothers and I have been attacked by the contagious diseases that most children have, but we were restored speedily without drugs. Last spring my father was taken with severe rheumatic trouble, and he too was healed through Christian Science. My uncle, who suffered a great deal with stomach and bowel trouble, has also been greatly benefited by this healing truth.

I shall not be satisfied unless I tell of a great demonstration last winter for myself. One night I was taken suddenly with pain and stiffness in my neck and shoulder. When I tried to rise I was unable to do so. A practitioner was telephoned to, and he gave me absent treatment. This was about three o'clock in the morning, and about half past five I was carried downstairs. A little later I was able to get ready to go to school. I drove six miles to school, taught all day, and the next morning I was as well as ever. Every week we have some demonstration which makes the light clearer and increases our love for the Master.

Only our hearts can tell how truly grateful we are for the manifold blessings that God has given us, and how thankful we are that in His goodness He chose for us a Leader who is today doing so much to lead mankind out of the bondage of sin, sickness, and death. For all these many blessings we are unspeakably thankful.

MISS OSEE BURKE, Dayton, O.

The benefits I have received from Christian Science are so many, and mean so much to me, that I feel I must give public expression to them, and at the same time express my gratitude to our revered Leader, Mrs. Eddy, for giving this glorious truth to the world. I was healed in a few treatments of a very serious eye trouble, the oculist claiming that I would always have to wear glasses. The glasses, however, as well as all the efforts of specialists, did not help me, and I was for nearly a year unable to use my eyes. Deliverance came to me, however, through the wonderful healing truth of Christian Science, and I have had unusually strong eyes ever since. I have also been healed of numerous ailments which had made me weak and inefficient, so that now I rejoice in a strong body and freedom from the fatigue which always assailed me after any slight exertion.

Thankful as I am for the physical comfort, I am much more grateful for the spiritual insight attained, for the unlocking of the Scriptures with the "Key" given us by Mrs. Eddy, and for the entire change which the study of Christian Science has wrought in my life. It has given me a new basis for thought and action, and a peace which passes understanding.

SUSIE GLOVER, Chattanooga, Tenn.

It is about ten years since I became interested in Christian Science. I was led by a dear sister to try it for severe stomach trouble, from which I had suffered for some time. It is over eight years since I was healed, and I have never had a return of the trouble. Many other ailments have been overcome in my family by the healing power of Truth. I have never had the least desire to use medicine since my healing. When I look back and compare those times with the present, my heart overflows with gratitude and love to God, and to those who helped me to find the way out of suffering. I stood alone in Christian Science in my town for several years, but now I am happy to say there are quite a number who are interested, and we are meeting to study the Lesson-Sermons. I have recently united with The Mother Church.

MRS. IDA M. DAVIS, Mt. Vernon, Mo.

A few years ago, while playing baseball, I had the misfortune to receive a serious injury, the collar-bone protruding from its place and causing much pain. A Christian Science practitioner was called immediately. She had the arm placed in a sling for convenience, but the bone was not set by a physician. After one week's treatment in Christian Science the injury was repaired, the swelling had gone down, and I was able to use my arm as before, much to the surprise of those who knew of the case. For the past fourteen years I have had numerous demonstrations of the power of this great truth to heal sickness and sin. For these benefits and for constant protection I am very grateful to God, and to Mrs. Eddy.

HUGH D. BUTLER, River Forest, Ill.

It is now about seven years since I became interested in Christian Science, and during that time this truth has healed me and my daughter of every sickness that has come upon us. We have never yet found it lacking, but always a sure and quick remedy. Cases of colds, throat, stomach, and bowel trouble, corns, a disease of the gums, and other physical ills too numerous to mention, have all been overcome in our family by the power of the word of Truth. That the facts of this testimony may be of help to some who may be in doubt, is my reason for writing it.

A. S. POPE, Butte, Mont.

With gratitude to God I acknowledge my lifelong debt to Christian Science. I feel that I have been led from the darkness of physical pain and weariness into the light of wholeness and joyousness in work and living; from the darkness of a clouded sight into the light of clearer vision; from the darkness of doubt and discord into the marvelous light of the reality of good.

T. E. DAVIDSON, Little Rock, Ark.

I feel it a duty I owe to God, and to our beloved Leader, Mrs. Eddy, to acknowledge what Truth has done for me. I had a severe pain in the breast, a bad eye, and other ailments, all of which were speedily overcome by Christian Science, which has been my only medicine for the past year. I feel very grateful to have had this healing religion presented to me.—MRS. WINONA D. MINOR, Aurora, Mo.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

Jesus Christ is our Master and our Lord. We follow him without mental, moral, or spiritual reservation. We accept him as elementally and eternally final in the realm where he lived and taught. We see nothing beyond him except God. We do not believe that it is possible for the world ever to outgrow him. Perhaps other sons of God may some time live here on earth who are as great as he, but there will be none greater among men. What Jesus tells us to do, we try to do. When he speaks, the case is closed. Our faith in him is absolute. All of life, all of hope, all of anticipation, all of dreaming on the hidden things of the coming years, is to us a growing up into the measure of the stature of the fulness of Jesus Christ.

[The Bishop of South Carolina in the *Churchman.*]

Behind all the extraordinary achievements of modern civilization, its miracles of science, its mighty combinations of labor and capital, there lies at the heart of the present generation a growing sense of social unrest. There is a consciousness of contradiction between the economic progress of the age and the realization of those ethical and spiritual ideas which have been instilled into the minds of men by the teachings of Christ. The literature of the day is filled with this desire for social improvement and for a reconstruction of society upon a new basis.

[*Christian Commonwealth.*]

The true Christian knows that God is immanent in his daily life, and in all his thought and word and work; and that thus his affairs, his moving and doing and expecting, are all an utter manifestation of God. The fact of Jesus is just the sufficient revelation of this glorious truth: so it makes an at-one-ment between terrified man and the ever and infinitely loving God. In such faith do men overcome and rule the world, time, sin, death, eternity. Theology that crystallizes such faith will win all souls.

[Roland Ringwalt in the *Living Church.*]

Unjust suspicions have crowded around some of the noblest characters who ever walked the earth. Some of the best work ever done was done for people who did not know enough to be grateful. Very little can be achieved until one is content that his labors be noted by One who seeth in secret, leaving to heaven the time and the manner in which they shall be rewarded openly.

[*British Congregationalist.*]

To the truly religious man nothing is outside the realm of his interests, and nothing can be counted common or unclean. There is great need for men of high Christian principle in all departments of public life in our time, and the first function of the church is to supply such men, and to give to them the strength, the ideals, and the moral impulse which they need for their work.

[*Christian World,* London.]

The emptiness at the center of modern life will have to be refilled, as were the primitive believers, with the sense of that vast and glorious reality, the kingdom of God within us. If the twentieth century is to have a history worthy of the name, it will be the history of the re-emergence of this eternal into our individual and our social life.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS IN NEW BINDINGS.—One volume containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; a second volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. These volumes are printed from new plates and are uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. The prices of these books prepaid are as follows: single copy, $3.50: six or more copies of either volume to one address, each $3.25.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Attention is called to the Library Edition of Mrs. Eddy's works, description and prices of which will be found on the outside cover page of the *Sentinel.*

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

In the Greater Boston postal district the *Monitor* will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week, payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

Attention is called to the new Pamphlets, Reprints, and Music found listed in the advertising columns on the opposite page.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

THE CHRISTIAN SCIENCE MONITOR

A daily newspaper of world-wide scope, particularly designed for those desiring a high-class publication in the home. It contains all the current news worth considering, all the departments of interest of a modern newspaper, illustrations of worthy features, and an unbiased editorial page which deals with the vital topics of the day. The MONITOR does not feature nor illustrate vice and crime.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months, postpaid. In the Greater Boston postal district the MONITOR will be delivered by carrier through the local news-dealer at the customary rate of 12 cents a week payable to the news-dealer. If delivered by mail $1.00 should be added to the annual subscription rate to cover extra postage.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE: For the United States, Canada, Mexico, and Cuba, 10 cents a copy, $1.00 a year in advance; all other countries, 12 cents a copy, $1.25 a year, postpaid.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

QUARTERLY COVERS, in black seal leather. Regular size, 5 1-4 x 7 3-4, $1.25 each or $12.50 a dozen. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11.00 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full morocco. Per copy, prepaid, $3.00; twelve or more copies to one address, prepaid, each, $2.50.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music, as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. The arrangement for both high and low voice in the same copy. 75 cents the copy; $7.00 the dozen.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. 75 cents the copy; $7.00 the dozen.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. 50 cents the copy; $5.00 the dozen.

"BLEST CHRISTMAS MORN." By Frederick W. Root. Published in two keys, for high and low voice. 50 cents the copy; $5.00 the dozen.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederick W. Root. Published in two keys for high and low voice. 50 cents the copy; $5.00 the dozen.

Please state when ordering any of the three last named whether high or low key is desired.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our coworkers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. 132 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.50.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A settlement has been effected by the Secretary of the Interior of the Government suit against the Union Pacific Railway, involving coal lands in Wyoming estimated as worth a million and a half dollars. The land is said to have been acquired by the company through what are known as "dummy" entries. The land involved aggregated 4,560 acres, and after numerous conferences the company decided not to defend the suit, but to reconvey the lands to the Government. It also paid nearly $33,000 in settlement for the coal mined from the lands. The company has discontinued mining from the land reconveyed, which has been withdrawn from entry until June 1, next. Besides reconveying the land and paying trespass damages, the company loses the $91,200 which was paid as purchase price for the land. This is one of the cases included in former Secretary Garfield's letter to Congress, which showed that lands worth over $100,000,000 were under investigation or in litigation.

The latest proposition to increase rapid transit facilities in New York through private capital comes from the Amsterdam corporation, which wants permission to construct an interterminal belt line, passenger and freight road, part elevated and part subway, skirting the river front of Manhattan island from Fifty-ninth street and the North river to and around the Battery, up the East river water-front to Fifty-ninth street, and cross-town in the latter street, thus forming a complete circuit. Connections are also provided in the plans with the Grand Central station and the Pennsylvania terminal. Plans have been filed with the public service commission with a request for a franchise. Plans for a further extension of the rapid transit system, to cost about $50,000,000, are being prepared by engineers of the Interborough Rapid Transit Company and will be submitted to the public service commission soon.

The joint committee on cooperation for the conservation of the national resources, which was authorized by the recent governors' conference in Washington, held its initial session last week to prepare a plan for united action by all organizations concerned with this problem. The joint committee of eleven members consists of six chairmen of state conservation commissions and five who are members of the national conservation commission. The committee will formulate a working plan, assigning to the different conservation organizations a definite plan of work which is designed to achieve practical results. Recommendations for the character and scope of work to follow have been submitted by all the conservation bodies in the country.

By an order of the Interior Department, about three million acres of land in the counties along the eastern border of Wyoming are to be thrown open at once to homesteaders, who will be allowed to take either one hundred and sixty or three hundred and twenty acres. The land cannot be irrigated, and will be of use, therefore, only for "dry farming." Those who take the full three hundred and twenty acres entries must make an attempt to cultivate the land, while those who go in on the smaller holdings will not be compelled by the law to do so. The throwing open of this territory is somewhat in the nature of an experiment to see what can be done with such land.

One of the features of the proposed new charter for New York, which has been presented as part of the report of the charter revision commission to the Legislature, is the centralization of authority and the abolishment of the administrative and executive powers of the borough presidents, most of whose duties are to be vested in a commissioner of street control to be appointed by the mayor. A petition for a new charter for Boston, drafted by the late Boston finance commission, and containing radical changes, is now before the Massachusetts Legislature.

Massachusetts has nearly one half as many more large cities which have abolished the saloons, either under state action or local option, as all the rest of the United States. Six of the ten largest cities in the country, where it has been voted to abolish the saloons, are in that commonwealth. At present 270 of the 321 towns of the state either are "no" or have so voted, to take effect on May 1, and there is a "no" majority in total votes of upward of 26,000 in Massachusetts. Thirteen towns have shifted from "yes" to "no" recently.

The passage of a new census bill during the special session of Congress, to take the place of the measure vetoed by President Roosevelt previous to his retirement from office, is confidently expected. The plan for the selection of clerks by non-competitive examinations, as provided for in the vetoed bill, has been abandoned and the merit system of selection, modified to meet the exigencies of the census work, will be adopted.

The Government's prosecution of the Standard Oil Company of Indiana, on the charge of accepting rebate from the Chicago and Alton Railway, collapsed last week with the instruction to the jury by Judge Anderson of the Federal District Court to find the company not guilty. The present case is the retrial of the famous $29,240,000 penalty imposed in August, 1907, by Judge Landis.

The motions by the Standard Oil Company of Indiana and the Republic Oil Company of Ohio for a rehearing of the ouster suit recently decided against them, and for a modification of the judgment, have been overruled by the Missouri Supreme Court.

International.

Newfoundland has made a contract with the Commercial Cable Company by which the latter will extend one of its cables into Newfoundland and thence direct to New York city. It will increase the speed of messages between New York and Ireland over thirty-five per cent and will be the only cable in the Atlantic running from Europe to Newfoundland, and thence direct to New York. It means the purchase and laying of seventeen hundred miles of new cable, and abandonment of nine hundred miles of cable now running along the bottom of the Atlantic from a point known as the "Flemish Cap" to Canso, Canada, which will be rendered useless by the installation of the new route. This old cable will be picked up by the company's cable ship, and utilized for other purposes.

The French Chamber of Deputies has passed the income tax bill by 407 votes to 166. The debate on the bill has been going on for several months. The measure bears heavily on foreign residents, whose taxes are practically quadrupled, their incomes being calculated at seven times the amount of the rent which they pay.

China is to be the scene of a vigorous campaign in the interests of the forests, according to plans for a series of meetings which will be held under the auspices of Boone College, Wuchang, China. There will be meetings in all the large cities, both on the coast and in the interior.

A lieutenant of the Belgian army, who was at one time denounced by the missionaries for burning and pillaging villages, assassinations, and other atrocities in the Congo, has been found guilty of a series of charges of this nature and sentenced to imprisonment for twelve years.

Owing to the improvement in the general condition of the country, the judicial department of the Russian Ministry of War has sent a circular to the district courts-martial recommending the transfer to the civil courts of all cases that can be settled in these tribunals.

Venezuela is preparing for the resumption of diplomatic relations with the United States. Pedro Ezequiel Rojas, who is regarded as the most able diplomat in Venezuela, will be appointed minister at Washington.

The expenditure for old-age pensions in England for the coming year is estimated at $43,500,000.

Industrial and Commercial.

The *New York Commercial* says: "Following up its preliminary announcement that it will spend $9,000,000 for new equipment this year, the New York Central and Hudson River Railroad Company has made known the fact that its budget for 1909 when completed will call for the expenditure of not less than $35,000,000. Besides the $9,000,000 equipment order the New York Central lines will spend $3,000,000 for steel rails, $1,500,000 for the elimination of grade crossings in Buffalo, and $4,000,000 for terminal improvements now in progress at the Grand Central station in New York city. The remainder of the large sum to be expended on construction work this year will be applied to building additional tracks for the movement of traffic, increased yard and terminal facilities, equipment of the main line of the system with automatic switches, and other general improvements. During the last ten years New York Central lines have expended approximately $285,000,000 for improvements, betterments, and increased facilities."

In finishing up the Wabash terminals in the Pittsburg district $200,000 is to be expended. There are eleven tunnels on this line within a few miles of the city, and only a few of them have been lined or finished as railroad requirements specify.

The annual yield of minerals in the British empire is said to be worth $1,000,000,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

BELIEF VERSUS FACT.

CLARENCE W. CHADWICK.

SOMEWHERE in the United States there is said to be a settlement of people who hold to the belief that the earth is flat; and because of their refusal to send their children to the public schools, where they would be taught from geography the opposite fact concerning the earth, they are said to have been fined and otherwise punished by the authorities. The situation as outlined is an interesting one in the present age of enlightenment, but it is here referred to not with any desire to hold these people up to ridicule, but simply as affording a helpful illustration to the student of metaphysics.

In the first place, let us consider what these people really possess while believing as they do. They believe that the earth is flat, not round. Is there any foundation for this belief? No. Is there any law to sustain it, any power to uphold it? No. Any well informed person will admit that it is simply an erroneous belief relative to the earth. It is a good illustration of what Christian Science means by the term belief. It comes as near being an illusion, or nothing, as anything could; but is it nothing to these people, while they are believing it to be a fact? Is it not just as much a reality to their deceived sense of things, as the opposite belief is to a great many others who think that the earth is round but who may not be able to offer any proof to sustain their opinion? Let them investigate, however, up to the point of enlightenment, and their belief will be proven to be but an illusion. The moment they learn what is true concerning the shape of the earth, their illusion will disappear. Let it also be observed that this belief that the earth is flat does not in any way affect the earth; nor would the opposite belief of its being round have any influence over it. The shape of the earth is absolutely independent of any human belief regarding it, whether such belief is termed false or true. Beliefs differ as to kind and quality, but they may be classed together in this and none of them have a foundation in truth.

Millions of the world's best people, people who are considered to be well educated and refined, are holding just as tenaciously to another belief, viz., that man is subject to sickness. And the question arises, Is their belief any nearer the truth than is the belief that the earth is flat? Does the belief that man is liable to sickness make him so? Science answers, No. The belief that the real man exists in any other than a state of perfection does not change his condition as a child of God. Science reveals the eternal fact that man is the spiritual image and likeness of God, that he lives in God, and is just as spiritual and perfect now as he ever was or ever will be. Because a mortal believes that he himself is God's man, and that he may be both sick and sinful, this does not change the fact relative to man's state of perfection in Spirit. Man is not in any way dependent upon any human belief relative to his state of health or happiness.

Until the mortal awakens from the Adam-dream of supposed life in matter, the belief that man is or can be sick or sinful tends to obscure the eternal facts concerning man, and the poor mortal continues to grope in the darkness of human belief, vainly imagining that he is living the life that God has given him instead of being conscious of eking out only a miserable existence, which Christ, Truth, comes to show him how to overcome. When the truth of being pierces the darkness of blind belief, and God's image and likeness is recognized to be the only real man, the belief that man is sick or sinful vanishes into nothingness, while the fact remains in Science that man was never sick nor a sinner. The belief of sickness or sin never entered the consciousness of man; it "is of the earth, earthy," and belongs to mortals, not to spiritual man. This belief has neither law nor power to sustain it, and it bears no relationship to the spiritual fact that man is now as perfect as his Father in heaven is perfect.

Is it any wonder that Mrs. Eddy, after discovering the great spiritual fact relative to man, should say to her followers, "Let the perfect model be present in your thoughts instead of its demoralized opposite" (Science and Health, p. 407)? Must not the mortal begin to separate the tares from the wheat; must he not begin to separate the idea of man from the matrix of materiality,—flesh and blood,—if he would entertain an intelligent hope of ever putting off the old man and putting on the new? This is the problem confronting every child of earth, and the sooner he shoulders the cross of self-denial—the rejection of the belief that man is mortal and material—the sooner will spiritual understanding reign supreme and the earth—his human sense—"be filled with the knowledge of the glory of the Lord, as the waters cover the sea"

A DEMAND OF THIS AGE.

J. S. BRAITHWAITE.

THIS is an age in which, despite the multiplication of intricate inventions and bewildering social problems, there is a greater demand than ever before for simplicity of thought and its natural consequent, the simple statement of thought. The simplest statements are the most pregnant with meaning and are always the most convincing. Of all the things where simple and direct phraseology is most needed for a complete interchange of ideas, that which stands foremost is religion, yet nowhere is it possible to find a more complex literature than that which surrounds this subject. The Century Dictionary defines knowledge as "the state of being aware of truth." Now if this were the generally accepted fact about knowledge, that it is a "state of being aware of truth," a condition of consciousness, we might indeed say that the time had arrived which is predicted by Jeremiah, the days when "they shall teach no more every man his neighbor, and every man his brother, saying, Know the Lord: for they shall all know me, from the least of them unto the greatest of them, saith the Lord."

Copyright, 1900, by Mary Baker Eddy.

Digitized by Google

The world, however, puts a different construction upon knowledge, and we find it defined by Mrs. Eddy in Science and Health (p. 590) as "evidence obtained from the five corporeal senses; mortality; beliefs and opinions; human theories, doctrines, hypotheses; that which is not divine and is the origin of sin, sickness, and death; the opposite of spiritual Truth and understanding." This is a sufficient explanation of the strifes and debates which have marked the religious history of mankind for many centuries, but there are signs that a new era is dawning in which spiritual understanding will be recognized in all its grand simplicity, and individual integrity of thought no longer be marred by dogma or sectarian bitterness.

The command to begin with was simple: "And as ye go, preach, saying, The kingdom of heaven is at hand." It could not well be more simple, and yet we fail to preach in such simple terms. We plead the excuse that it would not be understood in this age, but is it not rather because we do not ourselves understand it. There was also the command to "heal the sick;" and this, too, has been set aside because "the simplicity that is in Christ" was not understood, until Christian Science revealed it. Reference to the dictionary reveals the fact that simplicity literally means single-mindedness as opposed to duplicity or double-mindedness; therefore simplicity includes a sense of poise and stability which duplicity can never enjoy. "A double minded man is unstable in all his ways," wrote the apostle James.

There may yet be ahead of us much learned controversy before we see that the greatest in the kingdom is the child-thought, when in "the state of being aware of truth," uttering the impressions it receives, but never seeking to exalt self. All the time, however, it will be becoming clearer that the wisdom of preaching lies not so much in the utterance as in knowing enough to present the simplest statements of truth to the receptive thought, so that the listener may try the words as "the mouth tasteth meat." The preacher can hardly do more, for Truth does the teaching.

The Quakers have always set store on the literal meaning and use of words, and Christian Scientists know that the direct statement of the truth is best calculated to carry them through the greatest difficulties and protect them from their bitterest critics. To preserve simplicity it may be necessary to guard against the temptation to please the world, either by levity, flattery, or sympathy of the wrong kind. Courtesy will still characterize all our utterances and, thanks to Christian Science, one may learn to think quietly, even in the midst of seething evil, and to speak gently. Argument is sure to lead us away from this new-found treasure of simplicity. Argument is often overbearing and carries little or no conviction with it. The following instance, dating back to the second century, of a conversion to the truth by means of a direct denial of falsehood and a simple statement of faith, has proved very helpful to the writer and is a model of simplicity and fearlessness.

The record occurs in the "Octavius" of Minucius Felix. A certain Cæcilius, arguing on behalf of the gods of his ancestors, commences by expressing astonishment that a "mean and reprobate faction like the Christians, gathered from the dregs of the people, held together by nightly meetings, fastings, and inhuman repasts, silent in public but garrulous in their own retreats, should dare to rave against the gods. They have no altar, temple, or images, but they adore the head of an ass and worship a man who suffered death upon the cross and even worship the cross itself." After a long tirade, during which he heaped up further calumnies of a like nature, he concluded by referring to their poverty and persecuted condition as a proof of the falsity of their religion. Octavius replied to his points one by one as follows: "We call one another brethren, as being born of the same God and parent and as companions in faith and fellow-heirs in hope. As for crosses, we neither worship nor wish for them. As for images, what image of God shall I make, since, if you think rightly, man is himself the image of God? What temple shall I build to Him whom the universe cannot contain? While I, a man, dwell far and wide, shall I think to shut up the might of so great majesty within one little building? You say God is ignorant of man's doings. You greatly err; for from what place can He be afar off when things in earth and in heaven, and even beyond, are full of Him? Not only do we act, I had almost said we live, in Him."

Such was Octavius' answer to Cæcilius, and he added, "We do not talk great things; we live them." Silence fell on the afternoon air as they paced along the seashore at Ostia. Octavius, throughout unruffled, had issued no challenge to Cæcilius, who evidently applied the keenest test of reason and conscience to every word. His must have been an honest seeking thought, for he confessed to his yielding and asked that on the morrow he might have more perfect instruction, "as the sun is already sloping to its setting." The simple statement of faith had gained the day. Says Mrs. Eddy, "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences" (Science and Health, p. 570).

THE LABORERS.

THE HON. MABEL ROWLEY.

EVERY student of Christian Science rejoices in the fact that its illuminating teaching sheds a new light upon many passages of the Bible, revealing unsuspected beauties and deep truths, and this is perhaps especially noticeable with regard to the parables of our Lord. Before learning something of Christian Science, the parable of the laborers in the vineyard was a source of much perplexity to the writer. She could not see the justice of the equal payment of the "first" and the "last," although she was bound to admit that it seemed an inevitable consequence if it was believed that death was the entrance to heaven and that heaven could be attained even by a so-called death-bed repentance. Now, however, this same parable seems to be applicable to many phases of thought. Let us apply it in the following instances.

First let us assume that the "penny" represents simply physical healing. Often some one will ask, "Why should my healing be so slow, while others are healed after a few treatments, or perhaps instantaneously?" Well, it may be that the questioner entered upon Christian Science treatment somewhat carelessly, much as some of those laborers who were called in the early morning hours may have entered upon their work, accepting all as a matter of course, and satisfied that they would receive their reward in the evening, whatever happened. On the other hand, those who were called later in the day had perhaps passed through many hours of anxious waiting, hoping vainly to be called (healed) by some employer (some material means of healing), and when at last the call came, possibly these may have worked the more vigorously during that last hour to show their gratitude to the master of the vineyard.

Again, let us apply this parable to those who have come to Christian Science for the spiritual healing. There are those who come into the vineyard early in the day; that is, they accept Christian Science as soon as they hear of it. Perhaps they have never thought much about these things before, they have been negatively satisfied with such religion as they had; but when the call came they entered the vineyard simply with the desire to "know what this new doctrine . . . is," and the writer was certainly numbered among such. Mrs. Eddy says in Science and Health

Digitized by Google

(p. 26), "Jesus spares us not one individual experience, if we follow his commands faithfully;" and without doubt this is so, consequently the struggles of this class of individuals are apt to take place after they have accepted Christian Science, but—and here I think is where the justice of the equal payment is made manifest—they make their fight with error within the shelter of the vineyard and with the certainty of success ever before them. A Christian Scientist knows that there can be only one result from persistent effort to overcome all false beliefs; namely, absolute and complete victory. He knows that according to the calculations of mortal sense this may take years, but he knows also that nothing can rob him of ultimate success, for with the destruction of error comes the realization of ever-present harmony,—God and His perfect, spiritual universe.

Now let us turn back to those who did not hear the call, to those who are still standing in the market-place, torn with doubts and fears, a prey to nameless terrors; too honest, perhaps, to accept work in the vineyards of false gods; think of them when the voice comes somewhat sternly, "Why stand ye here all the day idle?" and they answer humbly, "Because no man hath hired us." Think of the peace of entering into the vineyard—not the peace of idleness or sleep, but the joyous peace which accompanies right activity. Mrs. Eddy says, "God rests in action" (Science and Health, p. 519), and we, as reflecting Him, must do likewise. Would the earlier laborers be jealous when these late comers receive their "penny," if they looked at their case in this light? Surely not!

Finally, let us look at this parable again and let us call the vineyard the work of establishing and demonstrating Christian Science. Forty years ago only one laborer in the market-place of the world was ready to answer the call of the Master. Her thought was pure enough to catch the sound of Truth's voice above the din and clamor of earthly strife. She was obedient to that voice, and alone she entered the vineyard and labored there. The hours went by, and one by one others joined her; every hour brought a larger number, for the good news spread, and in a measure the work became easier for each succeeding laborer.

It was the writer's privilege lately to visit The Mother Church in Boston. First she saw the beautiful new building, with its great white dome standing out against the blue sky, giving a sense of breadth and strength and protection, and then her eyes turned to the original Mother Church edifice, nestling beside its offspring, and her heart was filled with gratitude for the noble work done by our Leader and those early pioneers who followed her. She knew that it was the building of that seemingly small but sturdy stone edifice which had made the erection of the great temple possible, and not only that temple but every branch church all over the world owes its very existence to the faithful work done by Mrs. Eddy and those laborers who indeed have borne "the burden and heat of the day."

But the laborers who come in at the eleventh hour must needs earn their penny also; and though the work may not be so difficult in some respects as that of the first comers, yet more will be expected of them. They must be ready to profit by the experience of the older workers, and they must be alert, active, and progressive, ever ready to listen to and obey their Leader's instructions and admonitions as she leads them to higher ground. We must remember that the nothingness of error is being uncovered more and more every day, and we need to learn how to meet and destroy all sense of its reality speedily and efficiently. If we are doing our best to clear away the weeds and to work intelligently in the Master's vineyard, we may be sure that not one of the early laborers, and least of all our beloved Leader, will grudge us our "penny" when the day's work is finished.

LET YOUR LIGHT SHINE.

MYRA KING.

ONE evening, as I was sitting in the late twilight trying to realize the nothingness of certain discordant conditions, my room was suddenly illumined with a flood of beautiful rosy light. I looked from the window to discover the cause of this illumination, and saw a bonfire in an adjoining yard. A man who had moved into the next house the previous day was standing by the fire, engaged in the very prosaic work of burning up the rubbish and waste materials which his moving into new quarters had brought to light. He was busily intent on his work, having no purpose other than that all this refuse matter should be consumed, and was quite unconscious that the light produced by this combustion was illuminating every house in the neighborhood.

This circumstance brought to my thought several little experiences which had come to beginners in Science. A lady whose understanding of Christian Science was not yet very great, was engaged to do a certain kind of work where a number of other people were similarly employed. She found she was obliged to use all her knowledge of Christian Science, and to use it constantly, to overcome the errors in her own consciousness which her coming into new quarters (some understanding of Christian Science) had brought to light and shown it necessary to destroy. There was always a struggle, and sometimes the struggle was intense, but her one purpose was to overcome, although she had no thought that this consuming of error was shedding light on another's way.

One day, however, a fellow-laborer came to her and said, "I wish to ask what it is that you have which is possessed by no one else here. Why is it you are calmer, more self-possessed, and more patient than others?" The Scientist was glad to answer, "Oh, I have Christian Science to help me." "Then," answered the other, "I want Christian Science, too;" and in proof of the earnestness of her desire she purchased a copy of Science and Health and began its study.

Another case was that of a mother who had been studying Christian Science only a few months when she was confronted by a manifestation of physical inharmony in her baby. A neighbor who was just beginning to investigate Christian Science saw the child when the conditions seemed most aggravated, and exclaimed, "What's the matter with your baby? She's very sick, isn't she?" The mother, thinking only to protect her baby, turned resolutely away from the sense testimony and answered, "No, baby's all right." The younger student said afterward that she had been much helped by this little occurrence, as it had seemed wonderful and beautiful to her that a mother's fear could be so far overcome.

Still another case was that of a teacher who waited for her car almost every morning for a year in company with a young girl who was attending the high school. This young girl seemed to be possessed of a most unhappy, dissatisfied condition of thought in regard to her work. Her one subject of conversation was her great dislike of school and all its details. She checked off the days of the week as they passed, and seemed to find her only satisfaction in this thought, "Well, one more day is gone." The teacher, realizing that any thought of discontent or dissatisfaction would just so far unfit the girl to bring out right results in her work, and wishing to guard her own consciousness against the intrusion of such thoughts, met all these statements with a silent declaration of the truth, trying to realize that God's child is always in his right place, doing his right work, and is neither dissatisfied nor discouraged.

During the last week of school the two met one morning as usual, and the young girl remarked, "Well, this is the last week of school, and—it's the strangest thing I ever heard of—I don't care. I shouldn't mind keeping right on

Digitized by Google

with my school work. It's the first time in my life I ever felt this way, and I don't understand it." The Scientist realized instantly that her effort to protect her own thought had resulted in loosening somewhat the fetters of another. Truly, every right thought must be felt the whole world over.

The beginner in Christian Science is always anxious to tell the good news to all his friends, but he does not always realize that the quiet, patient, daily overcoming of his own errors of thought (the burning of his own rubbish) is the most effectual way of furnishing the light which will illuminate the dark places of all those around him. In this way we may at least begin to obey the command, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

CAUSE AND EFFECT.

HORACE H. THAYER, JR.

As the relation of God to man and the universe unfolds to us through our understanding of the Bible truths in the light which Christian Science throws upon them, and through our proving of these truths, we realize more and more the presence and activity of an all-pervading, resistless law which enters into the smallest details of daily experience. We rejoice in this understanding, for through it we feel the power and presence of God. We recognize that whatever is actuated by a thought of right, love, good, has law at the back of it and benediction in its train, and that everything small or great which departs from this law separates us just so much from the blessing which inevitably follows the doing of the right. We begin to understand that inharmony of every kind is simply a negative quantity, a loss of that consciousness of the government of God, in which "Whatsoever a man soweth, that shall he also reap," becomes to us a self-evident truth.

With a growing and proof-supported understanding of this law, let us take heed that we do not look for the reward of either right or wrong done by ourselves or others. How easy it is to apply the teaching, "Whatsoever a man soweth, that shall he also reap," to individual experiences, especially in connection with the good done by ourselves and the evil done by others. It is doubtless right to expect good for ourselves and others, for all that God made is good; yet we should not consider that the harvest reaped from a sowing of good seed can be determined or planned for by ourselves. Our duty is not to look for results; our duty is to sow. The harvest is determined by the laws of God, and is invariably the blessing of a further duty to perform, with an abundant supply of everything that is needful for its performance.

On the other hand, what does the expectation of evil as the result of some specific departure from the all-encompassing law of right imply? We do not sentence ourselves. Are we authorized to sentence our brother? Is not even the recognition of misfortune as having come to a man for wrong-doing often an indication that the misfortune had been expected or mentally prophesied, and that the prophet had been condemning his fellow-man?

Truly the daily prayer of Christian Scientists, as outlined in the Rule for Motives and Acts in The Mother Church Manual (p. 40), has a deep significance. To realize the immutability of divine law is one thing; to think of a fellow-man as not doing to us or to others as we feel he should do, and then to console ourselves with the reflection, "Whatsoever a man soweth, that shall he also reap," is another and quite a different thing. The former is the very unfolding of the law, and carries with it a blessing; the latter is doing what Jesus stated even the Son was not permitted to do, that is, to condemn. Paul says, "Therefore thou art inexcusable, O man, whosoever thou art that judgest: for wherein thou judgest another, thou condemnest thyself; for thou that judgest doest the same things. . . . And thinkest thou this, O man, that judgest them which do such things, and doest the same, that thou shalt escape the judgment of God?"

Do not the "true brotherliness, charitableness, and forgiveness" which this rule enjoins, all include the recognition that man is as God purposed him to be, and that all wrong-doing is due to a lack of understanding of God, a sense of aims and purposes independent of God, which is darkening us all and which can only be overcome by a steadfast striving in which we bear one another's burdens? Nor should we forget the apostle's admonition, that "charity thinketh no evil." Are we to thank God that we are "not as other men," as did the Pharisee of old, or are we to strive to see in our fellow-man God's own likeness, through Science, as Jesus saw it, notwithstanding apparent contradictions? Our text-book teaches us that this "correct view of man" enabled Jesus to heal the sick. (See Science and Health, p. 477.) To condemn our brother is to add to his darkness and our own; to see and supply his need of "true brotherliness, charitableness, and forgiveness" is to advance the world a step toward that full understanding of God which Jesus declared is life eternal.

If we are tempted ever to dwell upon or be impatient with a lack of right doing in others, let us remember the words of Jesus to Peter, at the morning meal, when he said, "What is that to thee? follow thou me;" and also remember that to follow Jesus is to see man as God's likeness, and to realize the nothingness and unreality of evil and the allness of God, divine Principle.

[Written for the *Sentinel.*]

TRUE PEACE.

AGNES FLORIDA CHALMERS.

ONE day when all went wrong, I humbly cried:
Why do I feel this nameless blame, dear Lord,—
Must I still conquer hate, or fear, or pride?
It is not mine—this cruel weight of shame!
Lay bare the hidden sin with Truth's own word.
Have I done aught unkind or wrong today,—
Have I not tried to feed each one who came
And asked for bread? Reveal, dear Lord, I pray,
My secret fault.

At eventide the answer came to me.
I knew Truth's voice, so soft and yet so clear:
One spoke today a word of praise to thee,
And thou didst listen eagerly to hear.
This was the cruel weight that bent thee low.
Dear child, thou shalt go meekly forth and know
Earth's praise is silenced with Love's Peace, be still!
And thy work always is the Father's will.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1909. Applications should be in the hands of the Clerk on or before May 12, 1909. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul streets, Boston.

SELECTED ARTICLES.

[Elizabeth Earl Jones in the *Asheville* (N. C.) *Citizen*.]

The teachings of Christ Jesus, as emphasized in Christian Science, are calling with clarion voices to awake the world from the lethargy of pride, prejudice, poverty, and pain, and from all that tends to rupture the interests of humanity, and these teachings will ultimately and wisely unite all nations and creeds in one great world-wide brotherhood, under the government of divine Love and harmony.

In her "Miscellaneous Writings" (p. 224), our revered Leader, Mrs. Eddy, says: "We should go forth into life with the smallest expectations, but with the largest patience; with a keen relish for and appreciation of everything beautiful, great, and good; but with a temper so genial that the friction of the world shall not wear upon our sensibilities; with an equanimity so settled that no passing breath nor accidental disturbance shall agitate or ruffle it; with a charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it,—determined not to be offended when no wrong is meant, nor even when it is, unless the offense be against God." It is in the light of such exalted teaching as this that we rejoice to forget "those things which are behind" and to honor true greatness wherever found.

[Assistant Editor *Rush City* (Minn.) *Post*, in *Minneapolis* (Minn.) *Progress*.]

In your last issue a clerical critic gives Christian Science a rebuff. He believes many things himself, judging from his writings, that many others of fair intelligence repudiate. But assuming that he is really a Christian, possessed of the clean, unadulterated "faith which was once delivered unto the saints," it naturally follows that he possesses powers which, if turned into the right channel, would have wonderful efficacy in affording relief to a sinful world. Let us go to the reverend gentleman's medicine-chest, and dig up a dose of his own kind and endeavor to administer it. "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." In these days of big doctor's fees it is a great thing to be in possession of a power from on high to cure disease, even if the state law compels one to practise without a fee.

The above quotation, from the Gospel of Mark, was one of the last utterances of the risen Christ, before he was received up into heaven. There is no chance for quibbling; it means either that a believer can exercise this power or that the whole fabric of Christianity is false. This power was conferred on the apostles; for in Acts we read: "And God wrought special miracles by the hands of Paul: so that from his body were brought unto the sick handkerchiefs or aprons, and the diseases departed from them, and the evil spirits went out of them." Paul believed, and the "signs" followed. The "signs" were a clinching argument in favor of the genuineness of his conversion. Now hear what Peter said anent Christian Science: "His name through faith in his name hath made this man strong, whom ye see and know: yea, the faith which is by him hath given him this perfect soundness in the presence of you all." The New Testament is full of Christian Science. The art of healing by faith was one of the chief credentials of a Christian.

Remember the Christian credential, brother, "These signs shall follow them that believe," etc. The Christian Scientists have put out the sign and are doing business under the old apostolic plan. "By their fruits ye shall know them." The writer is ignorant of just the way they go at the curing business, but he has seen results. Now stop contradicting, brother, and get your "sign" out and cure a few people in Minneapolis, and you will convert more people in a day with such a manifestation of power than did the apostles on the day of Pentecost.

The people need a thorough shaking up, for the time has come when they will not endure sound doctrine, but after their own lusts have they heaped to themselves teachers having itching ears, who would convince them that the days of miracles have passed because a wicked and perverse generation can do no miracles. This is not written as a witticism, but as a sort of plea to get Christians back into paths that Christ and his apostles trod with so much honor. Let a few of the faithful perform some public cure; demonstrate by deeds instead of words the power of the gospel unto salvation. If you don't like the Christian Scientists, down them with two cures to their one, and see how people will rush to join the church.

[F. A. Walker in the *Vermont Union-Journal*, Lyndonville, Vt.]

All Christian denominations have their commentaries and writings which explain the Scriptures. "Science and Health with Key to the Scriptures" by Mrs. Eddy is the Christian Science text-book and, as its title indicates, it is a "Key to the Scriptures," a commentary, a practical, spiritual explanation of the Scriptures, but this does not make of it a "sacred book," as stated in the article, if that means it is looked upon with superstitious veneration or in any sense that it takes the place of the Bible, which is usually called the "sacred book" of the Christian world.

In the Christian Science church services as many, if not more, passages are read from the Bible than in any other church service, and the adherents of this church give more time to the study of the Bible than do any other church-members of my acquaintance. They are seeking the deep, spiritual import of the Scriptures, not the "verbal inspiration of the original texts," as is stated. Mrs. Eddy's interpretation of the Scriptures gives them a clearer spiritual understanding of the meaning and intent of the Word as taught and practised by Jesus and his disciples in raising the dead, healing the sick, reforming the sinful, and comforting the sorrowing, than they previously had in their long-time church affiliations. Moreover, they have the proof of their corrected understanding of the Scriptures in better health, and more of that Mind in them "which was also in Christ Jesus," and as a result they are able to heal the sick, reform the sinful, and comfort the sorrowing. This is the test of discipleship which Jesus required as a proof that his teachings were understood, even though it "excites the scholar's disgust," as stated in the article. In those early days Jesus' teaching and practice so stirred the religious teachers and leaders of the Hebrew people that they crucified him.

[J. V. Dittemore in the *Medico-Legal Journal*.]

Christian Science, or the Science of Christianity, is the knowledge of the Principle or law by which Christ Jesus demonstrated his system of doctrines and precepts. Applied Christian Science, or the practice of Christian Science Mind-healing, consists of the application of this knowledge to the solution of the problem of evil and for humanity's deliverance from all sin, disease, and discord. The results from Christian Science practice, as in any other science, are in direct proportion to the demonstrator's understanding of the Principle, and his correct application of the rules. Christian Science accepts as its basis the existence of one infinite God, who is the infinitely intelligent, creative Principle of all that has real being, the spiritual noumenon of the phenomena through which it is interpreted and under-
